SOUTHERN REGIONAL COUNCIL, INC.

M E M O R A N D U M

TO: G. Esser DATE: 3january73

FROM: A. Campbell COPIES: 2

SUBJECT: National Rural Housing Coalition

As Vice-Chairman I am planning to attend a meeting of the officers, executive committee, and committee chairmen of the National Rural Housing Coalition on Tuesday, January 9, in Washington. This is essentially an organizational meeting. Would appreciate any x comments you might make about the Coalition and x and SRC's relationship to it.

I am proposing that we join the Coalition xxxx as a sustaining member, costing $50.00/year.

Please return the attached documents "ASAP"

National Rural Housing Coalition

MEMORANDUM

TO: All Officers and Members of the Executive Committee and all Committee Chairmen of the National Rural Housing Coalition.

FROM: Jon W. Linfield, Executive Secretary.

SUBJ: Meeting, Tuesday, 9 January, 1973, 12:20 p.m.

DATE: 20 December, 1972

It was decided at the ad hoc Structure Committee Meeting of December 7th that all officers and members of the Executive Committee and all Committee Chairmen would meet in the Coalition offices in Washington on the second Tuesday of each month at 12:20 p.m.

This arrangement will hold for at least the months of January and February. During these first two meetings, we will be discussing the outlines of the committee responsibilities and where we go from there. The sooner we can get moving on this, the better.

I hope to see you all here on January 9th.

Merry Christmas.

P.S. Attached is a copy of the minutes of the December 7th Structure Committee meeting.

National Rural Housing Coalition

STRUCTURE COMMITTEE MEETING

Thursday, 7 December, 1972

Pursuant to a resolution passed by the members, the Chairman convened a meeting of the ad hoc Structure Committee at 12 noon, 7 December, 1972, in the Coalition offices in Washington. Present were: Robert E. Johnson (Chairman), Gordon Cavanaugh, Clay Cochran, Steve Bossi, Karen Tobin, Bill Powers, and Jon Linfield.

There was a general discussion of Coalition objectives, organizationally and legislatively, both long- and short-term. It was moved by Cochran, seconded and passed, that the following Committees be established:

1. Regional/State Organizations
2. Finance and Membership
3. Legislative
4. Farm Labor Housing
5. Education and Publications

It was moved by Cochran, seconded and passed, that the Chairman appoint Committee charimen and members (subject to their approval) from among those suggested at the meeting. Mr. Johnson subsequently named the following people to the Committees indicated:

1. Regional/State Organizations: William Powers (Chairman), Jeff Monroe, Jim Stein, Jack Hernandez, Paul Chernick.

2. Finance and Membership: Dan Bedell (Chairman), Steve Bossi, Art Tennies, Gideon Anders, Lenin Juarez.

3. Legislation: Clay Cochran (Chairman), Gordon Cavanaugh, Mary Nenno, Anthony Henry.

4. Farm Labor Housing: Karen Tobin (Chairman), Art Collings, Lee Reno, Jim Upchurch, Eleanor Eaton, John Wilson, Boren Chertkov, Noe Lara.

5. Education and Publications: Norman Dewire (Chairman), Robert Johnson, D. Richard Neill, Phil Brown, Lucy Norman.

Chairmen of all Committees are ex-officio members of the Executive Committee and are urged to attend Executive Committee meetings, to be held in Washington the second Tuesday of each month at 12:20 p.m. in the Coalition offices.

There was a suggestion that a Congressional Rural Housing Coalition might be formed with a whip structure for critical votes. To be effective it would need the housing figures by Congressional District. Executive Secretary was asked to enquire into the possibility of obtaining those figures from the Legislative Reference Service. George Rucker should supply the proper questions.

The Executive Secretary was instructed to draw up a tentative outline of responsibilities of each Committee, subject to revision by the Committees themselves.

The meeting was adjourned at 2:30 p.m.

FOR IMMEDIATE RELEASE
Monday, January 22, 1973

Contact: Jon Linfield
296-4945

Rev. Robert E. Johnson, Chairman of the Board of the National Rural Housing Coalition, has announced the formation of an alliance of organizations with large rural constituencies into the Committee to Preserve Rural America.

At its organizational meeting, the Committee noted that the Constitution requires the President to "take care that the laws be faithfully executed."

Johnson stated that "the arbitrary and capricious way" in which funds have been impounded, programs terminated, and Congressional responsibilities usurped "is clearly not a faithful execution of the laws." One of the immediate goals of the Committee is that impounded funds be released, that moratoria be lifted, and that terminated programs be reinstituted. A further long-term goal is that the Federal government implement its responsibilities with equity as between urban and rural areas, between the wealthy and the workers, and between majorities and minorities. "In short," Johnson stated, "we demand a return to Constitutional, responsible government."

The Committee will act as a clearing-house for information on the social and economic consequences of the Administration's actions which affect health, housing, agriculture, conservation, aging, manpower, education, and community development in rural America. Staff reports will be distributed to associated organizations and, through them, to their various memberships and constituencies.

In its initial statement, the Committee made known its intention to write to the President and Members of Congress, making known its "opposition to these cutbacks in rural programs and our desire to promote orderly rural growth."

The Committee is also planning a "national day of lobbying" in early spring. "Such a day will not be a demonstration or a march," Johnson said, "but rather will bring people from every Congressional district to talk with their Representatives and Senators. Participants will be the working poor who, even with a full-time job, cannot make it without some kinds of Federal assistance."

The Committee also said it would urge Congress to hold hearings in various parts of the country. They would be designed to highlight the effect of Administration action in rural areas. "One of the agriculture committees should undertake such an investigation," Johnson stated.

The Committee is composed of representatives from 28 national organizations including those interested in education, housing, the native American movement, health care, housing, agriculture, conservation, senior citizens, the Spanish-speaking community, and the cooperative movement.

Dear Mr. Campbell:

I am very pleased to inform you that the members of the National Rural Housing Coalition have elected you to the organization's Board of Directors for the three-year term ending in 1975. Further, the Board itself has elected you Vice-Chairman of the Coalition.

I'm enclosing a copy of the by-laws and a list of all the Directors. No formal meetings have as yet been scheduled, but we hope to have a general outline for the year ahead by early in January. You should receive a report on the annual membership meeting within the month.

On behalf of our new chairman, Bob Johnson, and the entire membership, let me thank you for your interest and your willingness to serve.

Sincerely,

Jon

Jon W. Linfield
Executive Secretary

Enclosures.

Art, you really should join the Coalition. If you have, please let me know, but we have no record of it

Jon

Rural Housing

STATEMENT OF CLAY L. COCHRAN

CHAIRMAN, LEGISLATIVE COMMITTEE

NATIONAL RURAL HOUSING COALITION

1346 Connecticut Avenue, N.W.
Washington, D.C. 20036

before the

COMMITTEE ON AGRICULTURE AND FORESTRY

UNITED STATED SENATE

February 5, 1973

Mr. Chairman and Members of the Committee:

My name is Clay Cochran and I am appearing here today on behalf of the National Rural Housing Coalition. The Coalition is a voluntary membership organization with members in all fifty states, whose dues and contributions support our efforts to improve housing in rural America. We have no illusions about how much we have accomplished in the three years since our formation, save this: there has been an awakening in the country and in the Congress to the desperate need for adequate housing in small towns and rural areas.

I want to thank the Committee for this opportunity to discuss with you the effect the Administration's actions are having on this awakening, and of the consequences on lives and livelihoods of rural Americans. I will talk specifically about its import on housing programs, and more generally about its effect on other aspects of rural life.

HOUSING AND RELATED NEED IN RURAL AREAS

I will not dwell in any detail on the scope and depth of the need for housing and related facilities in small towns and rural areas. Suffice it to recall to your attention that (based on 1970 census figures) there are

roughly 31% of our citizens living in non-metropolitan areas, with 58% of all substandard housing in the nation -- either lacking essential plumbing, or overcrowded. In non-metropolitan areas, roughly one house in eight is sub-standard, while the comparable figure for metropolitan areas is one in 25.

At the same time, more than 30,000 rural communities do not have modern water facilities and 40,000 such communities do not have modern sanitation facilities. Debate on the 1972 Rural Development Act in the Senate less than a year ago indicated that $12 billion was needed to provide water and waste disposal systems to rural America.

We have reason to believe that comparable need could be demonstrated for community facilities for meetings, day care, community functions and other socially essential purposes.

HAS THE RESPONSE TO THE NEED BEEN ADEQUATE?

It was widely assumed for years that HUD and its predecessor agencies were providing whatever housing was necessary in rural areas, and no one, except the rural poor who knew better, questioned the implementation of the Housing Act of 1949.

Any examination of the facts would have revealed that the public housing program would have to function differently in rural areas because of the cost of administration, the level of welfare payments, and the skimpiness of Federal subsidy. At the same time, facts would have revealed that a middle-income program like FHA, created as much to serve the industry and private lending institutions as homeowners, could not function adequately in rural areas. There simply were not, and are not, sufficient private lending institutions in those areas.

It was not until 1961 that a modest homeownership program for non-farm

rural families was authorized for the Farmers Home Administration (FmHA). The program was initially financed out of direct appropriations, a tacit admission that the private credit institutions were not out there. This was later amended to enable FmHA to make insured loans, but again the machinery was provided for FmHA to sell its paper in the cities and lend the money in rural areas. It was another admission that the FHA/HUD housing business complex did not function in small towns and rural areas.

THERE IS NOTHING WRONG WITH BASIC FmHA STRUCTURE

In a sense, FmHA was ideally suited to the operation of a direct lending program in rural areas. It has 1,700 offices, generally available to rural people and (given the money) can provide the missing ingredient in rural housing -- a source of credit at reasonable rates. But Congressional appropriations starved the direct loan program, and when FmHA undertook insured loans, the strictures on selling the paper, along with a starvation budget on administrative funds, prevented rational planning and adequate growth.

AND WHAT IS FmHA NOW?

Over the past years, the National Rural Housing Coalition and other rural housing groups have railed at FmHA for its timidity in administering programs; for operating like a financial agency and not a housing agency; for its failure to fight for staff and appropriations; for its reluctance to work with the poorest of the poor; and for a dozen other things. We have always sought to improve the programs. In testimony last year before the Congress, we urged 24 changes and amendments to the rural housing programs.

I mention this only to indicate that we are not unaware of FmHA's shortcomings and inadequacies. But neither are we blind to its successes. The changes we proposed would have made the programs more responsive --

not shut them down. Our suggestions would permit more direct service to the poor -- not deny service of any kind to those most in need. They would have assisted the Congress and the nation in redeeming its pledge to decently house all out citizens -- not slough off that responsibility on others. For indeed the Farmers Home Administration is the only effective agency in the country (except for funds) equipped to bring housing to many low-income rural families. We felt the program was moving, but after June 30, except for a reduced program for middle-income families, it is virtually liquidated.

THE IMPACT OF THE HOUSING MORATORIUM ON RURAL AMERICA

Appended to my statement is a table showing the potential losses, state by state, in both revenue and man years of employment. Our national projections show an 18 month loss of revenue to the states of $1.55 billion and 133,000 man years of work lost. And for what purpose?

Time does not permit more than a couple of state examples, but we estimate that South Dakota will lose nearly $95 million in revenue over the next 18 months, and perhaps even more importantly over 8,300 man years of work.

I am sure the Congress is concerned about jobs and employment. Certainly employers as well as employees are worried. Let me read part of a letter from an employer -- a builder -- in Valley Springs, South Dakota.

> Gentlemen:
>
> I am writing in regards to Farm Home Administration stopping any future interest credit and rental housing loans.
>
> You no doubt know what the results are going to be on a sudden shutdown like this -- especially in a small community such as ours. We have spent the last few months getting prepared for next spring and have applications pending in FmHA office. Much time and effort have gone into those applications.
>
> Normally our business here in Valley Springs would support one or two families but due to the Rural Housing Program we have at present, and have had for the past three years ten families making

their living from this business. If this freeze continues into the next building season we will have to lay off at least six persons, which will hurt this little community considerably.

You will note from our previous letter changes we would like to see in this Rural Housing Program, but a complete shut down all at once is more than we can handle at this time. If need be a complete shut down it should come slowly so businesses like ours can adjust.

Hoping you can be of assistance on these points we remain

Sincerely yours,

s/Howard V. Cotton

Now I've never met Mr. Cotton, and I've never been to Valley Springs, South Dakota. I didn't find it on my office map. But I can tell you this. Howard Cotton is real and so is his concern. And those six people he will have to lay off are real, and so are their families. And so, too, are the 8,332 other people who will be laid off in South Dakota as a result of the destruction of these programs.

Let me cite another example, this one from an extension service agent in Delaware. He writes that in the past calendar year Sussex County FmHA office processed 100 (out of a total of 250) Section 502 home ownership loans with interest subsidies. At an average cost of $18,000 per house the loss of income to Sussex County over the next 18 months for subsidized housing alone will amount to $360,000. "That excludes all projected purchases of new furniture, appliances and household accessories which might normally follow a home purchase."

I am informed by J. Bragg of Dothan, Alabama, the Chairman of the Homebuilders Rural Subcommittee, that if the moratorium is not altered or cancelled, over a thousand small contractors will be bankrupted immediately. Attached is a moving letter from a contractor in Mississippi, tracing his involvement in rural housing and indicating that this moratorium means bankruptcy.

We cannot emphasize too strongly the loss to the emerging rural housing delivery system implicit in the imposed moratorium. It is so critical, and its impact will be felt so immediately, that a later change in the restrictions will not turn on the delivery of rural housing like a faucet.

The initial announcements of the housing moratorium revealed gross discrimination in the way the freeze was imposed on the Farmers Home Administration. Unlike HUD, which is permitted to carry out its commitments, Farmers Home's "pipeline" was stopped as of January 8th. In the confirmation hearings of Secretary Lynn, the Congress was assured that Federally assisted housing starts would not fall below the level of the current year. However, there is no assurance that this will apply to FmHA, despite a partial easing of the moratorium last week.

ADMINISTRATION'S JUSTIFICATION INADEQUATE

We have reviewed major statements by the Administration concerning the housing freeze, including the testimony of Secretary of Agriculture Earl Butz before this Committee. The burden of Mr. Butz's remarks is that rural people must sacrifice in order to curb inflation. In the first place, the inflationary factor involved in the rural housing programs the Administration plans to scuttle is minor. We estimate that the $1.25 billion in interest credit loans knocked out of the proposed FY'74 budget by the Administration would represent a savings of $27.2 million in direct subsidy costs. These savings are dwarfed by the proposed $4.7 billion increase in military expenditures next year, an amount nearly 175 times greater than the anticipated cuts in the rural housing program.

Additionally, we don't believe that robbing rural people is the way to deal with inflation, and we agree with economists like Leon Keyserling that the way to fight inflation is to put America and its full productive capacity to work.

In a speech before a county chamber of commerce and agriculture in Browfield, Texas, Under Secretary of Agriculture J. Phil Campbell offered another, and equally unsuitable justification for the slashing of Federal rural programs. Mr. Campbell urged his audience to accept the curtailment of such efforts as the rural electrification and telephone programs and disaster relief loans (which he referred to as "inequitable fringe benefits"), as the price of obtaining Congressional support for "continuing a basic farm program." We submit that housing, and clean water, and sanitary facilities are basic to the nation's farm and rural policies.

If this Congress, given an opportunity to exercise its Constitutional prerogatives, decided to reduce Federal expenditures rather than give us tax reform, we would contend, nevertheless, that destroying the small rural housing program is not a proper target. It cannot be argued that the rural housing programs are tainted with corruption. It cannot be argued that $27 million is a major element of inflation in an economy with a Gross National Product of $1.1 trillion a year.

Now, we do not defend the interest credit mechanism as being either adequate or desirable ways of providing decent housing, as contrasted with other ways. We urge its continuation only until something better is substituted; i.e., direct Federal loans. The only reason we have inordinately expensive programs like interest credits is the sacred cow of an outmoded Federal budget system. A capital budget would do much to clear the way for rational and economic housing finance programs, and we commend a capital budget both to you and Mr. Nixon. But we do not believe that rural people should be deprived of decent shelter and water and sewer while the Congress and the President decide to operate the country under a rational budget system.

Mr. Chairman,the rural housing program has been operating at less than half the level required to meet the Administration's own housing goals, goals which we have insisted (with what we consider to be convincing evidence) are less than half what they should be for assisted housing for small towns and rural areas -- making the level of operations before the freeze at less than a quarter of the level required if that 1949 goal of the Congress is to be met in this decade.

We urge the Congress to restore programs which it has put together, however belatedly and penuriously. "Hope deferred maketh the heart sick."

Mr. Chairman, the rural housing program has been operating at less than half the level required to meet the Administration's own housing goals, goals which we have insisted (with what we consider to be convincing evidence) are less than half what they should be for assisted housing for small towns and rural areas -- making the level of operations before the freeze at less than a quarter of the level required if that 1949 goal of the Congress is to be met in this decade.

We urge the Congress to restore programs which it has put together, however belatedly and penuriously. "Hope deferred maketh the heart sick."

RURAL HOUSING NEEDS AND BARRIERS: THE CASE OF CENTRAL APPALACHIA*

by Brady J. Deaton and Charles E. Hanrahan**

The nation's housing needs have recently become a subject of public concern--and rightfully so. The 1970 Census revealed 2.5 million substandard houses in nonmetropolitan areas inhabited by almost 13 million people.[1] Earlier, in 1968, two major government reports presented a picture of unfulfilled housing needs, and the pervasive social, economic, political and institutional obstacles to meeting these needs.[2]

Unfortunately, despite the pressing nature of substandard housing illuminated in these reports, few researchers have responded with serious analysis of the problem. Only passing attention to housing needs was given by the President's Poverty Commission,[3] even though the quality of housing is widely recognized as a key indicator of economic development and the quality of living.[4] If, however, an effective housing policy is to be developed, immediate and extensive research is a prerequisite.

---

*To be presented at the annual meeting of the Southern Agricultural Economics Association, Atlanta, Georgia, February 6, 1973.

This research effort was supported jointly by the Commission on Religion in Appalachia, Knoxville, Tennessee and the Department of Agricultural Economics, University of Kentucky and was conducted under the supervision of Dr. Kurt R. Anschel, Associate Professor, Dept. of Agricultural Economics, University of Kentucky.

**The authors are, respectively, Assistant Professor, Department of Agricultural Economics, University of Tennessee, and Agricultural Economist, ERS-USDA. The authors want to express thanks to Dr. Kurt R. Anschel for his substantial input into the study. Many helpful comments were also made by Dr. C. M. Cuskaden.

Purpose

The objectives of this paper are first, to describe, within the context of related social and economic conditions, the housing situation over the decade 1960-70 in one of the most depressed rural areas of the nation--the 60 counties of the Central Appalachian Region (C.A.R.)[5] This area represents one of the most difficult to deal with from a policy perspective because of its social and economic fragmentation. Moreover, it is rarely treated as a unit since parts of the region are in four separate states, and statistical analyses are, consequently, rendered more difficult than for political units such as states or counties. As a result, policy suggestions based on statewide data often do not apply to the Central Appalachian Region. Therefore, our focus on the core problem area may reveal unique problems related to housing development that would otherwise go unnoticed and may provide insight into the general housing picture.

It is our intent to develop a series of hypotheses regarding some of those "social, economic, political and institutional obstacles" to meeting housing needs that were reported by Douglas and Kaiser.[6] In fulfilling this second objective, major attention will be given to reviewing and analyzing the impact of federal housing programs in the region. At the same time, we want to point out data deficiencies which may hamper analysis of key problems. This analysis should provide a foundation for policy recommendations aimed at solving the critical housing problem of Central Appalachia and simultaneously identify important areas that deserve further research efforts.

Housing Conditions: 1960-70

The 1960 Census of Housing revealed that 43.8 percent of the region's houses were in either deteriorating or dilapidated states (Table 1). The most severe problem is in the 26 Eastern Kentucky counties where 47.5 percent of the housing units are listed as deteriorating or dilapidated. The state portions of Virginia, Tennessee, and West Virginia are only slightly below this figure.

Table 1. Number and Condition of Houses by State Portion of C.A.R., 1960

State	All Housing Units Number	Sound Number	Sound %	Deteriorating Number	Deteriorating %	Dilapidated Number	Dilapidated %
KENTUCKY

WEST VIRGINIA							
C.A.R. 9 counties	129,108	77,030	59.7	35,050	27.1	17,028	13.2
Total*	434,999	244,164	56.1	131,541	30.2	59,294	13.6

Source: U.S. Department of Commerce, Bureau of the Census, Census of Housing, 1960.

See Appendix A for definition of terms.

*Average percentages for the C.A.R. in this and succeeding tables are based on county averages.

The Census categories of sound, deteriorating, and dilapidated were not used in the 1970 Census because of serious judgmental errors in the classification process. For example, the Census Bureau has admitted that dilapidated housing in the U.S. as determined by the 1960 Census was understated by at least one-third.[7] Nevertheless, standards exist to allow some comparison between housing conditions in 1960 and 1970.

Analyses conducted recently for the A.R.C. conclude that in West Virginia and Appalachian Kentucky the condition of much housing is substandard...and lacks standard sanitary facilities.[8] More specifically, a 1968 Model Cities study of

Pikeville, Kentucky, concluded that 62.5 percent of the dwelling units had major deficiencies or were ready for clearance--a much higher figure than either the percentage of unsound housing in Pike County in 1960 (43.6) or the 1960 regional average of 43.9 percent unsound housing.[9]

A further indication of the relative adequacy of housing is the presence of plumbing facilities. Again, this measure reveals a serious problem for the C.A.R. The 1970 Census of Housing shows that 36.7 percent of the housing units in the region have no plumbing facilities, while nationally only 7.1 percent of housing units are without running water and only 10 percent lack bathrooms. Within the region, Kentucky represents the most pronounced problem in this respect with roughly 46 percent of the housing units without plumbing (Table 2). Although, the situation is not so extreme in the rest of the region, the absence of plumbing facilities is still widespread.

Table 2. Number of housing units, and housing units with all plumbing facilities, U.S., four states, and Central Appalachian Region, 1970

State	Housing Units Number	Housing units with all plumbing facilities Number	%
United States total	68,418,062	63,249,416	92.4
Four State total	4,433,892	3,712,708	83.7
Kentucky - 26 counties	163,444	88,836	54.5
Tennessee -18 counties	103,217	70,134	67.8
Virginia - 7 counties	61,402	36,622	59.8
W. Virginia 9 counties	119,856	87,692	73.3
C.A.R. 60 counties total	447,919	283,284	63.3

Source: United States Department of Commerce, Bureau of the Census, Census of Housing, Summaries by State, 1970, Table 2.

Housing Activity: 1960-70

Between 1960 and 1970 the number of housing units in the region increased by 56,906 -- 14.6 percent of the 1960 number (Table 3). The number of housing units constructed in the C.A.R. during the 1960's far exceeds the actual change in the number of housing units during that time, implying that some of the new units replaced old ones.

Table 3. Housing units in 1960 and 1970, change in housing units and houses constructed 1960-1970 Central Appalachian Region[10]

State	Housing units 1960	Housing units 1970	Change in no. of housing units 1960-70	No. of housing units constructed 1960-70
KENTUCKY				
26 counties	140,578	163,444	22,866	32,594
TENNESSEE				
18 counties	80,944	103,217	22,273	27,338
VIRGINIA				
7 counties	54,812	61,402	6,590	11,931
WEST VIRGINIA				
9 counties	114,679	119,856	5,177	13,559
Total	391,013	447,919	56,906	85,422

Source: Compiled from data presented in U.S. Department of Commerce, Bureau of Census, Census of Housing, 1960 and 1970.

Housing units constructed over the decade represent 44.8 percent of the number of deteriorating and dilapidated houses in 1960 (Table 4). This does not imply, however, that each unit constructed replaced a poorer quality house. In fact, the units of housing either destroyed or abandoned total only 30,009--only 15 percent of the number of deteriorating and dilapidated units in 1960. Moreover, the units destroyed or abandoned constitute only 35 percent of new house construction. Comparing the second column of figures in Table 4 with the last column in Table 1, it appears that housing units destroyed or abandoned represent roughly

50% of the number of dilapidated units in 1960 for all state portions of C.A.R. Thus, in spite of some improvement, the unfulfilled need for adequate housing reflected by the large number of deteriorating and dilapidated units remaining, appears to be great by anyone's calculations. No figures are available on the extent of home repair in the region, but the 1970 census suggests that a severe problem remains.

Table 4. Deteriorating and dilapidated housing-1960, construction of housing-1960-1970, units constructed as a percentage of deteriorating and dilapidated housing, Central Appalachian Region

The Advent and Role of Mobile Homes

In 1969 alone more than 160,000 mobile homes were shipped to the entire Appalachian region.[11] During the decade, 1960-70, roughly 14,000 mobile homes were moved into the C.A.R., representing 16 percent of total housing units constructed in that period.[12] It is not difficult to appreciate the economic and social forces which have contributed to this increased role for mobile homes. Given the low incomes in the region, the mobile home may prove the best alternative for permanent housing.

Other factors which appear to make the mobile home a partial solution to the housing ills of Central Appalachia are low job security and the continuing depopulation of the region which tend to discourage long term investments in permanent home sites. A major cause of job insecurity in the C.A.R., of course, is the declining employment in the coal industry fostered by increased mechanization in shaft mining and the shift into highly mechanized strip mining. These changes in the coal industry have contributed to unemployment and underemployment and sharpened the concern for stability of income streams in the C.A.R.

Further research is needed to investigate the appropriateness of the mobile home as the answer to the region's housing needs. Such a research task must deal with related problems of providing water and sewage facilities as well as other services to a relatively unstable population.

Constraints on Housing Development

In 1967 the Appalachian Regional Commission (A.R.C.) reported five major obstacles to improved housing in Appalachia which reflect problems of both demand and supply:[13]

1. Lack of exact information about building occupancies and demolitions.
2. The failure of communities to take advantage of federal programs.
3. The absence of a capable housing industry to serve parts of the region.
4. A shortage of developable land.
5. The separation of mineral and surface rights in land titles.

The 1970 Census of Housing appears to partially fulfill the need for more complete housing information as called for in number 1. The last two obstacles are more difficult to deal with. It appears, however, that number 4 may be relevant only to the extent that it is interrelated to the separation of mineral and surface rights in land titles, since current technology makes almost any land compatible with sound housing. The problem of separate land titles seems to represent a formidable barrier to housing investment in the C.A.R. Obtaining data on this problem, however, would require a search of county tax records and land titles which was beyond the scope of this paper.

A related problem in parts of the region is the corporate ownership of land which effectively removes a substantial portion of some county's land from the market. As a result, land values on the remaining land increase substantially and serve to drive up the costs of housing. Again, data on this factor could be obtained only with extensive searches of land records and maps at the county level, and would require further research effort.

The second and third problems need to be critically appraised since each has been the focus of federal program attention. On the other hand, these points seem to represent a second level of abstraction, with the primary level being a lack of effective demand for sound housing. Therefore, the remainder of this paper will consist of an appraisal of (1) problems affecting the demand for housing and (2) the relative success of federal programs to facilitate housing development including the second and third problem areas identified by the A.R.C.

The Problem of Effective Demand

Investment in housing represents a significant portion of total investment for most regions of the country. Although housing construction is a stimulant to economic growth and development, effective demand for housing is a derivative of some more fundamental "engine of growth." Effective demand can be viewed as a function of income derived from a sufficiently secure source to justify the long-term investment that housing necessitates. It is within this perspective that the poor state of housing in Central Appalachia can be understood.

Low Incomes

The prevalance of low incomes and abject poverty engendered by an unstable regional economy provide severe restrictions on house building activity. The percentage of families in the 60 Central Appalachian counties with incomes below the Social Security definition of poverty ranges from 15.1 percent in Anderson County, Tennessee, to 61.6 percent in Leslie County, Eastern Kentucky.[14] Median family incomes range from a low of $2,407 in Owsley County, Kentucky to a high of $8,558 in Anderson County, Tennessee. State averages vary from $3,909 in Kentucky to $6,190 in West Virginia in 1970 dollars. Table 5 gives an indication of the changing economic status of the region from 1960-70.

These figures indicate that average incomes have increased over the decade for most of the region. When the 1960 dollar values for median family income are inflated by the Consumer Price Index, some of the changes appear to be relatively insignificant. In fact, Kentucky appears to be no better off than in 1960 and perhaps even worse off. For the 60 counties there are 112,101 families with incomes below the poverty level--only 16,022 fewer than in 1960.

Table 5. Median family income, absolute number and percent of families below the Social Security definition of poverty, 1960-1970

C.A.R. portion of state	Mean value of median income per county* (1970 $ values) 1960	1970	Absolute number of families below Social Security definition of poverty 1960	1969	Percent of families below Social Security definition of poverty 1960	1969
KY. (26 counties)	2995 (3929)	3909	53,404	52,468	50.1	45.1
TENN. (18 counties)	3208 (4209)	4903	26,258	23,274	41.4	32.5
VA. (7 counties)	3372 (4424)	5680	26,604	13,895	45.1	28.8
W. VA. (9 counties)	4617 (6058)	6190	27,857	22,464	30.6	26.1
Mean values for 60 counties	3346 (4390)	4756	2135	1868	44.0	36.6
Total number of families below poverty income			128,123	112,101		

Source: Compiled from Community Profiles, Office of Economic Opportunity, and Bureau of Census, Census of Population 1970.

*These figures represent an unweighted mean of median income per county.

The picture is somewhat brighter for those who are gainfully employed in the region. The mean wage and salary incomes according to the 1970 Census varies from $5440 in the 26 counties of Kentucky to $7352 in the 9 counties of West Virginia. Since these salary figures are much higher than the mean family income figures, it can be concluded that problems such as unemployment, underemployment, disability and age strongly influence the incidence of poverty and thereby the ability to finance new housing.

The Role of Financial Institutions

Effective demand for housing is, in part, a function of the rules and regulations governing the operations of public and private financial institutions. For example, low income people may find it impossible to purchase a house if the down payment is too high even though their monthly income is adequate to meet mortgage requirements. This suggests the importance of considering changes in rules to facilitate effective demand when faced by constraints such as the widespread poverty of the C.A.R.

Banks and Savings and Loan Associations

The operations of savings and loan associations and private banks in the C.A.R. appear to be somewhat restrictive in this regard. These institutions represent the primary source of funds and financial leverage for housing development (Table 6). However, they handle a low volume of FHA and VA mortgages and a number restrict themselves to conventional mortgages only.[15] The latter entail down payments which may vary from 5 to 20 percent or more and are usually amortized over a shorter time period. Each of these requirements are formidable for low income people.

Although the interest rates on mortgages financed by banks and savings and loan associations are comparable to the national average, the average maturity is much shorter--20 years in the C.A.R., compared to 25.8 for the U.S. on new house construction.[16] Likewise, the terms on single-family conventional mortgages for existing houses in the C.A.R. range in maturity from 12 to 20 years while the national average is 23.7 years.[17] Consequently, monthly payments on a given mortgage for C.A.R. residents is significantly higher than the national average even though income levels in the region are far below the national average.

Table 6. Number of housing loans of commercial banks in Central Appalachia by source of security, December 31, 1967 (in thousands of dollars)

	Kentucky 26 counties	Tennessee 18 counties	Virginia 7 counties	W.Virginia 9 counties	C.A.R. 60 counties
Secured by residential properties	48,062	36,823	17,957	61,434	164,276
Insured by FHA	1,075	918	898	11,016	13,907
Guaranteed by VA	306	35	165	1,357	1,863

Insurance Companies

In contrast to the national housing picture, insurance companies have not been actively involved in financing housing construction in the C.A.R. In addressing this issue, the Checci study concluded that: "Insurance companies do not participate because the region lacks mortgage brokers and 'packagers' of mortgages in bundles of 25 or 50 that would become economically practicaly for institutional investors."[18] These factors along with generally high costs of acquisition, preparation, and development of land all impede housing development in the region.

Federal Assistance Programs

Federal programs have attempted to modify both the demand and supply of housing for the benefit of low income people. On the supply side special grants and loans have been provided to non-profit corporations and cooperatives which serve as sponsors of special housing programs for local communities. Efforts have also been undertaken by A.R.C. and OEO to promote the utilization of federal programs by target communities. On the demand side the aim has been (1) to eliminate barriers such as lump-sum down payments and to lengthen the repayment period, and (2) to provide partial subsidies through a system of interest credits and, to a less degree, rent supplements to low income families.

However, the widespread feeling that federal housing programs represent a major subsidy to the poor is not substantiated by available data. In fact, the federal government likely made a net profit on its housing programs up to 1968.[19] Moreover, most housing subsidies--two thirds of the total--are in the form of tax subsidies or deductions on individual and corporate income taxes.[20] Families with incomes above $10,000 receive roughly 55 percent of total housing subsidies while those with incomes below $3000 receive only 8 percent of the total.[21] Much of the pressure behind the recent program cutbacks is probably attributable to the mushrooming of subsidies since 1968, with the primary beneficiaries being the middle and above income classes.[22]

The Various Agencies

The task of delivering federal support for improved housing to rural America has fallen primarily to the Farmers Home Administration (FmHA) which operates in rural areas and small towns up to 10,000 population. Rural housing loans are made by FmHA under provisions in Title V of the Housing Act of 1949.[23] As a result of several major program changes, Title V loans may be used to construct, improve, or repair rural homes and related facilities, farm service buildings, fallout shelters, or water facilities for farmstead and household use.[24] FmHA provides direct federal expenditures as well as guaranties for single and multiple unit dwellings. The major thrust of the agency is in its 502 program which accounted for 80 percent of the total number, and 90 percent of the dollar volume, of loans made in fiscal year 1966.[25]

The Federal Housing Administration (FHA), a second major source of housing assistance, provides guaranties for private investment capital. There are no legislative restrictions on the size of city in which FHA can operate, nor is it prohibited from making expenditures in rural areas. The lending policy vis-a-vis different cities may vary, however, at the discretion of the administration of a particular office. The major FHA program for low income people has been the single unit FHA 235 and the multi-unit 236 program.

Both FmHA and FHA provide subsidy payments in the form of variable interest rates as low as one percent to families whose incomes are sufficient only to meet the appropriate mortgage payments including interest of at least 1 percent. The income of a recipient of the interest subsidy must be below a limit set for occupancy of public housing in the same area. The mortgage cannot exceed a specified amount (usually $18,000) but can be increased in a high cost area or for an unusually large family.[26] Effective interest rates can vary from 1 to 9 percent, depending on income. The programs have been especially helpful nationwide to families in the $4000-8000 a year bracket.[27]

While FmHA and FHA provide the highest percentage of funds for home financing, the Veterans Administration does assist veterans with mortgage financing; but has no special program for low-income people. In general, VA financing can be obtained on favorable terms because of the virtual elimination of down payments. This agency has not been so active within the Central Appalachian Region as either FHA or FmHA.

Local community organization and administrative capability are especially necessary for implementing a program of multi-family dwellings such as that provided for under FHA 236 or Section 515 of FmHA. Under this program the mortgage can generally cover 100 percent of development costs for a non-profit corporation or cooperative and 90 percent of development costs for a limited dividend sponsor for up to 40 years. The nominal interest rate is 9 percent, but can be reduced to as low as one percent on those units whose occupants are entitled to the lowest rent.[28] Hence, the actual rental payments made by the occupants of such units are related to their income. It is stipulated that each resident family must pay at least 25 percent of its adjusted income in rent up to the market rent level.[29]

For a brief time, the "self-help" housing program of FmHA was lauded as the solution to rural America's housing needs. The self-help approach enables a group of people to work cooperatively on each other's houses until all are completed. This single-unit housing program is the cheapest provided by any federal agency and enables the owner to save major labor costs while participating in the work himself.

Few self-help programs have been developed in Central Appalachia. To date, the number of self-help loans reported is only 29 in Kentucky, 9 in Tennessee, and one in Virginia. No figures were reported for West Virginia. Simply stated, the program appears to have been abandoned, and this view is supported by conversations

with community leaders and FmHA personnel. A study of the self-help program made at Berea College concluded that "...feasibility will be determined to a large extent, by the quality and extent of guidance and technical assistance offered by sponsoring agencies.[30] Perhaps the lack of sufficient organizational know-how in rural communities explains the low rate of utilization.

Total Federal Expenditures 1968-70

Total federal expenditures increased in all of the C.A.R. portions of the four states from 1968-70 (Table 7).

Table 7. Total Federal Expenditures on Housing by State for Fiscal 1968-70*

State		1968	1969	1970	Totals
KENTUCKY	-26 counties	4,338,290	4,385,670	6,349,581	15,073,541
TENNESSEE	-18 counties	6,795,210	6,775,200	10,823,830	24,394,240
VIRGINIA	- 7 counties	2,005,527	2,781,510	3,722,616	8,509,653
WEST VIRGINIA	- 9 counties	6,615,527	9,116,025	10,304,710	26,036,262
Totals		19,754,554	23,359,405	31,200,737	74,314,696

Source: Compiled from data found in Executive Office of the President, Office of Economic Opportunity, Federal Outlays (by states), FY 1968, 1969, 1970.

*These figures and those in succeeding tables include both direct expenditures and insured loans. Practically all direct expenditures are made by FmHA.

Per Capita Federal Expenditures

On a per capita basis there is a great deal of variation by state in the utilization of federal programs (Table 8).

Table 8. Total and per capita federal expenditures on housing in the C.A.R. Fiscal Years 1968-1970

State	Total Expenditures 1968-70	Population 1970	Per capita federal expenditures
KENTUCKY- 26 counties	15,073,541	506,425	$29.77
TENNESSEE-18 counties	24,394,240	304,218	80.19
VIRGINIA - 7 counties	8,509,653	171,241	49.69
W.VIRGINIA-9 counties	26,036,262	366,913	70.96

Source: Compiled from data found in Executive Office of the President, Office of Economic Opportunity, Federal Outlays (by states), FY 1968, 1969, 1970, also U.S. Dept. of Commerce, Bureau of the Census, Census of Population, Population by counties, Table 1.

The figures in the last column reveal great disparities from state to state in per capita utilization of federal programs. The 9 counties in West Virginia with 1970 population of 366,913 received over $26 million in federal expenditures during fiscal years 1968, 1969, and 1970. This amounts to $71.00 per person in that 9-county area. On the other hand, Kentucky's 26 counties with 1970 population of 506,425 received barely $15 million in the same three-year period. That is, with almost 1.4 times as many people, the Kentucky portion of Central Appalachia received only 58 percent as much federal money for housing as West Virginia. Stated more simply still, for every dollar spent in Kentucky, $2.38 was spent in West Virginia. None of the state areas in Central Appalachia fared so poorly as Kentucky. The next lowest state, Virginia, received 67 percent more money per person than Kentucky. Some of this variation may be attributable to the lower levels of income in Kentucky. Differences in leadership of state and local officials are other factors which are difficult to measure but likely influence the extent of federal expenditures.

Federal Expenditures by Agency

Table 9 illustrates the level and growth of federal spending in the C.A.R. by agency for the period 1968-70, the years in which this data was available on a county basis. The substantial increase in FmHA expenditures is the most noticable change over this time period.

Table 9. Federal expenditures on housing in C.A.R. by agency for Fiscal 1968-1970

Agency	1968	1969	1970	Total-3 years
FmHA	8,623,640	8,994,770	18,706,236	36,324,646
FHA	7,497,000	11,433,860	7,609,000	26,539,860
VA	3,633,914	2,930,775	4,885,501	11,450,190
Total federal expenditures on housing	19,754,554	23,359,405	31,200,737	74,314,696

Source: Compiled from data, Executive Office of the President, Office of Economic Opportunity, Federal Outlays (by states), FY 1968, 1969, 1970.

Federal Expenditures by Program Category

Although the level of federal expenditures for housing increased in the latter part of the decade, a more detailed breakdown shows that the major benefactors were not low-income people. Table 10 illustrates the dearth of federal spending in low-income program categories up to 1970.

In spite of the extent of poverty in Central Appalachia, only 2.96 percent of the total FmHA and FHA expenditures were for Very-Low-Income Housing--generally designating families with incomes below $3000. The bulk of federal spending, 64.23 percent, occurred in the Low-to-Moderate Income category; that is, families with incomes ranging from $3000 to $8000.

Table 10. FmHA and FHA expenditures in the C.A.R. for FY 1968-1970, by category of loan

Loan Category	Expenditures	
	Dollars	Percent of Total
VLIHL, and LRPH[1]	1,863,566	2.96
LMIHL[2]	40,383,990	64.23
RRHL[3]	942,020	1.49
Other[4]	19,674,930	31.29
Total	62,864,506	100.00

[1]VLIHL refers to "Very Low Income Housing Loans" which is entirely under FmHA. LRPH is "Low Rent Public Housing" which includes only $576,000 spent in Kentucky.

[2]LMIHL is "Low to Moderate Income Housing Loans" which is administered under both FmHA and FHA. The reported expenditures fall predominately under FmHA.

[3]RRHL refers to "Rural Rental Housing Loans."

[4]Consists of an array of other FmHA and FHA Programs, among which are Moderate-and-Above-Moderate-Income Housing Loans.

Table 11 illustrates the variation in spending by income category from state to state. Only in Kentucky do significant federal expenditures go for very-low-income housing loans. Kentucky's share represents over 74 percent of total expenditures for the C.A.R. in this category. Yet, loans in this category represent only 12.3 percent of total federal expenditures in Kentucky. Nevertheless, very-low-income loans are a much higher proportion than in any other state.

Table 11. FmHA and FHA expenditure category by state - FY 1968-1970

State	Category	Expenditure	As a percent of total FmHA and FHA expenditures State	C.A.
KENTUCKY	VLIHL	1,387,836	12.3	3.2
26 counties	LMIHL	9,900,500	87.7	22.9

Federal Programs and Low Income Families

FmHA regulations state explicitly that "rural housing loans are made only to applicants who are unable to obtain the credit they need from private and cooperative lenders."[31] However, less than 6 percent of the national total of FmHA housing loans went to families with incomes below $3000.[32] As a lending agency, it is the task of FmHA to determine the repayment capability of borrowers even though alternative credit is unavailable. The agency's success in this regard is remarkable, with a collection write-off rate of only eight-tenths of one percent.[33] With this record, it is easy to understand the criticism that FmHA is "unduly conservative,"[34] whether justified or not. Individuals with below poverty-level incomes are generally viewed as greater than average risks to creditors, including FmHA.

Since incomes below the poverty level will generally not enable a family to participate in federally supported, low-income housing programs, the effectiveness of the programs in the C.A.R. is severely limited by low-income conditions.[35] For example, the lowest cost house which can be constructed under either FHA 235 or Farmers Home Administration (FmHA) 502, the most widely utilized programs for single family dwellings, lies in the range of $10,000 - $15,000. In fact, state averages are much higher: $14,500 for Georgia; $13,000 for Colorado; and $15,500 for Vermont.[36] Nevertheless, assuming the $10,000 minimum cost amortized under the maximum subsidy in the form of interest credits, which reduce the market rate of 7.25 percent to 1 percent, then the lowest possible monthly payment on principal and interest is roughly $30.00. Adding $10.00 per month to cover house insurance and taxes (which is probably a minimum figure for most counties), the lowest monthly cost of home ownership under the FmHA 502 program is around $40.00. Since FmHA stipulates that receipients of the interest subsidy pay 20 percent of adjusted annual family income, these costs could be covered if adjusted income were $200 per month or $2400 per year. For a family with four children under 21, participation would require minimum actual annual earnings of $4374. As Table 5 reveals, many families in the region could not qualify for federal assistance, even though conceivably they may be paying a higher rent than the monthly mortgage payment required under FmHA 502.

More than half the families in the region would probably qualify for interest credits to some degree. Obviously, the size-of-family would have to be known to determine the exact number. Generally no interest-credit is needed if adjusted gross income is above $7,000. This figure, however, is well above the average family incomes of any of the Central Appalachian portions of the four states. Even if FmHA had adequate funds to cover the maximum interest-credit in every case of need, a substantial number of the families in Central Appalachia could not qualify for the program because of inadequate incomes.

Statistical Analysis

A multiple regressicn model was used in an attempt to measure the effect of some of the factors associated with housing construction. Data was obtained on a county basis for each variable with per capita housing units constructed in the 1960-70 period as the dependent variable. The complete results are included as Appendix C.

The only obvious results from the analysis were the positive relationships of population change and real income growth. Since these variables serve to some degree as proxies for general economic trends, they seem to underline the importance of expectations and income security which are prerequisites for long term housing investments.

Conclusions and Policy Implications

Substandard housing plagues most of the Central Appalachian Region in spite of extensive developmental efforts to increase both the supply and the effective demand for housing. The emergence of the subsidized housing programs of FHA and FmHA have not been sufficiently flexible to meet the needs of low income people. In view of the recent curtailment of the subsidized portions of these agencies' programs, any effort to provide housing for low income people must consider alternative financial sources or further program development. It is unlikely that minor adjustments in current legislation can push the cost of housing down to a level that can be financed by povery level incomes. Nevertheless, arguments have been advanced that FmHA restrictions should be eased. Some FmHA officials argue that a direct grant program for home repair, which was taken away by Congress in the early 1960's,[37] be reinstituted in an effort to reach the very poor.

The housing needs of Central Appalachia will probably remain unrelieved until direct subsidies are utilized, since regional economic conditions do not appear to be improving with sufficient speed to alleviate poverty in the near future. These subsidies could be either in the form of (1) underwriting construction activity that is then sold or rented to low-income families at below market prices or (2) direct transfers to low-income families to bring their income up to an appropriate level that would enable home purchase on competitive terms. The latter could be given special consideration via any guaranteed income program presently being considered by the current administration, and would provide for more efficient program administration and public understanding.

The Appalachian Regional Commission (ARC) has attempted to stimulate the utilization of existing federal programs and to modify current legislation to make it more amenable to the region's needs.[38] These efforts are directed at promoting cooperation between federal housing agencies, banks, and local public and private sponsoring organizations. The new Appalachian housing program enables a sponsor to borrow 80 percent of its initial planning and organizational costs, and to receive a grant with which to hire planning and management personnel to operationalize the actual housing project.

Since the costs covered by such loans are generally incorporated in the mortgage, the total costs of the project are not greatly reduced. Therefore, the level of rent payments necessary for a feasible operation can be reduced only by lengthening the terms of maturity on the mortgage. While rent supplements are available, they tend to assist only those who are at, or slightly above, poverty level income. Furthermore, it has not been demonstrated that programs for multifamily rental units have substantial appeal in the mostly rural Central Appalachian Region,except for aged families which represent an increasing proportion of the population.

The effectiveness of many federal programs depends upon the local organizational ability of rural communities. The recent legislative modifications pushed by ARC are built upon this premise. It seems somewhat unrealistic, however, to ask poor communities for highly skilled organizational and technical inputs, as well as long hours of planning, as a prerequisite to participation. No other group in society must meet such stringent requirements in order to qualify for federal housing funds. Such federal efforts run the risk of being turned into a system of transfers for lawyers, accountants, architects, planners and other professionals, with the poor picking up the tab, and little being accomplished in the way of reduced rents or low interest loans for poor families.

Research is needed to explore the appropriate organizational forms and powers that community groups should assume. It may be found that adequate housing can be provided only through the development of new institutional forms at the community level. The methods of establishing legitimacy for various types of organizations and delineating appropriate powers to be exercised by them are problems that must be addressed.

The benefits to the region would be unparalled in terms of jobs and income creation from an intensive effort to improve housing standards."[39] It has been estimated that an additional expenditure of $100 million per year over a 14 year period would be required to bring the quality of housing in the C.A.R. up to national standards.[40] This means roughly a doubling of current effort. For example, in 1967 private expenditures on housing in the C.A.R. totaled $98.5 million[41] while federal activity resulted in $15.0 million[42] for a total of $113.5 million for new housing construction. It is clear that additional sources of capital must be channeled into an effective financial mechanism to properly address the problem.

The modification of existing programs of various agencies such as the Federal Land Banks and the production credit associations to provide housing loans are significant steps in the right direction. The problems of population mobility, poverty, and new forms of delivery systems are integral parts of any general programmatic solution. The attention of researchers, extension workers, and public officials must give top priority to this set of problems if sound housing is to be realized in rural America.

APPENDIX A

Census Definitions - 1960

Sound: Housing which has no defects, or only slight defects which normally are corrected during the course of regular maintenance. Examples of slight defects are: Lack of paint; slight damage to porch or steps; slight wearing away of mortar between bricks or other masonry; small cracks in walls, plaster or chimney; cracked windows; slight wear on floors, doorsills, doorframes, window sills, or window frames; and broken gutters or downspouts.

Deteriorating: Housing which needs more repair than would be provided in the course of regular maintenance. Such housing has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter. Examples of intermediate defects are: Holes, open cracks, rotted, loose or missing material over a small area of the foundation, walls, roof, floors, or ceilings; shaky or unsafe porch, steps, or railings; several broken or missing windowpanes; some rotted or loose window frames or sashes that are no longer rainproof or windproof; broken or loose stair treads, or broken, loose, or missing risers, balusters, or railings of inside or outside stairs; deep wear on doorsills, doorframes, outside or inside steps or floors; missing bricks or cracks in the chimney which are not serious enough to be a fire hazard; and makeshift chimney such as a stovepipe or other uninsulated pipe leading directly from the stove to the outside through a hole in the roof, wall, or window. Such defects are signs of neglect which lead to serious structural deterioration or damage if not corrected.

Dilapidated: Housing which does not provide safe and adequate shelter and in its present condition endangers the health, safety, or well-being of the occupants. Such housing has one or more critical defects; or has a combination of intermediate defects in sufficient number or extent to require considerable repair or rebuilding; or is of inadequate original construction. The defects are either so critical or so widespread that the structure should be extensively repaired, rebuilt, or torn down.

APPENDIX C

The Regression Model

An attempt was made to obtain on a county basis either direct or proxy measures of each factor previously identified as a problem area to determine its effect on the number of houses constructed per capita over the decade, 1960-70.

The following factors were entered into the regression model:

Y = Ratio of houses constructed 1960-70 to population 1970.

X_1 = Percentage change in population 1960-70. A positive relationship was hypothesized.

X_2 = Mean wage and salary income per employee 1970. Higher income levels should be associated with a greater effective demand for housing.

X_3 = Percentage change in real income per family 1960-70. Income growth is expected to positively influence housing construction.

X_4 = Per capita federal expenditures on housing. Federal housing expenditures are expected to be positively associated with housing construction.

X_5 = Percentage of work force engaged in mining. A negative association with housing construction is hypothesized.

X_6 = Per capita bank deposits. A positive relationship is hypothesized.

Some terms were squared to approximate curvilinear relationships. The following results were obtained using step-wise regression techniques.

Summary Statistics

Variable	B	Standard Error	F
X_1	.00172	.00019	78.955*
X_2	-.00072	.00013	31.651*

America's Rural Housing CRISIS

MAY 18 1973

By Gordon Cavanaugh

It has been recognized for some time that our cities are facing a crisis of monumental proportions and that a large part of this crisis stems from the concentration of poverty and substandard housing in decaying inner-city neighborhoods across the nation. Not until recently, however, has the terrible crisis facing our vast rural areas become a matter of national concern. Like the cities, rural America is fighting for its existence. And like the cities, the concentration of poverty and the severe shortage of decent housing are a large part of its malaise.

Lack of decent housing for low-income citizens has been a persistent national problem but rural areas have found themselves at a severe disadvantage to the cities in their ability to cope with the problem. In housing particularly, the disadvantage lies in the manner in which cities are equipped to deliver housing and the lack of such equipment in rural areas.

If one thinks of a low-income housing delivery system as embodying responsible government agencies, from the federal down to the local level, covering all areas in need, carrying out an identifiable public policy in coordination with the essential established private institutions of development, finance, construction and skilled labor, then there is virtually no housing delivery system, nor even the rudiments of one in rural areas.

In urban areas, such a delivery system can be identified, functioning imperfectly, perhaps, but with essential parts existing to form a network of public agencies and private institutions producing low-income housing.

In rural areas, however, there is little pattern or equal distribution of resources and institutions – nothing which could be described as a rational network for producing housing for the rural poor. A number of factors contribute to this deficiency.

Social and Economic Conditions of Rural America in the 1970s," shows that as of 1970, total federal housing expenditures (excluding public housing and rent supplements) worked out to $91 per capita in metropolitan counties, $40 in non-metropolitan counties, and only $35 per capita in the most rural counties.

The facts are largely unknown to the American public and its elected and appointed officials. Most striking is that almost 60 percent of the nation's substandard housing is found in towns and unincorporated places of 2,500 population and below. That is rural in the truest sense of the word. With only 30 percent of the population, non-metropolitan areas have fully 45 percent of the housing units which lack essential plumbing, are overcrowded, or both. One house in seven is adequate in non-metropolitan areas, while only one metropolitan house in 25 is inadequate. The incidence of inadequate housing outside of metropolitan areas is roughly 3.5 times higher than in metropolitan areas.

Severe Poverty

Non-metropolitan areas contain 30 percent of the poverty population, as defined by the Office of Economic Opportunity. One person in five is below the poverty level in non-metropolitan areas, as compared to one in nine in metropolitan areas. Put another way, the incidence of poverty in non-metropolitan areas is roughly twice that in metropolitan areas. The rural poor, generally, possess lower income levels than their urban counterparts. This is due to lower wage rates and lower welfare assistance levels in the rural sections of the country. Most housing subsidy programs require some partial ability to pay; this element is lacking in rural areas, where the income of many families is insufficient for even the real estate tax and utility cost burdens of decent housing.

In spite of the greater incidence of inadequate housing in non-metropolitan areas, national housing policy has been consistently biased in favor of urban areas. A recent report by the Department of Agriculture's Economic Research Service, entitled "The

In cities and even in suburbs, public housing authorities, urban renewal agencies, planning commissions and other bureaucracies have permanent, professional staffs which spend major portions of their time achieving delivery of low-income housing. These groups possess skill and access to federal resources. Nothing comparable exists in rural areas.

Considerable low-income housing production in cities and in suburban areas is initiated by private sector forces, such as developers, architects, real estate persons and interested lawyers. This sector of low-income housing development is virtually non-existent in rural areas for a variety of reasons, including lack of a profitable market.

The sizeable and active private construction and mortgage lending institutions are urban and suburban. Rural institutions of finance and construction are more sparcely distributed and less competetive, their resources and experience in federal housing finance programs are often inadequate to the task and their attitude toward housing for the poor is at best one of caution. Skilled labor is likewise less readily available.

Subsidy Programs are Under-Utilized

Despite exceptionally sharp and pervasive poverty, the housing program serving lowest incomes – public housing – is less widely used than in urban and suburban areas. Rural America has half of the country's poverty and a third of its population and yet it has received less than 20 percent of the public housing subsidized units in the country. A recent study conducted jointly by the Housing Assistance Council and the Rural Housing Alliance, entitled, "Public Housing: Where Is It and Isn't," revealed a rural "wasteland" consisting of almost half of the nation's counties with no federally assisted public housing. These counties are the less urbanized counties with relatively low population density. Counties classified as the most urban contained 65 percent of the population and almost 75 percent of the public housing units. Rural counties contained almost 23 percent of the population and only 16 percent of the public housing.

Most metropolitan sections of the country posess a variety of organizations whose voices are raised on behalf of low-income housing problems, such as minority, civic, charitable and community and neighborhood action groups. Rural areas have no groups paying regular concern to their housing needs and issues.

There are a number of additional glaring inequities between rural and urban housing policies. For example, the urban renewal program has been providing land acquisition and development writedowns for urban housing since 1949. No such federally-funded land writedown program exists for rural areas. The Federal Housing Administration Section 236 program, a multi-family interest subsidy program, has rent

Gordon Cavanaugh is executive director of the Housing Assistance Council and former director of housing for the city of Philadelphia. The non-profit, OEO funded council provides assistance and interest-free loans to organizations and state and local agencies developing housing for low-income rural people. His highly urban housing experience provided Mr. Cavanaugh with unusual perspective on the rural scene.

Top left: Haymond, Ky., children going home from school. Middle photo: Near Vingstree, S.C., 14-15 people live in this home which has had three fires in past year. Top right and bottom photos are courtesy of Douglas W. Price, Division of State Planning and Community Affairs, Richmond, Va.

supplements attached to a portion of its units, so lower income families can be served. The Farmers Home Section 515 program, also a multifamily interest subsidy program, has no rent supplements. Finally, urban areas have had a home rehabilitation grant program (Section 115) to aid the poor and the elderly, while rural areas have had none. Such a grant program is authorized in legislation, but Congress has consistently refused to fund it.

While the nation lacks a comprehensive policy for the relative development of urban, suburban, and rural areas, there is considerable effort in planning for the future in metropolitan areas and cities. No comparable efforts exist for rural areas.

Even though the Department of Housing and Urban Development is the cabinet-level department entrusted with our national housing and community development programs, its efforts and resources are aimed almost exclusively at urban and metropolitan sectors and, consequently, the major national effort in these programs does not reach rural areas.

The Framers Home Administration does provide nousing solely in rural areas. The problem with Farmers Home programs, however, is that they rarely serve the very poor. In fiscal 1971, only 11.5 percent of all Section 502 homeownership interest-subsidy loans, the largest single loan program administered by FmHA, went to families with unadjusted incomes below $4,000.

The only Farmers Home program designed primarily to serve the very poor is the Farm Labor Housing Grant Program. But since its inception, appropriations for this program have amounted to only $2.5 million per year. (Last year's increase to $3.5 million was impounded.) Realistically, then, Farmers Home is not a low-income housing agency, in the sense that it is meant to serve the approximately 12 million poverty-level people living in non-metropolitan areas.

Several recent events will have a direct bearing on low-income housing for rural areas, making an already impossible situation worse and further accenting the anti-rural bias in housing. A "moratorium" on federal housing subsidies was imposed on January 5, and will be felt acutely in rural areas. Impact of the stoppage will be immediate because, unlike HUD, Farmers Home has no "pipeline" system to sustain housing production for the duration of the freeze.

The Administration's decision to disband the Office of Economic Opportunity and turn over fiscal support of community action and other programs to local option could have an even more disastrous effect. In many rural areas, OEO-supported housing development agencies are the only bodies endeavoring to deliver low-income housing. This and the housing subsidy freeze conspire to strangle much of what housing effort has begun to develop in rural areas.

The move to revenue sharing and special revenue sharing for community and rural development, and the concomitant distribution of responsibility to state and sub-state levels of government are a mixed bay of potential dangers and benefits. The danger is that once again rural areas, with few strong voices raised in their behalf as state and local policy is being written and funds allocated, may be caught short and the deprivation continued.

The potential benefits lie in the emerging roles for state and local governments in low-income housing delivery. States are evidencing increasing involvement in low-income housing, demonstrated most noticeably in the creation of state housing offices, departments of community affairs, state housing authorities, state housing finance agencies, state-related housing development corporations, and a quest for guidance in low-income housing matters generally.

In our increasingly urbanizing society, rural areas begin at a disadvantage. Handicapped at the outset in efforts to better the quality of life, many factors have conspired to keep them in a second-class status. Whether or not a change will come about as the result of new policies and programs remains to be seen. But that will happen only when all levels of government recognize low-income housing and particularly low-income rural housing as a major priority.

SITUATION SURVEY

A

Question List for Projects, Groups or Individuals

Contemplating a Low-Income Housing Program

The following list of questions was designed to aid people attempting to grapple with the low-income housing problem at the local level. By answering these questions, which are not all inclusive, we hope that local groups can better define the nature of the problem and identify potential sources of help. The list also gives some of the sources for information which can be tapped.

I. General Information About Community

1. What is the population of the community? (U. S. Census reports, usually available at college and public libraries)

2. What is per capita income of community? (U. S. Census reports)

3. What percent of population falls into low-income group? (U. S. Census reports)

4. What is per capita income of this group? (U. S. Census reports)

5. What is distribution of population by age? (U. S. Census reports)

6. What is distribution of low-income population by age? (U. S. Census report)

B 1. What are the major means of employment in the community? (Chamber of Commerce, Census reports, State Employment Service, local OEO agencies)

2. What employment is available to the low-income population? (Chamber of Commerce, U. S. Labor Department, State Employment Service, local OEO agencies)

3. What is the unemployment rate? (U. S. Labor Department, State Employment Service)

4. Is the community a center for economic and industrial growth? (Chamber of Commerce, local government and local OEO agencies)

5. How many people receive welfare assistance? (local Department of Social Services)

6. How many people draw Social Security benefits? (local office of Social Security Administration)

C 1. Is the community incorporated? (Mayor's office, County Commissioner's office, etc.)

2. What is the form of government for the community?

3. Does the community lie within the jurisdiction of planning commissions, economic development districts, Model Cities, water control boards, etc.? (office of local government)

4. Does the community have zoning and building codes? (office of local government, local Health Department)

5. Does the community have water and waste disposal systems? (local Health Department, office of local government)

6. What is the formula for assessing property values and what is the cost per thousand dollars for property taxes in the area? (assessor's office)

7. What is the cost of fire and hazard insurance of housing? (insurance agencies)

II. Current Housing Situation

A 1. What is the general level of construction activity by the housing industry in the community? (Chamber of Commerce, office of local government, local Federal Housing Administration Insuring Office)

2. How many single and multi-family units were built over the past year? (building permits on file with local government, local Federal Housing Administration Insuring Office)

3. What do new, contractor-built, single family units cost on the open market? (real estate agencies, want-ads, building permits, local Federal Housing Administration Insuring Office)

4. What is the supply (vacancy rate) condition and price range of rental housing? (U. S. Post Office, real estate agencies, want-ads, local Federal Housing Administration Insuring Office)

5. What is the supply (vacancy rate) condition and price range of an existing single family dwelling? (U. S. Post Office, real estate agencies, want-ads, local Federal Housing Administration Insuring Office)

B 1. What is the availability and cost of land (developed and undeveloped lots and parcels)? (real estate agencies, tax assessor's office)

2. What financing through banks, savings and loans, and other private institutions is available (interim and permanent financing?) (banks, savings and loans, FmHA, local Federal Housing Administration Insuring Office)

3. What is availability of building suppliers and are their prices generally competitive? (yellow pages, FmHA)

C What low-income housing activity has there been and what are the resources available?

1. FmHA (county and state offices)

a. How active has FmHA been in providing loans to low-income people?

b. Which programs (502, 504, 515, etc.) has been utilized and how many loans under each program were made during the past year?

c. What is the average loan amount for Section 502 homeownership?

d. Has FmHA made water and sewer grants and loans and in what amounts?

e. Has FmHA made comprehensive planning grants, recreation loans, conservation loans and grants?

2. Federal Housing Administration--same questions as 1. a, b, and c. (local FHA Insuring Office)

3. Public Housing

   a. Is there a Public Housing Authority in the community? How many units does it operate and under which program (conventional, Turnkey I, II, and III, Section 23 leasing)? (local office of government, local housing authority)

   b. Does the Public Housing Authority have plans for additional units? How many units, under which program and when? (local housing authority)

   c. What is the average cost per month to tenants of public housing units? (local housing authority)

   d. What is the vacancy rate and/or how long is the waiting list for occupancy of units? (local housing authority)

4. HUD

   a. Has HUD made a comprehensive planning grant (701) to the community? (office of local government, HUD area office)

   b. Are there Urban Renewal, Model Cities, or Neighborhood development funds in the community? (office of local government, HUD area office)

   c. Have community facilities grants been made to the community? Water and sewage grants? (office of local government, HUD area office)

   d. Is there a Concentrated Code Enforcement program in the community? If so, how many Section 115 loans and Section 312 grants have been made? (office of local government, HUD area office)

5. Other

a. Does the state have any housing programs and to what extent have they been utilized? (State Office of Community Affairs,or equivalent, local OEO agencies)

b. What other groups (non-profits, universities, etc.) are involved in low-income housing, what have they accomplished and what resources have they used? (local OEO agencies, local office of government)

D 1. What are the housing conditions of the low-income population? (U. S. Census reports, local government, regional planning commissions, local OEO agencies)

2. How many low-income families are homeowners and what is the general condition of their housing? (U. S. Census reports, local government, regional planning commissions, local OEO agencies)

3. How many low-income families are renters and what is the general condition of their housing? (U. S. Census reports, local government, planning commissions, local OEO agencies)

4. What problems do low-income families encounter in obtaining decent, adequate housing (racial, economic discrimination, inadequate supply, inadequate credit, etc.)? (Human Rights Commissions, local OEO agencies)

5. What percent of housing is substandard, dilapidated, overcrowded in community? (U. S. Census reports, local government, regional planning commissions, local OEO agencies

National Rural Housing Conference
Background Paper No. 12

INDIAN HOUSING

Clay Cochran
Rural Housing Alliance
1346 Connecticut Avenue, N. W.
Washington, D. C.

A note from the part-author:

I am not proud of this paper, but I was not scheduled to write it. Somebody else was. Late in the day when other resources had failed to produce an adequate paper on Indian housing, I undertook to appeal to some of the BIA people for some data and opinions and tried to put together at least some figures and viewpoints. But the job was done hurriedly and it is a pretty poor scene. Sorry about that.

Clay Cochran

INDIAN HOUSING

Total Indian Population

The latest estimates from the Bureau of Indian Affairs indicate that there are somewhere between 660,000 and 710,000 Indian people in the United States. Of these about 460,000 live on reservation or trust lands. In other words, between 65 and 70 percent of the total are on reservations, the others scattered in off-reservation areas.

Indian Housing Is Poorest

The housing of Indians and Alaskan natives are reported to be the worst of any minority group in the nation. This is certainly true of reservation housing, and although data are scarce there is no reason to believe that the housing of off-reservation Indians is much better, if at all.

Of the 91,000 families on reservations (no family data on off-reservation population), including a total of 325,000 persons, the number living in inadequate housing is estimated at 65,000 or 71 percent of the reservation population. (The President's Advisory Committee on Rural Poverty, in *The People Left Behind*, estimates the total at more than 75 percent.)

Based on a 1968 survey, BIA report that on reservations there are 55,000 substandard units, only 19,000 of which are

worth renovating, leaving a replacement need of 36,000 plus the need for additional housing for 13,000 families which are doubled up in existing units. On these figures, BIA estimated the need for 49,000 units of new housing.

Prior to 1961, virtually no effort was made to improve housing conditions for Indians and Alaskan natives. For the six-year period from fiscal 1963 through 1968, 6,086 new houses were constructed by various means, about 2,700 utilizing Housing Assistance agency funds. This was an average about a thousand houses a year. Actual annual construction figures are apparently not available.[1/]

The following quoted excerpts from a memorandum prepared by a BIA staffmember apparently sums up the BIA position.

"Approximately six years ago the BIA ade the first full scale effort to provide housing for poor Indians through the help of Federal programs. Combining overseas experience and applying this to the rather unique reservation status of Indians, a self-help or mutual-aid technique was molded to fit the Indian situation.[2/] The Housing Assistance

---

1/ Incredible!

2/ [HAA finance remains but self help and mutual aid are down the drain. CLC]

Administration (HAA) program was selected as the vehicle to finance this large scale effort to build Indian houses because this one program subsidized the capital cost as well as the interest cost thereby making the greater mass of low-income Indians eligible for decent housing. Production is expected to accelerate in the next few years because of turnkey development programs, and specially the Turnkey III approach.[3/]

"The principal emphasis in attempting to improve Indian housing continues to be that of helping Indians obtain assistance under federal housing programs administered by the Department of Housing and Urban Development (HUD), specially those under the HAA. Under agreements between the BIA and the HAA, tribal governments and Indian housing authorities are assisted in developing and managing housing programs until they have the experience and staff to operate on their own.

"Three types of public housing programs are in use on Indian reservations - conventional low-rent, mutual-help and Turnkey III. In each of these programs, the local Indian housing authority and HUD enter into a financial assistance contract (called "Annual Contributions Contract") providing for HUD financial assistance for the development and operation

---

3/ See Table 1

of housing at rents which are based on the low income occupants' ability to pay.

"The conventional low-rent and Turnkey programs operate the same in Indian and non-Indian communities. The local housing authority undertakes (with HUD approval of plans, specifications, and costs) the development of housing by contracting with a private developer[4/] or, in some cases, an Indian housing development enterprise. In conventional low-rent housing, the dwellings are rented to low income families with HUD's financial assistance payments being made over the 40 year period during which the development cost of the project (financed by the local housing authority's sale of bonds to private investors) is retired. In Turnkey III projects the dwellings are rented for a 25-year period during which the occupants can earn the right to own their dwelling after the 25 years by performing their own maintenance.

"The mutual-help program was devised by the HAA in cooperation with the BIA to meet the needs of very low income

---

4/ [The President's Advisory Commission on Rural Poverty charged that the manner in which wage determinations are made by the Department of Labor (under the Bacon-Davis Act) raised the cost of Indian housing done by contract by as much as 25 percent (see *The People Left Behind*, page 100). How much of the payroll of private contractors on reservations goes to Indian residents is not known. CLC]

Indians who desired home ownership rather than conventional low-rent housing. This program predates the Trunkey III homeownership program. In the mutual-help program, HUD provides the Indian housing authorities with financial assistance for the cost of building materials and specialized labor. The participating Indian families donate their own labor as a down payment on a new home and perform their own maintenance to permit a reduction in the monthly payment for the dwelling.[5/]

"Indian tribes have begun participating in other HUD programs such as Section 221(d)(3), Below Market Interest Rate;[6/] and the Section 235, Interest Subsidy Programs. In addition, it is estimated that about 1,000 units per year are constructed on Indian lands through conventional housing programs such as those available through the Veterans Administration, the Federal Housing Administration and the Farmers Home Administration and through tribal credit programs.

"In addition to HUD programs, since fiscal year 1964, the BIA has had a small program mainly devoted to Home Improvement. New homes are built, however, in special situations

---

5/ [As previously noted, however, self-help housing was severely cut back in 1968 and is being eliminated this year. CLC]

6/ [But, no such construction scheduled through Fiscal 1969. CLC]

where no other program will meet the need, i.e., extremely isolated areas or reservations where only a very small number of homes are needed. This program, in terms of dollars in relation to the need, is very small.[7/] Nevertheless, from the beginning of the program through December 31, 1968, approximately 700 new homes have been provided and some 2,300 existing homes have been repaired."

New Housing Legislation for Indians?

BIA housing officials do not feel restrained by existing housing legislation and assert that "present legislation is an adequate framework within which to work." There is concern over whether the appropriations for BIA, the Indian Health Service and HAA will be adequate to enable them to carry out the projected program.

The uneasiness on the part of outsiders that Indians should not be bound largely to HAA's programs (even though

---

7/ [According to recent BIA figures, the following funds have been available for the HI program: $1 million each in FY'66 and FY'67, $3 million in FY'68, and $3.5 million in FY'69, for a total of $8.5 million utilized in connection with 3,178 units. CLC]

altered in to make ownership possible after 17 to 25 years) does not seem to disturb BIA. Indeed, the precipitous abandonment of mutual help, raises questions as to how important individual ownership is versus the "numbers game" which all housing agencies seem to learn (or have to learn?) to play.8/

There are serious inequities in housing laws relating to Indian people on reservations. Example: Farmers Home Administration which would be the logical source of credit, other than HAA, cannot lend money to most Indian families because the law requires that FmHA lend for housing only on property where there is clear title in the borrower. Most Indians can secure nothing better than a long term lease on tribal land.

This restriction and all other restrictions in housing laws which discriminate against Indian borrowers should be eliminated. It was by force of arms that Indians were herded on to reservations, and it is by law that their rights are circumscribed

---

8/ Self help was apparently roundly damned by the head of the Housing Assistance Administration, ostensibly on the grounds that it was too slow. There were other reports on why self-help was less popular than contractor-built housing, but the nature of these reports will be left to the imagination of the reader. One thing does appear to be clear: Self-help for Indians was done in by HAA in favor of contractor-built housing, and it is very doubtful that Indians had much to say about it.

on reservations. It would seem simple justice to make minor alterations in existing housing laws to offset reservation disadvantage on such things as the FmHA restrictions. "The law is a ass" to the Indians.

BIA's Present Plans For Solving The Indian Housing Problem On Reservations

BIA's current plans for eliminating indecent housing on Indian reservations are set forth in statistical form in Table 1, page 10. The plan is that Housing Assistance (rental/ultimate ownership) units started will rise sharply from the average of 451 per year, 1963-68, to 3500 per year in the current fiscal year and average 6,000 per year from Fiscal 1970 through 1976.

BIA plans to construct 2,650 units in the 1969-76 period from its own funds, and it is relying on the construction of another 8,000 units by private and other sources of credit from 1970 to 1976.

BIA's plans rest on its assumption that the completion of about 56,200 units for the 1969-76 period plus the rehabilitation of 19,400 units would solve the Indian housing problem on reservations. But, on the basis of its own figures, this would not be the case. BIA expects the number of households to increase by some 9,500 in the meantime and when one adds this

to the already existing need for 68,400 units, the total rises to 78,000. The planned addition of 76,600 units (new construction and renovated units) falls short by 1,400.

Off-reservation Indian Housing Program

Off-reservation Indians, generally, find themselves in the same poor housing that other low income families do. There is nothing which can legitimately be called an off-reservation Indian housing program. In 1968 the first and only housing "program" for non-reservation Indians was enacted and funded for $500,000. In that year a total of 85 grants were made to individual Indians, averaging $875 each, to assist them in purchasing homes. During the first six months of 1969, 62 more Indians have received grants averaging $958 per grant.[9/]

Needless to say, this off-reservation housing program is so modest as to hardly merit mention.

[9/] This means that BIA has only utilized about $131,000, or just over one-fourth of the funds provided it.

'a legal right to a home . . .'

RESOLUTIONS OF THE SECOND NATIONAL RURAL HOUSING CONFERENCE

Washington, D.C.
November 30, 1972

INDEX OF RESOLUTIONS

BASIC PRINCIPLES 4

People have a right to decent shelter
Decent housing is a public responsibility
America has sufficient resources to provide housing
Citizens' rights are national

PRESENT HOUSING SUBSIDY PROGRAMS 6

The focus should be on people
Direct subsidy programs must be expanded
Subsidies should be provided according to need
Operating subsidies needed
Housing allowances no panacea
Housing problem is political, not technical

LAND FOR RURAL HOUSING 7

Federal land use policies needed
Restitution of stolen land
Land profits should be taxed
Rural relocation assistance needed
Public powers of eminent domain
Property tax reform
Restrictive land use controls opposed
Expansion of community facilities programs needed

NEW PROGRAMS TO BUILD AND PAY FOR HOUSING 9

Total housing costs must be considered
Emergency Rural Housing Administration
Deferred payment loans
People should plan and manage their own programs
Rural development bank
Comprehensive national housing program

FARMERS HOME ADMINISTRATION 10

Expanded FmHA program needed
End committee review of housing loans
More funds needed for home repair grants
Changes needed in ability-to-pay determination
New assistance needed for self-help housing
People should advise
Minority employment, service needs improvement

FARM LABOR HOUSING 13

Alternative tenants for farm labor housing
Non-farmer sponsorship
516 grant funds should be released
Reopen FmHA's doors

OFFICE OF ECONOMIC OPPORTUNITY 15

OEO rural housing policy needed
OEO to serve as advocate of poor
Increased funding for rural housing
Release proposed housing strategy paper
National OEO housing office
OEO should implement housing mandates
Alternative to Community Action Programs
Maintain national farm workers program
Maintenance of OEO effort urged
Transfer of OEO functions opposed

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT 17

Reorganization of guidelines
Strengthen public housing program
Self-help and public housing
Public housing goals
Alternative to public housing
Expand public housing authority
Establish Indian desk
Special provisions for Colville tribe
HUD operations in rural areas

STATE RESPONSIBILITIES, REVENUE SHARING, A-95 REVIEW 18

States to assume responsibilities
State housing codes
State zoning appeals
Homestead exemption
State legislature
State role limited
Revenue sharing
Block grants challenged
Federal sanctions proposed
A-95 review process

HOUSING DEVELOPMENT AND LIMITED DIVIDEND CORPORATIONS 20

Support for HDCs
Limited dividends opposed

HOUSING MANAGEMENT 20

GENERAL 21

BASIC PRINCIPLES

The people's right to decent housing

Adopted November 30, 1972

In 1949 Congress declared the policy of the United States to be to provide "a decent home and a suitable living environment for every American family." Now, nearly a quarter of a century later, we still have not seriously begun to carry out this policy in the rural areas of the United States.

Why? First, the policy was not really intended to be carried out. The programs embodied in the 1949 and subsequent housing acts were too small in scale to more than scratch the surface of the problem. It was not until 1968 that we had our first set of numerical housing goals. These were much too limited to deal with the problem and, moreover, were urban-oriented.

Second, not enough money has been appropriated to deal with the housing problems of the poor, whether in rural or urban areas.

Third, the basic focus of housing policy has been on urban rather than rural problems. Although nearly 60 per cent of the nation's substandard housing, and nearly half of the nation's "officially designated" poor * are in rural areas, there has been little awareness of rural needs.

Fourth, decision-making on housing projects and programs has either been left to the private sector or balkanized among some 38,000 counties, townships and municipalities.

Fifth, we have developed no institutional capacity to meet rural housing needs. In contrast, we have developed institutional capacities to frustrate meeting these needs at every step: provision of money, access to land, access to community facilities, etc. Only if **all** of the public and private institutions relating to housing and community development are positive can housing be provided. If any one of them is negative, efforts to provide decent housing will generally be frustrated.

---

* These are the poor as defined by the Office of Economic Opportunity. The income needed to escape from "poverty" is determined by multiplying the cost of a starvation diet by three. It is a totally inadequate measure of housing or other basic needs.

The Second National Rural Housing Conference believes that:

The Second National Rural Housing Conference believes that:

People have a right to decent housing where they want to live, at costs they can afford.

People have a right to stay on the land or in small towns, not to be forced out.

People have a right to return to rural areas or small towns from the cities and suburbs if they wish to.

People have a right to access to land for housing and other needs and for access to money if necessary to meet those needs.

To implement these rights, housing and development policies must provide real choices and real opportunities. This requires a national capacity to intervene to see that housing is provided. The federal government must be prepared to finance housing and community needs directly or through responsive local institutions. It also requires national planning for population growth and distribution. No new legislative trail-blazing is required to establish national policies. For example, they exist already, if only by default, in the federal highway system which has molded development in the twentieth century much as the railroads molded development in the nineteenth century. New legislation and programs are needed, however, to make our national policies responsive to the human needs of all sectors of our population.

People have a right to decent shelter

1. Every citizen of this nation should have a recognized and enforceable legal right to a home he or she can afford. The federal government has the basic responsibility for defining, enforcing, and satisfying this right. Moreover, we must meet the most critical needs first: those of low income Americans. Current estimates indicate that, in numerical terms, meeting this objective will require at least 13 million additional subsidized units. At least half of these should be in rural areas or small towns. At least sixty per cent should be for low income families. We deplore the present trend to shift housing subsidies away from building for low income people.

Decent housing is a public responsibility

2. We must resolve that solution of our housing problems in the 1970's is as important as the effort to place man on the moon in the 1960's. Therefore, we must commit the necessary resources, funds, and energy to achieving this goal. When the private market fails to furnish housing, there is no moral or legal obligation on us to bribe the systems into service. We must cut the umbilical cord which has bound public needs to private effort and, to the extent necessary, empower the federal government directly to finance and provide housing to meet critical needs, especially those of poor, minority, and rural families.

America has sufficient resources to provide housing

3. We must stop looking for cheap, easy, and painless ways of dealing with our housing crisis. Instead, we must recognize that solving our housing problems will require money, resources, and effort. This we can afford. Indeed, we can do no less if we are to honor our traditional commitment to the right to "life, liberty, and the pursuit of happiness."

4. We must reorder our national priorities. A society which spends four times as much on the private purchase of jewelry and watches ($4.0 billion in 1970) as it does on publicly subsidized housing for low income families has a tragically distorted sense of values. A society which predicates its defense spending on the possibility of fighting major wars in both Europe and Asia, while making the war on poverty hostage to budget ceilings and avoiding inflation or tax increases, dooms its poor to perpetual bondage.

5. Poor people and minorities should have the same choices enjoyed by other Americans. People are entitled to choose the location of their homes without being deprived of minimum facilities and transportation. In addition, they should have the right to decide whether they want home ownership, individual or cooperative or rental quarters.

6. People should plan and manage their own programs. Democratic participation in control of housing built and operated with public funds is not a luxury, it is a necessary means of protecting a free society. Persons living in publicly owned or subsidized housing should have genuine decision-making powers in the planning, control and management of these projects.

7. The focus should be on people not places. Government policies and programs have historically aided and abetted private efforts to force people off the land. People should not be compelled to move to cities to get shelter, running water, or sanitation. Public funds and publicly supported facilities available to metropolitan areas should also be available to small towns and rural areas. Equity in services and funding would do more to revitalize rural America than any number of artificially stimulated "growth centers."

Citizens' rights are national

8. Where local or state governments fail to act, the federal government must intervene, both to provide housing and to protect civil rights. It is no accident that the housing conditions of rural blacks and other minority Americans are shockingly worse than those of whites: it is the direct result of centuries of discrimination. We call for an end to federal laws and policies, including local government approvals of subsidized housing, which allow unresponsive state or local governments to interpose their powers to block residents of their areas from receiving the benefits of federal programs. Need, not the initiative or acquiescence of local government should be the primary consideration in the distribution of housing subsidies. The federal government must have and use the power to override local government and assume control where discrimination on the basis of income or race can be demonstrated or where it can be demonstrated that local entities are not meeting housing needs. If a citizen can be taxed, policed, and drafted into the military, those responsibilities and duties must be balanced by equivalent rights to food and security and shelter.

PRESENT HOUSING SUBSIDY PROGRAMS

The focus should be on people

9. Whereas all federally funded housing programs (FHA 235, 236, Conventional, etc. - FmHA 502, 501, etc.) are and have historically been for the primary protection of banking, management and developers, and whereas the provision of housing for people has been only of a secondary nature, now therefore we resolve that it is in the interest of the United States to reverse these priorities and consider its people as its greatest resource and thereby develop housing programs that provide for its people first and always foremost.

10. We call for the abandonment of indirect and intolerably expensive housing subsidies, such as interest credits and tax rip-offs like limited dividend subsidies. Given the tremendous need for public funds in solving the housing problem of low income people, it is essential that the cost be as low as possible. The federal government can borrow money and lend it more cheaply than it can subsidize others to make credit available. But the present mythology which makes all public credit look like a permanent loss has been utilized to block direct federal lending. The funds to finance the construction or rehabilitation and operation of subsidized housing should come out of the Treasury and be applied as directly as possible.

Direct subsidy programs must be expanded

11. We deplore the fact that the unsubsidized private sector effectively serves only the richest one fifth of the people in the country. Only they can afford the vast bulk of new sales or rental housing now being built. Except for the existing stock, efforts to meet the rest of our housing needs are dependent on limited dividend corporations, which provide inordinate tax shelter benefits for the rich; nonprofit housing, with shallow subsidies, inadequate resources, and difficult access to land and money; or public housing, which depends on the approval and support of local governments. Within these programs, most of the presently available overt subsidy funds are for moderate-income housing. Only public housing and rent supplement housing with below-market interest rates can truly serve low income people. Yet these programs to meet our most critical needs are but a small and diminishing proportion of all subsidized housing.

Subsidies should be provided according to need

12. We deplore the fact that 55 per cent of all housing subsidies goes to families with incomes above $10,000. Most of this is in the form of tax subsidies which are subject neither to public scrutiny nor annual Congressional review. If the affluent of this country are to receive housing subsidies as a matter of right, so, too, should those whose needs are far greater.

We favor legislation which provides a mechanism to devise and implement a formula which includes and accounts for all direct and indirect housing subsidies by income category, and which then distributes these subsidies on the basis of need or at least on an equal basis per capita. Such a system would explain and educate at the same time that it provides a fairly automatic remedy. It's the same thing for low-income citizens that the concept of "parity" was for farmers.

Operating subsidies needed

13. We deplore the fact that there are almost no operating subsidies available in our panoply of housing programs. Yet housing operation, including taxes, is as large or larger proportion of total housing cost as the financing of the construction itself. Without operating subsidies, related both to income and to the cost of providing decent shelter, it is impossible to meet the housing needs of the poor.

Housing allowances no panacea

14. We deplore any tendency to look to housing allowances without the safeguards of rent control, strict code enforcement, tenants rights and capital

funds for needed rehabilitation as a substitute for housing production, particularly in rural areas. Housing allowance experiments or programs must not be allowed to shift the focus away from meeting basic critical needs for housing, for income maintenance, and for employment programs.

Housing problem is political, not technical

15. We deplore the trend to lower standards of space or quality because of the effort to reduce housing costs to meet present subsidies. Too often, the emphasis on technology leads to proposals for experimenting on the poor, and to a futile search for substitutes for the programs needed to provide adequate housing in both rural or urban America.

The search for technological progress cannot be allowed to obscure the need for capital and operating subsidies to meet the housing needs of low income families.

LAND FOR RURAL HOUSING

Federal land use policies needed

16. The federal government must develop and implement policies or programs to assure that land is treated as a limited and precious natural resource. These policies must assure that use of land is based on the following priorities:

1) The social needs of all of the citizenry.
2) The basic right to hold or use land for shelter by every citizen.
3) Ecological considerations
4) Economic concerns

Government should have the power to ensure the intelligent use and preservation of land and should not allow land owners to irrevocably destroy something on which all human life depends. For example, there is no right to wipe out a forest without conserving by replacement, or to gut by strip mining without making restoration of the land.

Restitution of stolen land

17. Restitution should be made to the rightful owners of land which has been illegally seized, held, or used in violation of the law. Millions of acres have been wrested from native Americans and other minorities, in violation of their treaty and constitutional rights. Additional millions of acres are owned by railroads, in violation of their original land grant provisions. Acreage and residence restrictions in the Reclamation Act of 1902 have become worse than a joke: their flouting has been a major factor in the growth of agribusiness.

Land profits should be taxed

18. Effective measures are needed to counter the present concentration of ownership or control of open land in the hands of agribusiness, giant corporations, and wealthy individuals. We must explore all possible avenues of "buying America back."

Federal and state governments should adopt rural land banking programs to purchase land in desirable locations from large land owners, write down the cost, and lease it as needed to individuals, cooperatives, or community based housing development organizations. Such programs could be financed through taxing the unearned increment on land and putting these funds into a land banking trust fund.

Rural relocation assistance needed

19. All people displaced from rural areas—whether by public or private action—should be entitled to relocation and resettlement assistance, including provision of decent replacement housing and payment of all the costs of moving. The social costs of displacement should be the responsibility of the owner.

Public powers of eminent domain

20. Federal and state governments should use their powers of eminent domain to obtain land for housing where it is otherwise unavailable. Individuals denied access to land should have the right to initiate public action to obtain it through the use of these powers, but not at the expense of the poor.

Existing federal and state holding should be made available for housing whenever a request for land for low or moderate income housing development is made, the burden of proof should rest on the government agency seeking to hold the land or put it to another use. Otherwise, the land should be released.

21. We call for an end to federal subsidization of land speculation through the tax system. The low federal tax rate on capital gains—an estimated tax subsidy of almost $10 billion this year—should be abolished.

Property tax reform

22. We call for reduction of exorbitant residential property taxes and elimination of those property tax benefits which now encourage the unproductive use of land by enhancing the profits of land speculation. Not only is the property tax the major source of local governmental revenue, accounting in 1970 for 85 per cent of all local tax revenue, but when levied on human shelter it is one of the most regressive taxes ever devised and one of the largest components of housing cost for low income owners. Moreover, the need for tax revenue to finance education and other services tends to force land into development of high tax ratables instead of moderate cost or subsidized housing.

As a first step, we recommend that tax and other subsidy laws be revised to favor small rather than large holdings. For example, the tax could be made more progressive by increasing the rate in proportion to the value of the land. Where local governments, under the control of large land holders, consistently or flagrantly undervalue large holdings, a federal or state surtax should be imposed.

We further urge the adoption of a "homestead exemption" for modest homes which would permit a property tax exemption for all homes valued at less than the national median value, (currently $17,000).

Restrictive land use controls opposed

23. We condemn the utilization by local governments of land use controls and other regulatory controls, (such as "slow growth," or failure to provide adequate municipal facilities), to exclude or discriminate against low income and minority groups.

We call upon the federal government to institute planning and housing policies, in conjunction with federal funding methods, to insure the equitable use of land and access to housing in all locations by low and moderate income families.

We need a strong national growth and land use policy and programs which will restore an equitable rural-urban balance, prevent the urban concentration and suburban sprawl afflicting the nation today and bring about the revitalization of rural areas. Such programs must protect the rights of the poor.

We call upon the states and the federal government to institute over-ride appeals, planning, financing, and administrative mechanisms to overcome inequitable and unilateral local exclusionary and use controls. Finally, we call for policies which guarantee that housing needs will be considered and planned for on a regional basis, with fair share planning / financing of land use and housing.

Expansion of community facilities programs needed

24. We need new institutions and programs, backed by adequate funds, so that needed community facilities can and will be developed to serve all people, regardless of location. Much land that is or might be usable lacks the transportation, water and sewer and other community facilities necessary to make it suitable or desirable for housing. Programs to provide these facilities generally do not function in the areas of greatest need.

To achieve this goal, we recommend that the current community facilities program of the Farmers Home Administration be increased, with adequate funds for administration. Need, not arbitrary appropriations or authorizations, should determine program level. In addition to water and sewer facilities, the program should be expanded to provide loans and grants for the development of neighborhood centers by locally controlled community associations for clinics, libraries, fire stations, and other needs. Community associations should be able to obtain funds directly wherever local governments are not responsive to demonstrable local needs.

The Community Facilities Program, if properly funded, could meet an essential need for rural areas and small towns. What possible system of national priorities in the last third of the twentieth century could allocate a program so vital to so low a level?

We strongly condemn the Administration's freezing and threatening to freeze the already inadequate grants for water and sewers while continuing to make expansive and optimistic statements regarding rural development and safeguarding the environment.

NEW PROGRAMS TO BUILD AND PAY FOR HOUSING

Total housing costs must be considered

25. We call for housing finance and subsidy programs designed to bring satisfactory housing within the means of everyone, with a choice of location and tenure. In order to meet full needs, the following four factors must be considered: (1) the cost of new or rebuilt housing; (2) the cost of adequate maintenance or rehabilitation of existing housing; (3) operating costs, including insurance and utilities; and (4) taxes.

Emergency Rural Housing Administration

26. We urge immediate establishment of an Emergency Rural Housing Administration the single aim of which will be to provide minimum adequate housing, clean water, and sanitary facilities to the worst-housed of the nation's rural areas and to do so within five years. The agency should be directed to ascertain the need for such housing in all rural areas, to work with other agencies—state, local, public and private—in developing a five-year plan for meeting those needs; and to act directly to insure that those not being served by other agencies and programs are served.

Deferred payment loans

27. We urge the use of capital subsidies to provide genuine opportunities for home ownership. We recommend that this be done through enactment of a loan program which would allow, where low family income required, that up to 50 per cent of the loan be made an interest free, non-amortized second trust, on which no payments would be made before retirement of the interest-bearing, amortized first trust.

Present federal housing loan programs, even with interest credits or subsidies, cannot make decent housing available for most of those whose incomes are below the poverty level. Deferment of repayment of a portion of the loans will make possible home ownership for a large number of those in greatest need. Protection against "wind-fall profits" could be assured by providing that the second trust would become interest-bearing and payable upon transfer of the title to one ineligible for the benefits.

People should plan and manage their own programs

28. In order to provide for consumer participation and self-determination, we recommend an experimental program, modeled on the Rural Electrification Administration, which would provide that whenever a specified number of households or percentage of an area's population petition for the establishment of a housing development corporation, they must be granted a charter, technical assistance, and access to the full range of subsidies needed to acquire land and build low income housing.

Rural development bank

29. In order to provide sources of credit to meet our housing needs, we urge the creation of a Rural Development Bank as a central financing institution for rural development, including housing. The bank should make direct loans, at low interest rates, for housing, for community facilities and services, and for economic activities to increase income-producing and job opportunities for the rural poor.

Comprehensive national housing program

30. We urge the replacement of our present patchwork of housing subsidies with a comprehensive federal program providing adequate housing assistance for all who cannot obtain safe and decent housing through the private market at a reasonable portion of their income. The

assistance must bridge the full gap between the total costs of providing and operating the housing and the payments which the occupants can afford.

Under this program the federal government should be able to act directly or to provide funds, including grants, to locally based public, cooperative, or nonprofit organizations to build and repair housing and to provide the following services:

1. Assistance for emergencies, such as fires or evictions.
2. Legal services (in cooperation with local legal service units) for landlord-tenant disputes. These services would take advantage of recent court cases which make rent payments predicated on housing condition.
3. Loans and grants for moving expenses, furniture, utility deposits.
4. Services of housing specialists who would act as aggressive advocates and would inventory and utilize community resources to improve housing.
5. Grants for repairs to homes owned by low-income people.
6. Training in whatever skills would be necessary to encourage home improvement: self-help housing organizing, credit counseling, repair and maintenance.

31. With or without such a comprehensive program of housing assistance, we regard certain things as essential to meeting the needs of rural and small town areas.

A special administrative structure, dominated neither by the agri-business interests of the Department of Agriculture nor by the almost-totally-urban-oriented viewpoint of the Department of Housing and Urban Development should be assigned responsibility for rural areas and small towns, including non-metropolitan places of 25,000 and below.

The structure must have a field staff, at least down to the multi-county district level. In no other way can the institutional gap that is an integral part of the housing problem in rural areas be offset. In no other way can the people in need of housing assistance be assured of being adequately reached and served, where they are and when they need it.

That structure should have the responsibility, not on only to provide credit and subsidies, but to act as a catalytic agent in securing the creation and operation of housing delivery systems—local public bodies, nonprofit developers, consumer-directed housing sponsors. It should have the staff and the funds to assure that technical assistance is available to all in housing need and not just to those able to afford it.

FARMERS HOME ADMINISTRATION

Expanded FmHA program needed

32. The major objective of the Farmers Home Administration should be to meet the full housing needs of rural people, including residents of small towns of up to 25,000 people, without discrimination on the basis of race, sex or amount or sources of income. In order to do this, FmHA must have vastly increased funds and staff, and more flexibility in operations. The following specific recommendations are designed to meet this broad objective.

33. FmHA Administration and Appropriations. We recommend that $250 million be appropriated for FmHA administrative expenses in fiscal 1974 to enable the agency to handle the vastly increased workload, particularly in housing and in community facilities, and that its administrative and personnel structure and policies be adapted to give priority to the lowest income families.

Each state office of FmHA should develop specialists, as appropriate, in rental and cooperative housing, land acquisition and development, self-help housing, home repair, and farm labor housing. Such specialists should be used in those activities which will reach the lowest income families. The Farmers Home Administration, at all levels, should seek and support administrative and legislative changes which will make possible not only higher production, but greater services to the poor.

In the absence of increased appropriations for additional staff, the Farmers Home Administration should not take staff time away from the low and moderate income housing programs in order to implement the above moderate housing loan insurance program as provided for in the Rural Development Act of 1972.

34. Expanded Jurisdiction for Farmers Home Administration. We recommend that the authority of Farmers Home Administration to make loans be extended up to towns of 25,000 population. Implicit in this recommendation, however, is the need to accompany any such extension of FmHA's jurisdiction with a commensurate increase in the loan, grant, and administrative funds available to

it, so that its ability to serve its traditional jurisdiction is not thereby jeopardized.

The Congress must recognize that the present service area of FmHA and the unwillingness or inability of HUD / FHA to serve smaller towns and rural areas leave large portions of the countryside with very limited assistance from federal housing programs. This jurisdictional hiatus must be eliminated. Even the present inadequate housing and community development programs are better than nothing, and nothing is what many towns and rural areas are getting.

35. Research Funds for FmHA. We recommend that FmHA be provided with funds for research geared to solve the problems which often hamper or restrict housing developments in rural areas. An example is lack of waste disposal systems which could serve an individual home or a number of homes at a modest initial investment and low maintenance.

One of the reasons for the lack of innovation in rural housing programs is that FmHA has always been tied to "more of the same" and has had only meager access to USDA research funds. While HUD has limited itself to questionable reliance on technology to improve housing stock while devoting little attention to the gaping holes in its credit system, rural programs have had hardly a dime for elementary research and demonstration.

End committee review of housing loans

36. Termination of FmHA County Committee Review of Housing Loans. We commend the new FmHA regulations giving state directors authority to waive county committee use. We recommend that the authority of the Secretary of Agriculture to use county committees as a means of determining eligibility of applicants for FmHA housing loans be completely rescinded.

We recognize the historical origins of the local committee structure adopted by FmHA for the review and processing of farm loans, but can find no justification for the use of such committees to determine eligibility for rural home loans. This procedure waters down both the authority and responsibility of the FmHA county supervisor. The system is outdated and unresponsive and slows up loan processing.

37. Escrow Accounts for Rural Borrowers. We recommend enactment of any necessary legislation to authorize and direct FmHA to establish escrow accounts on behalf of its housing borrowers for the payment of taxes and insurance. The first year's taxes and insurance should be included in the mortgage as part of the closing costs.

More funds needed for home repair grants

38. Home Repair Grants. We recommend that the housing repair grant provisions of Section 504(a) be funded at a level of $25 million for fiscal 1974.

The provisions of Section 504(a) were written with both grants and loans in mind. This program, as well as the one provided by Section 1119 of the Social Security Act, is designed to reach the lowest income families who own their homes. This group, which is usually elderly or disabled, is not mobile and frequently has income of less than $100 a month. The usefulness of the program is very clear, having been demonstrated in eastern Kentucky and in practically every other region of the nation.

The FmHA grant program has been hamstrung since 1964 because of an annual rider on the appropriations bill prohibiting the use of any administrative money to operate the grant program.

G. Home Repair Loans. We recommend that the housing loan provisions of Section 504(a) be funded at a level of $25 million for fiscal 1973 and that the amount and term of years on this loan be increased.

The FmHA home repair loan, now limited to $2,500 ($3,500 when water and sewer is involved), is too costly for the very poor it is intended to serve based on its present 10 year term. The maximum amount should be increased to $4,000 and the term extended to as long as 20 years when necessary and FmHA should be mandated to promote the program (hiring special personnel if necessary) and couple it with available grant and job training programs to extend its usefulness and benefits.

The $1,000 promissory note provision should be increased to $1,500 to cover the cost of sewer, septic, well or toilet facilities. The present amount is inadequate.

Changes needed in ability-to-pay determination

39. Determination of Repayment Ability. We recommend that until more adequate subsidies are available the Farmers Home Administration change its procedures on loan eligibility to make any family eligible for a housing loan where the total costs of loan repayment plus taxes, insurance, and a reasonable maintenance allowance do not exceed the family's housing payments for the average of the three previous years.

We abhor the injustice of a procedure which, in effect, holds that although a family may be living in slum housing and paying a high price for it the family should not be allowed to buy a good house

and pay no more than it pays to the slum landlord.

Poor families very frequently have no alternative but to pay a higher percentage of their budget for housing than appears to be wise. We hold that in the absence of alternatives it is better to pay the same amount for decent home ownership than for slum housing.

Financial ability to repay should be the sole criterion for determining eligibility for a loan and the benefit of any doubts should be given to the borrower.

40. Rural Rental and Cooperative Housing. We recommend that the Rent Supplement Program be extended to programs which are financed directly by FmHA, that the FmHA staff be expanded to enable the agency to actively promote rental and cooperative housing, and that the agency promote the coupling of its rural rental program with the leased public housing program in order to serve low income families. The rent supplement program funding should be increased to meet this need.

We urge that FmHA be given authority to make or insure loans to condominiums.

The two per cent of project costs that FmHA requires rural rental housing sponsors to have on hand for initial operating costs (AMPO) should be included in the amount of the mortgage for non profit groups.

We deplore the move of FmHA to include limited dividend corporations, which primarily provide tax subsidies for the rich, as eligible for rental programs.

New assistance needed for self-help housing

41. Expansion of Self-Help Housing. We recommend that all programs sponsoring self-help housing be greatly expanded. This includes the establishment of self-help programs in the Department of Housing and Urban Development for cities of 10,000 population and above as long as those areas are excluded from service by the Farmers Home Administration. Federal programs should provide sponsor funds, revolving land development funds and varying programs of subsidy through lowered interest rates, postponed amortization of principal repayments, and grants, depending on family income. The guiding principle of such legislation should be that no family in need of decent housing be denied by reason of poverty the right to build its own house under competent supervision.

We applaud the provision of technical assistance funds for self-help housing through FmHA and call for appropriations of the full authorization of $10 million in grant funds for fiscal 1974. We further recommend that the self-help land loan funds be funded at $5 million for fiscal 1974; this money should be made available simultaneously with technical assistance grants.

We call for increased funding of Section 106(a) of the Housing Act, through which HUD can fund self-help administration and technical assistance, in order to fund all valid applications. We recommend a comparable program under FmHA.

People should advise

42. Consumer Advisory Committees. We urge the establishment of Consumer Advisory Committees, elected from the rural poor, at both national and state levels of FmHA. These committees should have access to such program information as they need to fulfill their function of advising officials of consumer needs and necessary program changes. Representatives of the Consumer Advisory Committees should also serve on the already established State Advisory Committees, from which they are currently excluded.

All proposed regulations should be reviewed by the Consumer Advisory Committee prior to publication for comment in the Federal Register. Advisory Committee recommendations, if not accepted, should also be published for wider consideration.

43. Title Insurance. We urge that FmHA be granted and use authority to insure titles to land which is otherwise uninsurable because of remote outstanding claims or encumbrances. In many rural areas, FmHA will not make loans because of remote clouds on title caused by a long line of inheritances. In most cases the chances of an adverse claim against the property appear to be so remote that a safe loan could be made, and the borrower could then obtain a housing loan. Where necessary, FmHA should refinance land contracts and other loans to allow FmHA financing for low-income families.

44. Appeals Procedure. For the first time, in 1972, FmHA adopted procedures for appeal from its decisions. These procedures, however, fall far short of the constitutional requirements of due process. We urge that they be strengthened.

Minority employment, service needs improvement

45. Civil Rights Enforcement and Hiring Practices. We recognize that FmHA has made significant improvements in its service to black and other minority groups and that some gains have been made in employment of women and minority personnel. We believe that progress is far too slow and we call for continued close scrutiny of FmHA (as well as the remainder of the Department of Agriculture and HUD) by all interested groups.

FmHA must begin to appoint and move up more minority assistant county supervisors and increase such employment opportunities in state and national offices, and to redress the white imbalance of the agency. FmHA has been too slow in seeking out minority contractors and in taking advantage of or creating special training resources to provide increased skills.

We urge study and continuing scrutiny of the farm credit institutions on employment and lending, and compliance with the spirit and letter of the requirements for affirmative action under civil rights laws.

46. Loan Processing. FmHA loan processing must be further simplified. One desirable step is authorizing the county supervisor to write checks for closed loans rather than order them from the St. Louis Finance Center. The county supervisor should also be authorized to advance money for options and other preliminary costs to approved borrowers when such actions will expedite the lending process.

47. Political Influence. Whereas it is currently FmHA practice to permit FmHA state directors to be replaced by political appointees, be it resolved by us that the conduct of FmHA business and uniform application of law and regulations would be improved by removing FmHA from the political pork barrel.

48. Designated Attorneys. We oppose the use of "designated attorneys" by FmHA. Families who pay for the services of an attorney in connection with a housing loan should be free to choose that attorney. The present system contributes to political chicanery in the selection of FmHA attorneys and denies the families the right to choose the attorneys for whose services they are paying.

FARM LABOR HOUSING

49. Farm Labor Housing Grant (Section 516) Appropriation. We recommend that the farm labor housing grant provisions of Section 516(a) be funded at a level of at least $250 million, sufficient to meet the current backlog of applications and expand the program to meet farm labor housing needs.

The pitifully inadequate Administration's request for $2.5 million for fiscal 1973 is a disgrace. More than $35 million in applications await FmHA action at this moment, and the appropriation has been exhausted.

50. Grant Implementation (Section 516). We recommend that grants be made at a level of 90 per cent of proposed project costs (as approved by Congress), unless a project submits evidence that local needs can be met using a lesser grant percentage.

FmHA is now implementing a policy of making grants equal to only 40-60 per cent of what projects request; this means funding projects at a level of 30-50 per cent grant (and 70-50 per cent loan) unless radical reductions in size and scale are made. Even if reductions are made, there is no indication from FmHA that the grant will not be reduced also, (i.e., so that no project has more than 30-50 per cent grant funding). Reducing grants increases debt service and substantially increases rents.

Nonprofit, farmworker organizations which seek funding under 514-516 Farm Labor Housing should not be limited to a total development cost of $1,000,000 per project. FmHA does not require this limit of other types of sponsors; therefore, the agency should not require this of Farmworker Sponsors.

51. Operating Subsidy Recommendation. The 514-516 program should have an operating subsidy (similar to the Brooke Amendment and rent supplement). Even with heavy (e.g., 50-90 per cent grant) capital funding, rents are still out of reach of migratory farm workers as well as resident seasonal workers. Taxes, insurance, maintenance, management, and other major operating expenses are not alleviated by capital grants.

Alternative tenants for farm labor housing

52. Off-Season Habitation by Non-Farmworkers—514-516 projects should be allowed to house agriculturally related (e.g., processing, packing) labor and / or any low-income families at times when there are inadequate "domestic farm labor" tenant applications.

It is wasteful for projects tailored to meet the needs of seasonal or migratory workers to sit idle during the off-season. In addition, we must look toward the time when the migratory streams will dissipate, and we will be faced with a declining need for farm labor.

Finally, we must consider that "ex-farm workers" will still need housing though they may

have new jobs. How will this influx into communities be handled if farm-labor housing projects are not adaptable? The provision above will allow us to continue to try to meet the needs of farm labor while facilitating the transition that workers and communities are and will be continuously confronted with.

53. Expansion of "Eligible Tenant" Definition. The definition of "eligible tenants" under 514-516 programs should be expanded from "earn a substantial portion of their income from farm labor" to "earn a protion of their income from farm labor."

In many areas of the country, seasonal farm workers are doing decreasing proportions of "farm" work (but are still in very high demand for seasonal work) and increasing proportions of processing or factory type work. Most farmworkers may only earn 20 per cent through income from farm work. However, they may constitute a majority of the work force. Their needs must be met by domestic farm labor housing legislation.

Non-farmer sponsorship

54. Maintenance of Nonprofit, Non-Farmer Sponsors. FmHA has recommended to nonprofit projects (i.e., WHO, Inc.) that they get farmers to become applicants for farm labor housing. Would FmHA limit or do away with the nonprofit approach, and change to "farmer-applicants"? If they do, they will be contributing to the **problem** not, to its **solution.** The problem is a paternalistic, 19th century, employment situation; farmers **controlling** not only the work but the **lives** of workers.

55. Farmers Home Study of 514-516 Program Under mandate from Congress (H.R. 92-1283), FmHA is doing a study of use of 514-516 by farmers. It has been indicated that the results of this study may be used to justify altering 514-516 so that farmers, individually or as would be eligible to submit proposals for farm labor housing.

Under no circumstances should farmers be eligible applicants for farm labor housing programs. The legislative intents should remain as it is now; projects are not to be used to provide labor for specific farmers. Workers must be allowed to live and work under conditions of their own choosing, without the possibility of their homes being jeopardized by farmers.

In addition, any FmHA study of 514-516 program effectiveness and possible future directions should consult with current applicant projects. This is not being done with the current study. Not consulting with applicant projects is irresponsible and neglectful. Applicant projects have made substantial investments of time, energy and money on the part of thousands of people to do farm labor housing and should be the first to be consulted as experts about farm labor needs and future directions. To not consult applicant projects is to renege on FmHA and legislative intent and commitment to carry out farm labor housing.

516 grant funds should be released

56. Withholding of Funds by Farmers Home Administration. FmHA is currently withholding $400,000 in 516 grant funds. This is enough to fund one project (only 4 are being funded this year). Those funds should be applied toward the appropriate applicant project(s) immediately. There is no excuse for withholding these funds, especially when one considers how pitifully small the total appropriation is ($3.75 million) and the fact that the President's Office of Management and Budget has already impounded $1.25 million (33 per cent) of that appropriation.

57. Recommendation that FmHA Request Release of Funds by OMB. Farmers Home Administration (and USDA) should make a formal request that the Office of Management and Budget release the impounded $1.25 million in 516 grant funds. Until they do, we can only believe that they are not serious about undertaking farm labor housing and about doing their job as mandated by Congress.

The request could be supported by a clear and abundant documentation of need; for instance:

1) The $28 million in grant applications received as of June 30, 1972, when FmHA national office and state offices stopped accepting applications.
2) The $38 million in grant applications as compiled by a national survey under the auspices of the National Rural Housing Coalition (September, 1972).
3) The new authorization by Congress for $150 million in grant funds.

Reopen FmHA's doors

58. FmHA should continue to accept applications. FmHA must reopen its doors. It must again accept and evaluate applications, even if immediate consideration cannot be given to funding new applicants. Applications, especially if they have been evaluated, are the best indicator possible of local need and desire for farm labor housing. They should be the foremost criterion for the level of funding authorized and appropriated by Congress and expended by the President's Office of Management and Budget. It is clear that they

cannot serve as such a criterion if FmHA has refused to accept them and does not know what applicant projects exist.

59. Establishment of Evaluation Criteria. FmHA should jointly (with rural housing organizations) establish specific, written, publicly obtainable criteria by which they evaluate 514-516 proposals. Mr. James Neville, Assistant Administrator / Rural Housing, has informed representatives of Waynco Housing Opportunities, the Housing Assistance Council, the National Housing Law Project, and the Rural Housing Alliance that no specific, written criteria currently exist. This is an irresponsible way of administering a federal program and potentially another travesty of justice.

OFFICE OF ECONOMIC OPPORTUNITY

OEO rural housing policy needed

60. We recommend that OEO take immediate steps to develop a housing policy and program for the rural poor and that it mount a program of national advocacy on behalf of the rural poor. The policy should be based on the right of the poor to assistance and to freedom of choice. It should use existing resources to the maximum extent feasible, and, more important, it should supplement those resources with its own funds to provide services for the poor.

OEO to serve as advocate of poor

61. We recommend that OEO recognize and assume responsibility for representing at the national level, the housing needs of the rural poor: That is; working with Congress, FmHA, HUD, and other agencies to reform their programs to meet the housing needs of the rural poor people, has not fought its grantees' battle with intransigent federal agencies, has not supported the housing efforts of its grantees. OEO has abdicated its responsibility for advocacy so that nonprofit organizations such as RHA and HAC have to tread carefully in making recommendations to Congress.

Increased funding for rural housing

62. OEO should devote a substantially increased portion of its funds to housing and to rural needs. We charge OEO with neglect of its responsibilities in not having done this under the mandates contained in Sections 214 and 240 of the Economic Opportunity Act of 1967. Furthermore, for failure to take action with regard to a national housing strategy for low-income families and individuals and for failure to specifically request use of Perkins Amendment funds, we charge Philip Sanchez with action contrary to the Economic Opportunity Act, contrary to the intent of Congress, and contrary to the mission of OEO as stated in the act itself.

Release proposed housing strategy paper

63. The conference demands that OEO Headquarters release the Housing Strategy Paper presently being considered by OEO director, Philip Sanchez, to all OEO grantees with a housing component and other OEO housing grantees so that they can determine whether or not the strategy should be supported.

National OEO housing office

64. We recommend the establishment of a separate division of housing at the headquarters level in OEO, with adequate staff and funds for operating programs, technical assistance, and research and demonstration functions.

We deplore the fragmentation of OEO's technical assistance which, while never very strong, has been reduced to an absurdity with a pattern of umbrella contracts and subcontracts let by individual regional offices. These catchalls offer man-days where years of assistance are needed.

We recommend that at least $1 billion be provided OEO annually for technical assistance, rural housing grants and for demonstration projects in order to provide more adequate housing for the rural poor. Furthermore, we urge that any and all such Research and Demonstration housing projects involve the entire OEO housing structure including CAAs in housing, HDCs, and other low-income

housing groups, in the planning and development of such projects prior to the actual implementation.

We recommend that OEO provide a housing counselling program composed of trained personnel to all working housing programs.

OEO should implement housing mandates

65. In as much as Congress has enacted programs in rural areas which have and continue to cause small farmers and farmworkers to be displaced, we demand that OEO implement programs, including grants, which will provide decent housing for such persons.

Alternative to Community Action Programs

66. Even if programs on rural housing, or rural development, are implemented, leaving the local CAP agency as the agent for such programs is a serious mistake. While a local CAP agency can be a good resource for nonprofit groups interested in sponsoring programs, not all CAPs are willing to help such groups. We recommend, therefore, that if a nonprofit group wishes to initiate any particular housing program, especially a program that would require an incentive grant, then this group should be eligible to submit their application directly to the regional or national OEO office if local CAPs refuse to cooperate and utilize such programs as they should.

Maintain national farm workers program

67. We vigorously oppose the periodic suggestions that the Migrant and Seasonal Farm Worker Division be removed from OEO, or that its operations be "regionalized." The problems of farm and harvest workers have been for generations neglected by the Departments of Agriculture and Labor. OEO, through its Migrant Programs, has done more toward finding solutions to the many problems of this tragically neglected group than have the combined efforts of the major departments. It has led OEO, and in some respects the entire federal government, in rural housing programs. Such initiative should be recognized with increased appropriations rather than relegation to anonymity in Labor or Agriculture.

Maintenance of OEO effort urged

68. We deplore the recurrent proposals for dissolution of OEO, for an increased cash matching share, for scattering its functions and funds to agencies and groups whose proven record for dealing with poverty is one of disinterest, inaction, or hostility. In rural areas where over half of the poor live this course of action is a cruel insult to those where hope for the historic promise of America lives on in spite of the puny commitment by the government to do better.

Transfer of OEO functions opposed

69. This conference hereby affirms its total opposition to reportedly imminent plans for the administrative transfer of OEO Operations functions to HUD. Incorporation of OEO activities into HUD is likely to cause increased administrative chaos and even less poor-people housing advocacy than OEO currently undertakes.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Reorganization of guidelines

70. We ask that any governmental reorganization with respect to housing, planning, and community development programs specifically account for the needs of rural areas. We ask that funds for such programs include increased allocations for rural areas and that staff responsible for such programs be qualified specifically to work with rural problems, including those of rural minority groups. Until the above requirements are clearly fulfilled, we oppose any reorganization of rural housing and community development responsibilities.

Strengthen public housing program

71. We deplore legislative and administrative efforts to emasculate public housing and call instead for measures guaranteeing that public housing will be made available to the lowest income families, by increasing the program funding level and increasing operating subsidies to conform with the intent of the Brooke amendment. We find particularly outrageous the attempts by the Administration to frustrate the application of the Brooke amendment by freezing funds already appropriated and by urging, instead, that housing authorities seek a broader income mix.

Self-help and public housing

72. We commend the experimental approaches to public housing which have coupled public housing and self-help homeownership subsidies. We urge that public housing subsidies be coupled with FmHA 502 loans and 515 loans with interest reductions to one per cent as well, to enable FmHA loans to be made to lower income people.

Public housing goals

73. At least 150,000 units of public housing are needed annually in rural areas alone, but **total** public housing production in the last five years has averaged roughly half this amount (77,000 units) and only about 20 per cent of this has been in rural areas. In order to enable public housing to meet the needs of rural as well as urban areas, Congress should enact legislation that will greatly expand the program.

Alternative to public housing

74. Public housing must be able to operate through local nonprofit and community-based organizations as well as through housing authorities, and must be freed of the oppressive need for local public approvals, including cooperation agreements. In addition, the conference calls upon those states whose legislation requires local approval to act to eliminate such restrictions.

Expand public housing authority

75. All states should enact legislation enabling creation of county and regional housing authorities and should encourage their creation with technical assistance staff.

We recommend that HUD provide funding for county, regional and statewide housing authorities that mechanisms be developed to revise requirements to accommodate these authorities and that set-asides for program reservations be made.

Establish Indian desk

76. We recommend that an Indian desk be established to eliminate red tape in gaining housing on reservations and to focus specifically on Indian programs and problems.

Special provisions for Colville tribe

77. Because a number of tribes, including the Colville Tribe and other northwest tribes, have had great difficulty in obtaining prompt and expeditious service from HUD, we recommend that funds be transferred from HUD to the Bureau of Indian Affairs for funding and administration of Indian housing projects whenever this is requested by the tribe concerned. In particular, we urge that this be done immediately for the Colville Tribe.

HUD operations in rural areas

78. To enable HUD to work more effectively in rural areas, we recommend that regulative and administrative procedures for existing HUD programs be adapted to the special needs and circumstances of rural areas, including the placement of field staff outside of urban centers.

In order to increase effectiveness of rural housing delivery systems, we recommend that the interagency communication between HUD and FmHA on national, state and regional levels be reactivated, that the proceedings from these meetings be published and that consumer participation be greatly increased.

STATE RESPONSIBILITIES, PROGRAMS, REVENUE SHARING AND A-95 REVIEW

States to assume responsibilities

79. We demand that state governments accept their responsibility to insure the delivery of low income housing in rural areas through the creation of state housing agencies, empowered to provide housing where localities fail or refuse to meet the needs of their low income people.

We further recommend that states take steps to develop programs in the following areas:

A. Rent supplement payments, down payments for homeownership, and increased loans and grants to nonprofit sponsors of low income housing, with special emphasis upon the funds necessary to cover initial operating expenses of nonprofit housing developers and public housing authorities.

B. Development of a nonprofit housing delivery system in rural areas, with emphasis upon regional and countrywide nonprofit organizations to insure that areas are covered by viable nonprofit housing sponsors.

C. Increased technical assistance to public and private housing producers involved in the development of low-income sales and rental housing.

D. State land banking and land development programs to write down the rapidly increasing costs of land for sponsors of low and moderate income housing and innovative programs to use surplus state lands for the provision of low income housing.

E. Below market interest rate permanent mortgage and construction loan financing, and state mortgage and construction loan insurance or guarantees.

State housing codes

80. Each state should adopt a uniform building code without local option, and a state manufactured housing code including coverage of mobile homes and provide expert staff with technical knowledge to enforce such codes. Such codes shall be ones which do not in any way restrict the use of subsidized housing programs or of quality manufactured housing.

State zoning appeals

81. Each state should enact legislation creating a state zoning appeals board which shall have the responsibility and power to override local zoning restrictions when it is determined that local restrictions are being used to exclude low and moderate income housing from a community or area.

Homestead exeruption

82. Each state should provide property tax relief for lower income owners and renters by allowing all households with incomes of $7,500 or less to deduct half of the cost of their property tax from the cost of their state income tax. In states having no income tax, the state should reimburse directly such owners and renters for half of the cost of their property tax.

State legislature

83. Each state legislature should establish in both houses a committee or sub-committee with specific responsibility for housing. These committees should hold joint hearings throughout their states as to housing conditions and problems and make recommendations for state legislation.

State role limited

84. We recognize that state and local action, however large-scale and effective, is an adjunct to and not a substitute for adequate federal programs. The responsibility for a just, balanced and orderly solution of social problems is a federal one which cannot, in the interests of equity for all citizens, be delegated to state or lower levels of government.

Revenue sharing

85. General revenue sharing offers a substantial source of additional revenue for many communities. We urge that it be used to meet the most pressing needs for community facilities, especially those of poor or minority people. We urge also that the civil rights requirements of the act be vigorously enforced.

Block grants challenged

86. We oppose special revenue sharing or block grant programs except in those cases where local and state governments have demonstrated their willingness and capacity to deal fairly and effectively with the housing and other problems of minority and low income people.

Federal sanctions proposed

87. We recommend that the Federal Government decrease the flow of federal funds, including revenue sharing funds to localities which refuse to take steps to house their low-income residents.

A-95 review process

88. We recognize the importance of regional perspectives and regional comment on federally funded local projects; however, we urge that the so-called A-95 review of housing and community development projects by regional agencies not be used to frustrate or delay sorely needed projects. All too often such powers, in the hands of unresponsive institutions, provide excuses for inaction rather than resulting in needed action.

We further recommend that steps be taken immediately to see that the decisions of A-95 review agencies are opened up to closer public scrutiny by mandating that all such agencies regularly publish summaries of actions taken.

HOUSING DEVELOPMENT AND LIMITED DIVIDEND CORPORATIONS

Support for HDCs

89. Given the general inadequacy of housing subsidy programs, it is small wonder that housing development corporations have been unable to achieve substantial impact on the needs of the rural poor. Without expecting miracles where none can happen, we recommend continued use and funding of housing development corporations for the following functions:

A. Providing responsive, consumer oriented institutions through which to channel presently available housing subsidies where public agencies are nonexistent, inactive or inadequate;

B. Acting as advocates for better programs and exposing the inadequacy and unworkability of present programs;

C. Experimenting with ways to hustle the system in order to make it more responsive to present needs.

Limited dividends opposed

90. This conference strongly goes on record as opposing the immoral use of public funds to the tune of $286 million in 1972, to subsidize the rich at the expense of the poor, through the tax losses which result from the accelerated depreciation and capital gains tax loopholes. The limited dividend approach to the provision of housing for the poor must be replaced by direct loans and grants and deeper subsidies in an amount necessary to meet the need, without resorting to bribes to the private sector to participate in housing the poor.

HOUSING MANAGEMENT

91. Rental housing programs should be designed for the benefit of the tenants and not agencies, builders, sponsors, lawyers, architects, consultants, managers or others who prey on the interests of low income consumers.

Adequate management requires, in the first instance, putting the interests and needs of tenants first and foremost. In order that tenants have the needed expertise for major management we urge that priority for participation in management training programs be given to tenants of subsidized housing projects. At minimum, tenants should participate in setting policies in such areas as renting apartments, evictions, setting rents, hiring staff and maintenance.

92. Subsidized housing today is under funded. Congress should appropriate and the executive branch of government should release sufficient funds to adequately cover operating deficits incurred by public housing authorities and sponsors of federally subsidized housing who should be providing housing at a maximum of 25 per cent of an individual's income. The operating subsidies should permit the use of the funds to cover the cost of training of tenants for management and maintenance. There should be no screening out of low income tenants as a substitute for adequate subsidies.

93. We urge that priority for participation in management training programs be given to tenants of subsidized housing projects with top priority being given to minorities.

We urge that the National Center for Housing Management make sufficient changes in its curriculum to train residents and to develop tenant management corporations, and that HUD and

Congress assist in adequately financing these functions.

94. We strongly encourage the formation of tenants organizations which can define and defend tenants rights, increase tenant understanding of management procedures and develop an orderly process for tenant participation in management.

95. Because poverty and poor housing are so closely intertwined, we call for a guaranteed annual income for every American, adequate to meet the cost of all basic needs: food, clothing, shelter, transportation, access to health, education, legal, and other services. To prevent increased income from simply bidding up the price of slum housing, the supply of decent housing available on reasonable terms must be vastly increased, as called for in our other recommendations. Adequate income is essential to decent housing; but adequate income alone will not provide it.

96. Because a majority of low income people are either unemployed, underemployed or employed at near-slave wages, we recommend that the federal government guarantee public service employment at decent wages to all able-bodied people who are willing to work. Lack of employment opportunity violates the rights of every jobless person who is willing to work.

Many of the pressing social needs of small towns and rural areas can be met by the rational utilization of presently unemployed manpower in the provision of needed public services, the rehabilitation of indecent homes, the construction of new homes and the provision of clean water and modern sanitation.

Moreover, there is no possibility of meeting the housing famine in this country without an increase in the supply of building craftsmen. Manpower programs must be adapted to rural areas, including the training of building craftsmen through the actual construction and rehabilitation of houses for the needy.

97. We recommend the establishment of a uniform housing code for rural areas where there are no statewide or local housing codes in effect. We further recommend the adoption of a strict national code to regulate the production of mobile homes.

98. To prevent the continued use of our tax money to support slum landlords, Congress should stipulate that shelter allowance funds not be used to rent substandard homes for welfare families when standard homes can be purchased or rented.

GENERAL

99. The Second Rural Housing Conference recognizes a new entity known as the **National Spanish-Speaking Housing Coalition,** an organization composed of Spanish-speaking housing professionals and organizations whose objectives are the following:

1. A decent home and a suitable living environment reflecting the life-style of every Spanish-speaking family.
2. Communication and information between all Spanish-speaking people in the United States and the government agencies which can facilitate housing development for the poor.
3. Concentrated political involvement in the development, formulation and passage of housing legislation which will benefit the Spanish-speaking people.

The Second Rural Housing Conference supports the efforts of this and all other groups actively advocating the right of all people to good housing.

100. The Spanish-Speaking delegates recognizing the multi-billion dollar industry of construction and recognizing the raw facts of the estimated 16 million Chicanos in this land we account for less than 1/10 of the general contractors in the industry, therefore, move that Chicanos who have position which facilitate access to HUD and the Department of Labor should work toward securing contracts or grants that carry riders specifying negotiated contracts for Spanish-Speaking Americans, with bonds waived under the mandate in the 1970 Housing Act.

101. The conference recognizes that an International Exposition and Conference for Home Appliances and Furniture will be held in Caracas, Venezuela in late 1972.

We encourage the concept of simple, durable, easily maintained and repaired farm and home equipment and wish to recognize the need of South and Central America to produce such equipment at home.

102. We recommend elimination of the dual process of legislation-plus-appropriation which has hamstrung all housing and community development programs (except public housing, which is not threatened with its extension) by requiring the Congress to enact programs twice before they become effective.

Using the war cry of "backdoor financing," opponents of housing subsidies and community development programs have succeeded in crippling much of the legislation adopted in recent years by requiring that all programs be re-enacted in the form of appropriations before contracts can be let.

We urge that this process be halted, and that all housing and community development legislation be couched so that programs can be carried out immediately upon adoption.

103. We call on Congress to take immediate steps to curb the current Executive Branch practice of spending or withholding funds without regard to the intent of the Legislative Branch; specifically the practice of the President's Office of Management and Budget of "freezing" or impounding funds.

104. We call on the Congressional committees dealing with housing to give full consideration to the pressing housing needs of rural America and to the programs recommended in these resolutions.

105. Whereas the benefits of the 1969 White House Conference on Nutrition and Health continue to be evident, and,

Whereas the present needs of the rural poor are now as neglected as was human nutrition before the White House Conference,

Therefore be it resolved that we urge the Administration to help us focus the nation's attention on the plight of the poor remaining in rural United States by mounting a White House Conference on Rural Needs.

106. We call on all citizens and organizations concerned with human needs and social justice to act in support of these resolutions.

'This House is Not for Livin'

This large photograph of a house in rural America, typical of conditions for millions of rural people, was displayed at the general sessions of the Second National Rural Housing Conference.

4 MILLION RURAL FAMILIES IN NEED

Conference Drafts Proposals To End Rural Housing Tragedy

More than 800 people from all over the nation came to Washington, D.C. November 28-30 to express their grave concern about the tragedy of unlivable housing for four million poor rural families.

The meeting was the Second National Rural Housing Conference called to discuss this national emergency and what must be done about it.

The meeting was convened by the Rural Housing Alliance and the Housing Assistance Council, the only two national organizations whose primary purpose is to improve housing for the rural poor. The conference was cosponsored by 37 organizations, including farm, labor, minority and religious groups.

For two days, Black, white, Indian, Chicano and Puerto Rican delegates examined and discussed all of the federal housing subsidy programs and the problems of developing housing for the rural poor.

On the final day the delegates passed a 15,000 word statement calling for sweeping reforms in legislation, new programs and sharply increased appropriations.

The Conference demanded a reordering of national priorities, charging that a society which spends four times as much on the private purchase of jewelry and watches ($4 billion in 1970) as it does on publicly subsidized housing, "has a tragically distorted sense of values."

"Every citizen of this nation should have a recognized and enforceable legal right to a home he or she can afford," the conference declared. "Poor people and minorities should have the same choices enjoyed by other Americans. People are entitled to choose the location of their homes without being deprived of minimum facilities and transportation wherever they choose to live. In addition, they should have the right to decide whether they want home ownership, individual or cooperative or rental quarters."

Principal speaker at the conference was newly elected Sen. James Abourezk of South Dakota who described how present programs are inadequate to serve poor Indians in South Dakota.

"Here we are, America, the richest country in the world," he said. "Here we have millions of people who won't get a leakproof roof over their heads until they are in their grave. And as bad as things are, they may get worse before they get better.

Abourezk predicted that "more than a few housing dollars are going to find their way into the deep freeze" at the White House and that the nation would see "obstructionism traveling in the disguise of reorganization."

"We have promises to keep and miles to go before we sleep," he concluded.

About This Report

This publication is a report of the conference. On the inside pages there is a two-page summary of the resolutions. Text of the resolutions are published in a separate document.

There are separate stories on each of these sessions and the major speeches at the conference. Basic facts about rural housing are subject of several stories, tables and charts.

Our Rural Scandal:

Two-Thirds of the Nation's Bad Housing Is Out There

By Clay Cochran

Bad housing in America is a scandal that is not going to be ended until we stop looking at the problem in terms of builders, bankers. . . and all the rest; and start looking at it in terms of people — of human need. — Aaron Henry, president of Mississippi NAACP, Oct. 5, 1970.

When the first new houses were built by the Resettlement Administration on farms and in small rural communities some 30-odd years ago, many depression-weary people took heart. When a tenant farmer moved into a place that was painted, warm in the winter, dry inside when it rained—that made a difference. In parts of the South the neat little homes were numerous enough to visibly brighten the landscape.

But like so many New Deal ventures that effort, which was basically land reform with decent housing as one element, never really got rolling.

In the late 1940s another attempt was launched to house rural families. This was a pure housing effort, no land involved except the site.

Decades passed before this second effort gained enough size to be noticeable. Currently, under the direction of the Farmers Home Administration (FmHA) houses are being financed in the countryside at a rapidly rising rate. But even now the needs of families with low incomes are being ignored and the total effort falls far short of the mark.

Today, two-thirds of the bad housing in the entire nation can be found in rural America.

What happened? Why was the promise of those earlier years never fulfilled? Can anything be done to erase the disgrace of a country that turned its back on families in need of such a basic element as decent shelter?

Neglect of Rural Housing

The primary blame for the neglect of rural housing must be shared by several Presidents, the Congress and the United States Department of Agriculture. Except for the Farmers Home Administration, the Department of Agriculture and its agencies—especially its principal outreach agent, the Extension Service—have virtually abandoned the poor people of small towns and rural areas.

Even the FmHA, the agency originally set up to serve the needs of the rural poor, has spent most of its time and energy in handling the applications of those who need the least assistance: the group above those in the lowest income category.

The magnitude of the rural housing problem is neither easy nor impossible to analyze. In the first place, the country is in trouble across the board on housing. The secretary of the Department of Housing and Urban Development has said that 80 per cent of the people cannot afford to buy a decent home. In a nation of home owners, this is a startling figure. The explanation runs the whole gamut of potential causes of housing problems.

It starts with a deficiency of supply brought about by high interest rates, skyrocketing land prices, outmoded zoning practices, outmoded production practices—all of these items are the direct or indirect result of public policy.

Rather than raise taxes to finance a major war, the people who call the shots in Washington have played irresponsible games with monetary policy. The housing industry, when the costs of financing climb skyward, is particularly susceptible to crippling. It has no built-in capacity for rolling with the punch.

Skyrocketing land prices are another tribute to inflation, as well as to the lack of a land policy, and the existence of a tax system which encourages land speculation and does nothing to inhibit it. Zoning has made its dent in the supply. Outmoded production practices should bear some part, but a minor part, of the blame.

This is part of the general picture.

But there is more.

The Vested Interests

The federal government has simply not acted responsibly on housing, particularly housing for low-income families. Uncle Sam spends $9 billion a year subsidizing poor housing through social security and welfare payments. But when dealing with housing production, Washington has not only been parsimonious, it has let housing—human shelter—fall victim to every little vested interest that could affort a ballpoint pen or an expensive lobbyist.

Inadequate Programs

Until recent years the Congress did little for housing low-and moderate-income people except emit some moving rhetoric and establish (1) an insurance program for moderate-income people designed to take the risk but not the profit out of private loans, and (2) set up a public housing program. Other programs were either little more than demonstration programs, such as the Farm Security Administration's farm labor camps, or they were almost invariably related to the making of war. They would not, in any real sense, be called housing programs.

Indirectly Congress has really torn up the housing scene. As a result of congressionally-blessed programs, more housing for low-income families has been torn down in renewal areas than has been replaced; the super-highway system has bulldozed thousands of homes without any intention of replacing them.

Also indirectly, Congress has subsidized the concentration of our "huddled masses" in our central cities through a most unwise program which ties federal benefits to either the capacity or the unwillingness of state and local governments to pay, thus creating vast inequities in payments.

In a country that makes a fetish of the economic man, we know that higher wages will attract manpower; we know that higher profits, in the absence of monopoly restraints, will attract capital; but we have closed our eyes, and our minds, to the equally simple rule that federal welfare payments delivered on an uneven basis will influence the location of welfare recipients.

Why should a woman with six children who is delivered a pittance in Arkansas stay there and starve when her relatives tell her she can get $300 a month in Chicago? Even though she may live miserably on $300 a month in Chicago, racked by slum landlords, she can at least live.

It is surprising that the movement to the cities has not been even greater.

On the other hand, in rural areas the Congress has dealt most generously with the establishment. Enormous subsidies have been handed out to large-scale operators under the guise of aiding the family farmer. Big farmers, packers, canners and processors have been further subsidized by exemptions from wage and hour laws, unemployment compensation, part of social security, and workers' right to organize and bargain collectively.

The 'Enclosure Movement'

Historians have carefully documented what they call the "enclosure movement" in England, the successful effort on the part of the wealthy land owners, years ago, to fence off, for their own use, large tracts of land that previously have been available to tenants. This function served the dual purpose of corralling the land and dumping cheap labor on the growing industrial labor market.

Not so well documented is the American enclosure movement that took place in recent years, as the more affluent farmers and farm corporations, aided and abetted by congressional action in the field of price supports and inaction in support of small farmers, have taken over the agricultural land resources of the United States.

This enclosure movement and the resulting out-migration created a crisis in the cities without curing the rural housing problem. Even the vast out-migration did not make available decent housing to those who remained.

The victims of this enclosure movement, whether they moved to the cities or tried

---

Clay Cochran is chairman of the board of the National Rural Housing Coalition, a Washington-based, non-profit organization that develops and supports legislation for low-income rural housing.

to settle out along a road somewhere, have been the tragic victims of an equally effective movement based partly on racism and partly on their poverty. The poor or not-so-poor black who moved to the city found poor housing, at high prices, awaiting him. The poor white who moved there fared little better. In this country, one's passport to decent housing has to be stamped "majority" on one side and "affluent" on the other. If either side is wrongly stamped—for instance, "black" or "Chicano" or "poor"—you are in trouble.

Red-Circle Victims

Within recent times the public has become aware of what government officials and lenders and real estate dealers and some would-be homebuyers have known for a long time, and that is the Federal Housing Administration long ago "red circled" most of the central cities; that is, they would not insure loans in those areas.

The result of this policy, which still exists *sub rosa*, was to cut off the flow of credit into the central cities, leaving them to deteriorate under the dual impact of credit privation and the accompanying evil of exhorbitant charges for whatever capital was available.

In somewhat different but equally devastating fashion, the red-circling phenomenon has prevailed in rural areas. For all intents and purposes the Federal Housing Administration has never really functioned in rural areas.

To impute blame here in the moral sense is fruitless because Congress apparently never intended that FHA should be anything but a scow on which lenders, realtors, developers, surveyors, title finance companies, and the rest of the camp followers of the housing industry could ride when they could not get aboard the yacht operated by banks, insurance companies, savings and loan associations and other lenders catering to the better-quality folk.

Rural Public Housing

Public Housing has also been largely an urban or metropolitan program. When, in the 1930s, a reactionary court thumped the New Dealers over the head and told them to stop constructing federal public housing projects, the Congress created a public housing system of local authorities backed by federal subsidies. Unfortunately, those subsidies were not available to the poor wherever they happened to be. The subsidies were available only where the local power structure was sufficiently wise or enterprising or humane to undertake the construction of public housing.

The result of this policy is apparent. Public housing exists mostly in urban areas. The "red circling" of rural people has been as effective in public housing as in the Federal Housing Administration's activities.

Cities and the 'Farm Bloc'

Clearly one of the basic reasons underlying the neglect of housing in rural areas is the myth that the growth of the cities would redound to the benefit of all. We have assumed that it was inevitable that when we really became civilized, 90 per cent of our people would live on one per cent of the land, happy, prosperous, cultured and secure. The place for people who

An old pump provides water for people near Kingstree, S. C. Photo by George Ballis

'Indirectly, Congress has really torn up the housing scene . . .'

were in trouble in rural areas and small towns was obviously in bigger towns.

Electricity, inside plumbing, paved streets, medical facilities, neon lights, the more guilded pleasures of the flesh, and lately, intolerable pollution, came first to the cities and (except for pollution) exercised a magnetic attraction for those who either wanted to escape from rural areas or who had no choice but to leave. For a wide variety of reasons, some real, some romantic, this was assumed to be good.

Given such assumptions, which have run to the very core of our philosophy of social and economic development, small wonder that the Congress should have moved easily with its increasingly urban-oriented constituency.

The powerful "farm bloc" which exercised power in the Congress, more or less, for a generation was actually a coalition of the better-heeled farmers and their suppliers and creditors (including a lot of so-called farmers who were corporations, doctors, lawyers and other absentee landlords) who were struggling to increase or protect their share of the American economic pie. They were more concerned with enlarging their holdings, decreasing the number of small farmers (the enclosure movement), increasing prices and holding down wages than they were in improving the quality of rural life by such exotic devices as subsidized housing programs.

In light of all these forces and preconceptions it is remarkable that any sort of rural housing program ever saw the light of day.

The rural housing program now in existence, the one managed by the Farmers Home Administration, never had any organized support.

FmHA: Weak and Strong

In a sense the Farmers Home Administration, that battered and anemic stepchild of the New Deal (its ancestry runs back through the Farm Security Administration to the Resettlement Administration) is ideally designed to operate a lending program in rural areas. It has about 1,700 field offices which are more or less accessible

A boy in the Appalachian mountains: How will it go for him? Photo by Al Clayton

Out from Ft. Myers, Fla., some people live this way Photo by George Ballis

to rural people. It is capable of providing, given the money, a key ingredient in rural housing, credit at more or less reasonable terms.

But Farmers Home Administration, as an institution for serving the housing needs of the rural poor, has many weaknesses, some of its own making. It has been accused of racism, and certainly it is not difficult to find blacks, Chicanos and Indians who hold evidence of discrimination. On the other hand there has been a marked improvement in recent years in the volume of loans made to minority groups and in the per cent of minority applications that have been approved. Many of the charges of discrimination because the applicants were black are probably due to discrimination because the applicants were poor. The complete study of the response of FmHA to the needs of minorities has yet to be made. Hopefully when the 1970 census data are available such a study will be undertaken.

Some of the other faults and frailities of the FmHA system that are easier to define lie in its funding problems, its organizational structure, its inability to cope with the needs of the poor.

For years Farmers Home made its housing loans out of appropriated funds and out of collections on loans advanced in prior years. This system produced a dribble of loans held back by those inside and out of Congress who worship at the feet of a balanced budget. Matters were not helped by the government's engagement in an undeclared war which it tried to finance out of funds denied social agencies or extracted from the consumer by inflation.

In 1966 Congress authorized FmHA to make housing loans out of funds obtained from private investors on an insured basis. After some trial and error Farmers Home discovered how to obtain more than $1 billion a year from the money market. This method produces loan funds, however, in a far from ideal manner. To obtain the funds the agency has to guarantee investors a higher return than the borrowers should, or do, pay. The taxpayers make up the difference.

Lack of Manpower

FmHA administers some 20 programs. Some provide operating and real estate purchase and development loans to farmers; some finance rural community water and sewer systems; some finance the construction, purchase and rehabilitation of homes. It is impossible to separate the administrative expenses for the housing programs from the general administrative kitty. All programs suffer from a lack of adequate administrative funds.

For about a decade layer after layer of responsibility in loan making and servicing has been placed on the shoulders of FmHA employees with only a relatively small compensation in terms of funds for administration. In 11 years the size of its program has increased about 624 per cent but its available manpower has increased only 77 per cent.

In fiscal 1970 FmHA advanced $1.6 billion, collected nearly $1 billion in principal and interest, and at the end of the year was servicing more than $6 billion in loans outstanding. Administrative costs for fiscal 1970 were about $71 million.

Aside from FmHA's inadequate resources for meeting its present service area needs, it is apparent there is a serious gap in overall housing services in rural areas. FmHA is restricted to towns of 10,000 and below and HUD does little in towns of 25,000 and below. This leaves millions of people who are caught between FmHA's statutory limits and HUD's functional limits.

Loans To The Poor

Another fundamental weakness in the Farmers Home Administration's system is its curious philosophy regarding making loans to low-income families.

The history of the agency is such that it is supposed to make loans only to families that cannot get money from any other source. This means that it is supposed to make risky loans for social purposes considered that important by the Congress. However, its loss rate is less than one per cent. A rate of loss that small repudiates the spirit of its enabling legislation.

The answer to this riddle can be traced in part to the tight-fisted agriculture subcommittees of the appropriation committees of both houses of Congress, which look askance against any "giveaway" programs regardless of the social returns.

So to be on the safe side, when FmHA deals with a low-income family on a housing loan, it constructs a budget for the family including everything *except* shelter; ascertains the family income; and subtracts the family budget from that income. Whatever is left over is the amount FmHA considers to be the mortgage-paying capacity of the family. To ask a family to pay more, FmHA contends, would be immoral.

Therefore, if a family has been paying $50 a month for rental to some slum landlord for years, and has somewhat less than that left over when FmHA makes out the family budget, FmHA's curious logic concludes that the family can't pay $50 a month to buy a decent home.

The net result of all this is that congressional pressure, enforced by FmHA's policies, has created a whole stratum of people who are *non-persons*. They cannot get decent shelter from slum landlords; they cannot get public housing; and FmHA shies away from its responsibility by erecting hurdles the families cannot clear, in the name of morality, but in fact to protect the agency from criticism from the Congress.

The Poor Passed By

The combination of the lack of adequate staff, an eagerness to avoid losses, a willingness to give a low priority to shelter, and a general drifting away from the high idealism of earlier days has resulted in FmHA's paying little attention to the tools placed at its command for use in serving those most in need of housing assistance.

To keep the record straight, we must flatly acknowledge that FmHA does not have the ability to grant the really large subsidies that the very poor must have to obtain adequate housing. But look at the record for fiscal 1970. The agency loaned nearly $800 million in its various rural housing operations. This amount was by far the largest ever advanced in one year. It was a rather remarkable expansion. Only $500 million was loaned the year before.

Where did the funds go? Approximately $756 million was used in its regular program, which serves families mainly in the $5,000 to $8,000 income range. True, some $128 million of this amount contained some interest subsidies, and that's on the plus side. But only approximately $5 million was used to make small loans for home repair to families so poor they could not afford a decent house. That amount was less than was spent the year before for the same purpose. Not one loan was made for cooperative housing.

About $1.5 million was loaned for farm labor housing—a paltry amount and less than the equally paltry amount loaned the year before. About $114,000 was loaned for the purchase and development of housing sites, a new program designed to help low-income families find land for their homesites. Approximately $5 million was loaned for self-help housing, the system the poor use to get houses by pooling their labor and doing most of the construction work.

Not one cent was granted to non-profit

groups to provide the technical assistance needed by people who build their houses via the self-help method.

The figures tell the tale.

What Can Be Done?

To some extent programs to deal with the rural housing problem already exist. Some need only to be expanded. Some need to be re-oriented. All need a tremendous increase in funds. But there will have to be more and different approaches than now exist.

There is no ally for those who are casually or actively opposed to programs designed to increase equality of opportunity in this country so powerful as the federal accounting system.

Under this primitive system, if the funds come directly from the Treasury we equate the cost of a children's hospital with a bomber, a loan for a house with the expenditure by the Pentagon of $28 million a year for public relations. So in our housing programs and elsewhere, we resort to the practice of insuring funds provided by private sources. This does not upset the budget.

We must get to an accounting system where a loan for a house is credited on the government's books as creating an asset equal to the debit caused by the loan. The cheapest way to finance public projects is through the Treasury. The system we are now using forces the taxpayer to subsidize both the poor families (who need and should receive a subsidy) and the money lenders (who do not need and should not receive a subsidy). The system we are now using will choke under its own weight within a few years.

Public Housing

It was noted earlier that the public housing program was basically weak because it was subject to veto by the local power structure. Why not bring pressure

An exterior bleakness reflects a state of life Photo by Al Clayton

on local communities to utilize the public housing authority as a prerequisite to taking advantage of other federal programs?

It is neither right nor constitutional for the Congress to deny citizens their federal benefits. The Congress must find some way of stipulating that funds for highways, education, water and sewer systems, and other community development projects cannot be obtained unless the community that requests such funds is actively engaged in meeting the needs of its low-income families.

Some Needed Changes

If Farmers Home is to make the necessary contribution to solving the rural housing problem a number of changes must be made. Among these are:

1. FmHA's appropriations for administrative funds must be greatly increased if it is to function properly.

2. The increase in funds should be accompanied by a complete reorganization of the agency's administrative structure to provide at all levels ample staff skilled in, and devoted to, all of the various methods of serving the needs of low-income rural families.

3. FmHA's service area should be expanded to include towns with a population of 25,000 and under.

4. As one means of reaching really low-income families, FmHA should be authorized to make housing loans in which payments on principal and interest on up to half of the loan could be deferred for 33 years.

5. FmHA should be instructed by the Congress to take greater risks. (This would probably be couched in language that spoke of greater subsidies. But the message could be made clear.)

An Emergency Agency

To move Farmers Home and HUD in the direction of really trying to serve the housing needs of the rural poor and to get something going in that area fast, it seems logical to place a real competitor in the field. An agency, set up on an emergency basis, with the broadest conceivable powers, to serve those not reached by the current federal structures, could get a lot done in a short span of time, and hopefully jar the existing bureaucracy out of its lethargic state.

In the familiar pattern already established by rural electric cooperatives, an Emergency Rural Housing Development Agency could organize, supervise and finance local housing development agencies controlled by those whose needs they serve. The local housing development agencies would function in small areas or across entire states. They would be able to buy and develop tracts, build houses for sale or for rental, work with any conceivable type of organization, utilize any possible type of construction. And they would be able to subsidize the housing needed by any family to the extent necessary to place that family in a home adequate for its needs.

The experiments and accomplishments of an organization of this type would no doubt shake and even shatter the nerves of many of the establishment, in both the private and the bureaucratic worlds. This is necessary. It may be that we need a whole new way of releasing poor people from "shack-life." Perhaps we can jar the existing institutions into taking stock and struggling to maintain their domains by doing the job they should have long since completed. In any case, the effort must be made.

The New Deal: What Went Wrong?

By ROBERT SHERRILL

Housing is not, of course, the only area in which the poorer people of America's rural area have been given short shrift under the nation's agricultural programs. Bad rural housing is related to all the rest. Robert Sherrill, in THE NATION, has written:

FDR: He Made a Start

Every year the U. S. Department of Agriculture pays more than $3 billion for nonwork (leaving land idle) and to support the price of crops that would otherwise have a rough time competing on the world market. About half this money is pocketed by the farmers who need it least—those in the top 15 per cent income bracket. This has been going on in one form or another for 35 years, and if the handouts have done much good, they obviously have had other effects as well.

During the same 35 years there has been a sharp trend toward domination of the food market by large commercial and corporate firms, while half the medium-sized producers have been squeezed out of business, and the really small farmers—almost untouched by the bounty—have slipped deeper into peonage. . .

The inequities of the New Deal approach the farmers—which, in modified form, is still the basis of the USDA's operation—can be criticized severely today, but so desperate was the American farmer in the 1930s that it is almost beside the point to criticize the programs in the context of their formation period. Something—however lopsidedly administered, however leaky—something had to be done or, as Edward O'Neal, the legendary leader of the American Farm Bureau, warned Congress: "We will have revolution in the countryside within less than 12 months."

From the crash of the stock market in 1929 to the inauguration of Franklin Roosevelt as President in 1933, the gross income of the cotton farmer fell by two-thirds. The "average" farmer who had earned $735 in 1929 was earning $216 in 1932. Hunger was commonplace, even among what had once been the middle class. .

The agriculture programs of the Roosevelt era came pouring into this abyss. In the first year, the Roosevelt administration handed out more than $175 million in crop support and land retirement payments and for reimbursing farmers for killing hogs—an impressive sum for those days—and about 65 per cent of it went into the South, where the margin for survival was narrowest. Briefly it looked as if the USDA was going to change its emphasis, and that any administration willing to take radical action for the top half of the farm population might be willing to take radical action to save the bottom half. But it never quite happened.

Some of the old hands in the USDA can remember when their exciting plans for a people's agriculture were slowly buried. One of them, an official at a moderately high level, recently ticked off the decades like this:

"Take the thirties. In the beginning the bright young lawyers in the Agricultural Adjustment Administration tried to work out a program that would wrest control of agriculture from the plantation owners and the even then all-powerful agribusiness types. But they failed. . . .

"Every time a new agency was set up to help the underprivileged farmer, it was stripped of its power, denied money by Congress, and eventually shuffled into something else.

"And all the way down the years, the poor farmers were betrayed or ignored. Henry Wallace didn't give a damn about the poor farmers, nor did Clinton Anderson. Charles Brannan had the right instincts but he had his hands full fighting other fights. And then came the fifties and Ezra Taft Benson, who was a throwback.

"Then came the sixties and Orville Freeman. He left too much to his aides. Toward the end of his regime Freeman visited the South, saw the poverty there and became interested, but then it was too late. I don't mean to imply that Freeman wasn't sympathetic. He thought of himself as a great liberal, and perhaps he was, but he listened to the wrong people in the beginning and he was irritated by the militants at the end. He never sorted out the alternatives. He had a great opportunity to marshal all of the forces of the Agriculture Department in a massive attack upon poverty and he blew it."

But the congressional farm committees weren't blowing it. They were concocting and solidifying the fat-cat subsidy programs. It was done in a very harmonious fashion, for the membership of the Congressional committees is largely drawn from cotton and wheat states. . . .

As a lobby that gets prompt and obsequious service in the capital, the family farmer has been replaced by the sophisticated agribusinessman — the middleman processor, textile mill owner, the meat packer, the canner, the chain grocery store executive, the feeder: big businessmen, big money men, big corporation men who already control the poultry market from the chicken coop to the market, . . . and who are well on their way to controlling most beef from conception to the meat counter. . . .

Nixon on Housing: Caution Is the Word. 'What Does He Expect From the Suburbs ?'

By MONROE W. KARMIN in The Wall Street Journal

Washington.

The emerging Nixonian policy on equal housing opportunity seems likely to be patterned after the administration's approach to school desegregation: a cautious effort designed to allay white fears and defuse an explosive political situation.

This is the direction Mr. Nixon signaled in replies to questions in two recent televised news conferences. It seems clear that while the President has yet to determine just what his housing policy will be, he has already decided what it must accomplish politically. It must assure suburbanites that the White House stands steadfastly opposed to "forced integration."

On the surface this promise resembles Mr. Nixon's pledge last spring on schooling: that he would resist all moves to bus children from neighborhood schools solely for the purpose of achieving "racial balance." Yet there is a major difference between schooling and housing.

In education, some states (Massachusetts, for example) and some courts had rendered affirmative declarations in favor of transporting pupils to achieve "racial balance." So the President, under pressure from Congress as well, was obliged to take a stand. He chose to proclaim opposition.

A Detestable Phrase

Housing is another matter. No legislative or judicial body that comes to mind has declared in favor of "forced integration." Nor has Secretary George Romney of the Department of Housing and Urban Development, the Cabinet member who does want to subsidize the construction of open occupancy housing in the suburbs.

Indeed, Mr. Romney has come to detest the phrase. "I think it was very unfortunate to have somebody coin the phrase 'forced integration,'" the secretary told a recent press conference, "because I don't think anybody can say, with certainty, what 'forced integration' means. It's one of those phrases that mean different things to different people."

To some suburbanites, the phrase links the elements of "compulsion" and "race-mixing" into a spectre so terrifying that anxiety overwhelms reason. Thus, it has been one journalist's experience in travels throughout the country that "forced integration" has become a political code used by those whites who simply believe in racial separation. Many are the same folks who resisted school desegregation on grounds that the more natural way to integrate schools would be to integrate housing first.

Other suburbanites do question the wisdom of federal housing policy, or what they believe to be policy, on grounds other than racial bigotry. It has been one journalist's experience that what these folks want from the President is enlightenment. What does Mr. Nixon expect from the suburbs to help him cope with the problems of the cities?

By opposing "forced integration," all Mr. Nixon has done so far is to flash a signal that, in housing as in schools, he is not going to move too far too fast. While the President may have allayed the fears of racial separatists, he still has not told other suburbanites what the administration's desires are.

Mr. Nixon knows that various civil rights laws oblige him to promulgate a positive, as well as negative, policy on the equal housing opportunity issue. "We're going to carry out the law," the President pledged in his last televised press interview (as of Jan. 19, 1971). "We're going to open up opportunities for all Americans to move into housing, any housing that they're able to afford. But on the other hand, for the federal government to go further than the law, to force integration in the suburbs, I think is unrealistic."

Translation of these broad remarks into precise policy is now in progress, occupying the President, Secretary Romney, Atty. Gen. John Mitchell and the White House staff. The product seems likely to be similar to the one produced for school desegregation last spring.

Then the President, in a 19-page proclamation, promised to root out *de jure* school segregation, the result of law or deliberate acts by school officials. But he also advanced a variety of reasons for leaving undisturbed more subtle forms of racial discrimination and "de facto" segregation, that which arises from residential housing patterns.

The essential message of Mr. Nixon's thousands of words was to pledge action against only the most blatant forms of racial discrimination. Moreover, this action would take the form of law suits, not the more direct route of withholding federal aid from discriminating school districts. In sum, the President produced a cautious policy designed to allay white fears and defuse an explosive political situation.

Just the other day Secretary Elliot Richardson of the Department of Health, Education and Welfare claimed great success for the policy, contending that it had contributed to the "unprecedented progress" in school desegregation during the current scholastic year and had resulted in the virtual elimination of the dual school system in the South. Yet the HEW report shows that 42 per cent of black pupils in the South continue to attend school with black enrollments of 80 per cent or more.

The Case of Blackjack

Now the racial issue has reached the crisis point in housing, and another Presidential proclamation might seem to be in order for this spring. The flame that sent temperatures soaring, and brought the controversy to Mr. Nixon's desk, is the case of Blackjack, Mo., a suburb of St. Louis.

Blackjack was once a comfortable suburban community of some 4,000 white working class citizens (estimated income range: $7,000 to $15,000 a year). But then Park View Heights Corp., a not-for-profit development corporation sponsored by religious organizations, purchased 11.9 acres of land in the area and prepared to build a federally subsidized housing project for low and moderate income families (estimated income range: $5,400 to $9,200 a year) of all races.

Originally the parcel purchased was zoned by St. Louis County to permit the construction of multi-family housing. But shortly after Mr. Romney's department approved the Park View Heights application for federal subsidy, alarmed Blackjack residents incorporated themselves as a city. One of the first acts of the new city council was to zone out multi-family dwellings, including the proposed Park View project.

Secretary Romney has branded the Blackjack move a "blatant violation of the Constitution and the law," and has requested Atty. Gen. Mitchell to file suit. Mr. Mitchell, it is known, also leans toward legal action, but the White House is reviewing the matter.

If Mr. Nixon decides not to file suit, it will be evident that he intends to do very

little on housing discrimination. But Blackjack is so "blatant," to use Mr. Romney's phrase, that the President may very well choose to unleash Mr. Mitchell. Yet such a decision, in itself, actually would reveal little about administration policy. All it would say is that no community can obviously, overtly discriminate and expect immunity.

After all, as far as is known, Blackjack doesn't want federal aid or, for that matter, anything to do with the federal government. The more difficult policy questions involve those communities that do want federally aided improvements, and what they must do, or not do, to qualify for financial help. That's where the various civil rights laws that the President has promised to carry out come into play, particularly the fair housing provisions of the Civil Rights Act of 1968.

"It is the policy of the United States to provide, within Constitutional limitations, for fair housing throughout the United States," the act opens. And it concludes by directing the HUD secretary to ". . . administer the programs and activities relative to housing and urban development in a manner affirmatively to further the policies of this title."

Mr. Romney has said repeatedly that he intends not only to move spiritedly against reported individual acts of discrimination, but that he interprets the mandate to act "in a manner affirmatively" to mean that he should bring to bear all the methods at his command to break down the barriers of racial discrimination.

However, this was before the 1970 election, and Blackjack, and discussions with Mr. Mitchell, and White House intervention. Now the secretary talks in much more compromising tones. And the record of the past year shows some of the areas where Mr. Romney has ventured forth, only to retreat, and where Mr. Nixon has yet to declare himself.

Take zoning, for example. Earlier in his term Mr. Romney spoke out forcefully against zoning practices that discriminated against the construction of federally subsidized housing open to all low and moderate income families. The secretary even proposed to the last Congress legislation that would prohibit new communities formed in previously undeveloped areas from enacting such zoning.

Congress demurred, and now the secretary says he won't re-introduce the proposal this year. The Blackjack suit, if filed, would be the administration's first such court action against zoning, though it has carried to the appellate level a suit brought by the Johnson Administration against the city of Lackawanna, N.Y., which is trying to prevent the construction of a housing project for blacks in a previously all-white section of town.

Then there is the matter of withholding, or cutting off, federal funds—the most powerful instrument in the Washington kit to bring about change in communities across the nation. Mr. Nixon's message last spring effectively mothballed this technique in the school desegregation controversy.

The most famous, or notorious, test case in housing came when Mr. Romney moved on Warren, Mich., a suburb of Detroit. HUD told the city that if it wanted to continue to receive urban renewal aid, it would have to take steps to eliminate racial discrimination. The department suggested a list of actions so long that it provoked a citizens uprising. Mr. Romney rushed to the battlefront for a confrontation, then backed down considerably and settled for the simple creation of a human relations commission. In the end, Warren voted to reject urban renewal altogether.

Less conspicuously, HUD has been using its water and sewer grant program to pry open suburban areas to integrated low and moderate income housing. Fairborne, Ohio; Stoughton, Mass., and Waterloo, Iowa, all were threatened with not getting federal funds if they didn't take steps to insure open housing. But now this campaign has slackened, and HUD spokesmen are quick to point out that these cities all were funded eventually and that no community has been denied funds because of racial discrimination alone.

At one point HUD assistant secretary Samuel Simmons put together an even more grandiose design that would have brought not only his department's programs but also those of other federal agencies to bear on communities. But the idea has long since been put on the HUD shelf.

Now the President, himself, may be expected to speak out, not only in terms of what he will not do—force integration—but what he will do to carry out the law. If his school desegregation policy is an appropriate guide, it seems likely that caution will apply to housing, too.

Self-Help: An Alabama Community Starts To Build Houses

By LEON W. LINDSAY

In The Christian Science Monitor

Working at night on self-help housing near Ft. Myers, Fla.

Auburn, Ala.

The scene is a large meeting room of a new, Negro church some 10 miles out from Auburn, Lee County, Ala.

A dozen black men and women—members of six area families; seven Volunteers in Service of America (Vista) workers; and a newspaper reporter are watching a film about a self-help housing project in California.

The people in the film are Mexican-Americans, the language they speak is foreign to the Alabama black folk, the houses they are building are probably a little more expensive than these people can afford, and the Californians—even though most are farm workers—earn a good deal more than the families here.

But the aspirations are the same—to get out of dilapidated, depressing, and even unsafe houses into homes of their own. . . .

With the assistance of the Washington-based Rural Housing Alliance, an acre of land was acquired and prepared, a well dug, a septic tank-system installed, and tools and materials for building the house purchased. Although some of the work, such as plumbing, has been done by contractors, Vista workers have done most of the construction.

The concept here is that, having learned how to do it, they will be able to supervise the building of more houses, with the labor supplied by the men, women, and children of the families who will occupy them.

Self-help—also called *sweat-equity*—housing is a proven concept, but it is not seen as a cure-all for the housing ills that beset the rural Southeast. It does, however, suit the need, abilities, and incomes of many poor families.

Though the most successful self-help housing projects have been in southern California, there are a number of such programs in the Southeast. Enough have demonstrated success to encourage new ones—some modest as the one here, others on a larger scale.

In Colbert and Lauderdale Counties, up in the Tennessee Valley Authority country of northern Alabama, self-help housing has had good results. It has worked in some areas of northern Florida panhandle and also in a three-county area around Fort Myers in south Florida. And there are others.

Rough Time in Georgia

But in Georgia, where there are some current attempts to start new self-help projects, the government agency which provides the major financial backing is not too keen on self-help. The Farmers Home Administration (FmHA), guarantor of minimum-interest housing loans to poor families, had a bad experience with one self-help project in which some houses did not get finished.

This points up one of the major necessities in a self-help program—organization. And this is what the meeting in Lee County one recent evening was about.

The Vista workers were a bit disappointed at the turnout. Only half of the 12 families interested in the project were represented.

Mrs. Noreen Lloyd, a Vista worker from Peabody, Mass., led the discussion of current and upcoming decisions and needs: Should they have a community well or individual wells for the houses, would the group accept a local black carpenter as a temporary supervisor for the building project—to be paid through an outside grant; and, most important of all, could anyone help find a landowner who would sell enough good acreage on which to build eight to 12 houses?

As the discussion went on, black members of the group began to speak more frequently. Several men showed leadership capability. One of them—the one who had spoken the most—was elected chairman, and the group voted to hold twice-monthly meetings.

In other areas, even in Alabama, there are local community-action programs funded by OEO and run by local people. Vista works in conjunction with some of these programs. There is a greater sense of community support. But here in Lee County, there is no community-action program. The Vista workers are generally regarded as outsiders and face mistrust.

In spite of this, they are running a legal-aid service, an apparently successful Head Start program, the housing project, and are providing some other services.

This housing program was begun in November, 1969. An initial OEO grant of $90,000 provided money to buy the acre of land on which the demonstration house stands, prepare the site, purchase equipment and materials, and meet other expenses. That grant ran out March 1, 1970. A new 15-month grant for $250,000 began May 1, with $100,000 earmarked for a revolving construction fund. The rest is for personnel and equipment.

Program Cost Weighed

If only 12 houses are built over the period of the grants, that would be a cost of more than $28,000 for each house. But not all of the grant necessarily will be spent. Also, the program is designed to demonstrate the feasibility of something that will have to be done on a much vaster scale as the concept catches on.

What will the houses cost the families? It is estimated the demonstration house—which one family will soon receive—will sell for about $4,800, including land, well, and septic system. This is a three-bedroom model. A four-bedroom house would cost about $6,000, and for a large family a "dormitory room" can be included for not much more money.

The houses will also cost the families a great deal of dedicated, hard work. Most of the men and several of the women have jobs—however, low paying. This means they will work weekends, evenings, and—if past experience is any indicator — into the wee hours of the morning as the enthusiasm of near completion grips them.

It takes about eight months to a year to build the house this way.

Of 12 families who had applied for FmHA loans nine have gained tentative approval.

If eight to 12 families build together, all houses in the group will start at the same time and be finished at the same time. No one will move in until every house is complete. Then everyone moves in on the same day.

What kind of house can a family buy for $4,800? Will it turn out to be another "slum" dwelling, like the onetime sharecropper shack they are trying to escape?

A number of types of self-help homes are being built around the United States which combine economy with quality. The demonstration house here appears to evidence the sturdiness and attractiveness that can be achieved even with low-cost materials and techniques.

Materials Used

Self-help and other low-income housing has been built through wood-prefabrication, concrete blocks, regular frame, and even brick veneer.

A new bonding process is being used on the concrete-block walls of the house here. The blocks are stacked "dry", then coated by troweling on a newly developed surface-bonding material.

Developed by researchers at the University of Georgia's College of Agriculture, the material is basically a water-cement mix, with some other chemicals added. But the

Photo by George Ballis

key element is fiber glass, in one-half inch lengths. The material is troweled on. It is only 1/16-inch thick on the wall, yet is stronger than regular mortar joints.

It is easy to handle, can be mixed on the site, and can be colored at the same time it is mixed. This eliminates extra steps for painting and waterproofing. The process is expected to cut costs of concrete-block structures by up to 30 per cent.

Door and window components of the house are bought as standard panels and are easily set in. Steel rods running from the concrete-slab floor to roof joists reinforce the structure.

Ironically, this wall-bonding process is not accepted by building codes in some areas, including the state of Georgia.

Most of the families who benefit from this type of housing have annual incomes of $3,000 or less. Most are renting now, and many are on welfare. Their loan payments on the self-help houses generally will be $30 or less a month—little more than they are paying in rent now.

An Evaluation:

Self-Help Projects Have Special Virtues and Pains

By ROBERT TROY

During the 1950s and early 1960s self-help was thought by many of its proponents to be the best answer for housing low-income people. Peace Corpsmen started self-help projects in Latin America, and private non-profit organizations successfully experimented with the program in migrant worker camps in California, Florida and Puerto Rico.

The self-help idea—in a nutshell, the construction of houses by and largely under the auspices of the people who will occupy them—has come to the Southeast only recently, and in small doses. The concept is based on the democratic ethic of a New England town meeting, the cooperative spirit of a barn raising and the pride of building one's own house. Superficially, it looks like a very simple process. But it becomes as complex as a difficult problem in human relations can become.

In the Southeast, the Washington-based Rural Housing Alliance has become a major force as a proponent of self-help housing. It is involved with experimental projects funded by the Office of Economic Opportunity, the Farmers Home Administration and Vista (Volunteers in Service to America) near Palatka, Fla., and near Auburn in Lee County, Ala.

Under the Rural Housing Alliance approach, a self-help housing project involves a group of poor people, usually eight to 10 families, organized by Vista volunteers under the direction of an RHA supervisor. Only those families whose incomes are sufficient to qualify them for a Farmers Home Administration (FmHA) mortgage are accepted. After being approved for FmHA financing, the group selects house plans drawn up by RHA and approved by FmHA.

Then another group of Vista volunteers and a construction supervisor hired by RHA train the families in construction techniques while they build their own homes. After all of the houses are finished, the families take possession and live cooperatively ever after.

Theoretically, this system provides the individual not only a good home at very low cost, but also enough training in skills to enable him to get a job as a construction worker. And presumably if he knows how the house is built he should be able to maintain it better. Most important, from the RHA viewpoint, is that people learn to work cooperatively and can use this knowledge in other projects.

As in most poverty programs, the theory seems to be well ahead of the reality. But it also must be said that some people involved in such projects will assuredly emerge with better housing than they ever would have had otherwise.

The observations that follow are based upon visits to the self-help projects near Auburn and Palatka.

The Beginning

In Auburn and Palatka, organizing the families into self-help groups proved to be a difficult and time-consuming task. Finding families who were able and willing to participate was no problem. It was finding families who were wealthy enough to to meet FmHA standards and yet poor enough to preserve the projects' poverty-program character that proved to be difficult.

The Vistas worked with dedication in getting the families through the paper jungle involved in getting a FmHA mortgage. Heretofore, this extraordinarily complex wall of forms and documents has isolated the FmHA from much contact with the poor—except for impecunious lawyers. This process took two to three months to complete. The mortgages are crucial to the program, since the interest goes as low as one per cent, depending on the family's income, and payments are spread over 40 years. This brings the monthly payments down to $15-25 per month, little more than most poor people pay to rent worthless shacks.

Finding an appropriate construction site and working out house plans was equally arduous. Finding a site within easy commuting distance for all of the families was impossible.

Once all the families were approved for FmHA financing, they were brought together for weekly meetings. Initially, the meetings were guided by the Vistas and RHA staff, until the families built up enough confidence to run them themselves.

The discussions centered on the construction site, house plans and the number of hours each family would work. This process also was protracted, since the questions of land and house plans also had to be negotiated with and approved by RHA national staff and the FmHA. In Auburn, the Vistas assigned to help in construction were delayed for two months while these questions were being decided. Fred Bennett, who was field director of the project in Auburn when it was visited for this report, maintains that this administrative inefficiency is compensated for by the lessons in cooperation the group learns from the process.

The Construction

The program's strongest and weakest points came out during the next phase, the actual construction of the houses. RHA planners have developed some construction techniques for cinder-block construction which hold out great promise. In lieu of mortaring, the wall blocks are bolted down with steel rods to a massive concrete slab foundation. The walls are then surface-bonded with a newly-developed fiberglass compound which serves as an exterior finish as well.

A demonstration house using these methods has been built on both project sites by the Vistas to show both the families and the FmHA that a very inexpensive house could be built well. But the Auburn demonstration house cost nearly $7,000, versus $4,000 projected cost. Nonetheless, the dry-wall technique was a significant breakthrough and may revolutionize cinder-block construction.

Despite all the administrative problems and delays, a great deal of enthusiasm was generated by the families and Vistas when construction began last year in Palatka. But with so many groups trying to get together, cooperation quickly turned to animosity. There were strong feelings among some staff people that too many of the RHA decisions were being made in Washington and that there was insufficient support from both RHA and Vista. Not to be outdone, the families started feuding. While some families wouldn't come to work unless everyone else came, other families wouldn't come if some of the people they disliked showed up. Still others could not get to the site for lack of transportation. The local project director finally departed, leaving the construction supervisor to finish the job. Jim Horgan, the supervisor, was resigned to the fact that "we will have to finish it ourselves." He added: "At this point we don't care about the self-help part of it. We just want to get it done."

Spirit in Auburn

Construction began this fall on the Auburn site with everything in its favor: resourceful and talented Vistas, excellent project and construction supervisors and hard-working families. It shows, too. With all its problems, it seems especially noteworthy for its creation of the spirit that all self-help groups aspire to—a spirit arising from someone's working on his own house.

But the same difficulties that plagued the Florida project have appeared in Auburn. Transportation is one of the major problems looming over the project. Few of the participants have reliable cars and so most depend upon others to drive them 10 to 15 miles to the site.

Other Difficulties

One member complained that the project was taking too long, because there was "too much talk and not enough work." Some of the Vistas claim that the evening meetings are forced on the people by the RHA staff to support RHA's notion of what self-help should be. They also contend that the national RHA has an ideological inflexibility on self-help housing, insisting upon some approaches that slow rather than speed the process of getting houses built.

Bennett recognized these problems, and he has changes to suggest. First, he proposes that the building time must be cut sharply from the 12 to 18 months it now takes, by using more prefabricated units and less unskilled labor (less, in short, "self-help"). Second, he believes that more care should be taken in site selection—that is, more consideration should be given to transportation, local housing needs and so on. Third, there should be a wider range of house designs so that the houses will be more compatible with the families' needs and the area they are to be built in. Thus a cinder-block house might be better for the swampy or sandy areas of Florida, but a frame house might be cheaper and better for the hilly terrain of Lee County, Ala.

Are They Successes?

If one is to judge these two projects according to the goals set out by RHA, it may be concluded that they have both succeeded and failed. They have succeeded in bringing decent housing to a few people at a relatively low *direct* cost. On the other hand, if all the subsidized costs were added—for Vistas, RHA staff and so on—the cost would probably exceed that of a contractor-built house. RHA contends, with reason, that this factor is offset by the improvement of living conditions for people who otherwise would have no decent house at all, and by the fact that subsequent houses need not be as expensive as the early experiments. As other houses are built, presumably, overhead costs are cut.

As for the skills learned by the participants, it is doubtful whether they are sufficient to get them jobs in the local construction markets even if such jobs were available.

Whether the families have absorbed a cooperative spirit and techniques that could help them in other ventures has been neither proved nor disproved in either project. They will, of course, have the pride of accomplishing an important task on their own.

But pride alone is not a sufficient justification for this program. Self-help housing can have a significant impact on rural housing if it is carried out much more quickly and efficiently. For this to happen, those involved must be willing to compromise some on the ideology of self-help in order to increase speed and cost-effectiveness.

Robert Troy, who has worked in community organizing and with Vista, formerly taught in Atlanta University and now is on the political science faculty of Georgia Tech. Previously for SOUTH TODAY he has written reports on the organizing efforts of Alabama chicken growers and slum ownership by state welfare departments.

Atlanta's skyline: Behind it some neighborhoods are struggling for stability

White Flight: One Area Fought It And It May Have Won

By BETSY FANCHER

Atlanta.

Atlanta's South DeKalb area today is an integrated neighborhood of approximately 4,600 families whose simple, brick homes are in the $20,000 range. Racial tension has not been entirely eradicated, but the casual visitor will find black and white children playing soccer and basketball on the well-manicured lawns, and one house flaunts a sign that speaks for most of the community: "This is our home. It is not for sale."

It was not always so. Perhaps it will not even continue to be. But at the moment, the South DeKalb area seems to have survived an intense period of fear, real estate blockbusting and a white flight, occasioned by the first movement of blacks into what had been an all-white neighborhood. In Southern cities such as Atlanta that are still largely segregated in their housing patterns, such areas usually have become transitional and then all-black. South DeKalb exemplifies what can take place when the residents accept black neighbors and refuse to panic.

In 1969 South DeKalb was an embattled area, the victim of a massive and unscrupulous blockbusting effort. The area had become a symbol of racial dissension in shifting urban housing patterns, and a target area for doomsday white critics who contend that the arrival of black residents always brings deteriorating neighborhoods, increased crime, poor schools and soaring delinquency rates.

The chain of events which was to make orderly, middle-class South DeKalb a symbol of the nation's growing blockbusting scandal began in 1968 when a realty company moved a black mother with four children into an unoccupied house under cover of darkness. It was morning before the woman herself realized she was in a white neighborhood. "I was so scared," she told one reporter, "I wouldn't let the children go out and play." A familiar, emotion-charged refrain spread from house to house: "The neighborhood is going colored." "For Sale" signs sprouted on tidy lawns as elderly widows and some residents packed their belongings, panicked by realtors' warnings to sell "while the selling is good."

But a hard core of home owners, both the whites and new blacks, joined forces to combat racial blockbusting and stabilize the neighborhood. A community organization, South DeKalb Neighbors, was launched under the leadership of Mrs. Pat Chapman, a woman who simply loved her home and didn't want to move. As the blockbusters descended on the neighborhood, she went from door to door pleading with her neighbors to stay.

"I was a little nervous at first," she recalls. "I didn't really know any Negroes and I didn't want to live next to anyone who would cheapen the neighborhood. But I found out that if we didn't panic, the blacks moving in would make as good neighbors as some of the whites moving out."

Taking the Offensive

Profiting from the mistakes of other communities which had completely resegregated in the wake of scare tactics and mass hysteria, South DeKalb Neighbors was able to stop—or at least slow—blockbusting and unethical realty practices in the area.

The organization tried to convince the neighborhood that not everyone was selling out and to combat emotion-charged rumors with facts. And it pointed to the folly of those who tried to escape a national trend by moving to new, far-out localities. (Among these was the woman who withdrew her children from an area school because there were 30 Negroes among the 700 students. In Lithonia, Ga., her new home, her children attended a school which was 30 per cent Negro, a much higher ratio than in South DeKalb.) And the organization followed the advice of HUD official Jerry Norris: "If, when a dealer implies that blacks are moving into the neighborhood, you can reply 'So what?' You are well on the way to licking this thing."

One of South DeKalb Neighbors' first public actions was to file a civil suit in federal court asking that the State Realty Co., be enjoined from using race to promote sales. The five plaintiffs, residents of Connie Lane—a street where nine white families and two Negro families live quietly and amicably—alleged that the owners and agents of State Realty were "selling dwellings by representations regarding the entry into the neighborhood of a person or persons of the Negro race."

In the first ruling under Title 8 of the 1968 Civil Rights Act, which outlaws soliciting sales on the ground that potential buyers are of a "particular race, color, religion or national origin," the real estate company was put under injunction not to engage in blockbusting (the use of racial fears to stampede residents) by a U. S. District Court. The judge also awarded punitive damages to the plaintiffs.

The ruling was reinforced when the FBI and the Georgia Real Estate Commission investigated the tactics of real estate companies in the area.

The Burning Cross

At one point, real estate people were subtly and insidiously fanning the dormant fears of South DeKalb. Then others, not given to much subtlety, produced the ancient symbol of Southern racism: the burning cross. First a cross was burned on the lawn of a black woman in the 2100 block of Keheley Drive, still a predominantly white part of the area. The wooden cross, wrapped in rags and soaked in gasoline, was still blazing when Patrolman D. G. Thomason arrived on the scene at 10:30 p.m. Thirty minutes later, on the lawn of another black family, another burning cross appeared.

The community, which had not only accepted but was beginning to welcome the presence of their black neighbors called them to apologize. South DeKalb Neighbors met immediately to deplore the cross burnings—"a relic of intimidation," they said.

The cross burnings, rather than terrorizing the neighborhood, seemed to bring it closer together. "Up to now," said Peggy (Mrs. James) Helton, a leader in South DeKalb Neighbors, "the only time we all got together was for the Tupperware parties. Now we get together for the good of the whole neighborhood—and what's good for one is good for all, both black and white."

Spokesmen for the South DeKalb Neighbors approach have so far been unsuccessful in persuading other communities in the metropolitan area to adopt the same attitude, thus making racial dispersion more likely and relieving some pressures from areas already changing. They complain that the Georgia Real Estate Commission has given them "no support" in curtailing blockbusting efforts. And their public appeals have received little attention from a city which, according to some predictions, could in 10 years become an urban island of black citizens, isolated from white suburbs by the perimeter interstate highway, perhaps patrolled by guardsmen who would require identification papers of blacks leaving the city.

But the efforts have not been in vain. Recently the Justice department filed suit against six real estate companies on charges of blockbusting in South DeKalb and Southwest Atlanta. The case is still pending before Judge Newell Edenfield, U. S. District judge of the fifth district.

Blacks moving into the area, are still greeted with racial tension on some all-white streets. But whites are also moving in. South DeKalb residents report they first noticed a significant number of white families buying homes in the area in mid-1969. Although no statistics are available, one real estate salesman sold three houses to whites in South DeKalb within four months, and another South DeKalb home, recently advertised for sale, brought in more than 100 calls. The percentages of white and black residents in South DeKalb now is uncertain. But a good measure probably is suggested by enrolment in Gordon High School, attended by most of the community's teen-agers, which is now 27 per cent black.

Once the specter of race is buried, whites may find that stabilized neighborhoods that once had seemed transitional from white to black offer good housing buys, convenient transportation and a free and communicative atmosphere, foreign to both the black ghettos of the inner city and the white ghettos of surburbia.

Betsy Fancher is associate editor of SOUTH TODAY. Her second book, THE LOST LEGACY OF GEORGIA'S GOLDEN ISLES, was published on Feb. 15 by Doubleday.

Addressed to Al Ulmer

CONFIDENTIAL - NOT FOR PUBLICATION

MS
Res

Minutes of the Board of Directors Meeting
International Self-Help Housing Associates
Continental Hotel, Washington, D.C.
March 30-31, 1967

Thursday, March 30

MORNING SESSION:

The meeting of the Board of Directors of ISHA was called to order by Chairman Elizabeth Herring.

PRESENT: Mariana Alcock, Edna Brooks, Robert Choate, Clay Cochran, Clarence Custis, Ida Edelen, Ben Fraticelli, Donald Hanson, Elizabeth Herring, William King, Richard Margolis, Jim Stein, George Topshee, and John Wagner. Staff: Clay Cochran, Paul Fry and Jean Thomas.

Eric Carlson was reported to be out of the country; George Grier and Al Ulmer had conflicts; Aurelio Lupercio cancelled out because of his wife's illness; Marian Wright was expected. No response from Elvera Nosie or Cleo Blackburn.

Board members and staff introduced themselves. New members of the Board, Ben Fraticelli, Mariana Alcock and Bill King were welcomed to the Board.

> 67-1: On motion by Bill King, seconded by John Wagner and approved unanimously, the Board approved sending a message to Aurelio Lupercio expressing its regrets at his wife's illness and his necessary absence. John Wagner was appointed to draft the telegram. (Subsequently dispatched.)

The Report of the Executive Director to the Board is attached to these minutes for your reference. (Attachment A). Specific actions taken by the Board with regard to his recommendations are included in the minutes.

Status of the Pamphlet - "Something to Build On"

One of our great needs is for an up-to-date general pamphlet on self-help and this should be satisfied soon. The American Friends Service Committee has offered to enter into a joint publication arrangement with us on Dick Margolis' manuscript by this title. AFSC has agreed to pay for the manuscript. We will pay for the printing. AFSC would

receive copies for their use and the balance, along with the copyright would become the property of ISHA.

RECOMMENDATION: We urge your approval of this arrangement, by resolution.

Eleanor Eaton: NCDA and AFSC published a booklet jointly which was very successful. AFSC welcomes a joint publication with ISHA.

67-2: Motion by Eleanor Eaton that ISHA agrees to publish jointly with AFSC the pamphlet, Something to Build On by Dick Margolis, the final approval of the text to be the decision of representatives from both AFSC and ISHA. The cost of the manual shall be incurred by AFSC; publication, distribution and promotional costs to be incurred by ISHA. ISHA will receive profits from pamphlet; AFSC will receive free copies. The income from sales to go to ISHA.

The motion was approved unanimously.

67-3: Mariana Alcock moved, seconded by Dick Margolis that ISHA's thanks be expressed to AFSC.

Approved unanimously. (See Attachment #1)

Eleanor Eaton indicated that AFSC's 12 district and overseas offices could be used as distribution points. AID and other agencies should be approached for distribution.

There was further discussion of the pamphlet and the proposed handbook to be produced under the ISHA-SHE contract. Jim Stein indicated that the combination of the AFSC-ISHA (Margolis) pamphlet and the handbook would go far in answering questions on the nature of the program and the method for carrying it out.

The Staff is submitting a request to OEO for a $75,000 grant to enable us to hire two field representatives, an additional writer, and two additional secretaries, plus travel funds, rental space and equipment, and a fairly generous allotment of funds for printed and photographic materials and the employment of consultants and "trouble-shooters". We have had preliminary discussions of this application with the Housing Director of OEO, Richard Granat, and he seems to be entirely cognizant of the need from OEO's own information.

Sponsorship of OEO Grant: Since we are a new organization and fall under an OEO ban on new organizations without a prior concern for the poor, it was necessary that we be "sponsored" by an organization with the proper credentials. Barbara Moffett of AFSC immediately agreed to and did secure approval for this sponsorship from the AFSC. For this we are very grateful.

I trust these activities have your approval, and we solicit ideas on the best ways to approach the problem of pushing the program with such help.

> RECOMMENDATION: We would appreciate your approval of our signing a lease in anticipation of the personnel now in order that we may have the space in the building where we are now located.
>
> 67-4: By unanimous vote the Board approved signing the lease.

Eleanor Eaton suggested that ISHA might hire someone who is bilingual, from the Mexican-American community. She also suggested that this was an opportunity for an integrated staff and that Southern Negro colleges be checked through such people as Vivian Henderson and Randolph Blackwell. Mariana Alcock indicated that the editor should have a good knowledge of the war on poverty, with experience, not just out of college with no working experience. She suggested that Sue and Henry Lorenzi would be good since they understand housing and community development. Sue Lorenzi is good at simple illustrative material. Alcock also suggested that Marian Wright may have ideas about who would make a good editor.

In the discussion of the contract with OEO, Eleanor Eaton made it clear that it would be necessary that Barbara Moffett receive all information on the contract, including reports, minutes of meetings, etc. because of the sponsorship by AFSC.

Organizational Matters:

Clay Cochran: Article IV of the By-laws stipulates that the Board of Directors shall consist of not more than 25 members, 18 of whom shall be elected by the membership and 7 elected by the Board. At least 6 members must be participant builders.

Currently the Board has 22 members, including the Executive Director.

It is a dubious policy to have a paid staff member on the governing body, and I herewith submit my resignation from the Board of Directors.

RECOMMENDATION: Acceptance of my resignation.

67-5: On Motion, Cochran's regisnation from the Board of Directors was accepted unanimously.

After discussion, it was decided that a temporary nominating committee of 5 would be appointed by the Chairman to (1) nominate permanent officers, (2) nominate persons to fill the 4 vacancies on the Board, (3) nominate the regular nominating committee for the fall meeting, in accordance with the By-laws, (4) nominate a new Executive Committee in accordance with the decision at the September, 1966 Board meeting and (5) nominate a three-person Advisory Committee on Research and Education.

67-6: On Motion the Chairman was instructed to appoint such a temporary committee to report the next afternoon. The Chairman appointed the committee including: Eleanor Eaton, Chairman; Marian Wright; George Topshee; Dick Margolis and Ben Fraticelli; with John Wagner as alternate if Marian Wright could not be present.

In the discussion it was emphasized that building participants have a vital function to perform. Mariana Alcock urged a check with Elvera Nosie via Bill King and a replacement named if she cannot attend meetings.

Eleanor Eaton suggested that the Executive Committee plan a meeting following the Board meeting to avoid using Board meeting time for such things as legislative information, rental problems and such matters. It was agreed to discuss this recommendation later.

Fringe Benefits for the Staff:

Clay Cochran: In the application for Ford Foundation Funds and in Minute XII-66, reference is made to 10 percent fringe benefits "in a package similar to the arrangement used by the AFSC and other such organizations."

It was indicated to me that Social Security benefits should be part of this, currently 4.4 percent of $6600. We are paying Social Security as a matter of course. We are also paying Unemployment Compensation and Workman's Compensation Insurance, but I do not consider these to be fringe benefits.

We intended to put together a package of benefits which, initially, would include (1) term life insurance to the nearest thousand of an employee's salary, (2) medical and hospitalization insurance, (3) and some kind of salary continuation arrangement in case of illness or accident. We were unable to qualify for group rates (with only three employees) because I was unacceptable as a "normal" risk.

We are paying membership fees for the staff in Group Health, the very good medical-hospitalization group here in D. C.

We have purchased general casualty policies for staff members who travel in the amount of $25,000.

The term life insurance and salary continuation policies will be purchased as soon as we have enough staff to qualify for group rates, or within a month in any case. I have arranged to carry my own term life insurance on I.U.D.'s group rate until July, at which time it will have to be picked up at exhorbitant cost. The following resolution is proposed to fix policy on fringe benefits.

> RECOMMENDED BOARD RESOLUTION: The Executive Director is instructed to provide all permanent employees social security, workman's compensation, unemployment insurance, medical and hospitalization insurance and term life insurance (if available) to the nearest thousand dollars in salary. In addition, employees who travel extensively shall be covered by casualty insurance and those who travel occasionally, by trip insurance.
>
> There shall be set aside an amount equal to ten percent of each employee's salary for fringe benefits. Social security, medical and hospitalization insurance, life insurance and casualty insurance shall be paid for out of this 10 percent. Any balance - for each employee - of this 10 percent fund shall belong to the employee as terminal leave pay, provided he has been an employee as long as six months, except that at such time as a retirement program is available, this balance may be used to pay the cost of that

program. The minimum fringe benefits paid by ISHA include (1) social security, (2) life insurance, term if available, to the nearest thousand dollars of salary, (3) group health and hospitalization, and (4) a casualty policy for employees who travel extensively. If the ten percent fringe allowance is insufficient to cover these specified items the funds shall be transferred from the general account to cover the deficit. The cost of the retirement program may be deducted from the 10 percent before additional terminal leave pay may be accrued.

67-7: The resolution was adopted unanimously.

Annual Audits:

RECOMMENDATION: Clay Cochran - The Board authorizes and instructs the Executive Director to secure an annual audit of the books, on a calendar year basis.

67-8: Approved unanimously - Motion by Ben Fraticelli, seconded by Jim Stein.

Question: What disposition does the Board wish to make of the problem of seeking financing for work in urban or international areas?

Discussion of this subject was deferred, but in the insuing discussion there was interest expressed in adding a staff person to work in obtaining information on international activities, with stress on the fact that for the time being ISHA has more to gain from other nations than we have to offer. The discussion of activity in urban areas was not conclusive.

Question: What should our policy be in "joining" other organizations?

RECOMMENDATION: Clay Cochran: It is the policy of ISHA to cooperate with other organizations to achieve common aims, but to hold formal memberships to a minimum. Formal memberships require the approval of a majority of the Executive Committee. (Note: This policy recommendation refers to ISHA as such, not to the staff.)

67-9: Approved on motion, unanimously.

Clay Cochran: The staff finds that the word "Associates" in our name is cumbersome and misleading. It makes us sound like a private

business. We urge your consideration of the following amendment to be submitted to the membership meeting in the fall for adoption:

> RECOMMENDATION: The Board of Directors submits the following amendment to the by-laws to the 1967 Membership Meeting with recommendations that it be adopted. Resolved that Article I of the by-laws be changed to read as follows: "The name of this organization shall be the International Self-Help Housing Association."

Eleanor Eaton explained that the reason "associates" was used instead of "association" was so that we would be known as an organization of members rather than organizations. She also raised the question of complications legal and tax-wise in making the change.

> 6-10: Dick Margolis moved that a resolution be submitted to the member meeting in the fall provided the staff finds no legal or other barriers to making the change.
> Motion approved unanimously.

Clay Cochran raised the question as to whether members of the Board of Directors should be identified on the letterhead by organization, for identification purposes only.

Eleanor Eaton opposed such identification, suggesting the board members be identified by name and geographical location only as many of them belong to numerous organizations. Jim Stein thought organization identification would take up too much space on the letterhead. Dick Margolis suggested a kit made up of biographical information on each board member.

ISHA Publications: Clay Cochran made the following recommendation with regard to ISHA publications:

> RECOMMENDATION: Members of ISHA shall receive one copy of all ISHA publications free plus a subscription to The Self-Help Reporter. The Reporter is a service and its receipt does not balance any particular dues payment. It is free and not for sale.

Mariana Alcock said she felt the Reporter should have a broad range of distribution and not be limited to just members. Eleanor Eaton suggested that this subject be held in abeyance until the number of mailings increases enough to warrant further decision, and, that for the interim, we accept the staff's recommendation. Dick Margolis suggested we seek contributions for bulk mailings.

6-11: Eleanor Eaton moved approval of the staff resolution on publications, seconded by Dick Margolis and approved unanimously.

Clay Cochran urged the board to authorize payment of travel and other costs incurred in attending this and subsequent Board meetings. He said it should be a blanket authorization to make payments clearly legal as a routine matter.

Eleanor Eaton stated that we should be very careful in future meetings, if this approval is given, in order to assure that participants travel the most economical way, e.g. tourist class when traveling by plane. She said that Minute XXXIII-66- "The Board approved payment of travel and other expenses for Board members traveling on ISHA business at the request of the Board or Executive Committee" was sufficient authorization for payment. Clay Cochran indicated that he had not realized that the authorization was general and that he deemed this language adequate.

Eleanor Eaton further suggested that Paul Fry draft a statement of guidelines for travel expense, to insure that due economy is observed and that such guidelines be submitted to the Executive Committee for discussion at their next meeting. Clay Cochran urged that Eleanor Eaton collaborate with Paul on such a statement; but also indicated that we would not wnat the rules so ironclad that a Board member might be forced to forego attendance because tourist seats were not available. Ben Fraticelli stated that had an ironclad rule been in effect he could not have attended the current Board meeting.

Recess for lunch- Guest speaker at the luncheon was Tom Karter, Chief of the Migrant Branch of the Office of Economic Opportunity. Mr. Karter discussed the war on poverty and the self-help housing program.

AFTERNOON SESSION - Friday March 30

Clay Cochran submitted a financial report, indicating that when the next allotment of funds from the Ford Foundation was received, probably around April 1, Mariana Alcock would be paid the balance due her. (The Financial Report is attached to these minutes as Attachment #2.)

There was discussion of finances and the work of the Finance Committee which had been inactive. It was agreed that the temporary nominating committee would submit nominations for a Finance Committee in their report.

Discussion of the article "Community Union" from AGENDA: It was stated that this kind of organizing takes an enormous amount of leg work but has great possibilities. We cannot confine ourselves to housing only, but we must also be constantly aware of the community as a whole. We must be quite careful that the phrase "self-help" is not used just because it is appealing--there are many other benefits flowing from "self-help" other than a house. Guidelines must be established. How does the Nova Scotia Program compare with the program in the U.S.? At the fall Board meeting we should discuss where and how we fit cooperative housing into the program in this country. Do any present cooperatives follow a self-help program?

George Topshee said that the person is more important than the house. We must use any vehicle to get to the people, to find out what they want and need; to find out what their interests are; and get them working together to meet their expressed needs. Mariana Alcock stressed the importance of reminding bureaucrats that they are working with people. Bill King urged that we not allow the organization or the program to become a vehicle for self-seeking interests. Dick Margolis asked: Where is self-help at Rosebud? Very little self-help in the usual sense, but much community development. The vital point is whether the person feels he has contributed. Does he feel that it is his house?

THE BOARD ADJOURNED TO ENABLE MEMBERS TO KEEP PRIOR ENGAGEMENTS AND ATTEND THE OPEN HOUSE AT ISHA HEADQUARTERS.

(The open house was well atended with representatives from BIA, HUD, Farmers Home Administration, OEO, the Senate Public Works Committee, and other agencies.)

EVENING SESSION - March 30

Reports from Board Members:

Clarence Custis reported that one project in New Jersey is being completed, with another to start next week. Farmers Home has been very cooperative in New Jersey, but lacks the administrative staff to do as much as needs doing. Since the problem is lack of help, ISHA should undertake to help solve the problem.

Ben Fraticelli commented that it is not necessary to have OEO supported statewide projects to facilitate the program. Statewide programs can be bypassed by local groups. He suggested that possibly the migrant ministry

in New Jersey should sponsor a project, and that ISHA could help stimulate interest. Find the groups that are ready to move, he said, and help them to move.

A question was raised as to whether Ben Fraticelli could be brought into New Jersey as a consultant. Bob Choate remarked that local groups should write to Fraticelli if they want his assistance and be ready to pay half of his expenses. Jim Stein indicated that not too much stress should be put on the partial payment of expenses if this is an impediment to advancing the program.

Elizabeth Herring asked how best to get the migrant ministry or AFSC to move on a project in New Jersey - or elsewhere. Ben Fraticelli said that all state migrant ministries are different. He suggested an informal approach, or possibly an approach through the National Migrant Ministry Advisory Committee. There is a meeting of the migrant ministry in September where an ISHA representative might participate in the program to discuss self-help housing. George Topshee suggested that the Executive Director budget such activities as those under discussion. Bill King recommended sticking to a clearing house principle of operation, but if groups want expertise try to furnish it.

George Topshee: Canada has only 20 million people with a greater geographical area than the U.S., one-fifth of the people live in Toronto and Montreal metropolitan areas. Canada has a national housing act and a crown corporation. As far as government is concerned the attitude toward self-help housing is not good. Some have no clue to its value, others think self-help is like little pigs, i.e. they're cute, but don't let them grow up. Around Toronto there is a great rural to urban movement resulting in skyrocketing values of land and housing. A normal housing vacancy rate is around 4-6 percent, but in Toronto it is only 1 percent. Prices jumped 14 percent in 6 months to an average of $19-26,000.

In Nova Scotia there is large unemployment. Nevertheless, there are 27 groups including about 230 families working on self-help now, the biggest year so far. In public housing 75% of the money is federal; 12.5% provincial; the balance is local funds. We argue that more public housing is good; but self-help is better in many ways. In Sydney the subsidy on 100 families is $6 million over a period of years in

public housing while there is no subsidy for self-help.

George Topshee's group is working on a "starter fund," a grant to specified types of families. Income in Nova Scotia is low compared to the national average. Thirty seven percent of all families are below the $3,000 poverty mark. Families with limited income build more modest houses, loans of $6500 to $8500. The family is supposed to pay 20% of its income for rent, under a contract which is reviewed every five years.

Question: Who pushes legislation in Nova Scotia?

George Topshee: This depends. Duncan McIntire works on this problem. If we had a dozen such men we could organize 2,000 families in housing. The starter fund is cancelled after 25 years, meantime it enables families to purchase land. There is self-help in non-Nova Scotia areas in Canada. Nova Scotia has built 2,000 houses up to now with another 200 to be built this year. Newfoundland has 40 or 50 self-help houses.

Donald Hanson: Reported a world uptrend in self-help housing. The program seems to go in cycles. From 1952-58 there was big production, especially the Puerto Rican program organized along the lines of the Nova Scotia program. There is a trend to prefabrication in self-help but this may push costs up.

In Africa there are two Quaker projects. The Ethiopian project is a success. Somali is pretty good. Africa is moving. Asia is not, possibly due in part to a scarcity of land. In Thailand, 700 families are rehabilitating houses, using Bangkok money plus UNICEF financing.

Two-story housing is a problem for self-help. There are possibilities but nothing is being done.

Ben Fraticelli: Who is financing self-help outside the U.S.?

Donald Hanson: AID sometimes; sometimes national governments. Self-help is common in the USSR and Yugoslavia. In the South in the U.S., site and services provision might help--may cut cost 30%. Building a core house rather than a complete house is an idea. Build one permanent room and make the others temporary.

Ben Fraticelli: Middle class standards are a problem.

Jim Stein: We are experimenting with some 960 square feet, 3 bedroom houses with beam ceilings, leaving off the doors. There is a $1500 grant per family, to those who could not get FHA financing. The house is of styrofoam panels.

Ben Fraticelli: A major problem is relationships with Farmers Home Administration, both in personalities and the bureaucratic structures. Lee and Collier counties (jointly) have a direct OEO grant. We need to develop some kind of grants-in-aid. Original OEO viewpoint was against local sponsors. They preferred areawide projects. Tentatively they are going along with Florida. We think it is best to start locally and then possibly merge at a higher or broader level. There were too many impediments to moving on a statewide basis, so we are going one place at a time.

There is a 14 county migrant project, OEO financed, in Florida on which we would like to have a state self-help man. There was a conference on housing made up of 8 organizations:

1. American Migrant Ministry
2. AFSC Migrant Program
3. Diocese of Miami
4. Council of Human Relations
5. IUD-AFL-CIO
6. Community Action Fund Migrant Project
7. Citizens Committee for Farm Labor
8. NAACP - State Conference of Builders

The conference resulted in the establishment of the Coordinating Committee for Farm Workers, as a receiving agency for planning and coordination and stimulation of action on housing. This Committee plans to encourage self-help, co-ops, low rental housing, and housing authorities.

Bill King: If self-help means maximum involvement or de-bureaucratizing, we may find it possible to redefine our role. We don't want administered people.

Could we consider getting a practical or theoretical knowledge of Community development. (One Board member recommended "Community Development Process" by Biddle and Biddle.)

Mariana Alcock: There are two types of housing in Argentina. The good housing is financed with a U.S. $2 million loan with a five-year

grace period at 3 percent interest. They are building a thousand houses a year with this money. Alcock said the houses are costing $700 thousand pesos apiece, or about $3500 per house. Land was expropriated and is free. She said she would submit a written report with the address of an Argentina citizen who wants to be placed on the ISHA mailing list for informational purposes.

Eleanor Eaton: El Porvenir is starting on 55 homes, after 5 years of struggle, under the sponsorship of the AFSC. Ground breaking is April 1. A resolution should be sent congratulating them.

There is a new project of the AFSC in Northwest Oregon.

The Meeting was adjourned until 8:30 a.m., Friday, March 31.

FRIDAY, MARCH 31

MORNING SESSION:

Report and Discussion of Legislative and Financing Problems:

Clay Cochran submitted a written report to the Board which is included here, interspersed with discussion notes.

OFFICE OF ECONOMIC OPPORTUNITY

Self-help housing supporters are necessarily concerned with funds for the Office of Economic Opportunity, particularly funds for migratory workers (Section III (b)), but also with funds in general insofar as they affect the capacity of the agency to function.

Facts on finances:

Total funds for OEO for current year (Fiscal 1967)	$ 1.6 bil.
Total recommended for next year	$2.06 bil.
Fnnds for Section III (b) for current year	$33 mil
Funds recommended for next year for III (b)	$27 mil.

We are in the process of drafting a statement to the appropriate Congressional committees expressing our concern for adequate funds for OEO, particularly as related to self-help housing.

Last year the Senate Committee Report on OEO carried language encouraging Administrator Shriver to make brick and mortar grants up to $1,500 per family, a very important factor in our future. No such grants have been made and there is some indication that Shriver wants more than committee language.

I think we should include in our statement noted above that we consider such authority and funds to carry it out as essential to the program if it is to reach lower into the income scale.

Farmers Home Administration

Currently virtually all funds for mortgage credit for self-helpers comes from Farmers Home Administration. Loans have been available at four percent, but effective March 14, four percent funds are no longer available, this year or next year. Moreover, Farmers Home drags its feet on self-help partly because where it is carrying the load of sponsorship (organization and supervision) without other help the burden on personnel is excessive. Farmers Home's lending authority has been tripled in about five years with only a 15 percent increase in administrative funds.

I would recommend that ISHA, as well as our allies, send statements to the appropriate Congressional committees:

(1) Urging supplemental four percent money for Fiscal 1967
(2) Urging an increase in four percent money for Fiscal 1968
(3) Urging special administrative funds to enable Farmers Home to expand its activites in self-help.

Staff Question No. 1: Where do we go from here on legislation?

Question No. 2: How do we go about recapturing our 4 percent rate? In view of our tax exempt status, how do we defend and advance the program?

Eleanor Eaton: We mush make sure that in discussing matters with the Congress we do not violate our tax exempt status. We should testify only upon request. We should speak not for any particular piece of legislation, but speak as the voice of experience. There is no ban on our right to pressure the executive agencies.

Dick Margolis: Before taking any action we should have an invitation for the sake of the Ford Foundation. We should also not mention Ford's name until they have been advised.

Bob Choate: We should advise the Ford Foundation when we have requests so that if they get queries they will not be in the dark.

Ben Fraticelli: Our first priority is the need for money and personnel. We should not lose sight of the fact that we must concentrate on the individual farm workers, not just a community as a whole and the agency establishment. We should go directly to the farm workers, not contractors and businessmen in the community.

Dick Margolis: ISHA should submit all of these problems on paper to the

highest level. Issue a Bill of Particulars for submission, particulars which should emanate from each project. He suggested that we get access to alleged information on projects being financed by credit from the Federal Housing Agency.

Eleanor Eaton: We should approach USDA, FHA, and Farmers Home affirmatively, acknowledging their good points. Farmers Home county supervisors have too much to lear and do. They need assistance, e.g. Atala or Winston, Mississippi - Problem seems to be that the personnel have to learn legalities, and they need experience in this area before gaining momentum. We should approach Farmer's Home with the idea that we want to help FHA do a good job.

In further discussion it was pointed out that the Department of Labor asked for bids of major industries to seek out hard-core unemployed in these areas. Should ISHA do the same on a county basis to create housing for these people? The Labor Department contracts out responsibility - Why not approach USDA about doing the same thing with housing? It was suggested that the staff pursue this matter further with Mr. Bertsch, and check on AID's Foundation for Cooperative Housing for foreign countries.

Eleanor Eaton: Mississippi has put on a full-time Farmers Home housing man at Lewisville.

Ben Fraticelli: Maybe we have a leadership function in organizing non-profit groups for the receipt of III (b) funds to help Farmers Home do its job.

Bob Choate: Can Farmers Home contract out part of these function? (Note: There was no response to this question which was later delivered to Mr. Malotky at luncheon and he assured us of a reply.)

Jim Stein: California Farmer's Home rejected S.H.E. offer to assign per personnel.

Elizabeth Herring: Rural Community Development Service is supposed to get part of a $450,000 fund -- did it? How does Mr. Bertsch plan to spend this money?

It was suggested that the staff make inquiry of Mr. Bertsch on this point.

67-11: In reference to the Executive Director's recommendation that ISHA make specific recommendations to the Congress on four percent money and more administrative funds, Bob Choate moved with a proper second that: In view of the fact that it is not within the goals of ISHA to engage in legislative activity unless we are requested to respond, I hereby move that these recommendations be rejected. The motion passed unanimously.

Dick Margolis suggested that a good study of OEO (on housing) and the Farmers Home Administration be made by the staff, with recommendations, at the fall membership meeting. He told the Board it is vital that Board members keep in contact with the staff on this paper, stressing particularly the need for specific points and details of problems.

RECOMMENDATION: Clay Cochran urged that a telegram, signed by all Board members, be sent to President Johnson with appropriate copies here and there.

The proposed telegram was discussed at length. A substitute idea of individual letters from Board members was discarded.

67-12: A motion that a letter embodying the revised proposed language be sent to President Johnson over the signature of the Executive Director was duly seconded and passed unanimously.

(A copy of the letter to the President is attachment #3.)

67-13: A motion that the Executive Director should send a letter to Mr. Shriver heartily endorsing the Senate Committee Report of 1966 which endorsed brick and mortar grants up to $1,500 per family and urging that it be included specifically in the OEO bill this year was duly seconded and passed unanimously. The letter is attached as attachment #4.

RECOMMENDATION: The staff suggested that the following resolution be transmitted to Senator Jennings Randolph Chairman of the Senate Public Works Committee:

The Board of Directors of ISHA wishes to express its deep appreciation to Senator Jennings Randolph for his interest in opening the doors for the use of self-help housing to enable low income families in the Applachian Region to help themselves, and we are particularly grateful to Senate Public Works Committee Director Richard B. Royce and Professional Staff Member M. Barry Meyer for their courteous cooperation.

67-14: A motion by John Wagner, duly seconded, approved the sending of the letter, a copy of which is Attachment #5.

Legislation For A New Lending Agency:

There are two bills already in the hopper designed to create a new agency in the Department of Housing and Urban Development to provide grant and loan funds for self-help housing. H.R. 1284, by Rep. Sisk of California, is the original bill drafted at the behest of Self-Help Enterprises in California. H.R. 6152, by Mathias of California, is Sisk revised to include the creation of a revolving fund for land acquisition.

The initial off-the-record response of HUD to the Sisk bill was, in the staff's opinion, unfair, misrepresentative and slashing in its criticism. We got a look at this "analysis" and responded with some comments of our own. Subsequently, Paul Fry and I met with Ashley Foard, the Assistant General Counsel of HUD, the chief economist and another attorney where it became quite evident that: (1) they were laboring under a lot of misapprehensions about self-help; (2) they were concerned about its being a Pied Piper which would lure attention and funds away from programs they liked better; (3) they are overwhelmingly oriented in the direction of the problems of megalopolis and could care less about rural areas.

Subsequent to this meeting we got a look at another "analysis" which, although it contained part of the unfair and unfriendly points in the first one, did go some distance in eulogizing self-help.

With the cooperation of the Chairman of the House Banking and Currency Committee, we have three drafts of bills which we think deserve consideration.

The first draft is the Sisk bill with certain technical improvements suggested by a HUD attorney, plus one substantial change: It permits grants up to 10 percent to families if necessary.

The second draft is the same as No. 1 except that it provided for our much needed revolving fund for building site acquisition.

The third draft is the same as No. 2 except that it adds a provision for up to 40 percent grants instead of 10 percent, or, alternately it establishes the "Norwegian" plan of allowing the Secretary of HUD to take up to 40 percent non-amortizable, non-interest bearing second trusts--if necessary--to enable a family to build its own house.

QUESTION: Where do we go from here on this legislation as written?

QUESTION: Would we want to permit HUD to delegate part or all of the functions to USDA?

Discussion indicated a wariness of any delegation of authority to USDA but no specific action was taken. Jim Stein was of the opinion that the Sisk bill plus the 10 percent grant authority suggested would be so great an improvement over present arrangements, considering the cut in interest rates to 3 percent, that we should take this step before considering the necessity for pressing for further assistance.

67-15: Eleanor Eaton moved the establishment of a standing committee to be known as the Legislative Study Committee, to advise the Board and consult with the staff as required on matters pertaining to legislation of interest to self-help housing. The motion was seconded and approved unanimously.

Chairman Elizabeth Herring welcomed and introduced Fred Blackwell of Senator Harrison Williams' office. Fred Blackwell discussed some of the problems of hired farm labor briefly and noted that the President called for 2,000 additional self-help housing units for Fiscal 1968.

Clay Cochran asked Blackwell what agency he thought would do the best job in getting appropriations for self-help housing, among the established agencies. Blackwell suggested HUD in preference to USDA. There was general agreement that Senator Williams should introduce bills on housing which would apply to all of the rural poor, not just migrant workers or hired farm workers.

67-16: Dick Margolis moved that the following resolution be sent to the President of the United Sates. The motion was duly seconded and passed unanimously

Resolution

Whereas, according to the 1960 U.S. Census, there exist in this nation approximately 11 million dwelling units that are either dilapidated or lack minimum facilities; and
whereas an almost identical number of inadequate dwelling units was cited a decade before, in the 1950 Census; and
whereas this chronic shortage of decent housing for millions of Americans continues to exist today, despite measures taken by our Federal government, our state government, our county and munipal governments and many private agencies;
Be it resolved that the United States Government invites the United Nations to send to our country a mission of housing experts for the purpose of investigating our housing problems and of recommending measures of solution.

Note: The letter was dispatched and appears as Attachment #6.

The Board recessed for lunch with Louis Malotky, Director, Rural Housing Loan Division, Farmers Home Administration, U.S. Department of Agriculture. A summary of Mr. Malotky's comments is attached to these minutes.

AFTERNOON SESSION - March 31

Report of the Temporary Nominations Committee:

67-17: The nominations committee nominated the following officers to fill out the three-year term ending with the fall meeting, 1969:

Chairman: Mariana Alcock

Vice-Chairman: George Topshee

Secretary-Treasurer: Edna Brooks

Elected unanimously.

67-18: For Nominations Committee for the fall membership meeting (required by the by-laws to include two non-members of the Board of Directors).

Chairman: John Wagner

Robert Marshall, (S.H.E.), non-Board member

Scott Nielsen, (Chester, Pa.), Non-Board member

Marian Wright

Ida Edelen

Elected unanimously.

69-19: For the Finance Committee:

Chairman: Mariana Alcock
Ralph Rosedale
Robert Choate

With authority to add other members on their own motion as required.

Motion approved unanimously.

67-20: For members of the Board of Directors:

Dan Bedell, Legislative Representative, United Autc Workers, Washington, D.C.; Randolph Blackwell, Director Southern Rural Action Project, Atlanta, Ga.; John Hagely, Batelle Institute

(Dr. Elfriede Hoeber and Chris Ahrens as alternates)

Dave Moore, Sydney Nova Scotia, Builder, self-help leader, mechanic.

With the following alternates: Gerald McIntire, N.S.; Louis Casanova, Meadow Wood, Texas; Renaldo Sanchez, Immakolee, Fla; and Nancy Whitehorse, Rosebud Reservation, South Dakota.

Elected unanimously subject to acceptance, except Bedell who had previously agreed to serve.

67-21: The committee recommended that the name of the proposed Education and Research Advisory Committee be changed to Agency Relations Committee with Elizabeth Herring as Chairman, George Grier, and Eleanor Eaton as members.

67-22: According to the by-laws, the officers were allotted three-year terms and lots were drawn for all other members of the Board with the following results:

Term expires Fall, 1967:

Elizabeth Herring*
Dave Moore
Dan Bedell
Ben Fraticelli**
William S. King**
Eleanor Eaton*
Don Hanson*
Randolph Blackwell
Dick Margolis*

Term expires Fall, 1968:

Elvera Nosie*
Ida Edelen*
Jim Stein**
John Wagner*
Clarence Custis*
Marian Wright**
John Hagely

Term expires Fall, 1969:

Mariana Alcock**
George Topshee*
Edna Brooks*
Robert Choate*
Aurelio Lupercio*
George Grier*
Al Ulmer**
Eric Carlson*

NOTE:
Board members whose names are underlined are the six participant builders required by our by-laws.

* Those Board members elected by the membership by mail ballot and assumed office at the first meeting of the Board, September, 1966.

** Those Board members elected by the Goard on March 31, 1967.

67-23: A motion was made and approved that, because of the time element involved, the following items be referred to the Executive Committee:

Membership Drive
Communications
Agenda and place for Annual Meeting, except that the time is to be between October 1 and December 1.
Finances

67-24: The Board expressed its deep appreciation to Elizabeth Herring, retiring Chairman, for her devotion to self-help housing and her invaluable services in helping to launch ISHA.

Meeting adjourned.

###

Attachment A

INTERNATIONAL SELF-HELP HOUSING ASSOCIATES

REPORT OF THE EXECUTIVE DIRECTOR TO THE BOARD OF DIRECTORS
March 30, 1967

As we informed you earlier, the Washington, D.C. offices of ISHA opened January 3, 1967 with a staff of three people, the Executive Director, the Assistant Director, Paul Fry, and a secretary, since replaced by Jean Thomas.

Our first assignment was to try to get around to existing projects before the pressure of events became so great as to preclude the kind of educational trips we figured were essential to understanding. We did get to California to visit with Self Help Enterprises for a week, spent some time with Herb Foster of AFSC, and visited with Bill King in Scottsdale and Maynard Schneck in Tuscon, Arizona, and Father John Wagner and Col. Deyo, the Texas housing chief, in San Antonio on the way back.

The S.H.E. staff in California worked overtime on our education, and we were able to get a good short course in the program. In addition we discussed the proposed legislation (H.R. 1284) which S.H.E. had drafted in an effort to bring some order into the Rube Goldberg machinery of the Federal government as it relates to self-help hsouing. (More on legislation later.)

DEVELOPMENT OF A WORKING HANDBOOK OR MANUAL ON SELF-HELP HOUSING:

We also reached an understanding with S.H.E. on a very vital need, the development of a loose-leaf handbook on self-help housing, a down-to-earth, detailed work manual based on S.H.E.'s experience, edited in Washington and made jointly available for use not only in California but elsewhere. A loose-leaf notebook will facilitate use in other areas where problems will be different, allow for easy variation, but will also facilitate the continued evolution of the handbook in S.H.E.'s hands. Two sections of the rough draft of this handbook are already in Washington, and we are hoping that Jim Stein has brought the third section with him to this meeting. If so, we should have a real working instrument within a few weeks.

On the return trip we missed the ground breaking for the first Arizona self-help project at Marana near Tuscon where Maynard Schneck, with the help of an outstanding VISTA worker has put together a group of 15 families made up of Negro, Mexican-American, Yaqui and Papago Indians.- really integrated housing.

We spent the better part of a day with Bill King and his housing supervisor on the Salt River Reservation near Phoenix. Houses are being built on a self-help basis by the Bureau of Indian Affairs, with a lift from the public health service on sanitation and water. I trust Bill will fill us in on details at this meeting. The houses look good and we watched a crew laying up block, led by a self-helper who was slapping up blocks like a professional after relatively little experience.

We were met in San Antonio by Father Wagner and given a tour of the Meadow Wood Acres project during the day, finding to our dismay that the Community Center had been turned into a surplus warehouse and was no longer serving as the nerve center of the community as Father and the early cooperators had envisioned. After Father Wagner's departure from the project it fell on evil days at the hands of some middle-

class politicians. Affairs are supposed to be improving since the project was taken over by the State OEO housing operation under Col. Deyo who had been recruited by Father Wagner earlier.

At about the time of our arrival OEO had funded Texas for about $132,000 and expects to build houses in three or four different locations. That night we met with Col. Deyo for a couple of hours and heard the latest on Texas. The Colonel has ambushed several wagon trains of surplus military barracks material, a half-dozen GSA trucks, an assortment of other materials and intends to build his houses with salvaged materials, using workers who will alternately be drawing OEO stipends for education and training and subsequently aided by MDTA training projects. With these aids, and the list is not exhaustive, Deyo plans to produce well-built, modest houses at a minimum cost to the families involved. My recollection is that the mortgages will run from $1500 to $2000 per family. I trust Father Wagner will add to this information during the Board Member reports.

APPALACHIAN TESTIMONY

We cut our trip West short, omitting South Dakota among other things, in order to return to Washington to testify on the Appalachian bill. You will recall that Congress has created a special organism for dealing with the problems of the Appalachian Region, a region largely depressed and deprived, making up parts of 11 states. The measure up for consideration was an extension of the act through 1970, with amendments. We were requested by the Chairman of the Senate Public Works Committee, Senator Jennings Randolph, to discuss self-help housing with the Committee. You received copies of our statement.

It is significant that there was a desire two years ago to include a self-help component in the Appalachian bill, but the Committee did not know where to turn for advice. We have done the best we could, publicly and privately, to help in the authorization of a program there, and the indications are that a program will be established. We are not clear on the scope of it yet.

We would like to express our appreciation to ISHA-member Chris Ahrens, special assistant on housing to the Governor of West Virginia, for his generous assistance on preparing the Appalachian testimony, and for the supplemental statement which he prepared for submission. We have a few copies of the hearings here if anyone has a special interest.

The intervening period has been unbelievably busy, considering our age and competence. We have had visitors and been of some assistance to self-help people, or people interested in self-help, from California, Oregon, Illinois, Ohio, Pennsylvania, Florida, Arizona, Michigan, Maryland, West Virginia, and Kentucky.

Representative Udall's office (Arizona) called to get information on the program for a CAP Director from one of his counties, and we were informed that both Udall and Representative Rhodes, a fair share of the political spectrum, are both very interested in being of assistance. Don Campbell, an employe of the City of Phoenix and interested in a special variant of self-help--repair and modernization of houses in a vacation city with 800 pit toilets-- was in the office seeking advice and information.

Our contacts with California have been with S.H.E., Herb Foster of AFSC and some Congressional offices which were seeking information. It should be noted that due largely, apparently, to Foster's efforts Farmers Home no longer requires that an applicant for credit be an American citizen. This is an important achievement.

AFSC's Charles Evers was in town working on a self-help project for Washington County Oregon, and we accompanied him to OEO and to the Housing Assistance Division of the Department of Housing and Urban Development, meeting with the Acting Commissioner (Mrs.) McGuire and Chief Counsel Joseph Burstein. We got only education from HUD because they cannot operate in an area unless there is a public housing authority and such an authority has been rejected by Washington County officials. It did become apparent to us that HAA-HUD operates under pretty severe limitations, and that these limitations are particularly significant in the South where public housing authorities, where they exist, tend to be part of the power structure. This is a problem of real magnitude, but it emphasizes the importance of self-help housing as a partial solution. Cooperative housing, self-help or no self-help, would be a great help in the South but under present regulations (which may or may not reflect the law) the sponsor of cooperative housing has to assume a 40-year responsibility which will act as a great obstacle to the use of cooperative housing in the South - and elsewhere. We have not pursued this problem as far as we must, and we solicit your aid and advice in learning more about the problems and possibilities.

We have not had time to investigate the possibilities of using demonstration funds for self-help housing, but as we indicate in the SELF-HELP REPORTER, President Johnson has instructed Secretary Weaver to "carry out, within existing authority, a low-income housing-ownership pilot program so that lessons may be learned and converted to public policy on a broad scale" -- and authorized the use of $20 million for this purpose for next year. We will make an effort to pursue this authorization and appreciate any information any of you may get along these lines. Cayetano Santiago, Director of the Illinois OEO funded Migrant Program, was in the office to secure information on self-help housing, His group is definitely interested in working with families settling out of the migrant stream.

At the request of OEO and a group of Catholic priests and lay leaders, we have acted as educators and consultants in Ohio. With the cooperation of Bob Marshall and the willingness of Jim Stein to work overtime, we got Jim to go into Ohio for a series of meetings running over several days, and Paul Fry joined him for two days. Jim showed the AFSC film "Six Houses, Six Homes," and there is at least one application for a project in that area being prepared for submission to OEO. (Verbally, we will fill you in on how important our ability is to get representatives into such an area in the early stages of development.)

We had a request from Chester County, Pennsylvania for assistance in financing the supervision of workers who are eligible for FHA credit but not for OEO assistance with Section III (b) funds. We advised them that we did not know any private sources which could be tapped for such funds, but indicated how rediculous it is that families are denied the opportunity for self-help because OEO's funds are divided into "kitties" which are sometimes mutually exclusive.

We directed a letter to Tom Karter of OEO asking him what could be done to get Section 205 (Community Action) funds added to III (b) (migrant workers) in projects so that families would not be forced out of projects, and he has this under consideration. Paul and I also talked to the new Rural Areas Director, Ira Kaye, about the same problem. He asked for specific details and indicated a willingness to work on the problem. <u>This is a problem in almost every area and a solution must be found.</u>

Our assistance to Florida has been limited to clarifying Farmers Home Administration's handling of loan money, but in the process we found that Farmers Home was giving self-help loans top priority in processing for direct loans. We also clarified, for our own sake, the situation over the exhaustion of direct loan funds at

four percent. For the sake of brevity, we refer you to the first issue of "The Self-Help Reporter" for details.

Jim Pino of the Michigan Migrant Project has been in contact with us by letter and in person, and is seeking means to construct adequate housing for migrant farm workers in southeastern Michigan. Jim is especially interested in helping workers to settle out of the migrant stream.

STATUS OF THE PAMPHLET - "SOMETHING TO BUILD ON"

One of our great needs is for an up-to-date general pamphlet on self-help and this should be satisfied soon. The American Friends Service Committee has offered to enter into a joint publication arrangement with us on Dick Margolis's manuscript by this title. AFSC has agreed to pay for the manuscript, and we will pay for the printing. AFSC would receive copies for their use and the balance, along with the copyright, would become the property of ISHA.

RECOMMENDATION: We urge your approval of this arrangement, by resolution.

THE NEED FOR PRINTED MATERIALS -

It is obvious to everybody that one of our immediate needs is for more educational material. I have already made reference to the arrangement with S.H.E. for the production and printing of a handbook on self-help. We need other materials, as quickly as possible, including a general brochure on the nature and purposes of ISHA.

Before we can get into any really productive educational efforts we need a variety of materials for training. We need help in securing more and more up-to-date information on projects, legislation, financing. And we need help on the newsletter, "The Self-Help Reporter."

With this in mind, and approval by mail from the Executive Committee, we discussed the problem with Mr. Louis Winnick of the Ford Foundation who readily agreed and advised us on procedure. Subsequently, we requested that funds for the employment of our editor be advanced from the second year to this year. We received that approval promptly, and are now in the market for a good editor.

THE NEED FOR ORGANIZERS, EDUCATORS, CONSULTANTS -

It is also apparent that a staff of two, Fry and I, or even three, including the editor, cannot begin to handle the requests for assistance and our routine affairs without additional help. Certainly we are in no position to promote organization in the barren areas far from such centers of activity as S.H.E. The funds from Ford for consultants and related people are very limited, and even with the funds from the S.H.E. contract we are in trouble.

Consequently, we are submitting a request to OEO for a $75,000 grant to enable us to hire two field representatives, an additional writer, and two additional secretaries, plus travel funds, rental space and equipment, and a fairly generous allotment of funds for printed and photographic materials and the employment of consultants and "trouble-shooters." We have had preliminary discussions of this application with the Housing Director of OEO, Richard Granat, and he seems to be entirely

cognizant of the need from OEO's own information.

Sponsorship of OEO Grant: Since we are a new organization and fall under an OEO ban on new organizations without a prior concern for the poor, it was necessary that we be "sponsored" by an organization with the proper credentials. Barbara Moffett of AFSC immediately agreed to secure approval for this sponsorship from the AFSC. For this we are very grateful.

I trust these activities have your approval, and we solicit ideas on the best ways to spproach the problem of pushing the program with such help.

RENTAL SPACE IS AN IMMEDIATE PROBLEM

Thursday afternoon at the open house it will be quite apparent to you that our office space will not accomodate the Ford-funded editor, whom we hope to find immediately. Within a month we hope to be funded for an additional writer, two field people, and two secretaries. We also need a desk with a telephone for members and visitors to use. This adds up to a definite need of additional space for an average of about five people. We also need space we do not have for inventories of handbooks and other educational literature as well as some additional office equipment.

The building in which we are located is pleasant, relatively inexpensive, and conveniently located, and at this time we can secure the additional space required in the same building. The rent will probably not begin until May 1, as the space requires renovation and painting, but we would like to have your approval to sign a lease for the space as soon as it is available in anticipation of the personnel. This involves some risk, but we do not believe the risk is great, and if the OEO grant should fail to materialize we can turn the space back with some anticipation of loss but certainly less than a full years rent.

RECOMMENDATION: We would appreciate your approval of our signing a lease in anticipation of the personnel now in order that we may have the space in the building where we are now located.

ORGANIZATIONAL MATTERS:

Article IV of the By-laws stipulates that the Board of Directors shall consist of not more than 25 members, 18 of whom shall be elected and 7 elected by the Board. At least 6 members must be participant builders.

Currently the Board has 22 members, including the Executive Director.

It is a dubious policy to have a paid staff member on the governing body, and I herewith submit my resignation from the Board of Directors.

RECOMMENDATION: Acceptance.

If this action is taken we will have 21 members on the Board, leaving 4 vacancies. These vacancies cann all be filled by the Board at this time, and I urge that you give this consideration, but only after straightening out our rotation system.

Article IV, Section 3 provides that members of the Board shall be elected for three-year terms, and that tenure of members of the first Board be determined by lot.

Article V, Section 1 provides that for the first election the officers be given three-year terms, in other words that the drawings take place after the election of officers.

RECOMMENDATION: That with the exception of Herring, Carlson and Brooks, lots be drawn to determine the terms of office for present Board members. (With 21 members of the Board, less 3 officers, lots totalling 18 should be in the hat. Seven lots should be for one and two years each, and four should be for three-year terms.)

RECOMMENDATION: Election of four additional members of the Board, names to be submitted at this meeting by a nominations committee appointed by the Chairman. This temporary nominations committee should:

(1) bring in suggestions for persons to be elected to the four vacancies and indicate the length of term for each person as well as whether the position being filled is an elective or appointive position;

(2) nominate a nominating committee of five members for the annual meeting in the fall. This committee shall include two non-members of the Board of Directors, and shall be prepared to submit nominations for six Directors at the fall meeting;

(3) nominate a new Executive Committee for ISHA (Minute XIX-66 of the September, 1966 Board of Directors meeting stipulates that the present Executive Committee was "approved to serve until there is a meeting of the full Board of Directors.") In other words, the present Executive Committee's terms expire at this meeting. Before electing a new Executive Committee to serve for the balance of this three-year period, let me urge a special consideration, to-wit:

Despite your foresight, particularly that of Robert Choate, in providing for conference telephone meetings of the Executive Committee we find this cumbersome. The staff feels we should have access to a working Executive Committee, particularly in the early stages of the organization's life. Therefore, I wish to suggest, without prejudice to the existing by-laws, that by concensus we instruct the nominating committee to nominate persons to the Executive Committee who are within commuting distance of Washington, D.C., i.e. not further away than the vicinity of New York City. If we could have such an Executive Committee we think it could be made into a working body and possibly guard us from error in the months ahead.

(4) nominate a three-person Advisory Committee on Research and Education, (This committee could assist us in getting the voluntary assistance of others, provide liaison with other agencies, provide ideas, serve as needed.)

At the next meeting of the Board of Directors, I would like to have your approval for asking members of the Executive Committee and all building participants to come to the meeting place in time for a full evenings session. I think the Executive Committee could dispose of a lot of cumbersome, routine details and make the full meeting more fruitful. I think the participants have a very special function to fullfill which might be easier for them if they had an opportunity to meet together for discussions prior to the beginning of the Board meeting.

RECOMMENDATION: Approval on both points, realizing that this will increase costs a little.

Fringe benefits for the staff: In the application for Ford Foundation Funds and in Minute XII-66, reference is made to 10 percent fringe benefits "in a package similar to the arrangement used by the AFSC and other such organizations."

In it indicated to me that Social Security benefits should be a part of this, currently 4.4 percent of $6600. We are paying Social Security as a matter of course. We are also paying Unemployment Compensation and Workman's compensation costs, but I do not consider these to be fringe benefits.

We intended to put together a package of benefits which, initially, would include term life insurance to the nearest thousandth of an employe's salary; medical and hospitalization insurance; and some kind of salary continuation arrangement in case of illness or accident. We were unable to qualify for group rates (with only three employes) because I was unacceptable as a "normal" risk.

We are paying membership fees for the staff in Group Health, the very good medical-hospitalization group here in D.C.

We have purchased general casualty policies for staff members who travel in the amount of $25,000.

The term life insurance and salary continuation policies will be purchased as soon as we have enough staff to qualify for group rates, or within a month in any case. I have arranged to carry my own term life insurance on I.U.D.'s group rate until July, at which time it will have to be picked up at exhorbitant cost. See the attached proposed resolution on fringe benefits.

RECOMMENDATION: See Attachment.

Annual Audits: RECOMMENDATION: The Board authorizes and instructs the Executive Director to secure an annual audit of the books, on a calendar year basis.

QUESTION: What Disposition Does the Board Wish to Make of the Problem of Seeking Financing for Work in Urban or International Areas?

What should our policy be in "joining" other organizations?

RECOMMENDATION: It is the policy of ISHA to cooperate with other organizations to achieve common aims, but to hold formal memberships to a minimum. Formal memberships require the approval of a majority of the Executive Committee. (Note: This refers to ISHA as such, not to the staff.)

The staff finds that the work "Associates" in our name is cumbersome and misleading. It makes us sound like a group of private businessmen. We urge your consideration of the following amendment to be submitted to the membership meeting in the fall for adoption:

> The Board of Directors submits the following amendment to the by-laws to the 1967 Membership Meeting with recommendations that it be adopted: Resolved that Article I of the by-laws be changed to read as follows: "The name of this organization shall be the International Self-Help Housing Association."

Discussion:

Should members of the Board of Directors be identified by names of organization on the ISHA letterhead, for identification purposes only?

Recommended policy resolution:

Members of ISHA shall receive one copy of all ISHA publications free plus a subscription to "The Self-Help Reporter." The "Reporter" is a service and its receipt does not balance any particular dues payment. It is free and not for sale.

RECOMMENDATION: The Board authorizes the payment of travel and other costs incurred in attending this and subsequent Board meetings.

PLACE AND PROGRAM FOR ANNUAL MEETING IN THE FALL:

Our annual reporting date to the Ford Foundation is September 30. It is suggested that the annual meeting be held after September 30.

RECOMMENDATION: Fix a place and time for the annual membership (and Board) Meeting.

RECOMMENDATION: Suggestions for agenda beyond routine business.

ATTACHMENT

BOARD RESOLUTION

The Executive Director is instructed to provide all permanent employes social security, workman's compensation, unemployment insurance, medical and hospitalization insurance and life insurance to the nearest thousand dollars in salary. In addition, employes who travel extensively shall be covered by casualty insurance and those who travel occasionally, by trip insurance.

There shall be set aside an amount equal to ten percent of each employe's salary for fringe benefits. Social security, medical and hospitalization insurance, life insurance and casualty insurance shall be paid for out of this 10 percent. Any balance - for each employe - of this 10 percent fund shall belong to the employe as terminal leave pay, provided he has been an employe as long as six months.

The minimum fringe benefits paid by ISHA includes (1) social security (2) life insurance, term if available, to the nearest thousand dollars of salary (3) group health and hospitalization, and (4) a casualty policy for employes who travel extensively. If the ten percent fringe allowances is insufficient to cover these specified items the funds shall be transferred from the general account to cover the deficit.

(Expression of thanks to the American Friends Service Committee)

April 12, 1967

Barbara Moffett
American Friends Service Committee
160 North 15th Street
Philadelphia, Pennsylvania

Dear Barbara:

At our Board of Directors meeting March 31, AFSC's generous offer to publish jointly with ISHA the Margolis Pamphlet, "Something to Build On," was approved unanimously, on the basis of the terms set forth in your letter.

In a companion resolution, a unanimous Board requested that our appreciation for this opportunity be transmitted to AFSC.

Dick Margolis told me as he left the meeting that he thought he could complete the manuscript within the next week, so we are looking forward to hearing from you soon. Dick also said that a Chicago publisher had expressed interest, but apparently there was no agreement on terms. There is also a good printer in North Dakota who would like to make an offer. We can get to these details when a manuscript satisfactory to all is in hand.

I need not tell you that we need this booklet very badly, and soon. It would be of assistance in many ways and we are handicapped without it.

Sincerely,

(Sig)
Clay L. Cochran

President Lyndon B. Johnson
The White House
Washington, D.C.

Dear Mr. President:

As an organization devoted to helping low income people help themselves in securing decent housing, we wish to thank you for your encouragement of self-help housing in your Message on Poverty. We also wish to call to your attention that because of inadequate funds the Farmers Home Administration has announced that it can no longer lend self-help families money at four percent for the balance of this year or for Fiscal 1968. The resulting increase in interest rates places another hurdle in the path of those anxious to help themselves, and we earnestly urge you to seek supplemental funds for this year and an increase in direct loan funds for Fiscal 1968. Available administrative funds for Farmers Home, in view of their greatly expanded lending authority, are wholly inadequate and this inadequacy is a serious problem in self-help housing.

We are also concerned about the funds available to the Office of Economic Opportunity this year and recommended funds for next year. It is OEO which has been the principle source of funds for furnishing group organization and technical supervision in the self-help program. We wish to express our appreciation for their pioneering work in this field and urge your support for a continuing and expanding effort.

We urge you to increase the request for funds for OEO housing activities, hopefully to include not only an increase in funds available for organizing and furnishing technical assistance to self-help groups, but also funds to enable OEO to make direct "brick and mortar" grants to families to facilitate extension of the self-help program to families lower in the income scale.

Sincerely,

(Sig)
Clay L. Cochran

Sargent Shriver
Director
Office of Economic Opportunity
1200 19th Street, N. W.
Washington, D. C.

Dear Mr. Shriver:

At the semi-annual meeting of our Board of Directors in Washington, March 30-31, it was requested you be advised that we heartily support the endorsement by the Senate Committee last year of "brick and mortar" grants up to $1,500 to families to aid in the solution of their housing problems and that you be urged to seek the inclusion of such authority in the authorization bill this year.

You will also be interested in the letter which the Board instructed me to transmit to the President of the United States, a copy of which is attached for your information.

We greatly appreciated the contribution made to the success of our Board Meeting by Tom Karter, Chief, Migrant Branch, and we are very conscious of the continuing contribution of OEO to the self-help housing program.

Sincerely,

(Sig)

Clay L. Cochran

A BRIEF SUMMARY OF THE LOW INCOME HOUSING PROVISIONS

OF THE HOUSING AND URBAN DEVELOPMENT ACT OF 1968

The 1968 Housing Act includes several major new programs as well as a variety of changes in existing programs affecting low-income housing efforts. Most important is the provision of what amounts to reduced-interest money (as low as the equivalent of 1% in some instances) for both sale and rental housing in both urban and rural areas. Related to this financing assistance are provisions to liberalize FHA credit requirements and to provide assistance to non-profit sponsors of low-income housing. The establishment of a National Homeownership Foundation is generally cited as a major achievement of the bill, and is also aimed particularly at aiding sponsor-type organizations. The bill's Rural Housing section establishes a specific self-help housing program under Farmers Home Administration, authorizing grants and/or contracts for the technical assistance work (i.e., the sort of "sponsor money" currently provided by the Office of Economic Opportunity to self-help grantees) and establishing a revolving loan fund for land acquisition. Also of special interest is the Act's provision ordering the Department of Housing and Urban Development to study self-help housing as a part of its existing "Low-Income Housing Demonstration" project and to report back within a year.

These new programs and a number of the changes made in existing programs are summarized in more detail below. The identification of programs by section number is not intended to confuse, but to facilitate understanding the "experts" who use these as shorthand terms. In some instances they refer to the 1949 Housing Act, in others to the 1961 Housing Act, in still others to the 1966 Metropolitan Development Act, and so on. The new Sections 235 and 236, for example, have been added to the National Housing Act of 1934, which already includes much of the nation's basic housing legislation, including the various Section 221 programs.

Before summarizing some of the provisions of the 1968 Act, it should be noted that the <u>new</u> programs authorized have yet to be funded by Congress and their actual use will have to await that. The changes in existing programs <u>can</u> be carried out to the extent that funds already appropriated for those programs are available. The Department of Housing and Urban Development is expected to ask Congress for additional appropriations in September (when Congress returns after the political conventions) and Farmers Home Administration is also considering a request for a supplemental appropriation. In the absence of supplemental

appropriations, funding of the new programs would have to await action on the Fiscal 1970 budget, which will be sent to Congress early next year but probably won't be acted on much before mid-1969.

Illustrative of the difference between new programs and modifications of existing programs is the fact that, while technical assistance grants for self-help projects under the new Section 523 program (page 10 below) will have to wait for new appropriations, Farmers Home Administration is already preparing to institute the reduced interest-rates authorized by the Act for their existing direct and insured loan programs (page 13 below). In fact, the implementation of the lower interest rates for existing Farmers Home loan programs is possible because the new Section 235 program has to wait for new financing, and therefore the requirement is met that the need can't now be met from other sources.

New Programs

Section 235 assistance for home ownership -- This section provides for assistance payments to make possible home ownership with the equivalent of reduced interest rate financing. It is available for individual ownership or for ownership in cooperative and condominium arrangements, and can be used for new or for existing homes (in the latter case either for standard homes or for substandard homes purchased and rehabilitated for resale by non-profit organizations or public agencies). The emphasis, though, is on new and substantially rehabilitated units, and the proportion of assistance going for existing units is limited (25% in the first year, 15% in the second, and 10% in the third).

In addition to individual, cooperative and condominium purchases, Section 235 assistance can also be applied to sales by non-profit organizations and public agencies under the current 221(h) program. Since this is, in effect, a modification of an existing program, it is summarized separately at page 12 below.

Under Section 235 the government insures approved mortgages as is currently done under the standard Federal Housing Administration insured loan program. The buyer's payments must be at least equal to 20% of adjusted income (total family income minus $300 per child), and not less than the payments would be on the same mortgage carrying a 1% interest rate. The government makes assistance payments (to the mortgage holder) to cover the difference between the buyer's payments and the actual mortgage cost. In other words, the effect of the assistance payments is to make the equivalent of 1% financing available where the gap between mortgage cost and income is greatest.

The maximum size of mortgages under Section 235 is $15,000 per unit, with exceptions for high-cost areas and for families of five or more persons. (The maximum for larger families is $17,500 in most areas, $20,000 in high-cost areas; for other families it is $17,500 in high-cost areas.)

In addition to the limit on mortgage size, there is a partial limit on income eligibility. Not more than 20% of the assistance under the program can go to families with an income above a certain limit. (The limit is based on those used for public housing occupancy and ranges, for a family of five, from about $6,000 in a city like Birmingham to $11,000 in a city like New York.)

The minimum income level required for Section 235 assistance is set by the requirement that the family make payments at least large enough to meet the costs on a mortgage carrying 1% interest. The larger the mortgage, of course, the higher the income level required. Table 1 illustrates, for various mortgage sizes, what the minimum monthly family payment would be and, assuming a market-interest-rate of 6 3/4%, what the maximum assistance payment would be. Table 2 illustrates, for various income levels, what the family payment and the assistance payment would be.

Assuming that the family pays no more than 20% of income, the minimum income required for a 35-year, $8,000 mortgage would be $2,249 for a family with no children; $2,549 for a family with one child; $2,849 for one with two children, etc. However, a family desiring to pay a larger proportion of income and considered a reasonable credit risk could come under the program. Thus, a family of four with total income of $2,500 should be able to get an $8,000 mortgage, though the $37.15 payment required would represent about 23½% of the family's adjusted income of $1,900. Table 2 uses 25% of adjusted income as an upper cut-off since it is expected that above that level, a question of credit risk might be raised.

Table 2 also makes it clear that only the family receiving the maximum assistance payment is securing its financing at the equivalent of a 1% interest rate. Higher-income families pay the equivalent of higher -- though still below-market -- interest rates, up to the point where the family's minimum payment is sufficient to meet the full market rate (and there is no assistance payment).

Mortgages under Section 235 require a minimum downpayment of $200 for low-income families (3% of acquisition cost for moderate-income families), but the Act also provides that the mortgagor "shall to the maximum extent feasible be given the

[1]Total family income minus $300 for each child; figure in parentheses is 20% of monthly adjusted family income.

[2]Family payment is either minimum payment (as if mortgage carried 1% interest) or 20% of adjusted family income, whichever is larger.

[3]Minimum payment would be in excess of 25% of adjusted family income.

Source: Same as Table 1; figures assume actual mortgage is 35 years at 6 3/4% interest rate.

opportunity to contribute the value of his labor as equity."

Finally, "a reasonable portion" of Section 235 assistance is to be allocated by the Secretary of H.U.D. to the Secretary of Agriculture for administration in rural areas and small towns. (This means that appropriations for implementing Section 235 will be included in H.U.D.'s funding and then allocated to Agriculture.)

Section 236 assistance for rental housing - This section is intended to provide for rental housing a program comparable to that for home ownership under Section 235. Again, the mechanism is assistance payments which in effect reduce the interest rate on mortgage money. In this case the mortgagor is not the individual home owner but the owner of rental housing. To qualify for assistance the landlord must be a non-profit or limited dividend company, or a cooperative, and establish a schedule of basic rental charges representing each unit's share of the carrying costs on a 1% mortgage. The government insures the mortgage and pays the difference between the market rate and the payments made by the mortgagor on the basis of a hypothetical 1% mortgage.

The tenants in turn pay either the basic rental charge or 25% of their adjusted family income, whichever is larger. (Note the difference between the ownership assistance linked to 20% of income and rental assistance linked to 25% of income. It is based on the assumption that the owner has added maintenance costs which the renter avoids.)

Table 3 illustrates the fair market rental and the basic rental charges for various sizes of unit. It will be noted that a substantial part of the monthly payments represents operating costs. In projects where these can be reduced (through lower management costs, etc.), both the fair market rental and the basic rental charges would be reduced and, as a consequence, lower income families could be reached under the program.

Table 4 illustrates, for various income levels, what the family payments would be and how much rent reduction would be effected in each case. Since the tenant pays the higher amount when 25% of adjusted income exceeds the basic rental charge, total rents collected by the landlord would exceed the aggregate of the basic rental charges. This excess is turned over to the government as a partial offset to its assistance payments on behalf of the landlord-mortgagor.

As in the Section 235 program, not more than 20% of the assistance is to go to units occupied by tenants with incomes above a certain level. The lower income level is set by the fact that the tenant's payments must be at least as large as the

TABLE 3

MONTHLY RENTAL CHARGES AND REDUCTIONS UNDER SECTION 236 PROGRAM

	SIZE OF UNIT[1]

[4]Required rental payment would exceed 30% of adjusted family income.

Source: Same as Table 3.

basic rental charge. In Table 4, those families at the lower end of the income scale in each column would be paying about 30% of adjusted income to meet the basic charge. It is assumed that a larger share would be unwise, if not impossible, and therefore families with still lower incomes would be precluded from participation. However, where rent supplements can be combined with the new Section 236 program, as they can now be combined with Section 221(d)(3) projects, it will be possible to reach lower income families with this housing.

The new Section 236 program is intended to replace the existing 221(d)(3) program for providing below-market-interest financing for rental housing (at 3% rather than 1%), and mortgages on projects still in development under the old program may be refinanced under the new. With government approval, projects mortgaged under Section 236 can include some non-dwelling facilities, including even commercial facilities when the latter are to be rented at prevailing commercial rates. Also with government approval, the landlord can subsequently sell units to the tenants and Section 235 assistance may be utilized in connection with such ownership acquisition. Finally, as in Section 235, a portion of the assistance authorized is to be allocated to the Secretary of Agriculture for administration in small towns and rural areas.

Section 237 credit assistance - This provides for an experimental program of FHA mortgage insurance for applicants whose previous credit record or earnings pattern would otherwise disqualify them. Under the new program -- which is limited to a total of $200-million worth of outstanding mortgages -- counseling services on budget and debt management would be provided and FHA insurance approved for those marginal credit risks where it is felt that the counseling services could assist in making home ownership feasible.

Assistance to non-profit sponsors - The new Act provides for two forms of assistance to non-profit sponsors of low- and moderate-income housing. First, technical assistance is to be provided by H.U.D., either directly, or through contractors; and second, interest-free loans to sponsors are authorized for up to 80% of the pre-construction costs (including such items as market surveys, architectural and engineering work, and land options and acquisitions). It is anticipated that these pre-construction costs will eventually be covered by final financing, but where this proves impossible, H.U.D. is authorized to cancel the loan in whole or in part.

National Homeownership Foundation - The Act sets up a government-chartered, non-profit foundation with an initial appropriation of

$10-million authorized. Additional financing is expected from private contributions and the purpose of the Foundation is to secure increased private sector activity in the field of low-income housing. In the words of the Senate report, it is to "mobilize technical and financial assistance in the private sector." The governing board will consist of the Secretaries of Agriculture and H.U.D. and the Director of O.E.O., and 15 public members appointed by the President (with Senate confirmation). A primary function of the Foundation is to provide technical assistance to local community and neighborhood organizations working for "increased homeownership and housing opportunities....for lower income families." While the Foundation's technical assistance can be provided directly, it is not intended to be a funding agency itself, and loans and grants are authorized for organizational and administrative expenses, pre-construction costs, and counseling and related services only where such funds are "not available from Federal sources." In its annual report to the President and Congress the Foundation is not only to furnish an account of its own activities, but to make "such recommendations as it deems appropriate" in the broad field of low-income housing.

Section 523 self-help program for rural areas - Farmers Home Administration, which is already insuring mortgages for self-help housing, is authorized under this addition to Title V of the 1949 Housing Act to furnish self-help projects with two other kinds of assistance. First, the costs of technical assistance involved in organizing and operating self-help projects can be financed by grants or through contracts. A maximum of $5-million a year is authorized for this purpose. Second, a revolving Land Development Fund is to be set up from which self-help projects can borrow at 3% interest for the purpose of acquiring and developing the land to be sold as building sites to self-help families. The Fund is limited to a maximum of $1-million in the first year, rising to $3-million the second.

The actual mortgage financing of self-help housing can, of course, qualify for assistance under the new Section 235 program previously summarized. In addition, as will be noted subsequently, Farmers Home Administration's own direct and insured loan authority is broadened under the Act to bring it into line with the reduced-interest financing available under Section 235 (see below, page 13).

Advisory Commission on Low Income Housing - The Act provides for the establishment of a 21-member Advisory Commission, including four Senators and four Representatives, to "undertake a comprehensive study and investigation...of practicable and effective

ways of bringing decent, safe, and sanitary housing within the reach of low income families." An interim report is to be filed by mid-1969 and a final report by mid-1970.

Changes in Existing Programs

Public housing - The 1968 Act makes several changes in the public housing program first established by the Housing Act of 1937.

1) The size of the authorized program is substantially increased. In addition to the authorization for $47-million in annual contributions contracts (between the Housing Assistance Administration and local housing authorities) which went into effect in mid-1968, the Act adds $100-million this year, and another $150-million each in mid-1969 and mid-1970. (Over the three-year period, this is expected to make possible the addition of 375,000 units to the 735,000 units currently in operation or under construction.)

2) The present authority under which a special subsidy of up to $120 a year can be paid to local housing authorities to make possible the housing of elderly families and families displaced by urban renewal or housing projects, is now extended to authorize the same special assistance to families with four or more children and other families with unusually low incomes.

3) A new program of grants -- up to $15-million in the current fiscal year and $30-million in fiscal 1970 -- to local housing authorities is authorized to provide tenant services -- such as counseling on household and budget management, child care, and community resources in job placement, education, health, and welfare services. The program calls for "the maximum feasible participation of the tenants in the development and operation of such tenant services."

4) The possibility for sale of rental units by the local housing authorities to the tenants is expanded in two ways. The current limitation of such sales to detached and semi-detached houses is replaced by the requirement only that the units be suitable for individual ownership. In addition, private housing which has been leased by a local authority for rental to low-income tenants, may be purchased by the authority for resale to the tenants, or even to a group of tenants, if the latter account for 80% of the structure's occupancy (in terms of value). As in housing leased by local authorities for rental use, the workable program requirement is not applicable.

5) The existing limitation of public housing assistance to non-farm areas is waived relative to Indian areas. This is designed to make possible the use of sites on Indian reservations even where they are on or adjacent to a farm.

Rehabilitation programs - At least three programs focusing on rehabilitation of existing housing, including rehabilitation for sale or rent to low-income families, are modified by the new Act.

1) Rehabilitation grants under Section 115 of the 1949 Act to low income owner-occupants: The maximum grant size is increased from $1,500 to $3,000; their use is no longer limited to the dwelling structure itself, but now applicable to any "real property" rehabilitation; and they can now also be made outside urban renewal and code enforcement areas, under certain limitations (the local governing body certifies the area as containing a substantial number of structures in need of repair, the locality has a workable program, and the area is definitely planned for rehabilitation or code enforcement).

2) Rehabilitation loans under Section 312 of the 1964 Act: The authorized level of annual appropriations for the revolving fund used to finance these loans is increased from $100-million to $150-million; the program is extended until mid-1973: these loans are limited to those whose income levels are low enough to qualify them for occupancy in units built under the below-market-interest-rate program (Section 221(d)(3) mortgages); and these rehabilitation loans can now be made outside urban renewal and code enforcement areas either under the same limitations as the Section 115 rehabilitation grants, or where the structure to be rehabilitated has been determined to be uninsurable in the absence of the rehabilitation (under the statewide insurance plans which are called for by the new National Insurance Development Program). The 3% interest rate on rehabilitation loans is continued.

3) Section 221(h) below-market-interest-rate financing for purchase and rehabilitation of housing and for its resale to low-income families: A reduction of interest rates under this program down to 1% is authorized; the limit on the amount of outstanding mortgages which may be insured for the non-profit organizations carrying out the purchase, rehabilitation and resale is increased from $20-million to $50-million; and a new one-year program is authorized under which the owner-occupants of single-family units which were purchased from non-profit organizations can refinance -- at down to 1% interest rates and up to a maximum mortgage of $15,000 -- for the purpose of improving or rehabilitating the dwellings.

Disposition of land in urban areas for low-income housing - The existing Section 107 program of the 1949 Act, under which land in urban renewal projects can be sold "at fair value for use" (instead of full market value) for "housing for occupancy by families or individuals of moderate income," is broadened by the new Act. First, it is made clear that the program is to facilitate low-income as well as moderate-income occupancy. Second, the eligibility to purchase such land is broadened to include even private developers as long as the benefits go to the home buyer rather than the developer. Also, the extension of such sales to "open land" projects is facilitated by authorizing grants of up to two-thirds of the difference between the "fair value for use" and the full market value. (This puts "open land" projects on the same basis as other renewal projects since, in the latter, the government assumes two-thirds of the cost of the project and the "loss" involved in the sale of the land at the lower price would be part of that project cost.)

Conversion of 221(d)(3) rental housing to cooperative or condominium ownership - Another expansion of the possibilities for home ownership by low and moderate income tenants is afforded by a change in the existing Section 221(d)(3) program. Rental housing provided with the below-market-interest-rate financing provided under 221(d)(3) may now be converted into cooperative or condiminium ownership with the conversion refinanced with insured below-market-interest-rate mortgages. (This program parallels in part the new Section 235 assistance program -- see page 2 above.)

Rent supplement program (Section 101 of the 1965 Act) - The authorized level of rent supplements is substantially increased, from $150-million a year currently to $190-million after mid-1969 and $290-million after mid-1970. Families benefiting from rent supplements will now be able to deduct $300 per child from their annual income before computing the 25% of income payment they are required to make. Finally, the type of housing which can qualify for rent supplement is broadened by authorizing the Secretary of HUD to include that built by cooperatives, non-profit organizations and limited dividend firms where the financing was assisted by state or local programs.

Title V rural housing loans - In addition to adding a new program to encourage and facilitate self-help housing in rural areas (see page 10 above), the 1968 Act authorizes the Secretary of Agriculture to reduce or subsidize interest rates down to 1% on direct and insured loans for housing under Sections 502 (direct loans for homeownership), 517 (insured loans for homeownership), and 515 (direct and insured loans to cooperatives and non-profit organizations for rental housing). Loans at the reduced

interest rates would be made available only when the need cannot be met from other sources, including the new programs under Sections 235 and 236. Loans at the reduced interest rates can be made available to applicants not previously residing in rural areas.

Low-income housing demonstration - The Department of Housing and Urban Development is directed to include in its low-income housing demonstration program (established by the 1961 Act) "the study of self-help in the construction, rehabilitation, and maintenance of housing" and to report back to Congress on this within a year.

Minimum level of low-income housing in urban renewal areas - The existing requirement that urban renewal areas being redeveloped for predominantly residential uses include "a substantial number" of units for low and moderate income families, is made more specific by the 1968 Act, which requires that at least 20% of the units in a community's total of residential urban renewal projects be for low-income families and at least a majority for low and moderate income families combined. The Secretary of Housing and Urban Development is authorized to waive the 20% requirement "to the extent that units for low-income families and individuals are not needed" in a given community.

R H A REPRINTS NO. 4 JUNE, 1970

PROCESSING A NON-PROFIT MULTI-FAMILY HOUSING PROJECT

BY CHARLES F. BRENNAN

[The following article reviews the general steps and the documentation involved in processing a project for the Federal Housing Administration's mortgage insurance under Sections 221(d)(3) or 236. While written for lawyers, it provides an overview of interest and value to potential sponsor organizations and others. It is reproduced from the October, 1969, issue of *Law Notes* with permission of the American Bar Association and its Sections of Young Lawyers and General Practice.]

Dupont Circle Building, 1346 Connecticut Avenue, N.W., Washington, D.C. 20036

Processing a Non-Profit Multi-Family Housing Project

by CHARLES F. BRENNAN
New York, New York

THE PLIGHT OF AMERICAN cities in providing safe and sanitary housing for their inhabitants hardly needs to be documented. Officials calculate that across the nation there is a need for six million new and rehabilitated low income housing units. In urging passage of the 1968 Housing Act, former President Johnson requested Congress to provide for that many units over the next decade. The Advisory Commission on Civil Disorders called for building a similar number in half that time.

Private enterprise, on its own, cannot meet these demands. Government assistance, in some form, is necessary in order to provide housing for low and moderate income families. Tax abatement, land cost writedown, long term low interest mortgages, interest subsidies, or rent supplements are necessary to reduce rents to a level consistent with the income of low and moderate income families.

The federal government has provided significant legislative tools to enable the private sector to meet these goals. Two of the most important are §221(d)(3) of the National Housing Act and §236 of the 1968 Housing Act. Both programs are mortgage assistance programs administered by the Federal Housing Administration (FHA). Assistance is essentially in the form of insurance of the temporary construction loan or of the permanent loan, coupled with government's financial aid in reducing the rate of interest. §221(d)(3), passed in 1963, was a major breakthrough in the field of federal government assistance to private low income multi-family housing. It provides for long-term mortgage financing of 40 years at a reduced rate of 3% for 100 percent of the development costs for non-profit sponsors of housing for low and moderate income families. §236 of the 1968 Housing Act further assists non-profit and limited dividend sponsors of similar housing by allowing long-term government insured mortgages at rates as low as 1 percent. Both programs have important legislative and regulatory constraints. They are: (1) Family income limitations of tenants; (2) allowable average per unit mortgage cost; (3) maximum allowable monthly gross rental; (4) occupancy limits of family size, and (5) percentage of family income required to be paid for rent. Each constraint varies from area to area and should be examined before allowing a client to proceed with a project.

Because of the large number of documents that must be processed to successfully close a multi-family project, the major part of this note will comment, in detail, on the most important of those documents. A checklist is appended, itemizing all the documents submitted during processing. Counsel is cautioned to review carefully all documents, in light of local practice and the needs of his client.

An outline of the general steps of processing would be as follows:

A. Qualification of Non-Profit Sponsor and Pre-Application Review. (FHA Forms 3433 & 2012).
B. Application and Feasibility. (FHA Forms 2013 and 2435)
C. Underwriting Approval. (FHA Forms 2432 and 2264)
D. Initial Endorsement or Closing and Construction. (FHA Forms 1733, 2441 and 2442)
E. Final Endorsement or Closing and Renting. (FHA Forms 3378-A, 3378 and 2023)

A. Qualification of Non-Profit Sponsor and Pre-Application Review

The primary purpose of this stage of processing is twofold: (1) To qualify the non-profit sponsor as one eligible to receive the benefits of the program, and (2) to appraise the FHA insuring office of preliminary marketability data. The former is accomplished by submitting FHA Form 3433, "Request for Preliminary Determination of Eligibility as Non-Profit Sponsor or Mortgagor." This requires a complete history of the operation of the sponsor and identification of its officers, directors and trustees. The essential qualifications of an eligible sponsor are continuity of operation, to insure continued support of the project, and a sincere desire to provide needed housing on a non-profit basis.

Although the FHA does not require the sponsor to guarantee the success of the project, except in rare cases where deficits are anticipated during the rent-up period, it must be aware of its continuing responsibility to the project. It does not suffice, no matter how

well motivated, for a sponsor to just add its name to the endeavor. In this regard, it is helpful to attach to Form 3433 a resolution of the sponsor adopted by its members or trustees acknowledging its intent to enter the program with the full awareness of its responsibilities. A sponsor with roots in the community and with previous successful experience in housing or other social services will portend success in this program.

At the same time, the sponsor submits, in addition to other items, FHA Form 2012, "Request for Pre-Application Analysis of Multi-Family Housing Proposal." The information supplied therein will allow the FHA to make a tentative determination of the marketability of the proposed housing in the selected community.

If the FHA approves the eligibility of the sponsor, the site, and tentative marketability of the project, the sponsor is invited to submit a formal application. This invitation is in the form of an FHA "B" letter.

B. Application and Feasibility

Feasibility, or the basic soundness of a project, may be determined by either the traditional multiple stage processing or by the new method entitled "Accelerated Multi-Family Processing" (AMP). FHA has recently introduced the new AMP system in all its insuring offices. It promises to dramatically reduce processing time from years to months. In an AMP submission, the sponsor submits all the required documents, including qualification, feasibility data, and architectural working drawings, at a Feasibility Conference, and seeks a firm commitment with one FHA review.

In multiple stage processing, the sponsor is not prepared or chooses not to risk this considerable investment in time and effort. He seeks qualification approval, feasibility approval and, then, conditional commitment and firm commitment in stages. Experienced non-profit sponsors should investigate the new AMP system as it offers hope in avoiding traditional delay.

In either system, the key document in determining feasibility is FHA Form 2013, "Application for Project Mortgage Insurance." Here, the sponsor sets forth the details of the project to prove a feasible proposal. This form serves a dual capacity: (1) An application to the lending institution for a construction loan, and (2) an application to the FHA to insure the loan. Careful attention must be given to the content of the application since it acts as the keystone of the sponsor's proposal. The information to be supplied on the application includes the following: (1) location and complete description of the property; (2) estimate of annual income derived from apartment, commercial and garage rents; (3) estimate of annual operating costs, including administrative, operating and maintenance expenses; (4) projected annual operating statement, which determines: (a) the amount of cash available from income to pay debt service [i.e., projected gross income from project minus vacancy allowances, operating expenses and realty taxes], and (b) cash residue available after debt service payment for income and corporate taxes, dividends and surplus, and (5) total development costs including land improvements, construction, builders' and architects' fees, interim financing charges, taxes and insurance during construction, FHA examination and inspection fees, title insurance and survey charges, AMPO funds (contingency Allowance to Make Project Operational), and legal and organizational expenses.

In §221(d)(3), non-profit sponsored projects, the FHA waives its mortgage insurance premium charges.

Simultaneously with submission of FHA Form 2013, the architect submits FHA Form 2435, "Outline Specifications," which is a detailed listing of the work to be done and materials to be used.

After careful analysis of the information contained in Application Form 2013, and the exhibits thereto, the FHA will proceed to its internal review of the feasibility of the proposal.

C. Underwriting Approval

This review is essentially an intensive appraisal by the FHA of the final architectural plans and data submitted by the non-profit sponsor, to determine if FHA will issue a commitment to insure the mortgage loan. There are four independent analyses:

(1) **Architectural Review**—The agency is here concerned with the quality of the design, including room size and layout. All specifications must meet the approval of FHA Minimum Property Standards, as well as local housing and building codes.

(2) **Cost Review**—This is the agency's independent analysis of the cost figures submitted by the sponsor on FHA Form 2013, which determines the total amount it is willing to insure as development costs. Among the items evaluated are, construction costs, appraisal of land, carrying and financing charges, operating expenses and the economic life of the improved property. The term or length of the insured mortgage cannot be in excess of three-quarters of the economic life of the property. Once the development costs, operating costs and term of the mortgage have been ascertained, the amount of necessary debt service is determined and a rent roll is established.

(3) **Determination of Marketability of Project & Evaluation**—The project is evaluated as to marketability in the community in light of the rentals.

(4) **Credit Approval of Sponsor and Contractor**—The credit and resources of the sponsor and contractor are carefully reviewed in the event the project is unsuccessful. Also, the proposed management of the project is examined at this stage.

If, after this review, the project meets with FHA approval, a commitment to insure the loan is issued by the FHA. The key documents involved in the commitment stage, which is the successful culmination of the underwriting approval review, are the FHA Form 2432, "Commitment to Insure Advances," and FHA Form 2264, "Income Analysis and Appraisal."

The FHA commitment (2432) merits the most careful attention of the project's attorney. It contains the terms and conditions under which the agency will insure the loan with which the project will be built and contains all the relevant information necessary to prepare the closing of title documents. Among the terms set forth therein, the more important are:

(A) Terms and method of repayment of the insured loan. It is customary to use the Level Annuity Monthly Payment Plan, which requires equal monthly payments of interest and amortization over the life of the mortgage. If the interim or construction loan is insured, interest is paid during the period of construction, while payment of principal is deferred until sometime after construction is completed.

(B) The amount and terms of the surety construction bonds and title insurance policies.

(C) The amount allowed, as a mortgagable item, for AMPO funds which are available to the sponsor for expenses in renting the completed structure.

(D) The amounts required to be placed in escrow for development of off-site improvements and for annual replacements.

(E) The amounts payable to the FHA for its inspection and commitment fees.

(F) The requirement that the construction and renting of the project be subject to the terms of the President's Executive Orders dealing with Equal Opportunity in Employment, (Order No. 11246) and Equal Opportunity in Housing (November 20, 1962).

(G) Subject to any local requirements, as conditions precedent, such as tax abatement.

Attached to the FHA Commitment is FHA Form 2264, "Income Analysis and Appraisal." This form details the results of FHA's independent analysis of the cost of erecting the project and the projected operating expenses. It should be noted that this is the agency's equivalent to the sponsor's FHA Form 2013 and determines how much the agency is willing to insure a loan for construction. Any discrepancy between the sponsor's application and the FHA's appraisals must be resolved before proceeding to closing.

The 2264 is divided into four parts. For sake of clarity, the parts will be taken out of chronological order.

Part IV, "Estimated Replacement Costs," determines the actual amount of insurable mortgage as well as the Maximum Insurable Mortgage available to the sponsor. The "Estimated Replacement Cost" is arrived at by adding the cost of acquisition of property, cost of construction, carrying charges and expenses, contractor's, architect's and legal fees and contingency allowances. The one regulatory constraint on this amount is that it cannot exceed the Maximum Insurable Mortgage. For a non-profit sponsor, this latter term is defined as being the "estimated replacement cost" for new construction or for rehabilitation, the amount of rehabilitation costs plus the estimated value of the property before rehabilitation. There is an additional statutory limit on the Maximum Insurable Mortgage of 12.5 million dollars for any one project.

Part III analyzes the estimate of annual taxes necessary to carry the project, including land and payroll taxes, but excluding income or corporate taxes of the sponsor.

Part II estimates the operating and maintenance expenses and reserve allowances.

Part I is the FHA's estimate of rental income from the project. In determining rents, another serious constraint must be considered. This is the Debt Service limitation. Under FHA regulations, no more than 95% of the "net income" may be used to meet the debt service requirements of the project. Net Income is defined as total gross income, minus a 5-7% vacancy allowance, minus a 5% contingency factor and less operating expenses.

After careful review of the FHA commitment and consultation with the non-profit sponsor, the attorney is prepared to proceed to the initial closing of the building loan agreement and of title to the property.

D. Initial Endorsement or Closing

The initial endorsement accomplishes the following purposes: *First*, the acquisition of title to the project property; *Second*, attending to the legal details of closing the interim building and construction loan from the mortgagee lending institution, and *Third*, securing the endorsement of the FHA insurance guarantee of that loan. As in any legal closing of title, many documents are to be prepared, executed and transferred at the closing. Consult the appended checklist for documents required in most jurisdictions.

The three major documents at the closing are: (1) Regulatory Agreement; (2) Building Loan Agreement, and (3) Construction Contract. They incorporate the legal and contractual relationships between the major parties to the building of the project. The Regulatory Agreement sets forth the legal relations between the FHA and the non-profit sponsor; the Building Loan Agreement, the relations between the mortgagee lending institution and the mortgagor non-profit sponsor; and the Construction Contract, the relations between the general contractor responsible for construction and the non-profit sponsor.

The Regulatory Agreement (FHA Form 1733)

enumerates the responsibilities and obligations of the non-profit sponsor to the FHA governing the operation of the project during the life of the insured mortgage. It provides for the establishment and the amount of a reserve fund for replacements; the terms and conditions of the lease contracts with the tenants, including rent and income limitations and provisions for term of lease and sub-leases; and selection of tenants. It also contains provisions requiring FHA approval for various actions taken by the sponsor, such as transferring or assigning interests in the property; providing management services and the keeping of books and accounts, and the incurring of liabilities. It also contains covenants relative to default and breach of the agreement.

The Building Loan Agreement (FHA Form 2441) provides for the legal obligations attendant to the making of insured advances for completed construction work at regular intervals and for establishing priority of liens for such advances. The rights of the lender are established in the event of default by the borrower in completion of the project or by a breach of any of the terms of the agreement. This agreement must be executed and acknowledged by both parties. A copy of the legal description of the property and a copy of the Trade Payment Breakdown (FHA Form 2536) should be attached as exhibits.

The Construction Contract may be either Cost-Plus (FHA Form 2442A) or Lump Sum (FHA Form 2442). When a non-profit organization is acting as sponsor, a Cost-Plus is generally used. The contract provides the scope of construction work and amount of fees including, where applicable, an upset price. On all FHA insured construction projects a 10% holdback on advances for completed work is required until after final inspection of the completed project. The priority and release of mechanic liens and the manner and form of certification of actual costs by the contractor is detailed.

A word of caution in dealing with the two documents of security, the mortgage or deed of trust and the secured note. Although in some jurisdictions the agency supplies appropriate forms, counsel should be vigilant to check that all local requirements are satisfied in the preparation of these forms.

E. Final Endorsement or Closing

After construction is completed, a final endorsement is held. The final endorsement serves two purposes: (1) to provide for certification of actual costs of the total project, and (2) to determine final rental and income limits prior to obtaining permission to occupy.

The latter purpose is self-determined by completion of various FHA forms and documents. However, the procedures for cost certification are one of the most important aspects of processing. Both the contractor and the sponsor are required to certify actual expenditures of all funds.

The contractor must submit Contractor's Certificate of Actual Cost (FHA Form 3378-A) which details the amounts paid to each sub-contractor and to each material supplier, the amounts expended for labor, job overhead, and general office overhead.

The sponsor submits Mortgagor's Certificate of Actual Cost (FHA Form 3378), which accounts for all items other than cost of construction. Both sets of certifications must be certified to by an independent CPA, pursuant to FHA regulations.

The sum of the actual certified costs of construction and sponsor's expenses, plus the cost of land, will determine the amount of the final mortgage and note to be insured by the FHA. The mortgagee lender then obtains final endorsement of insurance by the FHA of the secured note (FHA Form 2023).

CHECKLIST*

A. Qualification of Sponsor and Pre-Application Review

Request for Preliminary Determination of Eligibility as Non-Profit Sponsor or Mortgagor (FHA Form 3433)—basic information on background and operation of sponsor.

Request for Pre-Application Analysis of Multi-Family Housing Proposal (FHA Form 2012)—preliminary information concerning site, units and rents, which enables FHA to determine soundness of proposal.

Equal Employment Opportunity Certification (FHA Form 2010)—sponsor agrees to abide by regulations concerning non-discriminatory employment practices.

Previous Multi-Family Participation Certificate (FHA Form 2530)—information concerning principal's previous activity in FHA insured projects.

Report on Pre-Application Review (FHA Form 2438-A)—a determination by FHA of site and market acceptability of project. If favorable, a formal application is requested.

FHA "B" Letter—request by FHA for formal submission of multi-family mortgage insurance application.

Formation of Non-Profit Mortgagor Corporation—use of appropriate state statute. Certified copies required for initial endorsement. See FHA Guide Form of Certificate of Incorporation (No. 1732).

B. Application and Feasibility

Application for Project Mortgage Insurance (No. 2013)—complete proposal for multi-family housing project.

* (numbers in parentheses refer to FHA Forms)

Outline Specification (No. 2435)—detailed specifications pertaining to proposed construction of project. Submitted with No. 2013.

C. Underwriting Approval

These documents are prepared for internal use by FHA and determine components of feasibility of project.

Rental Housing Appraisal Data and Project Information (No. 2401)—data concerning physical, social and economic factors affecting project.

Valuation of Land (No. 2401-LV)—determination of "as is" value of land prior to construction, for cost certification and fair market value of land when improved.

Architectural Report (No. 2411)—detailed architectural analysis by FHA.

Report of Cost Estimation (No. 2412)—determination by FHA of cost of on-site and off-site improvements.

Breakdown of Reserve for Replacements (No. 2419)—determines amount of annual reserves needed for replacements—a determinant of annual operating expenses.

Project Income Analysis and Appraisal (No. 2264) and *Rent Formula and Supplement to Project Income Analysis and Appraisal* (No. 2264-A)—sets forth results of feasibility determination by FHA.

FHA "C" Letter—favorable report of feasibility and request for submission of Preliminary Working Drawings and Specifications.

Report of Review Committee and Chief Underwriter (No. 2438)—recommendations of rejection or issuance of commitment.

Request for Preliminary Reservation of Funds (No. 3126) and *Amount and Computation of Funds to be Reserved* (No. 3120)—under §236, interest subsidized project, the FHA must complete the foregoing before a commitment can be issued.

Commitment for Insurance of Advances (No. 2432)—terms and conditions of commitment to insure construction loan by FHA.

D. Initial Endorsement or Closing

Financial Requirements of Closing (No. 2283)—final analysis by FHA of financial requirements for initial mortgage closing.

Lending Institution's Commitment—terms and conditions of the construction loan.

Assignment of Commitment—used in event that FHA commitment is assigned to different mortgagor prior to initial closing.

Regulatory Agreement (No. 1733)—terms and conditions regulating the sponsor during term of insured mortgage.

Secured Note (No. 1734)—evidence of indebtedness of insured loan. Used for §221(d)(3) BMIR projects.

Lease of Premises—if mortgage on improvement is to be placed on leasehold, FHA requires approval of lease.

Wage Conference—to be held within 20 days of initial closing for the purpose of explaining prevailing wage and equal opportunity requirements.

Certificate of Relationships and Non-Profit Motives (No. 3434)—provides updated information previously submitted on Form 3433 concerning persons associated with sponsor.

Certifications (No. 3435)—information concerning contractual relationships with sponsor of those rendering services to project.

Land Disposition Contract and Deed—dispository agreement if project is in Urban Renewal area.

Resolution of Mortgagor-Corporation—State law may require corporate resolution to mortgage its property.

Insurance Policies—Builder's Risk policy, or equivalent, and appropriate policies covering mortgagor for fire, theft, liability and other losses. *Property Insurance Requirements* (No. 2447) and *Schedule* (No. 2445)—details the insurance limits required by FHA.

Assurances from local governing bodies concerning tax exemption and abatement, if applicable.

Filing documents concerning statutory lien laws.

Title Insurance Policy and Reports—insurance covers Mortgagor, Mortgagee and Secretary of HUD and, if BMIR, then FNMA, "as interests may appear."

Surveyor's Certificate (No. 2457)—recent survey and report to FHA's satisfaction, is required.

Rent Supplement Contract (No. 2503)—prepared by insuring office if project approved for rent subsidies, in which case a *Reservation of Funds* would previously have been obtained (No. 2500).

Mortgage or Deed of Trust—FHA has appropriate state forms in most jurisdictions.

Building Loan Agreement (No. 2441)—terms and conditions governing construction loan between lender and mortgagor. Description of property and Trade Payment Breakdown are attached as exhibits.

Construction Contract—agreement between contractor and mortgagor. Either Lump Sum (No. 2442) or Cost-Plus (No. 2442-A).

Completion Bond or Assurance—surety bond with dual obligee (No. 2452) or *Completion Assurance Agreement* (No. 2450). A part of total costs of physical improvements must be assured.

Owner-Architect Agreement (No. 2719-A)—terms and conditions of payment for architectural services.

Deed or evidence of fee or leasehold ownership by mortgagor.

Evidence of Compliance with applicable zoning reg-

ulations prepared by either architect or municipal authority.

Standard form of *AIA General Conditions of Construction Contract* and *FHA Supplementary General Conditions* (No. 2554).

Building Permit or Preliminary Certificate of Occupancy—appropriate approval of local authority.

Assurance of Completion of Off-Site Facilities-Bond (No. 2479) or *Escrow Agreement* in equal amount (No. 2446) for successful completion of required off-site improvements. Copy of construction contract for off-site improvements is attached as Exhibit "A".

Mortgagor's Certificate (No. 2433) and *Oath* (No. 2478)—sets forth the responsibilities and obligations of the mortgagor during term of the insured mortgage.

Mortgagee's Certificate (No. 2434) sets forth the rights and obligations of the mortgagee in relation to the mortgage transaction.

Contractor's Certification (No. 2482)—concerning labor standards, prevailing wage requirements and information of ownership of contractor. Similar information required of sub-contractors. (No. 2482-A).

Agreement and Certification (No. 3305)—agreement executed by mortgagor and mortgagee concerning certification of construction costs.

Mortgagor's Attorneys' Opinion—submitted by sponsor's attorney concerning legal status of mortgagor and validity and priority of mortgage as a first lien. See FHA Guide Form of Opinion.

Housing Consultant's Contract (No. 2531-A) and *Certificate* (No. 2531)—when a housing consultant has been retained, both documents must be submitted.

Trade Payment Breakdown (No. 2536)—a complete breakdown of total estimated cost of each item of construction.

Mortgagor's and Architect's Certificate (No. 2403-I)—used when first payment of architect's fee is made from mortgage proceeds at initial endorsement.

FNMA Commitment Contract (No. 307) and *Additional Provisions* (No. 358)—if final mortgage is to be held by Federal National Mortgage Association at below market rate interest, then commitment to purchase mortgage is necessary before initial endorsement to protect interim lender and sponsor.

Project Inspection Report (No. 2449), *Contractor's Requisition for Payment* (No. 2448) and *Prevailing Wage Certificate* (No. 2403-A); and *Application for Insurance of Advances* (No. 2403)—during construction, as work progresses and is approved by inspection, the contractor applies for advances by requisition, which is approved by the mortgagor and FHA and then paid by the mortgagee lending institution.

E. Final Endorsement

Request for Construction Changes (No. 2437)—this form is submitted for construction changes during construction of project.

Maximum Income and Occupancy Limits (No. 1729)—prepared by FHA for §221(d)(3) projects.

Rental Schedule and Information (No. 2458)—determination by sponsor of proposed rents which must be approved by FHA.

Permission to Occupy (No. 2485)—approval by all parties that project is ready to be rented.

Contractor's Certificate of Actual Cost (No. 3378-A)—cost certification by builder.

Mortgagor's Certificate of Actual Cost (No. 3378)—cost certification by sponsor.

Maximum Insurable Mortgage (No. 2580)—prepared by FHA to determine maximum mortgage that will be insured at final closing.

Updated Title Policy, Survey and Surveyor's Certificate—covering completed project.

Chattel Mortgage—covering personalty not secured by primary mortgage, or *Attorney's Opinion Letter* that chattel mortgage not necessary under applicable statutes.

Assurances of Completion for Off-Site Facilities with Escrow Agreement (No. 2446) or *Bond* (No. 2479) and *On-Site Facilities* (No. 2456).

Request for Final Endorsement of Credit Instrument (No. 2023—final endorsement by FHA of secured note.

The Honorable Walter F. Mondale
United States Senate
Washington, D. C. 20510

Dear Senator Mondale:

Because of your legislative interest in both housing and farm workers, we thought you would find worth reading--and perhaps pursuing with the Department of Housing and Urban Development--the enclosed memorandum prepared by an American Friends Service Committee project in Florida, which is working with seasonal farm workers.

One obvious problem is that builders, who tend to aim at the top of the market since the profit margin is greater there, seldom produce houses at prices less than $18,000, which eliminates most farm workers even when the government subsidizes all but 1 per cent of the interest costs. But, beyond this, the AFSC experience indicates an insistence by FHA and by FHA-approved mortgagees on steady employment records, a full set of W-2 forms, and similar bureaucratic requirements. At this memo points out, such requirements are utterly unrealistic in the case of the farm workers.

It seems significant to us that Farmers Home Administration has been able to process loan applications for farm workers, "reconstructing" employment records when necessary, and in general putting some "assistance" into its "assisted" housing program. If HUD's Federal Housing Administration is unable to do the same thing, its programs for low income families are assuredly a hoax.

Sincerely,

Clay L. Cochran
Executive Director

Bill Channel May 22, 1970

Jim Upchurch

Federal Housing Administration 235 Loans for Farm Workers

Our recent efforts to stimulate construction of FHA 235 houses by local builders may not help farm workers. The Coral Gables FHA office and local 235 builders have developed official and unofficial guidelines which prevent approximately 90 per cent of South Florida's farm workers from qualifying for this Federal Housing subsidy program.

Unfortunately, we discovered this inequity after I spent a great deal of time encouraging private builders to initiate 235 projects. Since January we have contacted 107 builders of Palm Beach County.[1] Our survey showed that 91 per cent of these builders indicated that they would not utilize 235 financing under any circumstances.

Our survey did produce a list of 15 builders who expressed interest in constructing low income units. This included the one company of Palm Beach and Martin Counties now active in the 235 program. AFSC sponsored a seminar for these builders and invited FHA staff and mortgage bankers to explain the program and the opportunities for financing to these interested builders.

Three builders advised us later that they would construct 235 units in the near future. One new builder gave us a specific date for beginning construction and requested that we send him applicants.

With additional units being constructed, we now have more experience in trying to qualify farm workers in 235 loans to buy new homes.

Jerry Flick with the Mid-West Mortgage Company in Miami said that his firm had tried to qualify seasonal farm workers in Dade, Broward, and Palm Beach Counties. He reported that obtaining approvals for seasonal farm workers from FHA was impossible under current rules. He suggested to builders that they "forget" what he termed marginal applicants--"Why bother in a seller's market to waste time on people who may qualify but cannot document it".

---

[1] Palm Beach County has a seasonal farm worker population of approximately 25,000 persons and county officials estimate that a low income housing deficit of 15,000 units exists today. Less than fifty 235 units were constructed in fiscal 1969 in Palm Beach and Martin Counties.

During the seminar, we explained to FHA officials working with the 235 program that many farm workers are paid in cash and do not receive W-2 forms. Furthermore, they are forced by the seasonal nature of agriculture to work for several different employers each year. The FHA officials responded by pointing out that no FHA employee would risk violation of Federal laws. In cases where low income persons work for only one or two employers and receive W-2 forms each year, the FHA could easily verify their income. They added that laws establishing interest subsidy programs required that every penny of income be verified to prevent misuse of government funds. The officials conceded that many farm workers would be unable to provide this information under current regulations.

The FHA officials were not telling us anything new. We recently referred nine Mexican-American families to Palm Beach Mortgage Company for Section 235-FmHA loans.[2] Don Wood, secretary of Palm Beach Mortgage, returned their files five weeks later along with a letter saying that Palm Beach Mortgage is not interested in this program. All applicants were migrants or former migrants. A few months earlier Wood made a sincere effort to qualify some farm workers but found the experience too costly in time and effort to justify their continuing to participate in a program specializing in farm workers.

WESCO Development Corporation of Palm Beach (one of the recent 235 builders) told us yesterday not to send them anymore applicants with less than $4,700 income, two years steady employment, and their 1969 - 1040 Federal Income Tax form. We advised Walter Steel, president of WESCO, that an estimated 60 per cent of South Florida's farm workers do not file 1040 Income Tax forms and that seasonal farm workers are almost by definition prevented from establishing the type of employment pattern that he and FHA desire.[3]

"This is what FHA demands--they want a complete credit bureau report, and we do not find reconstructing employment histories for farm workers to be profitiable," said Walter Steel.[4]

---

[2] The Federal Housing Administration allocated 235 funds to the Farmers Home Administration to be used in areas with less than 5,500 population.

[3] Weak Federal Social Security laws for farm workers returned to plague us again. If more seasonal farm workers received W-2 forms, they could file 1040 forms. A semi-illiterate farm worker would need to hire a full-time bookkeeper to verify piece work, etc. Farmers could easily pay weekly checks directly to farm workers, if they choose to do so.

[4] Ironically, FHA staff pointed the guilty finger at national regulations. They then turn the destiny of low income families over to an unregulated credit bureau which may have little concern for the social benefits of homeownership for the poor.

We called W. P. Wilcox, director of the Coral Gables FHA office, to ask him if Section 237 would be useful in solving this problem. Other FHA offices have signed contracts with nonprofit organizations prior to the funding of 237 thus enabling these nonprofit agencies to counsel with and solve problems of marginal applicants. Wilcox said that he would work with anyone but he does not plan to make any formal arrangements at this time. We asked how agencies such as AFSC could help farm workers outside of the Builder-Credit Bureau-Lender-FHA circle. He was noncommital We talked with the FHA staff at the Housing Counseling Service of the Coral Gables office and the person in charge said that he was not aware that farm workers had these special problems. Apparently, FHA still thinks in terms of protecting lenders and using the old credit bureau approach which has been so successful in housing the white, middle-income population since World War II. We think that the fact that FHA staff do not seem to be aware of seasonal farm workers problems in qualifying for the 235 loans indicates that builders and lenders may be serving as a front line screen. They know that the FHA will not accept certain applications, and they never bothered to submit these applications.

THE NATIONAL RURAL HOUSING COALITION'S
BI-WEEKLY READER

Vol. 2, No. 3 March 1, 1971

Profile: Things are warming up in Congress. Committees begin their work, and some new proposals are added to the hopper.

Manpower and Housing: The 91st Congress passed a manpower bill which would provide public service jobs during times of high unemployment. President Nixon vetoed the bill. Proponents of the idea are making a second try one of the first major pieces of business for this session. Senate Labor & Public Welfare Subcommittee on Employment, Manpower and Poverty has been holding hearings on a bill much the same as the vetoed version. It hopes to report the bill to the full committee sometime the first week of March. The bill would take effect whenever unemployment stayed above 4.5% for three consecutive months. When that happens, the Department of Labor would release funds to states, who in turn would distribute them to localities to hire people to work in a variety of community services, including housing and neighborhood improvement, environment, health and safety. The bill authorizes $750 million the first year and $1 billion per year thereafter, plus an additional $100 million for every half a percentage point the unemployment figure rises after 4.5%. Main difference between the ill-fated recent proposal and the current one is that the latter is more of a temporary nature. In the Senate, it's S31. The House version is HR 17, hearings begin on it March 2,3,4,5 in the House Education and Labor Committee.

Labor Committee organizes: The Senate Labor & Public Welfare Committee has partially organized into subcommittees, but its House counterpart, Education and Labor, has yet to do so.

The Senate Subcommittee on Employment, Manpower and Poverty: Chairman Gaylord Nelson, Ted Kennedy, Walter Mondale, Alan Cranston, Harold Hughes, Jennings Randolph, Adlai Stevenson III, Richard Schweiker, Jacob Javits, Winston Prouty, Peter Dominick and Robert Taft.

The Senate Subcommitttee on Migratory Labor: Chairman Stevenson, Harrison Williams, Walter Mondale, Kennedy, and Hughes. To date only Richard Schweiker has been appointed to the minority side. Two more minority appointments are pending. Former Subcommittee Chairman Mondale has moved to chairmanship on a subcommittee on Youth.

Rural Development Subcommittee: The 1970 farm bill authorized the Senate Agriculture Committee to set up a subcommittee on rural development. Hubert Humphrey is its first chairman, as announced 2/17. Other members of the subcommittee: Allen Ellender, James Eastland, James Allen, Carl Curtis, Bob Dole and Henry Bellmon. Chairman Humphrey is planning a series of field hearings around the country "to explore rural development problems and programs". "We'll hit hard on housing," a Humphrey staffer told the Reader. He cited recent fund cuts for Farmers Home and Farmers Home manpower needs. On the agenda: new means of financing rural development, including a development bank proposal that's "more comprehensive" than a current proposal by Banking Committee Chairmen Sparkman and Patman. First order of business is a funding resolution to pay for the field hearings. The subcommittee's plans should "shape up quite sharply" this month.

Meanwhile, a House counterpart, the Subcommittee on Family Farms and Rural Development, chaired by Pennsylvania Democrat Joseph Vigerito, has been inactive because of Ag Committee Chairman Bob Poage's insistence that rural development matters be handled at the full committee level.

The Hunger Committee: The Senate, 3/1, votes 51-17 to extend McGovern's Select Committee on Nutrition and Human Needs to March of 1972. Text of the Committee's hearings last fall and its report on rural housing are now available from the Committee. A press conference by the Chairman 2/18 to release the report of those hearings is overshadowed when questioning strays onto Laos. McGovern told reporters, "We have found a truly shocking situation in rural America's housing and sanitation needs." Two-thirds of need and only 20% of public housing are in rural America, he says, and proposes an Emergency Rural Home Development Administration.

Carlucci: The nomination of Frank Carlucci to head OEO still waits for Senate Labor & Public Welfare subcommittee approval. No hearing dates set yet. Meanwhile, in a number of missives from OEO, "acting" is dropped from Carlucci's title.

Fight for Money: Senate Banking Committee plans two days of hearings, March 3 and 4, on fund freezes for fiscal '71 including Sec. 235 and 236, public housing, urban renewal, water and sewer, model cities and mass transit programs.

Some $56 million in Farmers Home water and sewer grant funds have been frozen. Another $200 million in HUD water-sewer grant funds is being withheld. In urban renewal, which has a $3billion backlog, $100 million reportedly is not being released.

In public housing, $150 million is being withheld.

Mayor John Lindsay said that cutbacks in funds for cities total $1.3 billion, in a news release 2/11. He charges that the Budget, in addition to freezes this year, proposes funding five urban programs, including public housing, at only 50% of authorized level.

Hearings: House Appropriations Subcommittee on HUD and Space-Science, announces executive hearings 3/4 to begin work on the FY'72 budget.

FmHA legislative program: In a special day of hearings before the House Agriculture Committee 2/25, FmHA Administrator J.V. Smith outlined his agency's legislative agenda. He said the agency was preparing legislation "to calculate all interest rates on a cost-of-Treasury-borrowing formula." Taken literally, this would mean interest rate increases for home repair loans, farm labor housing loans and self-help housing site loans, but a source within the Department was disinclined to believe that these three rates, set by statute, will be affected.

Smith said the agency will propose legislation "to authorize user fees under the housing program to make it comparable to that of the Department of Housing and Urban Development." He said the agency needs an additional 600 employees to administer its program, especially now that 823 towns, by his estimate, have been added to FMHA's load by the 1970 Housing Act upping the FmHA population limit to 10,000.

Another proposal would authorize FmHA to finance solid waste disposal facilities. Other proposals would change FmHA's bonding of its employees to end their personal liability for losses on loans they make, and raise the $4 million limit on water-sewer loans. Smith said the agency is working on a plan to coordinate water and sewer, land development and housing loans into a comprehensive package-type service.

New Bills: Sen. Birch Bayh, 2/22, announces he will try this year to secure a major proposal which was not enacted into last year's disaster relief legislation. He introduces S903, which would establish a national disaster insurance program within HUD if the private sector failed within two years to produce comprehensive disaster relief insurance programs at reasonable cost with coverage comparable to the Bayh proposal.

Rep. Ed Koch, D-NY, 2/25 introduces HR 842, to allow people who rent their homes to deduct from their income tax amounts which represent taxes and mortgage interest paid via rent.

Rep. John Culver, D-Iowa, 2/25, introduces HR4937, which would require USDA to make separate accounting of fund requests for agri-business versus rural development activities. Referred to Committee on Agriculture.

RURAL HOUSING ALLIANCE

International Self-Help Housing • Low Income Rural Housing

Dupont Circle Building, 1346 Connecticut Avenue, N.W., Washington, D.C. 20036

Clay L. Cochran *Executive Director*

Telephone (202) 659-1680

Dear Mr. Anthony:

The participants of the National Conference on Rural Housing, meeting June 9-12, 1969, concluded that the solution to bad rural housing is neither technological nor financial; it is political. The Conference determined that their task--and the task of concerned people everywhere--is to organize themselves for bold and direct action to raise in the public consciousness the issue of bad housing, and to build on that consciousness a genuine public commitment that is capable of being translated into an adequate public response. To perform this task the Conference called for "a continuing committee to be known as the National Rural Housing Conference," with a mandate to structure a coalition of concerned individuals and organizations, backed by staff and resources, to help the rural poor meet their needs and aspirations.

Accordingly, the Rural Housing Alliance is convening a meeting of concerned individuals to determine the form of this continuing effort, and to create an organization for that effort. The meeting is set for 10:00 AM, Friday, October 31 in the 5th floor Conference Room of the Dupont Circle Building, 1346 Connecticut Avenue, N.W., Washington, D. C.

Your concern is well known, and we look forward to your involvement in the creation of the National Rural Housing Conference. Our ability to carry out the mandate of the June Conference, but more importantly, our ability to respond to the housing needs of the rural poor, depends on success in reaching a working relationship with just such people as you on how the Conference is to be structured and how it is to be financed.

While many existing organizations, such as the Rural Housing Alliance, can provide technical assistance, can serve an ombudsman function, can testify before congressional committees (on request), and can make studies, there are strict and frustrating limits to our legitimate activities. Those who are ill-housed--and those who are concerned about the ill-housed--find themselves, too often, without a focal point for political action. The National Rural Housing Conference would be created to meet that political need; it would exist as a non-partisan, political organization.

The Conference clearly must be identified with low-income individuals and indigenous organizations at the grassroots level, and its basic task will be to assist these people and these organizations to have their greatest impact on the American consciousness and on the American establishment. The objective of the Conference will be to place low-income, rural housing high on this nation's agenda, much as others have worked in recent months to raise the issue to hunger and malnutrition to a level of public concern and action.

Those who called for the creation of a National Rural Housing Conference expressed hope that the organization to be created will have maximum freedom of action, and that it will be burdened as little as possible with structures and procedures that are both unnecessary and potentially fraudulent. In addition, the participants of the June Conference specifically called for a primary focus in the field:

> "Within the framework of the coalition there must be an effort backed by staff and resources to help rural poor people to organize around this conference's program. Where possible, existing rural poor people's organizations should be utilized to achieve such support. In any event, we believe that the successful implementation of this program depends on organizing the support of the people most affected by the program."

Aside from these general guidelines, the structuring of a continuing National Rural Housing Conference is up to you and others who are being invited to the October 31st meeting. The organization will be created by you and the work of the Conference will proceed as determined by the group.

Unfortunately, Rural Housing Alliance has no funds to help people get to Washington for our meeting. We realize that many of you outside of easy reach of Washington will not have the money to get here. We hope that you can find a way to come, but for those who cannot, we wanted you to know of the meeting and to submit any ideas or comments that you might have. Most importantly, we want your support and future involvement in this vital, common task. We consider you essential to the success of this undertaking, and we are counting on all the participation that you can offer.

Please help us prepare for the meeting by completing and mailing the attached form right away. We look forward to having you with

us on the 31st--and to joining with you thereafter to bring some real relief to millions of poorly-housed, rural Americans.

Sincerely yours,

Clay Cochran

Clay Cochran, Chairman
Conference Working Committee

* Members who have built or are now bullding a home in a self-help housing project are entitled to participant membership dues.

January 11, 1971

Mr. Arthur Campbell
Director of Planning
Southern Regional Council
52 Fairlie Street, NW
Atlanta, Georgia

Dear Art:

This letter is in response to your request that I submit a proposal indicating services that I can provide in the design and implementation of housing projects in South Carolina. In outlining these services I make reference to your memorandum to me of December 28, 1971 which describes activities in which the Southern Regional Council would like to become involved in the State of South Carolina.

I could provide assistance in the following areas: (1) identification of target areas where potential housing projects could emerge; (2) development of demographic data of selected areas; (3) conducting field surveys of the selected areas for the purpose of identifying leaders to assist in designing the housing program; (4) and helping to organize workshops involving technicians and local residents to develop strategies for dealing with the local community and housing programs.

The services outlined above are those which would contribute primarily to the identification of target areas and location of agencies and officials that could lend strength, support and possible funding to a project. I have had significant experience in various planning efforts within the State of South Carolina. Therefore, I could quickly assist you in establishing the necessary support to locate a project and assure its design and implementation. Once target areas have been selected, we could then discuss the possibility of the services which my firm could provide in actually conducting planning for the designated area(s). I am in agreement with you, that a strong resident input is essential for the type of project we have

James Wright Associates, Inc. 1182 W. Peachtree St., NW • Suite 306 • Atlanta, Ga. 30309 • 404 / 873-1875

discussed. Also, I would be interested in providing a strong socio/economic base to any plan designs which are developed. I think it is essential that any housing communities which are planned should coincide with the actual needs, values, aspirations and life styles of residents that will live therein.

For the initial phase of the services which I propose, I think the most desirable and equitable mutual arrangement would be on a per diem basis. I would provide services outlined above at the rate of $200 a day plus expenses. Itemized invoices would be submitted to you on a regularly scheduled basis for services performed.

When a project area is designated and a planning approach outlined, I could then develop a proposal for providing planning, community organization and design services. Such a proposal would be contingent upon our selection of a designated site.

I am quite confident that we could become involved in a very exciting housing program within South Carolina. Our philosophies regarding community planning are synonymous. Your interest in expanding housing planning and programs for the Southern Regional Council is commendable. I look forward to the opportunity of working with you in this exciting endeavor.

Best regards.

Sincerely,

JAMES WRIGHT ASSOCIATES, INC.

James Lee Wright, Jr.

Summary of a Conference

on

Comprehensive Economic Development in the

Coastal Plains Area of South Carolina

Penn Center

Frogmore, South Carolina April 21-23, 1971

A group of about fifty persons assembled at Penn Center, Frogmore, South Carolina, April 21-23, 1971 for the purpose of exploring the possibilities of developing a comprehensive and coordinated strategy for economic development in the coastal plains area of South Carolina.

Those present included representatives of several community and economic development projects in South Carolina, the South Carolina state government, South Carolina State College, the Federation of Southern Cooperatives and several national foundations, church mission boards and governmental agencies. (The full roster of those registered is attached to this summary.)

Mr. John Gadson, Mr. Rodney Albert and Mr. Charles Washington shared the role of chairman.

Wednesday evening, April 21

This was a very free-wheeling introductory session. The participants introduced themselves. The general purpose of the conference was explained. The discussion ranged widely over the problems facing the poor and black people of the South Carolina coastal plains region. There emerged a general consensus that the entire region shares many problems in common, that these are well known to the participants in this conference and that the group was ready to move on to discussion of lines of action to deal with the problems.

Thursday Morning, April 22

The opening statement at this session was made by Mr. James Clyburn, Assistant to South Carolina Governor John West for Human Resource Development. Mr. Clyburn reported in some detail on the plans of the governor's office in the fields of housing, education, health services and elimination of hunger.

Housing is the top priority on Mr. Clyburn's agenda. Almost half the housing in South Carolina is sub-standard. A bill has been introduced into the state legislature to create a State Housing Authority. A bill has also been prepared dealing with the problem of settling certain cloudy land titles.

The education problem in South Carolina is reflected in the current 52% drop-out rate before high school graduation. Mr. Clyburn's aim is a

compensatory education program with emphasis on child care centers and a head-start type effort. Human resource money is being sought from the Coastal Plains Regional Commission for special educational effort in certain planning districts within the coastal plains area .

One problem in the health field is the fact that the State of South Carolina has no policy on health. Mr. Clyburn is emphasizing the importance of ambulatory health services which will get poor people out from under the high costs of hospital care. Governor West is planning to call a state-wide conference on health sometime in 1972.

With regard to the hunger problem, Mr. Clyburn pointed to the small percentage of school cafeterias which have a breakfast program. He also stated that only about 50% of eligible people in the state are receiving food stamps. He announced that beginning May 1, food stamps will be mailed to welfare recipients.

The remainder of the morning was devoted to discussion with Mr. Clyburn regarding the issues presented by him and a good many others. Among specific suggestions addressed to Mr. Clyburn were these:

1. The state government should seek ways to protect black people's ownership of land and homes. Mortgage insurance and programs to increase income were suggested.

2. There is need for programs of title clearance..
3. The big money must come from federal sources.
4. The state should require that a substantial proportion of new housing be built by Blacks.

Some unhappiness was expressed that the governor's program as presented by Mr. Clyburn did not seem to be sufficiently comprehensive in dealing with the broad range of problems facing poor people. Mr. Clyburn's response was that resources are insufficient to do everything at once and that concentration on certain priority issues is essential if any progress is to be made.

Thursday afternoon, April 22

At this session representatives of various projects were asked to describe their economic development programs.

South Carolina Council on Human Relations. - Paul Matthias

The key economic development program is called RURAL (Retention, Utilization, Reclamation and Acquisition of Land) It is focussed in Bamberg County. An inventory has been made of land owned by black people. The project is now moving into a feasibility study with regard to the possible uses of this information. Ultimately program alternatives will be presented to the black land owners.

State-Wide Homes Foundation - Rodney Albert - reported in the absence of Rev. I. DeQuincey Newman.

SHF has acquired development sites in several areas of the state. It has

been approved by SEC to float bonds up to $1,000,000. A local housing corporation has been set up at Great Falls and 100 acres of land has been purchased. Hundreds of individuals have built homes in various parts of the state.

Rural Missions - John's Island - Rev. Willis Goodwin

This project started with day care centers but has moved in several directions including a health clinic and a pickle Coop. Plans under development include a sea food cooperative, preventive medicine program, expansion into fresh market produce, and a handcraft cooperative. Land titles are a serious problem in this area. Helping agencies have been the United Methodist, Lutheran and Mennonite Churches.

Sea Island Cooperative - Mr. P. T. Seabrook

This is an old cooperative in Frogmore. Mr. Seabrook's presentation emphasized the problems of inadequate member loyalty and participation due, in his opinion, to failure of the coop. to maintain educational programs for members, board and management.

Penn Center Tomato Growers Coop. - Mr. George Parris

This is a new cooperative with about 75 members representing about 300 acres. The cooperative has a tomato grader and intends to grade and market tomatoes for its members.

South Carolina Commission on Farm Workers - Mr. Al Fields

The Commission sponsors several buying clubs, has plans for a crabbing cooperative and is thinking about a construction company in the low income housing field.

Comprehensive Health Service - Mrs. Laura A. Bush

Several county and multi-county comprehensive health services were represented in the conference. Time permitted only a most sketchy presentation regarding their program. Environmental programs for preventive health are emphasized.

Williamsburg County Program - Rev. O. J. Nelson

This program emphasized leisure time activities for the aging.

As a part of this round-up, the group also heard briefly from Mr. Roy Williams of the Farmer Cooperative Service, U.S.D.A. and Mr. Jesse P. Perry, Jr. of the Rockefeller Foundation.

Mr. Williams described the kind of technical help the FCS could provide to the area through a multi-county cooperative development cooperation. Mr. Perry stated some of the questions any foundation would ask a group presenting a proposal for funding:

1. What do you want to do?
2. How do you propose to do it?
3. What resources do you already have available?
4. How long will it take to do it?
5. To whom else have you talked about it?

Following a coffee break the group moved into a general strategy session.

Shirley Greene listed some of the areas which might be included in a comprehensive development package: economic, housing, health, education, welfare, transportation. Also some of the factors which will be required: People, land, capital, credit, legal aid, technical assistance, training, management, political power. Also some of the sources for some of the factors are governmental agencies, foundations, churches.

Jim Pierce made a statement emphasizing the value and importance of agricultural coops in such a rural area as this where there is little likelihood of any considerable industrial development.

Ira Kaye pointed out the possibility of many jobs in such service areas as housing, health, education and day care. The picture is not simply industry <u>or</u> agriculture.

The general discussion developed, among others, the following main points:

-- The need of the area is for a comprehensive approach to development.

-- The situation is one of urgency. Bureaucratic procedures are too slow. Self-help coops are the key.

-- An alternative to the coop is the community development cooperative.

-- Legal services are an essential component of development.

-- CAP agencies should write legal aid into their budgets.

-- A community land trust might be a possibility.

-- Land is important, but it is not enough for black people to own it; they must be in position to use it in a profitable way.

Evening Session, April 22

This session zeroed in on the central question of the feasibility and desirability of some kind of coordinating committee or organization for development in the coastal plains area of South Carolina.

After considerable discussion of pros and cons and alternative patterns of organization, the group voted to proceed to the organization of an Ad Hoc Committee on Development. There were no dissenting votes.

After further discussion it was voted that a few minutes be allowed for consideration of what such a committee should do, after which the chairman of this session (Mr. Charles Washington) should appoint the Ad hoc Committee from among the South Carolina people invited to this meeting. There were some dissenting votes on this motion.

The chairman declared a brief recess during which he asked each person to write out his suggestions as to what the Ad hoc Committee should do.

When the group reconvened, the chairman announced the following personnel for the Ad hoc Committee (supplemented by one person elected to the committee on Friday morning)

Mr. John Gadson, Frogmore
Mr. Rodney Albert, Columbia
Mrs. Laura A. Bush, Bluffton
Mr. Al Fields, Charleston
Rev. Willis Goodwin, John's Island
Mrs. Catherine Lewis, Conway
Rev. O. J. Nelson, Kingstree
Mrs. Eunice Rush, Orangeburg
Mr. George Smith, Frogmore
Mr. G. T. Twitty, Kingstree

Mr. John Gadson was later elected chairman by the Committee.

The Ad hoc Committee was asked to collect the papers, to meet following the evening adjournment to define their task, and to report back to the full group in the morning.

A motion to adjourn was lost. After a couple of other motions designed to define the functions and limits of the Ad hoc Committee were also debated and lost, a motion to adjourn was carried.

Friday Morning, April 23

The Ad hoc Committee reported five points defining its functions and responsibilities for the immediate future:

1. The Committee is to undertake a "study" to determine the areas in which there would be advantages for a coalition of effort.

2. The Committee recommends that the geographical area for this coalition effort be defined as the coastal plains of South Carolina.

3. The Committee is to develop a short statement of objectives based on the discussions of this conference.

4. The Committee is to call a conference of South Carolina coastal plains people to accept or reject the findings of the Ad hoc Committee.

5. All these steps are to be taken within the next 90 days (amended by the group to "60 days").

These recommendations, with the amendment noted were approved by the conference. In the discussion the following additional points and clarifications were made:

Penn Center is seen as the focal point for this effort at least for the initial period.

The summary of this conference is to be sent to all persons who expressed interest in the conference as well as those who attended.

The offer of legal aid on land titles extended by Haywood Burns of the National Conference of Black Lawyers should be followed up promptly by the Ad hoc Committee.

Contact should be made by the Committee with the South Carolina state economic opportunity office.

The Ad hoc Committee is to search as diligently as possible for all local development groups and projects in the coastal plains area for invitation to the next meeting.

The Ad hoc Committee is to make every reasonable effort to secure the ideas and views of poor people as in-put for planning the coalition effort.

Whatever funds remain after covering the expenses of this conference from the $1000 grant of the United Methodist Rural Economic Development Action Program will be available for the further expenses of the coalition effort as determined by the Ad hoc Committee.

The representatives present from the Episcopal General Council Special Program and the Lutheran Church in America Board of American Missions agreed to see if their agencies could provide some grant money to assist the coalition effort.

It was agreed that funds for the coalition effort are to be handled for the present by Penn Center under the supervision of Committee Chairman John Gadson.

Chairman Gadson was granted authority to add members to the Ad hoc Committee.

The chairman requested all participants to send to him in writing their feelings and reflections regarding the conference.

In addition to these matters of business, a very helpful discussion was led by Charles Washington and Zack Townsend, attorneys, regarding legal problems related to land ownership. Topics covered included: ways of getting a moratorium on tax sales; problems of partition sales; problems of inadequate wills; problems of mortgage foreclosures.

John Gadson expressed appreciation to all who had participated in the conference. The group expressed appreciation to John Gadson and Penn Center.

The conference adjourned at about 11:30 A.M.

MEMORANDUM

TO: Mr. James Wright

FROM: Art Campbell

RE: Rural Housing in South Carolina

This is a brief statement of the kind of activities I would like to become involved in in South Carolina.

Generally our purpose is to stimulate housing development in those rural areas where the greatest need exit. We strive to work directly with residents of these areas in defining their housing problems and then help pull together the necessary resources for developing effective housing programs.

As I see it now, the project I am proposing would entail the following activities:

A. Identify target areas. These would be primarily areas not served by a housing authority or one that has an inactive authority.

B. Develop demographic data on selected areas (especially on housing needs as measured by dilapidation).

C. Conduct field surveys of the selected area for the purpose of identifying leaders and existing housing program. Would also contact local

residents interested in developing low cost housing. Work thru existing co-op's, CAPs and other neighborhood organizations.

D. Help organize workshops involving technicians and local residents to develop strategies for dealing with the local community's housing problem. Depending on an assessment of the local situation I would want to pursue the following courses:

1. Organize non-profit sponsors to develop co-op housing.

2. Package applications for loans under the Farmers Home Administration 502 program.

3. Organize a housing authority or reactivate existing authority to build public housing (incl. section 23 leased, turnkey and conventional).

E. Help organize teams of professional consultants to develop the housing program. (Attorneys, planners, architects, bldg. contractors)

F. Act as advocate planner for the local residents.

1. Convene workshops for in-depth explanation of certain housing programs.

2. Develop preliminary plans reflecting concerns of local residents. Work with professional consultants on behalf of residents.

3. Explore possible long range housing-related economic developments.

G. On-going consultations/assistance in implementing housing strategies.

As I mentioned earlier, there are five or six individuals that I would have to touch base with become becoming actually involved in this type of venture in South Carolina.

SUBJECT: Efforts to locate potential housing projects in South Carolina

On February 3, 1972, I met with the Mayor Worth Barnett of Greer, South Carolina. The purpose of the meeting was to determine the status of planning for an area of the city that was being considered for potential urban renewal and low and moderate income housing development. Mayor Barnett spent some time explaining the history and current status of the project and personally drove me through the entire area while highlighting characteristics and features of the neighborhood.

The area in consideration is named Sunnydale. It was once a typical minority community which are characteristically located on the outskirts of small towns throughout the southeast and southwest. It has now been incorporated into the city. The area has traditionally been without basic facilities and services such as sewer, water and recreation. The streets are also largely unpaved or run down. Many other necessary services are also inadequate, such as stores, shops, convenience centers, recreation areas, etc.

The area is characterised by single family framed structures. The density is not excessive as single family units do predominate. There is a substantial amount of dilapidated structures which are unfit for human habitation. There are some redeeming features, such as a newly constructed multi-family development in the heart of the neighborhood. The general land use and density pattern would allow some very favorable reuse treatment of the overall site.

Mayor Barnett is committed to making improvements in the area. Since he has assumed office, some streets have been paved, a sewer and water grant has been applied for, and he has negotiated with the Greenville Planning Commission as well as Spartanburg County Planning Commission for assistance in developing a workable program as the initial step toward undertaking of a urban renewal project. He indicated that the City of Greer does not have funds at this time to retain professional consultant assistance. However, he is quite interested in receiving professional help. This is the reason that he has been negotiating with the Greenville and Spartanburg County Planning Commissions to receive whatever limited assistance they can provide.

I outlined to Mayor Barnett the possibility of assistance from the Southern Regional Council. He looked over the memorandum you sent me which outlined services which the Southern Regional Council could possibly provide. His interest was high and he expressed a strong desire to discuss the matter further and pursue it with his council, housing authority director, and planning commission members. He has tentatively scheduled a meeting for February 17, 1972 at 7:30 p.m. in the evening. The meeting would consist of members of Council, the Greer Planning Commission, and the Director of the Greer Housing Authority. He also suggested that I contact some staff members in the Greenville County Planning Commission to discuss with them the possibility of assistance if the Southern Regional Council should become involved in planning for the area.

I indicated to Mayor Barnett that we would be interested in working with both the local officials as well as neighborhood leaders. He indicated that there were some recognized neighborhood leaders and at least the nucleus of a community organization in the Sunnydale area. He suggested that it would be quite favorable to work with the community residents. The predominating population in the designated area is Black.

I indicated that I would be in touch with him prior to the February 17th meeting. It appears to me that there is a very real potential for getting involved in a significant project within the Greer area. There is commitment from the Mayor, available resources from local Planning Commissions, and a very distinctive need which exists in the designated neighborhood. I will be very interested in discussing this potential project with you further.

February 8, 1972

Mr. Arthur Campbell
Director of Planning
Southern Regional Council
52 Fairlie Street
Atlanta, Georgia 30303

Dear Art:

This letter summarizes previous discussions which we have had regarding the assistance which James Wright Associates, Inc. can provide the Southern Regional Council in identifying target areas for possible development of low and moderate income housing projects in the state of South Carolina.

Carrying out the designated task, I will provide the following assistance: (1) meet with local officials, planners, agency administrators, community leaders, and any other persons who can provide information regarding the potential for development of low and moderate income housing in designated areas; (2) assimilate social-economic-physical data which will assist in determining the potential of designated project areas; (3) provide help in any meetings, liaisions, or negotiations, which you need to have with local officials, planners, or community leaders; (4) develop regular memoranda to be sent to you on the progress in efforts to locate housing targets areas.

For these services James Wright Associates, Inc. will be reimbursed the sum of $200 per day. This amount will cover all expenses. Invoicing will be based on the amount of actual hours spent in a given day which would constitute a percentage of the daily $200 fee.

James Wright Associates, Inc. 1182 W. Peachtree St., NW • Suite 306 • Atlanta, Ga. 30309 • 404 / 873-1875

THE TOTAL COMMUNITY DEVELOPMENT PROCESS: Planning • Evaluation • Management • Development

I am quite enthusiastic about the possibility of locating some low-moderate income housing target areas in South Carolina. I look forward to the opportunity of working with you in this exciting endeavor.

Sincerely,

JAMES WRIGHT ASSOCIATES, INC.

Mr. John McCarroll
Phillis Wheatley Recreation Center
121 East Broad Street
Greenville, South Carolina

Dear John:

Thanks for your time and effort spent showing me around Greer and explaining the current situation.

I met with Mayor Worth Barnett and a full contingent of city officials on Thursday night. Iddid not get all the names of those in attendance but included were members of the Redevelopment Committee. Incidentally, this committee susposedly supercedes the housing aurhority. (It was a cordial meeting--in fact almost too cordial.)

I briefed them on the Southern Regional Council and explained that our interest was in helping low income communities across the South to start housing and physical development programs.

Apparently they had gotten the impression that SRC would hire Jim Wright (the Atlanta-based consultant I mentioned) to work for the City of Greer in developing traditional planning studies/programs (i.e. a comprehensive plan and workable program). I emphasized that we would want to work with the local government but not directly: But instead, through a local community group.

The officials said they wanted to do something about the communities that need physical improvements. They claim this is why they annexed certain portions of the Black community to Greer. However, little has been done.

Mayor Burnett said the Greenville Planning Commission has assigned a man full-time to Greer. His job would be to develop the plans necessary for completing a "workable program" for the city. A city is required by the U. S. Department of Housing and Urban Development to have such a program to be eligible for a variety of federal funds.

While I have not visited the planning commission, it is my belief that it would want to start a urban renewal project in Greer. Immediately, I see several drawbacks to this approach from the Black Citizens of Greer's view point. One, the process takes a long time to yield physical results. Two, and perhaps more serious, the city under this program will end up owning the land of a good chunk of the Black community. Of course, I can't say how extensive this will be in Greer because I don't know the proportion of Black property owners. A third aspect is that the urban renewal project could very well affect standard houses on well kept properties--especially since some good houses are scattered among the bad. (i.e. in the areas we drove through).

As I indicated, I would like to see a program of improvement developed by the Black community itself with the understanding and cooperation of the city of Greer--a kind of private renewal. I felt the city officials out on the idea of private renewal. They were not generally optimistic. Of course they were not responding to a specific plan.

What I have in mind is for the community with the leadership of a local group to organize its own "Development Commission." This group would not only develop its own program but would monitor the activities of the city and its planning representatives--the Greenville Planning Commission. The Housing and Planning Project (SRC) could act as the planning arm of the local organization (e.g. Black Concerned Citizens of Greer) and would help develop a program for the Black community. In this connection we would help locate outside resources.

Basically, I am suggesting that some short-range projects be initiated by the community itself withethe aim of tapping private funds. This could be housing or some type of park/ recreation program.

Let me say again that we don't have a great amount of resources that we are itching to find a place to spend them on. The development of low-income communities, especially Black, is simply a goal we are committed to. And I personally believe the community approach to improving run-down areas has a lot of merit since it stresses community iniative and self reliance.

Please let me know what you think about the suggestions I have made.

Sincerely,

Arthur C. Campbell

SUBJECT: Potential Greer, South Carolina Housing Project

On February 25, 1972, I met with Mr. Coleman Shouss who is the Planning Director for the Greenville County Planning Commission, in Greenville, S. C. He helped clarity various matters pertaining to the potential Greer, S. C. housing project. Also, he recommended a possible approach which the Southern Regional Council may wish to take in planning and stimulating development of a housing project in the Sunnyside neighborhood of Greer, S. C.

He stated that the Greenville County Planning Commission is the only agency which is currently involved and will continue working with the Greer, S. C. Planning Commission. Initially, the Appalachian Regional Council had been contacted by the Mayor to do some work on the city's workable program. However, since that time, the Greenville Planning Commission has taken over all planning activities, and the Appalachian Regional Council will no longer be involved.

Currently, the Greenville County Planning Commission is preparing a general development plan for the community in addition to all other elements which are necessary for Workable Program certification by HUD. It is anticipated that the general development plan and other elements of the workable program will be completed within 60 days.

He indicated that the general development plan would not be specific in detail and nature. It would constitute an overall guide to growth and development in the community. Particularly with regard to housing, he indicated that there would be no detailed social-economic or housing data for identified deteriorating areas within the community. Particularly, with regard to Sunnyside, he indicated that there would be only general information concerning housing conditions and no specific plans regarding neighborhood development or housing needs in the area.

He indicated that he thought the Sunnyside project had a lot of potential. At the suggestion of possible SRC involvement, he was quite enthusiastic and offered whatever assistance would be needed to aid the Council in its efforts. His recommendation was that the Council consider the development of a detailed development plan for the Sunnyside area which would include an analysis of social economic elements as well as a more thorough investigation of physical conditions in the neighborhood and potential reuse opportunities. He said there would be no need for the SRC to become involved in efforts to complete elements of the Workable Program since the Greenville Planning Commission was currently responsible for this task.

Mr. Shouss also suggested that the SRC possibly work with a Mr. Dobbins who is Executive Director of the Greer Chamber of Commerce. His interest is in the provision of housing for low and moderate income families. Mr. Shouss thought Mr. Dobbins would be quite enthusiastic about the possibility of SRC involvement and would cooperate to the greatest extent possible in planning efforts.

As I indicated, Mr. Shouss was quite positive about the possibility of working with the SRC. In addition to the opportunity in Greer, he also indicated that there are certain deteriorating areas in Greenville that would possibly be able to use planning assistance from the SRC if there was an interest.

I believe he would be quite cooperative and helpful in any efforts that are undertaken. To assist in planning efforts he provided a set of base maps in addition to a copy of the Greer Zoning Ordinance, and outline of the general development plan. He indicated that as additional elements are developed in the workable program preparation he would make them available. He is interested in hearing from us further in regard to efforts in the Greer situation and also concerning the possibility of an involvement in Greenville planning efforts.

SCATTER*- SITE PUBLIC HOUSING

GIVING HOUSING DISCRIMINATION THE "DOOR" An important legal battle in the League's long campaign for open housing was won recently. The **Illinois League** and the **LWVUS** were among several civil rights organizations submitting briefs in *Gautreaux* v. *Romney*, charging that the U.S. Department of Housing and Urban Development had violated the rights of blacks by not requiring that the Chicago public housing it funded be scattered throughout the city. On Sepember 10, the U.S. Court of Appeals found HUD guilty of racial discrimination. This decision appears to contradict the Administration's housing policy as it was defined by President Nixon: "It is not the policy of this government to use the power of the federal government or federal funds . . . to force integration of the suburbs." The Court's ruling could have extensive impact in other areas where Leagues are fighting efforts to restrict low-cost, federally supported housing projects to black districts rather than scatter them throughout the community. □

ISAIAH TERMAN

THE AMERICAN JEWISH COMMITTEE

Institute of Human Relations • 165 East 56 Street, New York, N. Y. 10022 • PLaza 1-4000 • Cable Wishcom, New York

Date: January 7, 1972

To: Public and Private Groups and Individuals with an Interest in Scatter-Site Housing

From: Alexander Greendale, Director, Housing Division

Subject: A Ten Point Guide For Scatter-Site Public Housing

The American Jewish Committee believes firmly in the principles underlying scatter-site public housing. Yet it is cognizant of the fact that fierce resistance against racial and economic integration efforts by communities and local jurisdictions has contributed substantially to polarizing much of the country around these housing issues with a resultant slowing up -- and in some sections of the country even completely immobilizing -- federal, state and local housing programs.

It is with this in mind, and because AJC hopes that we can stimulate more housing starts as well as more racial and economic housing integration, that the enclosed Guidelines were developed.

We hope you will find them useful and welcome your comments.

Introduction

Jews are metropolitan dwellers and are directly affected by the polarization that results from metropolitan tensions. One of the high tension areas is housing. The shortage of housing and the scattering of public housing into middle-income communities has contributed in no small measure to intergroup confrontations by diverse ethnic, racial and religious groups. Scatter-site housing in particular requires more community relations efforts than any current housing program. The thesis underlying scatter-site housing is that by being dispersed into stable, middle-class communities, the poor will be helped to free themselves from the destructive bind which permeates so much of ghetto life. However, resistance from the middle-class communities throughout the country chosen for scatter-site public housing is fierce and unrelenting.

The American Jewish Committee has addressed itself to the conflicts that arise directly from our housing dilemma because of its concern for metropolitan Jewry in particular -- and all metropolitan dwellers in general -- and because it is a human relations agency that has, over the years, developed strategies and programs designed to depolarize and defuse divisive confrontations, and restructure them into more positive efforts.

As far back as 1949, AJC addressed itself to housing problems, and developed housing programs calculated to eliminate discrimination. At its 53rd Annual Meeting in 1960, AJC issued an urban-suburban Statement condemning restrictive zoning and housing segregation. In 1962, Irving Engel, Honorary President of AJC, testified before the Civil Rights Commission in Washington on housing discrimination in the District of Columbia and its suburbs. In 1966, AJC created the Department of Education and Urban Planning to deal with the desperate plight of the nation's cities. In a comprehensive policy statement (1967), AJC encouraged private and governmental efforts to promote housing integration, particularly as related to job opportunities which were beginning to open up in the suburbs. AJC testified before Congress on the Housing and Urban Development Act of 1968, urging that Congress stimulate the growth of balanced communities by offering meaningful incentives to both new and existing communities. In 1970, AJC created a National Housing Committee and charged it to deal directly with urban-suburban issues.

It is a matter of record that throughout the 60's, full and fair housing laws, as well as strong attacks by fair housing and civil rights groups against racial and economic housing discrimination, resulted in surprisingly little governmentally sponsored housing output. Housing shortages affect many of

the middle-class as well who are also in desperate need of governmental subsidies in order to buy into the housing market.

It is to get us back on the track of positive achievement that the Domestic Affairs Commission of the American Jewish Committee has adopted the following ten point guide for scatter-site public housing:

The Ten Points

1. Cities should plan scatter-site projects with middle-class communities in such a way as to alleviate their fears. The community should be assured that its own poor, young marrieds, elderly and returning veterans will receive first priority -- that the project will be open to all city residents and not just specific groups.

2. Essential services should be provided as needed and not after the project opens. Services should include adequate provisions for schools, police protection, sanitation, etc.

3. There should be outreach to all the major groups in these communities during the planning stages, and the expertise of civic and community relations groups be called upon and utilized.

4. The project should be within the density and size scale of the rest of the community. This may increase the cost, but the "social" benefits derived from this building-to-scale is well worth the price.

5. Consideration should be given to greatly expanding subsidized moderate income housing with a sizeable percentage of the units (20-25%) to be reserved for the poor. In general, moderate income housing enjoys much higher status than public housing.

6. Cities should adopt an admissions policy for scatter-site housing that will reassure the community. Psychologists, social workers and sociologists have been able to identify families with severe problems. Many of these families have made life untenable for their neighbors. Providing them with therapy services has, on the whole, not been considered a successful approach to their problems. Society must seek better solutions for these families -- housing by itself cannot provide the answer. Unfortunately, these families have contributed in no small measure to the destruction of public housing.

7. Cities should make strong provisions that when homes contiguous to the project go up for sale -- especially in the initial stage of project planning, building and occupancy -- they be neither "blockbuster" inspired nor "blockbuster" bought. This has happened often in the past. It is at this crucial time that the stability of the neighborhood may be in jeopardy.

8. Innovative home ownership co-op or condominium public housing should be explored. The Columbus, Ohio Housing Authority has successfully initiated high-rise home ownership. Home ownership appeals to the middle-class and would win much favor among them. It calls upon self-help principles inherent in our tradition and national character.

9. The concept of the Dayton, Ohio Plan in providing for scatter-site housing should be utilized. The political leadership in Dayton and its five surrounding counties each agreed to accept their share of the poor. The political leadership did an excellent educational job with respect to their constituencies. Community acceptance related to the fact that there was a plan. Most middle-class whites flee from the poor because they are convinced their neighborhood will quickly change and deteriorate. The Dayton Plan assured middle-class suburban communities they would only be asked to absorb a specific number of poor -- and no more.

10. All states should pass legislation that adopts the principle in recent Massachusetts legislation (Connecticut has an improved version), which allots a certain percentage of unused land in every jurisdiction for low and moderate income housing, thus sharing the responsibility on an equal community to community basis.

Conclusion

For scatter-site public housing to succeed, cities and communities must learn to work cooperatively, and this entails compromise. Hopefully, the above ten points will provide guidelines to what we all desire -- a decent place to live for all Americans.

EDITORIAL

"OF AND FOR THE PEOPLE"

Our monthly Reporter has made its way to many government agencies, in many states. This communication between agencies is good and praiseworthy.

However, it seems that we somewhat midsirected our efforts. For this news letter is really OF AND FOR THE PEOPLE. It is a report to the people for whom we work, namely the poor and the unsheltered. It is a report to the participants who have made the great sacrifice and are enjoying their new homes. It is a report to those who are now anticipating the day when they will be able to start construction on their own house.

Consequently, our Reporter will make its way not only to public agencies, but to the very doors of the poor and target area participants. They will be given the opportunity to read about themselves. They will be given the opportunity to influence the policies of the program which serve them, by filling out a questionnaire attached to the last page of the Reporter.

Personal interviews will be conducted in the homes of families and the results will appear in the Reporter.

We hope that our friends in other agencies will enjoy reading the Reporter, but more important than that, we intend for this news letter to truly be OF AND FOR THE PEOPLE.

Henry Wolfe, Jr.
Program Coordinator

PROPOSAL APPROVED

The President of the Board of Directors at Southeast Louisiana Self Help Housing Association, Inc., alone with the Director and Coordinator attended a conference in Washington, D. C. to discuss the directions of the program for the year 1970. Mr. Earl White, Director of St. James Community Action Program and Board member of Southeast Louisiana Self Help Housing Association, Inc. was also present.

Following that conference, a new proposal was drafted and accepted by the Migrant Division. One result of that new proposal is that this agency will have its own construction personnel on a full-time basis. One construction specialist and three construction supervisors will be available to work with our families.

BOARD TRAINING SET

The Board of Directors are scheduled to begin training on April 10, 1970. The training will be done by Shaw University, of Raleigh, North Carolina. The Board is made up of five (5) members from each of the parishes served by this program. It is their responsibility to represent the prople living in their area.

HOUSES NEAR COMPLETION

The Reserve and Edgard Projects are now very near completion. Most of the houses have been painted and the beautiful colors are pleasant to behold. The families are looking forward to moving in their new homes.

DEDICATION SET

Nine units of Self Help houses have been completed in Bertrandville, Assumption Parish , and dedication has been set for the 21st of March at 2:00 P.M. Mr. Melvin Johnson of O.E.O. Migrant Division will be among the various officials present for the occasion. The Farmers Home Administration (the agency making the loans) will be co-sponsors of the event. Mr. Kernan Banker and Mr. Bruce Bordelon, the County Supervisors in that area have worked very dilligently with the families in that area. They attended most of their association meetings. Mr. Oncale is also said to have been one of the best construction supervisors available.

NEW GROUPS FORMED.

Seven new groups are now being formed for self-help projects, thirty-one families in St. John, twenty families in St. James, twenty families in Lafourche, ten families in Assumption, and six families in Ascension. A group is scheduled to be organized in St. Charles soon.

The process of organizing families is taking a little longer than we originally anticipated. We have initiated a new screening process which accounts for the slowness. For the first time, we are doing our own credit check on the families before bringing them to Farmers Home Administration. This gives us the opportunity to clear up any financial difficulties a family may have, before reaching Farmers Home Administration.

Dear Friends,

The following questions are meant to give you a chance to offer your opinions about Southeast Louisiana Self-help Housing Association, Inc. You are not required to sign your name and no one will be singled out for his opinion.

The Program is here to serve your, and we should know how you feel about that service. Pleast don't throw the questionnaire away because one of our counselors will be by to pick it up.

Thanks.

Henry Wolfe, Jr.

THE FmHA CREDIT SQUEEZE

All low-income rural housing is in a squeeze, including self-help housing financed by the Farmers Home Administration (FmHA). Unless President Nixon or the Congress takes action quickly, self-help is in deep trouble because credit will not be available.

Farmers Home's "insured loan program," under which all self-help loans of that agency are made, operates under a very complex arrangement. FmHA takes the mortgage "paper" from individual borrowers and sells it to investors, usually at rates of 3/4 to 1.5 percent higher than the same money could be borrowed directly by the Treasury. Farmers Home guarantees the loans with a revolving fund, but it is also obligated to buy back any loans which an investor wishes to sell.

At this time, almost a half billion dollars worth of FmHA mortgages are backed up in its St. Louis financial office, absorbing most of its revolving fund and blocking further loans to families.

Farmers Home can subsidize borrowers from its revolving fund, but lenders are refusing to buy FmHA paper because it is not allowed to pay more than 7 percent for short-term money and 7.5 percent for long-term money. These ceilings are imposed by the President through the Treasury Department.

Since investors can make more profitable investments in other securities, lenders are turning back old loans to FmHA and refusing to buy new mortgages. The result is that FmHA's loan program is being shut off.

Unless Congress changes the law, or unless the President (through the Treasury) raises the interest rates FmHA can pay, or unless, as Congressman Wright Patman proposes, the Government National Mortgage Association or the Federal Reserve System buys up the paper, Farmers Home is not going to have money to lend. (Of course, interest rates might drop, but this is an unlikely gamble.)

According to Patman, Chairman of the House Banking and Currency Committee, FmHA "faces the prospect of entering the new fiscal year with its insured home loan program running at half speed against a record high backlog of more than 70 thousand applications for insured home loans."

Congressman Patman suggests two immediate actions to ease the situation. The President "could solve this problem by activating the newly formed Government National Mortgage Association (GNMA) and designating FmHA the agency for which it will market obligations through the sale of participation certificates. FNMA could hold FmHA paper and investors, through the purchase of certificates, would be relieved of everything but collecting a return on their participations. In this way, Farmers Home would not only have a renewed flow of capital, it would also be able to save nearly $2.5 million in interest costs because GNMA would eliminate the problem of having to sell non-standard paper at premium rates."

In the meantime, Representative Patman called on the Federal Reserve System, to "purchase the obligations of Federal Housing programs when necessary so that these programs can continue to function at the highest level and lowest possible cost." Patman pointed out that the "housing notes could be returned to FmHA as soon as GNMA is activated as a marketing agent for it and other Federal agencies."

The Congressman called upon the President and the Federal Reserve System to act in these ways to "demonstrate a conviction that the national goal of providing decent housing for all Americans is not merely a meaningless statement."

(Editor's Note: Representative Patman and Representative Robert Stephens were the Congressmen who deserve most credit for the section of the 1968 Housing Act which established the technical assistance and revolving land fund programs in FmHA for self-help housing.)

A NEW PUBLICATION

Informational Paper #2, a fact-sheet on Public Housing, is now available from RHA (single copies on request, additional copies 35¢ each). Its 32 pages summarize the low-rent public housing program (including the new "Turnkey" variants), and the way it operates, and provides a bibliography and a series of statistical tables and charts.

EDITORIAL

The self-help housing program seems to move from one crises to another, the threatened dissolution of OEO for the last year, and now the threatened disappearance of Farmers Home loan funds. Some projects are already being told that they will have to wait for weeks or months for mortgage credit while their funds for technical assistance run down the drain, and this in spite of the fact that Farmers Home gives priority to self-help loans.

The low-income housing program of this country, particularly in small towns and rural areas, is a pitiful pretense of a program at best, considering the need, and now it appears that even this small program is in jeopardy because of a "war first and business as usual" attitude in Washington.

Barring a drop in interest rates, highly unlikely because the Federal Government is deliberately driving them up and keeping them high, self-help and other low-income programs are in real trouble unless either the Congress takes action or the President uses his authority to give relief through the Treasury (raising interest rates FmHA can pay), through GNMA (which can buy up the paper) or through the Federal Reserve System, the banker's bank (which can also buy up the paper).

It is my opinion that this country is going through a genuine test of the capacity of the "establishment" to govern and the ability of the people to influence the establishment. The current crises in the low-income housing program, small as it is, is one test. Since the people who read *The Reporter* are not part of the establishment, you might like to try your hand at influencing the establishment. Who knows what a letter to the White House from an ordinary citizen means any more? Who knows what a letter or a telephone call to your Congressman may achieve? Like to try? Or have you thrown in the towel and given up any hope of exercising a little control over your government?

---Clay Cochran

SELF-HELP HOUSING AND FmHA IN THE NIXON BUDGET

In mid-April, the Nixon Administration sent up to Congress its revisions in the budget requests for the next fiscal year. Of the $4.2 billion in new reductions recommended by the new Administration, some $94.0 million were in programs relevant to low and moderate income housing.

The $5 million reduction in FmHA loans for homeowners is in direct loan funds, largely for rehabilitation and repair loans (Section 504 and 502 disaster loans). Of direct concern to self-helpers is the further reduction in self-help sponsor money which leaves the request $2 million below the authorized level.

(in millions of dollars)

	Johnson Request	Nixon Request
Farmers Home Administration:		
Homeownership (loans)	$1,250.0	$1,245.0
Rental Housing (loans)	30.0	28.0
Farm Labor Housing Grants	5.7	3.7
Self-Help Sponsor Funds	4.0	3.0
Self-Help Land Development Revolving Funds	1.4	1.4
Rural Trainee Housing Grants	4.5	.9

In addition to the above $13.6 million reduction, the revised budget reduces the requests for water and sewer system grants by $24 million, and loans by $10 million; and it cuts the request for staffing funds by $600,000.

SENATOR MCGOVERN TO ADDRESS NATIONAL RURAL HOUSING CONFERENCE

Senator George McGovern will speak Monday, June 9th to open the National Rural Housing Conference. His speech will set the atmosphere for the 75 to 100 invited participants at the conference sponsored by Rural Housing Alliance and funded by the Ford Foundation. The conference, scheduled for June 9th through 12th at Airlie House, in Warrenton, Virginia will bring together experienced and concerned people to examine the problem of housing low-income people in rural America and to map out a plan to meet the need.

Senator McGovern's speech will focus on the realities of rural poverty and the need for re-ordering national priorities. His remarks will keynote the conference whose purpose is the development of a ten-year plan to house America's rural poor.

A Democrat from an agricultural state, South Dakota, Senator McGovern served as Special Assistant to the President and Director of Food for Peace in 1961-62 under John Kennedy. He has demonstrated both the courage and the willingness to become involved in hard fights and an unwillingness to remain silent at injustice. He was an early supporter of the campaign against hunger in America. Presently, he is a member of the Senate Agricultural Committee, Chairman of the Select Committee on Nutrition and Human Needs, and Chairman of the Subcommittee on Indian Affairs.

CAA-VISTA BEGIN SELF-HELP IN TEXAS

A Community Action Agency and VISTA combination is attempting a self-help housing program in Round Rock, Texas. The Williamson-Burnet County Opportunities, Inc. and one VISTA Volunteer have been organizing participants for the first self-help housing group in the area. An attempt has been made to involve the families as much as possible in every phase of the program.

Three VISTA Architects joined the Round Rock Volunteer in January, 1969. They are members of a mobile team of Volunteers with special skills, employed to give technical assistance to VISTA's with regular field assignments; the program is known as "Environmental VISTA Collaboration" (EVC). The architectural team, working with the families, are reported to have provided plans which meet the needs of the participants, not just their economic limitations.

Six Families have now organized themselves into a group called "Mi Casa, Tu Casa Association of Williamson County, Texas." They have been meeting weekly, since October, with their VISTA sponsor, John Squires, and are awaiting FmHA loans.

Supervision of the construction will be jointly provided by the CAA and VISTA.

NOTES ON THE PROJECTS

George W. Curtice, Jr. was named Project Director of the Southwest Florida Self-Help Housing Association at a meeting of the Board of Directors, April 21, 1969.

A TRAINING PROGRAM BUILDS HOUSES IN ALABAMA

The Organized Community Action Program, Inc. of Troy, Alabama is conducting an on-the-job training program teaching unemployed and underemployed men construction skills by building houses. The houses are being built for target area families who qualify for special 502 loans from FmHA. OCAP has a grant of $100,000 from OEO to operate the training and construction parts of the project which is a pilot project, the only one of its type in the country.

There are 28 trainees now involved in the program. It is estimated that training will take up to one year. One hour per week is spent in the classroom learning the fundamentals of carpentry and masonry, etc. and 39 hours are spent in construction of the houses. As the trainees find jobs outside of the program in the community, new trainees will be hired.

The first house was started at the end of September last year. Eleven houses have been started to date. Seven are occupied. The average loan from FmHA has been about $5,400 for materials. The approximate cost of labor, which includes trainees salary and the program administration, is $3,800 per house. The project staff predict that there will be sixteen houses built by June 1, 1969, and they hope to build 24 next year. Over 90 families have applied to Farmers Home for the special 502 loan to participate in the program.

NEW HOUSING ACT TO BENEFIT RURAL FAMILIES

The Housing Act of 1970, signed by the President on December 31, 1970 contains several amendments of key significance so far as rural families and farm workers are concerned.

The rural provisions of the Act liberalize the Financial assistance provided by the Federal government for farm labor housing, expand the area served by the Farmers Home Administration, increase the amount that can be loaned for home repair, raise the maximum limit on rental housing loans, and authorize housing credit to lease holders.

All of the rural phases of the legislation will be administered by the Farmers Home Administration. None of the amendments were requested by the Administration.

Farm Labor Housing

The maximum grant for farm labor housing is increased from 66 and 2/3 percent of the cost of construction to 90 percent. Interest rate on farm labor housing loans is reduced from five to one percent. The financing of household furnishings for farm labor housing units is authorized.

"One of the key amendments in the farm labor housing section," Clay L. Cochran, executive director of the Rural Housing Alliance, noted, "authorizes assistance to any broad-based public or private nonprofit organization or any nonprofit organization of farmworkers incorporated within the State for the purpose of providing housing for domestic farm laborers any place within the State.

"Loans and grants could have been made to groups operating on a state-wide basis and to groups of farm workers under the old law. However, the Farmers Home Administration chose to interpret the law in such a fashion as to rule out state-wide organizations and organizations composed of farm workers. In fact for over a year Farmers Home has refused to make grants to any type of nonprofit organization."

Communities of 10,000 Population Eligible

Under the new bill Farmers Home Administration is authorized to serve families in rural communities of up to 10,000 population in size. The agency has been limited to serving communities up to 5,500 population.

Emergency Repair Loans

In addition, the ceiling on loans made for minor repairs is raised from $1,500 to $2,500 with an additional $1,000 allowed if necessary to finance household water supply and sanitation facilities. These loans are made at one percent to families whose dwellings are badly in need of repair and who cannot afford completely adequate housing.

Rental Housing

The ceiling on loans for rental housing projects is raised from $300,000 to $750,000.

Loans To City Workers

The committee reports accompanying both House and Senate bills rescind language in the reports accompanying the 1968 housing bills and enable the Farmers Home Administration to make loans to people who work in urban areas but want to build or buy a home in the country. Formerly only city workers who owned a building site in the country were eligible for FmHA credit.

County Committees

The bill also gives Farmers Home discretionary authority in the use of county committees. Formerly FmHA was required to use county committees in determining the eligibility of applicants and the amount of financial assistance to be granted.

Loans To Lessees

The bill also enables the Farmers Home Administration to make housing loans to lessees of nonfarm tracts. Previously only lessees of farm land were eligible. (This is particularly important on Indian Reservations and Hawaii and states with public school lands.)

FARMERS HOME HOUSING STAFF REORGANIZED...

In a reorganization of the national rural housing staff of the Farmers Home Administration early in December Louis D. Malotky, formerly director of the Rural Housing Division, was named Deputy Assistant Administrator for Rural Housing. The Rural Housing Division was abolished and replaced by a Single Family Housing Loan Division with Jennings Orr, director and a Multiple Family Housing Loan Division with L. D. Elwell, director.

All three officials are long-time career employees of the Farmers Home Administration. Orr and Elwell had been serving as Malotky's key lieutenants in the old Rural Housing Division.

Self-help technical assistance grants and loans to individuals for self-help housing are handled by the Single Family Housing Loan Division. Self-help site development loans are handled by the Multiple Family Housing Loan Division.

The position of Assistant Administrator for Rural Housing, vacated when Henry Lowe resigned last spring has yet to be filled.

NEW SELF-HELP PROJECT UNDERWAY IN SOUTHERN NEW YORK

In Steuben County, New York, foundations have been completed for two self-help houses and the land leveled and footings poured for a third. As soon as sites are located construction will start on an additional two houses.

Sponsored by the Steuben County Churchmen Against Poverty, the project is the first self-help effort in the area.

The Alfred Agricultural and Technical Institute extension school at Wellsville, New York, has agreed to fabricate the exterior panels for the first two homes, transport them to the sites and aid in erecting them. The students at the building and trades campus are doing the work free as a means of learning construction skills.

If land problems are solved in the near future all five families will be in their new homes by fall.

The sponsor organization has raised more than $28,000 in support of the self-help project. Farmers Home loans are financing the cost of construction materials.

SELF-HELP IN PERSPECTIVE

Recent inquiries by a reporter for a national magazine brought us to analyze the self-help housing scene in a new light. Here's what it looks like:

RHA estimated that about 60 self-help housing projects have been started in the United States. Thirty have been financed by the Office of Economic Opportunity and thirty financed by the Farmers Home Administration. The ones financed by the FmHA are much smaller in scope than the OEO projects - usually consisting of a one man staff - a construction supervisor.

These projects are located in about 100 counties in 32 states and Puerto Rico.

Not included in these figures are the 2,600 units of housing built by the Bureau of Indian Affairs under the Turnkey III program. The amount of self-help labor contributed by the family inn this program is only token.

As for funding, OEO has put about $7 million into self-help housing technical assistance as of last June 30. The flexibility of the program is reflected in the varying size of the grants which range from $60,000 to the North Carolina Council of Churches Migrant Project to $1.2 million to the Self-Help Enterprises, Inc. of Visalia, California - the original self-help project.

STATUS REPORT ON FmHA SELF-HELP TA GRANTS

BAD RURAL HOUSING: A VITAL ISSUE

Some high school students in schools around the nation will study bad rural housing as part of their regular social studies classes this year. *Vital Issues*, a monthly publication for high schools providing background material on topics of current interest, featured the topic of bad rural housing in their October issue. The four page leaflet is an adaptation of Clay Cochran's testimony before Senator McGovern's Select Committee on Nutrition and Human Need. The publication is circulated to schools, civic organizations, industry, Junior Chambers of Commerce, etc.

The accompanying teacher's guide lists among the objectives of the issue:

- To understand the history of the Federal Government's efforts to improve rural housing conditions
- To realize that HUD has been urban oriented
- To be aware of the human consequences of bad housing and that two thirds of it is in rural areas
- To know that of all the housing programs now existing, the one reaching families lowest in income is self-help housing
- To realize that the real attack on eliminating rural slums awaits the day when the nation is prepared to make the proper commitment of its resources to do so

To achieve these objectives the guide includes a list of suggested activities including a class trip through the countryside to photograph rural housing, talking to a local bank officer about the availability and lending of funds for rural homes, writing an editorial for a school or local newspaper pointing out the need for decent rural housing and supporting it as a national priority.

Copies of "Bad Rural Housing: What Can Be Done About It?" by Clay L. Cochran, Volume XX, Number 2, may be obtained from the Center for Information on America, Washington, Connecticut 06793. 1 to 9 copies 35¢ each, 10 to 49 copies 20¢ each.

DEPARTMENT OF CITY CLERK

CITY HALL

ATLANTA, GEORGIA

RESOLUTION BY

ALDERMAN MARVIN ARRINGTON

WHEREAS, the City of Atlanta Board of Aldermen, on December 2, 1970, adopted a statement calling for desegregation of public facilities; and

WHEREAS, in the years subsequent to this action, the Board had seen fit to adopt ordinances, resolutions, and take other actions which place it squarely on the side of equal opportunity; and

WHEREAS, the Board of Aldermen has never, however, adopted a position on the right of persons to buy or otherwise acquire housing accommodations without regard to factors of race, religion, or national origin.

NOW, THEREFORE, BE IT RESOLVED BY THE MAYOR AND BOARD OF ALDERMEN OF THE CITY OF ATLANTA, as follows:

1. That the Mayor and Board of Aldermen of the City of Atlanta does hereby affirm its support of the spirit and intent of fair housing legislation and urges the compliance therewith, especially Section 3604 of Public Law 90-284, which provides that it is unlawful to:

(a) To refuse to sell or rent after the making of a bona fide offer, or to refuse to negotiate for the sale or rental of, or otherwise make unavailable or deny, a dwelling to any person because of race, color, religion, or national origin.

(b) To discriminate against any person in the terms, conditions, or privileges of sale or rental of a dwelling, or in the provision of services or facilities in connection therewith, because of race, color, religion, or national origin.

(c) To make, print, or publish, or cause to be made, printed, or published any notice, statement, or advertisement, with respect to the sale or rental of a dwelling that indicates any preference, limitation, or discrimination based on race, color, religion, or national origin, or an intention to make any such preference, limitation, or discrimination.

(d) To represent to any person because of race, color, religion, or national origin that any dwelling is

available for inspection, sale, or rental when such dwelling is in fact so available.

(e) For profit, to induce or attempt to induce any person to sell or rent any dwelling by representations regarding the entry or prospective entry into the neighborhood of a person or persons of a particular race, color, religion, or national origin.

A true copy,
J. J. Little
CITY CLERK.

Dear Mr. Battle:

I am in receipt of your letter of January 18, 1971. I am happy to know of the formation of the new organization and to learn of its purposes.

Our organization is in perfect agreement with your aims and goals.

Please keep us informed of your next Annual Conference of the Council of Delegates.

As soon as I can get clearance I 'll see if our organization can become a member of yours.

Yours very truly,

Earnest A. Smith
Associate General Secretary

February 3, 1971

Joseph H. Battle, President
National Neighbors
3129 Keswick Road
Shaker Heights, Ohio

Dear Mr. Battle:

Thank you very much for your letter about National Neighbors. I was not previously aware of its existence, but then I'll bet you were not previously aware that there is a Lawyers' Committee office in Cleveland!

The national Lawyers' Committee is concerned with the legal problems inherent in the segregated housing patterns of this country and anxious to do something about them. We have a special projects attorney in our national office working on these problems, and I know he will want to stay in touch with the work of the National Neighbors. His name is Stephen Browning, and I am passing your letter and this reply on to him.

In addition, it would be useful for all of your affiliated organizations and all of ours to know something about one another. I noticed, for example, that your list of voting members includes affiliates in Indianapolis, Chicago, the Cleveland area, Washington, D.C., Baltimore, Philadelphia, New York City, Atlanta and Kansas City. We have more or less active committees in all of those places.

Let me start by including a copy of our most recent annual report and our most recent newsletter, whose lead story concerns a very important housing case in Philadelphia. I will put your name and that of your executive director on our mailing list to receive other copies of our newsletter. I will also circulate your letter and your fact-sheet to each of our local committees. If you wish for your member organizations also to receive our mailings, would you be good enough to ask your staff to send me current mailing addresses for each of them.

Sincerely,

James Robertson

February 8, 1971

Mr. Joseph H. Battle
President
National Neighbors
3129 Keswick Road
Shaker Heights, Ohio 44120

Dear Mr. Battle:

Since Mr. Hayes is no longer with the NAACP Legal Defense and Educational Fund, Inc., I am taking the liberty of answering your interesting letter of February 2.

National Neighbors sounds like a desperately needed and worthwhile movement, and I certainly hope it becomes a large national trend.

Unfortunately, I don't see how the LDF can be of any great assistance to National Neighbors at the present time. We are an organization supported entirely by public contributions, not by a membership; and, therefore, have only limited ties with those who support our cause. Also, the recession plus inflation and the high cost of litigating our civil rights cases has caused us to suspend publication of our newsletter, Equal Justice, the last issue of which is enclosed.

Of course, if there is some other way we can be of assistance to you, I hope you will let us know. In the meantime, please keep us informed of your activities through your publications. If there is any charge for this, let me know and I will take care of it.

Sincerely,

Sandy O'Gorman

Joseph H. Battle, President
National Neighbors
3129 Keswich Road
Shaker Heights, Ohio 44120

Dear Mr. Battle:

Thank you for your February 2 letter extending the hand of friendship from your organization to the League. I'm sure you'll be pleased to know that our organizations have been in contact and that we have already alerted our League housing chairmen throughout the country to the work of National Neighbors by including your pamphlet, "Maintaining and Integrated Community -- Guidelines for Stabilization," in a June 1970 list of suggested materials. I believe that a member of our national Human Resources Committee participated in the SOHI conference which preceded the establishment of National Neighbors.

The League of Women Voters has been working hard for the past several years toward the elimination of segregated housing patterns, one of your organization's basic goals, too. It would not surprise me to find that there is significant overlap in the membership of our two organizations and it would seem likely that there will be opportunities for mutual support toward our common goals. I like your suggestion of advising our members to contact your organization when they move to another city, in order to secure information about nondiscriminatory housing and will try to do so in the near future.

Best wishes for your success.

Sincerely yours,

Lucy Wilson Benson

February 11, 1971

Mr. Joseph H. Battle, President
National Neighbors
3129 Keswick Road
Shaker Heights, Ohio 44120

Dear Mr. Battle:

Thanks for apprising me of the new organization, National Neighbors. I'm glad that you are keeping alive the goal of multi-racial neighborhoods at a time when it seems as if white liberals and Black militants have both lost interest.

There are two organizations within Unitarian Universalism that you should contact, and perhaps you already have. One is the Department of Education and Social Concern, Margaret Williams, Consultant on Social Action, at 25 Beacon St., Boston, Mass. 02108. The other is Black and White Action, an affiliated Unitarian Universalist organization, whose executive director is Mrs. Betty Seiden at Station E, P.O. Box 13292, Oakland, Calif. 94611. In the Ethical Movement, you ought to contact Mr. Robert M. Stein, Chairman, Public Affairs Committee, American Ethical Union, 2 West 64th St., New York, N.Y. 10023. In the Humanist movement, contact Mrs. Bette Chambers, Chairman, Div. of Human Involvement, N 6610 Moore, Spokane, Wash. 99208.

All good luck to you in your enterprise. I will try to be as supportive as possible, although I do not have any financial support for you from this office.

Sincerely,

Robert E. Jones

Robert E. Jones

Dear Mr. Mattle:

Received you letter of February 2, 1971, which was addressed to Mrs. Amalia Betanzos who happens to be the past president of the National Association for Puerto Rican Civil Rights. Nevertheless, I am in the best position to help you in your endeavor. We, as well as your organization seek the same goal, to try to solve the many crucial problems in our society.

We have been in existence for the last six (6) years trying to find the way for a better human society.

I will promise to please you on your two requests, that is; we will include your organization in our newsletter and as soon as we know that any one of our members is moving to another city we will suggest them to contact you about obtaining nondiscriminatory housing.

I will apreciate very much if you put me in contact with a Puerto Rican leader in Ohio who will be interested in organizing a chapter of the National Association for Puerto Rican Civil Rights in their locality. We are right now in an organizing campain and we plan to have a chapter in every state of the Nation.

Hoping that our goals and programs be of mutual support, I remain

Very truly yours,

Dear Mr. Battle:

Miss Margaret Mealey, our Executive Director, has asked me to reply to your recent letter, which introduces us to your new organization, National Neighbors.

As you know, the National Council of Catholic Women has been active throughout the country in an education program on equal opportunity in the fields of education, employment, and housing. "Adequate Housing for All Americans" was the theme and focus for our Community Affairs Commission program for 1969-70, and we were pleased with the response from our leadership.

We will be happy to mention your organization in our CAC quarterly newsletter and list local contacts that will furnish information on non-discriminatory housing in their areas.

Thank you for your interest in the work of the Council. It is greatly appreciated.

We extend all best wishes for the future success of your new organization.

Sincerely,

Ruth D. Wehle

Dear Sir:

Dr. Julie Saltman of the Fair Housing Contact Service here has recently acquainted me with your "National Newsletter for Interracial Communities."

As the issue I saw was from a few months back, I am writing you now to inquire whether it is still being published. If so, I would appreciate being put on the mailing list. As requested in the issue I saw, I will send a contribution to cover your cost as soon as I receive confirmation.

I am also interested in having the University library receive it regularly. Since they will not order a subscription on the basis of an indefinite contribution to be made, would you please indicate an amount which should be paid for a year's subscription by a library. Then I will send through an order for the subscription.

As long time members of the Hyde Park--Kenwood Community Conference, recent members of the Kennedy Heights (Cincinnati) Community Council and now West Side (Akron) Neighbors, as well as the instructor of the course in Community Organization here, I am very much interested in and pleased to find your newsletter. I hope it can grow into a major journal like the Integrated Education: Race and Schools did over the years.

Many thanks. I will look forward to hearing from you.

Sincerely,

John H. Ramey

MAR 2 1971

3129 Keswick Road
Shaker Heights, Ohio 44120
February 25, 1971

Mr. Paul Anthony
Executive Director
Southern Regional Council
5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Anthony:

I am writing to introduce a new organization, National Neighbors. The enclosed fact sheet will give you the pertinent details about Neighbors. My personal involvement in the creation of this organization grew from my desire to promote open housing.

Equal housing opportunity in an open, pluralistic society, although guaranteed by law, is far from a reality in our country. Segregated housing patterns are implicated in many of the crucial problems of our society, involving employment, education and human relations. The communities which comprise National Neighbors offer living examples of multi-racial neighborhoods where people live, plan and work together. Such communities can, and do, point the way towards an open, humane society.

We will be most grateful for any support which your organization, and its members, can give to Neighbors. Specifically, we would like to make two requests: (1) If it is appropriate and compatible with your purposes, include information about Neighbors in your newsletter, or other publications; and (2) If and when your members move to another city, suggest that they contact us about obtaining nondiscriminatory housing.

Our infant organization needs all the exposure it can get. Just recently I met a couple new to Cleveland who wanted their children to grow up in a pluralistic setting, but they had bought a house in a one-race area because the real estate agent refused to admit the existence of any multi-racial neighborhoods. My family and I have lived in such a neighborhood in Cleveland for the past 11 years.

We hope that you will accept our extended hand of friendship and that we may be supportive of each other's goals and programs.

Very truly yours,

Joseph H. Battle

Joseph H. Battle,
President

JHB/bjw

April 22, 1971

DEAR _____

I have been asked by Mrs Peggy Helton of South DeKalb Neighbors to coordinate a project called "Shoppers Sunday" that is being sponsored nationally by National Neighbors (See the enclosed "Facts about National Neighbors"). "Shoppers Sunday" is an attempt to find, document and perhaps litigate against discrimination in housing by realtors and apartment management firms. South DeKalb Neighbors is the primary local sponsor of this project.

I agreed to act as coordinator with the belief that broad-based support from local fair housing organizations/activist could be mobilized: not just for implementation but for planning and coordination as well. Therefore my role is probably more properly defined as consumer, because the definition of geographical and problem areas (eg real estate brokers and apartment management firms) in times of housing discrimination must come from you who have been active in

this area.

For maximum success (and to insure accuracy of the data) it is important that no publicity be given the project.

To facilitate collective planning of the project I have scheduled an organizational meeting for May 30th at 1 p.m., to be held in the conference room of the Southern Regional Council located at 5 Forsyth St in Atlanta. The proposed agenda of this meeting covers the following areas: a fuller explanation of National Neighbors and the proposed program; selection of volunteers to recruit participants in "Shoppers Sunday"; and discussion and/or selection of target real estate companies and apartment management firms.

~~We regret that this notice is made contrary to normal practice, but we propose a meeting in such a short~~

This short notice is due to the very short time remaining in which to organize and implement our program.

I sincerely hope, however, that you ~~are to~~ can attend (or send a representative) the May 30th meeting and ~~to lend your~~ can support ~~to~~ my is endeavor. In any event, please let me know if you can attend by May 3rd.

I look forward to working with you.

Sincerely

Arthur C. [illegible]
Co-Director [illegible] & Rly. [illegible]

DIRECTOR

April 27, 1971

Mr. Arthur C. Campbell
Co-Director
Housing and Planning Program
Southern Regional Council
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Mr. Campbell:

Thanks for your letter of April 26, 1971. I believe that your "Shoppers Sunday" project is a worthwhile one, and I will support it in any way that I can.

Hoping to see you at the meeting on May 4 at 1:00 p.m., I am

Sincerely,

William M. Pace

Winnie McPhelan

April 27, 1971

Mr. Frank Truan
Center of Disease Control
1079 Belleview Drive
Atlanta, Georgia 30306

Dear Mr. Truan:

I have been asked by Mrs. Peggy Helton of the South DeKalb Neighbors to coordinate a project called "Shoppers Sunday" that is being sponsored nationally by National Neighbors (see attached "Facts about National Neighbors"). "Shoppers Sunday" is an attempt to find, document and perhaps litigate against discrimination in housing by realtors and apartment management firms. South DeKalb Neighbors is the primary local sponsor of this project.

I agreed to act as coordinator with the belief that broad-based support from local fair housing organizations/activists could be mobilized; not just for implementation, but for planning and coordination as well. Therefore, my role is probably more properly defined as convener, because the definition of geographical and problem areas (e.g. real estate brokers and apartment management firms) in terms of housing discrimination must come from you who have been active in this area.

For maximum success (and to insure accuracy of the data) it is important that no publicity be given the project.

To facilitate collective planning of the project, I have scheduled an organizational meeting for May 4, 1971 at 1:00 p.m., to be held

in the conference room of the Southern Regional Council located at 5 Forsyth Street, N. W. in Atlanta. The proposed agenda of this meeting covers the following areas: A fuller explanation of National Neighbors and the proposed program; selection of volunteers to recruit participants in "Shoppers Sunday"; and discussion and/or selection of target real estate companies and apartment management firms.

This short notice is due to the very short time remaining in which to organize and implement our program. I sincerely hope, however, that you can attend the May 4th meeting and can support this endeavor.

If you have any questions prior to the meeting, I can be reached at 522-8764.

Sincerely yours,

Arthur C. Campbell
Co-Director
Housing and Planning Program

Enclosure: "Facts about National Neighbors"

POSITION PAPER PRESENTED BY THE
CRC EXECUTIVE COMMITTEE
TO THE FULL COMMISSION - APRIL 27

The Community Relations Commission strongly believes in Atlanta now and the Atlanta of the future. We believe that Atlanta stands a better chance to develop in peace and prosperity than any other American city. We do not believe in a white city nor a black city. We believe in a people city.

For over a year, the Community Relations Commission has had a program in the area of open housing and neighborhood stabilization. We have had Town Hall Meetings in Southwest High School Area, Southeast Atlanta, and more recently at Therrell High School. The staff has also worked in East Atlanta and Ben Hill. Many citizens in these communities tell the Commission they want to live in integrated communities if city services and schools can be maintained at a high level and if their privacy can be protected against overly aggressive real estate solicitation.

The Commission has met with only limited success using persuasion as its only tool. The CRC has come to the conclusion that its hand needs to be strengthened. The Commission has studied neighborhood stabilization ordinances of other American cities. The Commission has asked the City Attorney's office to research this subject further. CRC is considering recommending to the Board of Aldermen the passage of two new ordinances:

(1) A "no sign" ordinance which would bar the uses of real estate signs on residential property throughout the City of Atlanta. The City of Decatur has had such an ordinance for the last 3 years. The CRC staff has interviewed City Manager Robert Mauney and Dekalb Commission Chairman Clark Harrison, who is also a realtor. Both report that this ordinance has had a helpful effect in stabilizing Decatur and has been a great psychological boost to the community. Former Mayor Jack Hamilton,

also a realtor, reports that the ordinance has considerably improved the physical appearance of Decatur.

(2) A "no solicitation" ordinance which would bar real estate agents from soliciting listings from homeowners.

If a homeowner wishes to sell his property, he could contact any real estate agent he choses. The real estate agent could promote and advertise the property any way he selects except to put a sign on the property.

The Community Relations Commission asks for support of these two ordinances from business and real estate organizations, churches, civic groups, PTA's, the Atlanta School Board, civil rights and fair housing groups and other organizations. Letters of endorsement should be directed to Alderman Wade Mitchell, Chairman of Ordinance and Legislation Committee, % City Clerk, City Hall, Atlanta, with a copy of the letter to the Community Relations Commission, 121 Memorial Drive, S. W., Atlanta, 30303.

COORDINATORS SUMMARY SHEET

Reasons for selection of target firms: To gain information on Real Estate agents suspected of discrimination. All of those selected operate solely in all white or transitional areas. Generally, the criteria for selection was subjective and based on the experiences of the local organizers.

Did you have trouble obtaining white volunteers? No black? No
Experienced difficulty finding bonafide home buyers.
What other groups in your community cooperated in this project? Southern Regional Council (Human Relations organization) and Neighborhood Fiar Housing groups.

Do you see any compliance with open housing laws in your area? Yes X No

If you do, is it in sales? rentals? Primarily

Did compliance increase during the last year? not at all data inclusive ~~none~~

greatly total compliance

Is it confined to one or two areas? data inclusive

Has there been any legal activity in your area? ~~none~~ yes minimal

significant

If so, did it involve U.S. Justice Department 6 - 7 suits filed HUD several administrative actions in individual cases
(check any or all which apply)
state commission private agency individuals 1-2 suits filed

Do you think your community would join with National Neighbors in a planned legal assault on discriminatory practices, if resources could be made available? yes -- Many Shopper's Sunday volunteers expressed an interest in legal action provided a sound case could be developed.

Please write any additional details or comments you wish to include on back of sheet.

(over)

when we enquired about the stability of the neighborhood we were told her company does not sell to blacks. more specifically she indicated she had tactics to avoid admitting black clients to a house and related a telephone conversation she had had with a CDC employee - prospect to discourage him from making an appointment to see a house her company had for sale. She casually mentioned a basement water problem but reassured him the water did not stand that it ran out within an hour or so. We did not show any feelings about blacks to elicit such a confidential statement to strangers. We felt that her views were not merely personal ones but that she reflected the company's attitude.

C. Edwin Smith

We are curious to learn if our black partner was admitted to the house since she stated that she would not answer the door when she recognized the caller was a black.

OVER

House we went to was listed on p.27E of Sunday paper as open today - Ann Smith was agent with Nelson Realty and was there. It was listed as "Lot 3 Paces Ferry Road" - no house number assigned yet since it is unfinished new construction. Paper listing said "mid 40's". 3 bdrm, 2½ baths, almost acre lot, 2200 ft² finished main & second floor & 1200 ft² unfinished basement, air conditioned. Sales lady was obviously anxious to sell. She said price had been 49,500 but builder just came down to 47,500 last week & she thought it could be bought for 46,000. price includes carpeting through whole house which wasn't in yet - "Buy now & pick your own". She said there would be no trouble getting an 80% mortgage at 7¾% giving monthly payments of 258 $/mo. plus taxes of about 600→700 $/yr. - closing cost will run about 2% of mortgage or 740 $. House would be ready in a week or two.

• She also ~~made~~ stressed a community club (automatically) available to owner at $350 initiation fee + 10 $/mo (swim, tennis, etc) & social gatherings.

Note: She also said she thought the builder would add stairs to back porch at no charge if we ask.

PAUL ANTHONY
EXECUTIVE DIRECTOR

A Council to attain the ideals and practices of equal opportunity for all peoples in the South

May 21, 1971

Dear "Shoppers Sunday" Participant:

When we started our search for volunteers to test discrimination in housing in Atlanta, few of us expected the response reflected in the group that assembled at Georgia State University on Sunday, May 16th. Your enthusiastic participation is deeply appreciated.

We are sending our survey forms plus a brief summary of the project to National Neighbors to be included in their national survey of discrimination in housing. When the results of that survey become available, we will attempt to get them to you.

Again, thanks for participating and we will keep you apprised of future open housing activities.

Sincerely yours,

Arthur C. Campbell
Co-Director
Housing and Planning Program
Coordinator of "Shoppers Sunday"

ACC:mv

FACTS ABOUT NATIONAL NEIGHBORS

What is National Neighbors?

A National organization of interracial neighborhoods, founded in May, 1970. Its purpose is "to foster and encourage successfully integrated neighborhoods".

Who are its members?

The voting members are 33 community associations of residents of interracial neighborhoods of 23 cities in 17 states and the District of Columbia. These groups have a total membership approximating 20,000 and their communities include hundreds of thousands. NN also has over a hundred associate members, individuals and organizations, who support its goals.

Who runs the organization?

Representatives of its member groups. A Council of Delegates, made up of a black and a white delegate from each association, elects the officers and the Board of Directors, and is the policy-making body. The 36 members of the Board implement that policy. Day to day business is handled by a staff headed by an executive.

What are your immediate plans?

Our program for 1970-71 includes:

- a major challenge to the real estate industries to promote open housing;
- publication of a directory of interracial communities;
- a monthly newsletter;
- development of publications useful to interracial neighborhoods (now available @ 25¢ each, "Maintaining an Integrated Community").

The next annual conference of our Council of Delegates, planned for ~~Atlanta~~ Oakland in the spring of 1971, will survey our progress and make further plans.

Where will the money come from?

Dues, contributions, sales of publications, and grants. While NN will seek help in fund-raising from its member groups, appeals will go to those everywhere who support equality within a pluralistic society as a goal for America.

Why another national organization?

Our member groups exist because people in many different interracial neighborhoods independently felt the need to organize. They have also long felt the need to communicate with each other, to learn from each other, and to join together in broader efforts. No existing organization offered this opportunity. So when SOHI (Sponsors of Open Housing Investment) brought leaders of 12 such communities together in March, 1969, to ask what help was most needed, a new national organization was proposed. SOHI agreed to underwrite the cost of organizing and within 14 months, NN was born.

Why should NN get outside support?

The keystone that supports institutional racism in America is segregated housing patterns. Schools, jobs, urban crises - all have housing patterns as the basic problem. But successful interracial communities do not just happen, even with laws prohibiting housing discrimination. They require much work. National Neighbors can strengthen all those local efforts that will build new patterns.

Who can join?

Any individual or group supporting NN's purpose can become an associate member. Voting membership is restricted to associations of residents of interracial neighborhoods. Dues for organizations are $25 a year; dues for individuals are $10 a year. All categories of membership include copies of NN publications.

Art, these are more names that were called in today by Mrs. Cronley. They have already been told about the meeting on Sunday and are planning to attend. She wanted to know if other names were given to her, if the time limit would prevent these people from participating on Sunday. I told her what I thought the prime reason for having all the names in on Thursday was the situation at Georgia State with the guards needing to know who would be coming so they would have a pass to get into the building. Maybe I was wrong, since we hadn't discussed the matter. However, I told her that she should call in all the names that are given to her and maybe something could be worked out.

SHOPPERS SUNDAY

A Project of National Neighbors

During the period of May 1 - May 31, each member community of National Neighbors will sponsor "Shoppers Sunday." On the specific day (or days) chosen by your group, teams of trained volunteers will gather data concerning real estate practices in their home community. Findings will be incorporated in a national report which will be released at the National Neighbors Annual Conference on June 11 - 13, 1971.[1]

GOAL

This project is designed to demonstrate that (1) open housing is a national problem because there is widespread discrimination in housing in every area of the country and (2) real estate practices---some illegal, some merely questionable---contribute directly to the segregated character of housing in the United States.

(If your community does not present a pattern of discrimination, the project report will, of course, include positive findings, too.)

RATIONALE

We believe that the groups which comprise Neighbors understand open housing to be an integral part of any long-term, successful effort in maintaining stable, integrated neighborhoods.

Neighborhoods with any significant degree of racial integration face almost unbearable pressures from many quarters. Black families need more and better housing than present ghetto areas can provide. Many whites are determined to maintain their "property rights," even at the cost of their own freedom of movement.

Our communities may be setting new life styles for the future, but this way of life can only succeed if open housing becomes a reality for all.

METHOD

Your community will choose its own targets among local real estate brokers and/or apartment management firms, and conduct its own survey of real estate practices.

---

[1] A resolution passed at the National Neighbors founding conference called for Shoppers Sunday as a national project.

The survey teams should consist of paired black and white volunteers who will visit separately the same real estate office, apartment, or broker's Open House. Volunteers will need to be trained, so that they can extract the maximum amount of accurate information from each visit.

Uniform data sheets from each community will provide the material for the national report.

Since the Neighbors communities vary so greatly in size, each group must determine the size and geographical scope of its project, based on the number of volunteers available. We ask that each community cover at least a minimum of one broker.

PLAN OF ACTION

STEP ONE: Select your coordinator.

STEP TWO: Receive and evaluate packets of materials from National Neighbors.

STEP THREE: Hold training session in your community for volunteers and any auxiliary helpers. This step will be the responsibility of the individual coordinators. We will supply necessary training material, and welcome telephone questions.

STEP FOUR: Select the day or days, and other weekend times, such as Saturdays, which fit the needs of your volunteers to go shopping.

STEP FIVE: Collection of data from volunteers by coordinator. Make brief summary of your communities experience.

STEP SIX: Return material to National Neighbors if possible by June 5 via the mail. Otherwise, mail or bring to the June 11 Convention.

PUBLICITY

In order to insure the accuracy of the data, no public notice should be made of Shoppers Sunday. Each community must take responsibility for handling details of the operation in such a way that the real estate system will not be alerted to changing its practices for one weekend. Don't, for example, publicize this event in the community newsletter.

PACKET OF MATERIALS - This will be in your hands within a week.

Each packet will include:

- Detailed work plan for coordinator
- Summary of applicable Federal housing laws and court decisions (each community should provide state and local legal summary)
- Instruction in how to select broker and management targets
- Narrative examples of actual cases of discrimination, noting most common discriminatory practices
- Briefing on financing procedures (each community must provide relevant local details, so that volunteers appear to be bona fide homeseekers)
- Data sheets for volunteers
- Comprehensive form for coordinator to make report

NATIONAL COORDINATOR

Every group will have access to help if and when it is needed, in carrying out this project.

Each packet will include the address and 24 hour telephone number of Operation Equality in Cleveland. The NN president, as well as the OE professional staff and legal counsel, will be available to answer questions for the duration of the project.

PART TWO: OPTIONAL LEGAL PROJECT

Each member community, if it so chooses, may institute legal proceedings in one or more cases if the evidence warrants such action.

A legal project requires three major components:

(1) willingness of the member community to be associated, at least indirectly, with legal activity

(2) knowledgeable attorney willing to volunteer legal services

(3) black and white volunteer willing to serve as plaintiffs

A solid, carefully planned legal action can enhance any open housing effort. In fact, it is difficult to see how open housing can be made a reality without widespread legal challenges to the continual violations of law by the real estate system.

If a member group wants to make a commitment to legal activity, resources almost always can be mustered to handle the job. Two possible sources of help would be any agency in the community which has handled housing discrimination cases, and willing attorneys who are residents of the member community.

A special packet of materials on the procedures involved in filing a case will be sent to every group desiring to try this project.

John Davison, legal counsel to Operation Equality, will be available for consultation, if National Neighbors wants to explore further the possibilities of such a legal project.

If cases are filed, the communities involved should share their legal experiences with other interested member groups.

First edition, October 1963.

NEW OPPORTUNITIES FOR DEPRESSED AREAS

BY JOHN D. POMFRET

The author is a well-known newspaperman associated with the Washington Bureau of the New York Times. . . . *Illustrations are by Visual Services, Inc.*

The United States is engaged in a modest, yet promising, effort to shore up the sagging economies of its depressed areas.

It began May 1, 1961, when President Kennedy signed the Area Redevelopment Act — the first major piece of legislation of his administration.

The Act's purpose was to create a new partnership between private enterprise, community leadership and state and federal government to improve economic conditions in hundreds of areas where, through little or no fault of their own, they had deteriorated drastically.

The new law came none too soon, for the problems of the nation's depressed areas had become complex, numerous, difficult and too often just plain tragic. Yet, for most of the nation, they were not — and are not — visible. The country can go about its business — and business has been good — comfortably oblivious to the human despair and economic rot that afflict hundreds of communities.

These are the areas of substantial and persistent unemployment — unemployment that is chronic, that hangs on, a grim, uninvited intruder, even when the economy in the rest of the nation is moving upward, and becomes unbearable when the economy of the rest of the nation dips into recession.

why we have depressed areas

There are several main causes of this kind of affliction. They are changes in demand, geographic shifts of plants or industries and technological change. These can occur singly or in concert, but are usually accompanied in the stricken community by a lack of industrial diversification.

The absence of diversification is the key element, for it means that when a town's single industry or major employer cuts back or shuts down, the town is left in the lurch. Lack of diversification is surprisingly common in America. A Bureau of the Census study several years ago revealed that more than three out of five counties in the United States owed half or more of their total manufacturing shipments to the largest two companies. This was especially the case in rural counties.

The classic case of the distress that radical technological change coupled with a shift in demand can bring to a region whose economy depends largely on a single industry is that of coal mining.

Technological change came to the mines in the form of huge machines that bite out tremendous quantities of coal at a snap. These and other devices more than doubled productivity in the 1950's. At the same time, rival fuels cut into demand for coal. The result of fewer tons with fewer men needed to mine each ton has been a drop in employment in the bituminous mines from about half a million at the end of World War II to fewer than 150,000. It has wrecked the economies of the soft coal areas of West Virginia, eastern Kentucky, Pennsylvania, parts of Virginia, and southern Illinois.

hunger and despair

Hunger and despair stalk these valleys. In some counties, a third of the people are "on commodities" — the Government's surplus food dole. There is no hope that the mines ever will re-employ the thousands of idle men, nor is there other work for them to do.

The situation in eastern Kentucky is perhaps the worst in the country. Here bands of desperate pickets, disowned by the United Mine Workers of America, roam the hills, harrassing and sometimes dynamiting the small non-union mines where their hunger-driven fellow miners work for pay far below the union scale.

The tragedy involves more than the visible victims — the unemployed and their families. This enforced idleness exacts a fearful price from their communities in the form of relief costs, ungarnered taxes on income that is never earned and depleted public facilities. It runs up the employers' unemployment compensation bills and deprives them of business. It works a hardship on the whole nation through wasted manpower that could be put to use building needed schools and hospitals, rehabilitating its cities or restoring its land, producing goods or providing services.

What can be seen on so broad a scale in the coal-mining towns is true in a smaller, but no less ominous, way elsewhere. Altoona,

The reduction of employment in the bituminous coal mining

Pennsylvania, for example, was once a thriving city which depended for its livelihood on the shops where steam locomotives were built and repaired. But the Diesel replaced steam on the railroads and Altoona has never recovered. Or there is Biddeford-Sanford, Maine, where the woolen mill closed, and other textile centers in New England, desolated when the plants moved south.

Then there are hundreds of rural counties which never had an adequate economic base to begin with. The farming units may have been too small, or the land poor, or jobs off the farm too few, or vocational training skimpy or mechanization may have cut into the demand for labor, or the lack of it lost the area its competitive edge. But whatever the cause, there are in these counties, too, thousands who carry a crushing burden of rural poverty.

a vicious spiral

In rural and urban depressed areas alike, depression breeds depression. Young workers and able business talent move out. The plant facilities that exist often are old and not easily adapted to modern manufacturing needs. Private financial institutions are often not able to finance expansion. Public facilities have deteriorated because of insufficient tax revenues, a high proportion of which

must be used for relief. In these and other ways, the resources the depressed areas need to begin their long pull back from poverty are lacking or inadequate.

The magnitude of the problem is indicated by the number of areas that have been designated as eligible for assistance under the Area Redevelopment Act.

when is an area depressed?

The standards for eligibility are precise. In major labor market areas, unemployment must be 6 per cent or more, after allowing for temporary and seasonal factors, and have been 50 per cent above the national average for three of the preceding four years, 75 per cent above for two of the preceding three years or 100 per cent higher for one of the preceding two years. Smaller labor market areas are judged by roughly the same criteria. Others are included if the median family income is less than $1,887 a year or the median farm income is less than $1,415 a year or the counties were part of an earlier rural development program of the Department of Agriculture.

So far, 141 urban and 877 rural areas and 54 Indian reservations have been designated as redevelopment areas. They have a fifth of the country's population and labor force, but nearly a third of its unemployment. In some cases, the unemployment rates run to 20 and 30 per cent. The average is half again the national rate, which lately has been hovering between 5.5 and 6 per cent of the labor force. As might be expected, the characteristics of the jobless in the depressed areas indicate that unemployment there has much more serious welfare implications than elsewhere.

A 1960 Bureau of Labor Statistics study turned up some hard facts. It showed that the proportion of long-term unemployment was much higher than average in the depressed areas. They had 40 per cent of the nation's jobless who had been out of work for six months or more. It is obvious that one who has been out of work that long is likely to have run through his unemployment compensation benefits and his savings as well. His skills may have

rotted from disuse. He may have lost hope and accepted unemployment as a way of life, however unwelcome.

In the depressed areas, the study showed, a relatively higher number of the jobless were semi-skilled factory workers than in the nation as a whole. The plight of such workers is especially difficult because they are often ill-equipped to fill jobs in occupations where vacancies are most likely to exist — professional, technical, secretarial, and the like. The same is true of older workers, and the study showed that the depressed areas had more than their share of these, too, indicating that younger persons were moving out to search for jobs.

It was evident from the study that the decline of the principal industries had had spill-over effects. Unemployment rates in the depressed areas in construction, transportation, and trade exceeded the national averages.

relationship to national economic health

The fact that unemployed workers in depressed areas have different characteristics from those in the rest of the country is not to be taken to imply that the general economic health of the nation has no bearing on the fortunes of the less-favored areas. It is of vital importance. The principal need of the depressed areas is for permanent jobs. But very little can be done about creating these in periods of national recession.

Indeed, an irony of the situation is that advocates of special measures to aid the depressed areas were able to prevail on Congress to pay attention to their problems only when the nation as a whole was suffering from so high a rate of unemployment that it was difficult to attack the plight of the depressed areas in an effective way. The federal tax, credit and expenditure measures necessary to restore full employment in the nation at large are, if anything, even more essential for the sake of the depressed areas.

Only when workers elsewhere are in short supply will concerns looking for plant sites turn in significant numbers to communities with large labor surpluses. Only in an expanding economy will

concerns be prompted to undertake expansion on the scale necessary to restore prosperity to depressed areas. Only when jobs are plentiful elsewhere will it be possible to encourage large numbers of workers to pull up stakes and seek jobs outside the depressed areas.

But together with a consensus on the importance of measures to stimulate the entire economy, there seems to be a growing measure of agreement on the key role to be played by special programs.

There has been a tendency among economists to take an "either-or" approach to the situation. Now measures to shore up general demand and those aimed at specific kinds of structural unemployment are more and more coming to be regarded as the two blades of a scissors.

The feeling is that if only general measures are relied on, the nation is likely to get an inflationary price rise before full employment levels are achieved. Further, there is nearly complete agreement among those seriously concerned with the problem that the depressed areas must have federal assistance if they are to solve their problems.

It is not as though the depressed areas have sat by without raising a finger to save themselves. They have poured large sums into financing industrial development activities. These operations

bootstrap have proliferated. Although many are not in depressed areas, it is estimated that there are 3,000 community industrial development groups in the United States.

Most have failed to alleviate materially the plight of their communities. And, in some cases, these efforts have actually resulted in reducing the amount of capital available locally.

Despite this unhappy picture, the experts believe that most depressed communities can be redeveloped. They contain large amounts of personal, social and private capital which are a base on which new economic structures can be raised.

This is a crucial point in the case for area redevelopment; for the waste involved in writing off these communities, with their homes, schools, plants, hospitals, sidewalks — and people — would be enormous. Furthermore, each time an impoverished citizen of a depressed area moves elsewhere, he adds to the load on his new community's facilities.

congress slow to act

In spite of the magnitude of the depressed area problem, the misery of the people living in them and the obvious need for federal attention, it took the Congress a long time to act.

In 1955, however, the joint economic committee of Congress called for federal action.

There were Congressional hearings that year and in the next the President's Council of Economic Advisors conceded that the problem was one of national as well as of local concern. Yet, it would take five years of tedious legislative haggling before this principle was acted on.

Senator Paul H. Douglas, Illinois Democrat, principal exponent of legislation to relieve depressed areas, introduced his first bill in 1955. Later a less comprehensive administration bill was introduced. There were extensive hearings and the Senate passed a compromise version, but the House took no action.

Senator Douglas introduced his bill again in 1957. The recession that began later that year was not yet in evidence. It would

have been an ideal time to attack the depressed area problem. The bill passed the Senate and the House in 1958, but the President killed it by pocket veto.

Senator Douglas again introduced an area redevelopment bill in 1959. It passed the Senate and, with amendments, the House in 1960. The Senate accepted the House amendments to get a bill through. But President Eisenhower again vetoed it.

John F. Kennedy made aid to depressed areas a central issue in his Presidential campaign. This emphasis contributed to his victory over Senator Hubert H. Humphrey in the West Virginia primary in 1960. When Mr. Kennedy was elected president, area redevelopment legislation was high on his list of priorities. The Senate bill received the coveted S. 1 designation. Senator Douglas, again in the forefront of the fight, declared that the results of the election had given the program's sponsors a popular mandate.

The bill that President Kennedy signed into law May 1, 1961, was like the earlier Douglas bills in most respects, but placed the new Area Redevelopment Administration in the Department of Commerce. Senator Douglas had fought vigorously for an independent agency, but accepted this compromise.

the basic program

What does the Area Redevelopment Act provide and what is its philosophy? Essentially, it is a package of tools designed to help depressed communities help themselves attract and foster industrial and commercial concerns. It relies largely on local initiative. Its most important emphasis is on encouraging depressed areas to assess and mobilize their own resources for economic growth. It encourages — indeed, insists on —the involvement in the redevelopment effort of a broadly representative community group.

Its partnership aspect — between the communities, private enterprise and state and federal government — is broadly the theory that underlies so much of federal activity, from the building of hospitals to the support of education to the operation of the public employment service.

The package of tools which the Act authorized include:

— *Loans* — not to exceed $100 million at any one time in urban areas and another $100 million in rural sections — for industrial and commercial purposes, including buying land, erecting buildings and purchasing equipment. The money can be borrowed for up to 25 years. The current rate is 4 per cent. The money must not be available from other sources on reasonable terms. A loan may not exceed 65 per cent of the total cost of a project, excluding working capital. ARA money cannot be used for working capital. At least 10 per cent of the project's financing must come from the state or community or local redevelopment agency and at least 5 per cent must be from non-governmental sources. These shares cannot be repaid until ARA has been paid back. No loans may be made to assist pirating of industrial facilities from one community to another, and "dozens" of applications have been rejected on this ground, according to the ARA.

— *Public facility loans* — also not to exceed $100 million in outstanding obligations — for development of public facilities to improve the opportunities for getting or expanding industry or commerce. These loans can be made for up to 40 years. The present rate is 3⅝ per cent. Again, funds must not be available from other sources at reasonable rates.

— *Grants* of $75 million for similar public facilities to fulfill a pressing need where there is little probability that the project can be undertaken without the grant. Grants usually are used to make up the difference between what can be secured from other sources, including ARA loans, and the cost of the project.

— *Annual authorization of $4,500,000 for technical assistance,* for studies to evaluate the needs of communities and develop the potentialities for their economic growth.

— *A program run by the Labor Department and the Department of Health, Education and Welfare to retrain jobless workers in depressed areas.* Expenditures of $4,500,000 a year are authorized to pay for the training and $10 million to pay for allowances for trainees for up to sixteen weeks in an amount equal to the average weekly unemployment benefit in their state.

But the central feature of the Act is its provision that to be eligible for its other benefits, an area must first submit and win approval of an over-all program for economic development. Projects, to gain approval, must be consistent with this plan.

local action essential

The plan is the heart of the ARA program. It is the tangible embodiment of the ARA's philosophy: That the main impetus for redevelopment must come from the depressed area itself.

The Act requires that the widest possible variety of community interests — businessmen, labor leaders, public officials, farm representatives, bankers, and so on — participate in preparing the plan. Professional planners' services may be — and often are — used, but the aim is to engage local citizens in the process, since it is felt success or failure will finally depend on them.

The plan is a master community blueprint for economic development.

The basic elements of the plan — the Overall Economic Development Program — as set forth by ARA are these:

— A description of the representative local organization sponsoring the program.

— A background picture of the redevelopment area as a place in which to live and work.

— An assessment of the labor skills, natural resources, physical facilities, transportation networks, and available markets.

— An analysis of the roadblocks to progress.

— Finally, a program of action for creating new employment opportunities, with local, state, and federal responsibilities clearly defined.

Some of the OEDP's are regional and are supplemented by local plans. But in every case, the idea is to get the area to take a searching look at itself — its liabilities and potential — and to build from there a comprehensive, realistic blueprint of specific proposals and recommendations for attacking its problems of unemployment and underemployment.

"The revolutionary part of this idea," says ARA Administrator William L. Batt, Jr., "is that you cannot just do things for people; you cannot superimpose on people something from the outside and expect them to continue on after you are gone.

"Unless it has strong community roots, whatever you set up ends the day you quit. If you can't find some kind of life in the community, a desire to rebuild its base, then there's very little that can be done.

"It is true that some areas need more outside help than others. Just by having to assess their own situations, some are well on their way out. Others require vastly more assistance. But, if the impulse to survive and diversify is not community based, I don't think anything can be infused from the outside that will last."

Mr. Batt also points out that ARA has given the search for jobs a somewhat different twist than is customary with many in-

dustrial development efforts. Usually, the quest is for the big company that will move in. While ARA certainly is jubilant when that happens, it is emphasizing development and expansion of home-grown industries. They may not be so big to begin with, but they tend to stay put as they get bigger.

The ARA recently has attempted to inject into the planning process the concept of continuing revision. It has substituted this for the first OEDP policy of a provisional plan to qualify for ARA assistance followed by a comprehensive updating.

The new emphasis is on plans and programs, but it seeks to avoid the preparation of the kind of documents and reports that are dear to the heart of file clerks but a burden on smaller communities and not much help in getting on with the job.

results so far

What have been the results of the ARA program so far? In some cases, remarkable.

Johnson County, Tennessee

One example is that of Johnson County, Tennessee. It was in the agricultural doldrums because its small hill farms could not compete with big, mechanized rivals. Unemployment was widespread and so was underemployment. Younger people were leaving. Between 1950 and 1960, the population dropped from 12,278 to 10,765, and most of those who left were from 15 to 39 years old.

A group of community leaders decided they had to try to reverse this pattern of disintegration. They formed the Johnson County Industrial Commission and floated a $400,000 county bond issue to create a 30-acre industrial park and build a plant.

The Area Redevelopment Act was passed and the county was duly designated a redevelopment area. The local group, with the help of the University of Tennessee Cooperative Extension Service and the United States Department of Agriculture, drew up an OEDP. Sixteen separate committees composed of about 200 local people looked at all aspects of the county's economic problem.

Agriculture, natural resources, manufacturing, recreation, education, and conservation were surveyed.

ARA loaned the county $60,000 and granted it another $46,300 to provide water and sewage facilities to finish the industrial park. A garment manufacturer moved in, providing employment for 204 workers and an annual payroll of $500,000. Assistance is now being sought to get other employers started. The county is making plans for a new high school and working to develop its attraction as a tourist center.

"The ARA program served as a catalyst in bringing about these developments," the community group reported recently. "It provided the incentive for the people to come together as a co-ordinated group and look at the present situation, discuss the problems, and make plans for action."

The unemployment statistics indicate that Johnson County still has some distance to travel before it can claim prosperity, but it is on its way.

Cambridge, Maryland

Cambridge, Maryland, is an eastern shore city tucked along the bank of the Choptank River about 15 miles up-river from the Chesapeake Bay. The river is two miles wide at Cambridge and the location is as lovely as anyone could ask.

Life is not lovely in Cambridge, however, for a large segment of the population — a situation that undoubtedly has contributed to the city's racial unrest. In 1957, the principal employer, a local food-packing concern, was sold to a national company and the plant was shut down. The jobless at one point accounted for a quarter of the area's labor force.

A local development committee was set up by the Chamber of Commerce. Its four members began by raising $15,000 for a study of the community's assets and liabilities by a professional firm.

By the time the Area Redevelopment Act was passed, the community's efforts to bring in industry had met with some success. When ARA swung into action, it put up $272,000 for a combina-

tion loan and grant to extend a sewer line to an industrial park outside Cambridge. It also has approved a $500,000 grant for a $1 million deep water port for ocean-going shipping businesses — among them, a tuna packer.

Altogether, the Cambridge developers estimate they have brought in concerns employing about 850 workers. Meanwhile, though, a garment plant has closed its doors and an electronics plant has burned. An ARA loan was obtained to rebuild and expand the electronics plant.

careful planning

In the Cambridge experience the early development effort followed the lines that later were laid down by ARA. The conscious assessment of the strong and weak points was a key feature and it was invaluable. One boat manufacturer, who moved in, told the Cambridge development group that it was the first of seven cities he had considered that was able to give him complete facts about itself.

Out of their experience, the four men who have had most to do with the Cambridge effort have concluded, with ARA, that local initiative is the all-important ingredient for successful redevelopment. There are hundreds of communities that would like to use ARA's limited funds, but the most energetic will get them, they point out.

ARA is a help, they say, but not an answer. Lightning does not strike the lazy. The four men estimate that for the last five years, they have put in an average of two days a week apiece on voluntary redevelopment work.

ARA's chief contribution nationally so far has been the unprecedented wave of local planning and self-assessment generated by the development program requirement.

OEDP's for 845 areas and 42 Indian reservations have been submitted. They had been approved for 775 areas and 42 Indian reservations, as of June 30, 1963.

problems and shortcomings

The OEDP's have varied greatly in quality and usefulness. Some have been the creative and unifying instruments that were intended. But, according to one recent and informed assessment, too many have been "superficial, poorly conceived, and of little potential value to the areas concerned."

These shortcomings were noted in a recent ARA bulletin:

— Goals are not realistic in terms of employment possibilities.

— Population and labor force projections and the manpower planning aspects of the programs have not been fully developed.

— The causes of unemployment have not been spelled out.

— Sources of technical assistance such as local employment security offices are often overlooked.

— A thorough investigation of local financial sources is not made. Too often it is merely stated that there is a lack of venture capital.

— There is a failure to recognize that there may be a lack of entrepreneurial initiative.

— The problem of out-migration is not dealt with realistically.

— The redevelopment organizations do not have enough subcommittees to deal with all possible approaches.

— Many states have not found their proper role. Some try to do too much for the communities and smother their initiative; others need to offer more help.

achievements

The ARA has midwived a great variety of industrial and commercial projects in its first two years — and at an accelerating rate.

To June 30, 1963, (and it should be noted that Congress did not appropriate funds until October of 1961, although the Act was passed the preceding May), ARA approved 210 industrial loans for $73,232,767 to create an estimated 22,329 direct jobs.

These encompass a remarkable range.

In Alaska, a loan was approved to help expand fish processing facilities. One in Arkansas will help construct buildings for the

roadside display of handicrafts. Other loans are for everything from sawmills to electronics plants. Tourism is a big benefactor. There are loans for motels and hotels and other aids to vacationers. (It is the ARA's secret hope to turn West Virginia into the Switzerland of the United States.)

There were 149 projects for public facilities approved, involving $45,495,700 in loans and $39,226,849 in grants and 31,384 jobs.

Many of these projects involve the extension of sewer and water facilities to serve community industrial parks. But there will be a marine sciences research center in Oregon, a hospital in Ripley, West Virginia, and a scientific research center in Wilkes-Barre, Pennsylvania.

There have been 208 technical assistance projects approved by mid-year 1963. They add up to $7,205,518. Many of these are studies to see if it is feasible to establish one or another sort of project in a particular area. Thus, ARA has put up $21,000 for a tourism study in Jefferson, Texas. It has provided $13,000 for a transportation study for the Appalachian region. It has put up

$20,000 for studies of forest resources and wood industry potentials in Washington and Oregon. It has allocated $250,000 for drilling test wells in a salt bed exploration project in Ohio that could create many new jobs. At Caddo Lake, Texas, it has put up $77,500 for a study and pilot project to use water plants as animal feed.

Under the Act, 453 training and subsistence programs for 22,388 workers were approved in the first two years. This program is run by the Labor Department and the Department of Health, Education and Welfare. It has trained jobless workers to be automobile mechanics, sewing machine operators, peach growers, clerk-stenographers, waitresses, electronic assemblers, and medical technicians and to fill many other occupations. About 70 per cent of the trainees are getting jobs — a record which pleases officials since jobs, by definition, are scarce in the depressed areas in which training is being given.

need continues

These activities should not obscure the fact that the area redevelopment effort is still in its infancy. It is not a problem that should be allowed to slip from the nation's consciousness.

The principal difficulty impeding the whole effort is that unless the nation's over-all rate of economic growth can be accelerated, ARA cannot be expected to do its job satisfactorily.

The relevance of general economic conditions to the problem of depressed areas shows in the figures.

In March of 1957, the Labor Department reported that only 19 of the nation's 150 major labor market areas were in the substantial labor surplus category of 6 per cent or more unemployed. But by the following March, recession had pushed that number to 70. Recovery reduced it to 33 by March of 1960, but recession in 1961 boosted the total to 101 in March of that year. In March, 1963, the figure was at 48 — down 15 from March of the previous year.

Not only would a better general employment picture vastly

improve ARA's chances for success, it would spike the guns of one of the most effective arguments of opponents of the program. They have been saying that with unused plant capacity commonplace around the country, plants established with ARA aid simply take business away from existing plants and spread unemployment, not reduce it.

Even though ARA's funds are supposed to be only seed money, with the main investment to be left to private enterprise, many observers feel that the agency has been given too little seed.

The magnitude of the task it faces is enormous. A crude estimate, making optimistic assumptions about the dimensions of the current economic upswing, indicates it would take 800,000 more jobs in chronic labor surplus areas to bring their unemployment level down to a tolerable 4 per cent. This could mean an investment of something like more than $6 billion dollars.

increased funds requested

Commerce Secretary Luther H. Hodges, and ARA Administrator Batt, told Congress that the agency would be bumping its head on the ceilings of its borrowing authority and funds for technical assistance and public works grants if these were not raised. That point has since been reached.

The Administration asked Congress to raise the limit on each of the two industrial loan funds from $100 million to $250 million.

It wanted an increase from $100 million to $150 million in the amount authorized for loans for public facility projects and an increase of from $75 million to $175 million in the amount authorized for public facility grants. It sought to raise the amount authorized to be appropriated for technical assistance each year from $4½ to $10 million.

The House rejected ARA's recommendations. The Senate approved them. The Senate bill then went to the House for reconsideration.

The Area Redevelopment Act includes a provision allowing Treas-

In the first 2 years' time 22,000 workers retrained in 365 centres

ury borrowing to obtain funds for loans. This so-called "backdoor borrowing" provision was nullified, in effect, by Congress through the appropriations measure involving ARA and it is likely to be removed altogether, leaving the ARA to rely entirely on Congressional appropriations for loan funds.

One major problem ARA has encountered is the inability of many communities whose resources have been exhausted in the long battle with poverty to raise the 10 per cent in state or local funds required by the Act as their share of industrial or commercial projects. Only six states help.

"Many promising projects have been delayed or never started because of the inability of the community to meet the 10 per cent requirement," Mr. Batt told a Congressional committee.

The Administration has asked that the requirement be eased slightly by allowing local communities to be repaid at the same time as the federal government, rather than waiting until afterward, as the law now provides.

are broader powers needed?

Actually, more than this may be needed. Many communities, and particularly those that have been trying for some years to pull themselves out of the economic slough, have their available capital tied up already in industrial mortgages. President Kennedy's task force on depressed areas recommended in 1960 some sort of secondary market be created for these, following the pattern for the purchase of real estate mortgages by the Federal National Mortgage Association. Senator Douglas was the chairman of the task force, and Mr. Batt was on it.

Many experts are not at all certain that the depressed areas in the United States can be rejuvenated with the package of tools that the Area Redevelopment Act has provided. They feel that additional methods will have to be employed.

European nations use a wider range of techniques, although most place a heavy emphasis on loans and grants. Some of the other devices used in Europe are tax concessions of various kinds to stimulate investment, relocation payments to unemployed workers willing to move to jobs that are available in other areas, controlling or influencing the location of new industry by licensing and direct government acquisition of sites and construction of buildings.

Mr. Batt, who was then running Toledo's industrial development program, testified in 1956 before a Congressional committee on the ingredients of a successful area redevelopment program. One on which he laid great stress was tax concessions to stimulate location of plants in depressed areas. Mr. Batt and others view this as an important device because many companies, particularly established and prosperous manufacturing concerns, do not expand out of borrowed capital but from retained earnings. For these, the ARA's low cost loans offer no inducement.

Nor, since the enactment in 1962 of the more generous, national retraining program of the Manpower Development and Training Act, does the ARA retraining program offer these companies any special incentive to move into a depressed area.

At the 1956 hearing, Mr. Batt introduced a tabulation by the

Office of Defense Mobilization of rapid tax amortization certificates issued for defense manufacturing facilities to be located in labor surplus areas in the latter stages of the Korean War period.

It showed 58 plant locations involving $217,418,729 worth of plants employing 11,311 employees. The largest was the Kaiser Aluminum plant in Jackson County, West Virginia. It now has about 3,000 employees. A check with the company disclosed that the tax concession was one factor that counted in the concern's decision to put the plant where it did. Several others — among them the central sales location, low cost power, the Ohio River, and the availability of labor — also contributed to the decision, and a company spokesman said it was impossible to say which had been given the most weight.

Mr. Batt has also been an advocate of much more extensive use of federal procurement to shore up the economies of depressed areas. This supposedly is encouraged now, but it is estimated that in the fiscal year 1963, of some $7.4 billion in prime military contracts awarded to concerns in labor surplus areas (about a third of the total), only 1.4 per cent were awarded through preferential procedures designed to aid the depressed areas.

relocation problems

There are students of the problem who think there is a place for relocation allowances in the area redevelopment plan. Indeed, they were included in the Trade Expansion Act for workers who lose their jobs because of the easing of restrictions on the entry of foreign goods.

Somewhere down the line, it may be necessary to concede that there will be some communities which cannot be rehabilitated. Some analysts of the situation in depressed areas think it is necessary that workers in these communities be given help to begin a new life elsewhere. Relocation allowances coupled with retraining could be one way of doing this.

No serious student of the problem looks on relocation as a panacea, however, and the extraordinary tenacity with which

Americans cling to their home towns — particularly if they are middle aged or older — cannot be ignored.

A study of an Illinois city whose main industry closed showed that workers preferred to remain there even at the cost of substantially lower wages than could be earned elsewhere. Nearly half of those who took jobs elsewhere kept their families in the old town and more than four in five who moved said they would prefer jobs in the old town to the ones they held.

There is considerable migration away from depressed areas already. Between 1950 and 1960, the net migration from all depressed areas was about 10 per cent of their population. The population of five southeastern Kentucky counties declined by nearly a quarter in that period. Undoubtedly this mobility could be increased if workers were provided with more relocation allowances and comprehensive information about jobs elsewhere — and if there were more jobs elsewhere as a result of a higher rate of national economic growth. Despite steps taken in the last two years to improve it, however, the nation does not yet have an effective job-finding public employment service that is national in scope.

better education and leadership needed

It is unlikely that any public program can make so important and fundamental a contribution to the elimination of poverty in depressed areas and elsewhere as free public education. Yet recent studies indicate both the general and vocational educational systems need improving.

It is noteworthy that one of the underlying assumptions of the Kennedy depressed areas task force was that federal aid to education on a national basis would be instituted in 1961. It urged that a disbursing formula be adopted that would assure additional assistance for depressed areas.

The way the Act is now drawn, an area must have fallen on evil days before it is eligible for redevelopment assistance. It is apparent, however, that technological change or other factors af-

fecting a particular industry — steel, for example — could result in a new group of distressed areas. Some suggest that an early warning system coupled with anticipatory remedial measures is necessary if still more communities are not to pay the fearful toll already exacted by the coal-mining areas for technological progress that has benefited the entire nation.

The administrative theory behind ARA was that it was not to be a new bureaucracy. It was to co-ordinate and administer, but to rely largely on other agencies of government to do the actual work.

But the other agencies have their own work to do, and it should have been foreseeable that they would tend to do this first. Time

has been wasted, delays compounded and, in sum, an administrative nightmare created. The ARA and other agencies have even at times disagreed on the interpretation of the statute both were administering.

What is more, ARA has spread itself too thin. This is to a degree built into the Act itself, but it is apparent also that the agency has tried to take on far too much with limited resources.

Nor has the agency scored high in the political arena. It made the mistake of trampling unnecessarily on the toes of the ranking Republican on the House committee that must approve its legislation, and it allowed its friends to go into a recent vital House debate woefully unprepared to rebut the agency's critics.

These problems, however, are relatively easily solved. What is really troublesome is what to do about a depressed area that is lacking local leadership and initiative when the ARA program depends almost entirely on these for results.

A county planning board in North Carolina summed up its predicament recently in a poignant letter to ARA.

"Our success has been rather limited in enlisting able and willing people to work on further development of our OEDP," the board said. "The few people we have with competence in the field of economic planning are all busy making a living. Federal agencies are trying to be helpful. The wide dispersal among so many agencies of the possible sources of help is, from our standpoint, an unfortunate, time-consuming handicap.

"If we had unlimited time to devote to these problems, we could, I'm sure, get to the bottom of these matters, but as things stand, we are just a bunch of amateurs working in fields about which we have little knowledge or experience.

"Working under these conditions, we find that everything seems to take an inordinate amount of time. Another difficulty we have found in availing ourselves of technical assistance is that we don't know what questions to ask."

The board went on to complain that there were too many studies and not enough action. It admitted a weakness in leadership, but

added that previous failures had made people skeptical and apathetic.

The 4,500 people who left the county in the 1950's, the board said, included nearly everyone with the ability and initiative for developing businesses. The ARA "red tape" represents a formidable barrier to the few remaining volunteers, said the letter, concluding:

"Present ARA practices reward those areas with the greatest initiative, ability, and energy. Aid will go to those areas that need it least."

The letter brings home a point: Establishment of ARA was a major step forward in dealing with the hard and complex problems that beset the depressed areas. But the program was not the total answer.

Even so, Mr. Batt is optimistic.

"There is life in almost all of these areas," he says. "They are determined to survive. There is entrepreneurship there, too, although not enough in all of them, to be sure.

"The applications we have gotten indicate that a real need was there, and what these people needed was something to work with. I was sure these resources would be made use of if they were made available. Of course, there is a different calendar for solving the problem in almost every community. Some may be solved in a couple of years; some may not be solved in 10 years.

"The people in Cambridge would have done it anyway. Our aid may have telescoped the process. But Southeastern Kentucky is as hard an area to help as any in the United States. It will have to run faster than it is going now just to arrest the downward movement. But even there, there is potential.

"I am optimistic. I think we are helping concentrate private resources to help solve some human problems. We are effecting a better marriage of natural, entrepreneurial and human resources. We have induced the kind of community economic planning that just had not been done before.

"But this problem didn't happen quickly, and it won't be solved quickly. You don't diversify in a hurry."

Despite its handicaps and mistakes, ARA already has done effective work. Many familiar with the problems of the coal-mining region feel that, by itself, ARA's participation in the effort to save the miners' hospitals goes a long way toward justifying its existence.

The economic blight that afflicts the nation's depressed areas is deep-seated, however, and to remedy it will take time, money and work. It is well to repeat that ARA is a beginning, not a complete and final cure.

the public affairs committee

This pamphlet is one of a series published by the Public Affairs Committee, a nonprofit educational organization founded in 1935 "to develop new techniques to educate the American public on vital economic and social problems and to issue concise and interesting pamphlets dealing with such problems."

Neighborhood Improvement 1965

PROPOSAL FOR SUPPORT OF THE VINE CITY COUNCIL

The Vine City Council is an association of people, chiefly residents of the Vine City area. Our main purpose is to better the condition of the people living in the general area of Vine City by encouraging them to work together and to stand up for what is right and just. We have organized on the basis of committees - Housing, Welfare, Publications, Thrift Shop, Finance, and Program. We are currently meeting two times a month. Committees are coordinated by the executive secretary.

Program

Neighborhood Improvement

During the summer of 1965, the Council worked to get streets paved. At a public works hearing in December, the City agreed to pave one block. This may seem like little, but residents have been trying for years to get this done. It is necessary to get landlords owning 51% of the foot frontage to sign an affidavit stating that they want the street paved and will pay the costs. Many landlords do not want to have this expense and others will raise rents, causing extra hardship to the tenants.

Housing conditions in Vine City are generally very bad. The Council has reported violations of the Housing Code to the City. The Council has worked together with landlords, encouraging landlord-tenant cooperation. The Council has also helped relocate families that were forced to move. They have spoken with landlords to try to encourage them to charge fair rents and to repair their properties. In one case where the exploitation by the landlord was extreme, the Council organized a picket line in front of the slum building and in front of the landlord's house. This was a very positive experience for all, and we hope to continue as the occasion arises, using the possibility of picketing as a lever to gain improvement in housing.

Thrift Shop

The Council also started a Thrift Shop in the home of Hector and Susie Black in July 1965. This shop was started because people had been giving the Blacks clothing to pass on to people in the neighborhood. The Blacks found that this was an embarrassing relationship both for them and for those who came to get the clothes. And so it was decided to sell the clothes at a low price so that people who came would really feel that the clothing was theirs and would not be embarrassed by a hand-out. Since one of the real hardships residents undergo is eviction, it was decided to help families in financial difficulty by giving them loans without interest. Tenants can be evicted for non-payment of rent by having a warrant served on them. This warrant gives them three days to move. Usually the family has to raise $20 for moving costs plus $30 as down payment of half a month's rent for another apartment. Fifty dollars is a lot of money to people in Vine City and many people can't raise that much. And so the sheriff comes and sets all the furniture and the people out on the street and locks the door. If the family hasn't found anyone to take in the furniture, it is left on the street and stolen overnight or rained on. In this way a family can lose everything they have in the world. Twenty seven loans were made in 1965.

The Thrift Shop also gives clothing to people who really don't have any money. We usually ask them to help out in the shop in payment. Neighbors, mainly the Thrift Shop Committee, volunteer to help out in the shop. Susie Black takes care of sales work as a volunteer.

Publications

In September 1965 the Council started a neighborhood newspaper called the Vine City Voice. This paper is published every two weeks. The principal aim of the Council in starting this paper was to give residents of Vine City an opportunity to express what they were thinking and feeling about the total situation in our neighborhood. This paper will help to create the feeling that Vine City is a neighborhood and what happens to one person happens to all.

As of December 1965, we have 20 paid subscriptions which go to interested individuals in Atlanta and other parts of the U.S. We started printing 700 copies and have gradually increased this number to 900. The mimeograph machine was purchased through the earnings of the Thrift Shop. Paper costs are met partly through advertising and subscriptions, and partly through the Thrift Shop. The work on the paper (which involves considerable time writing, typing, mimeographing, assembling, distributing) is all volunteer except for Hector Black.

Social Welfare

The Council also has reported cases of need to the membership who have then tried to help by referring the person to an agency, by helping them ourselves when there was no help elsewhere, or by transporting them to the agency in the hope that the presence of someone else would help to insure that the individual receives consideration and help.

Hospitality

In early December a group of seven students from the Boston area came down with a truckload of clothing for the Thrift Shop. They were given hospitality in the homes of Council members during the three days they were here. From time to time other people without a place to stay are put up at the Black's house.

Executive Secretary

Since the main sum in our request is for the salary of Hector Black and a co-worker who will carry some of the increasing load of his work, we would like to speak more specifically of the work he has done and will be continuing with in 1966. The Thrift Shop is located in the Black's home. Hector looks after the store during the time his wife cannot - about 3 hours a day. He helps with heavy loads and makes trips to pick up clothing donations. Customers come from 7 AM until 11 PM every day of the week. During these beginning months, we wanted to be available to residents whenever we were needed. However, during the coming year we plan to set up regular hours for the Thrift Shop, although the Blacks will be available for emergencies at any time.

Every day, people stop in at the Black's home with various needs and problems. Depending upon the problem, Hector Black refers them to Legal Aid, Welfare, EOA, Salvation Army, Protestant Welfare, Housing Authority or, if it is a situation where the Council is able to help (as in referring complaints to landlords or talking over personal problems), or if a financial problem cannot be solved elsewhere, Hector Black and the Council will try to help. There are occasional emergencies when someone is hurt in a fight or is ill and needs transportation to Grady Hospital. Hector Black helps by driving. Some people need encouragement when they visit one of the agencies and when possible, he or another member of the Council will go along with them. On other occasions he has taken people to visit relatives in the Fulton County Jail, or the Milledgeville Women's prison.

Hector Black has conducted considerable research centering on property ownership in the Vine City area and housing code laws and Urban renewal for Atlanta. There is also continuing study of the solutions to housing and other problems of slum areas in other cities.

In the interest of making wider contacts throughout the community and keeping in touch with current problems, our executive secretary makes periodic trips through the Vine City community talking with people as he goes. He has made these trips with people who have lived here all their lives and know where the people most in need live. In this way the Council is informed of conditions and increases its contacts throughout the area. We also visit in bars and on street corners to interpret what we are trying to do and encourage people to join in working with us.

About once a month there have been educational trips for children of the Vine City area with Hector Black and other members of the Council assisting.

The executive secretary has given occasional talks interpreting the condition and suffering of people in Vine City to the larger community of Atlanta. He has also given talks to groups that help to supply the Thrift Shop with clothing, etc. and makes trips to pick up the clothing.

Because the publication of the newspaper involves a great deal of work, Hector Black also spends a good deal of time in typing and mimeographing along with other members of the Council.

Future Plans

Plans for 1966 include moving to a larger building. The present 5 rooms which the Blacks occupy are not enough for all the varied activities of the Council. It is planned that larger space for the Thrift Shop will enable us to sell larger items of furniture and expand the sales of other items with more display space. We also plan a voter registration drive, and citizenship education. There are many people in Vine City of voting age who have not registered.

We have been exploring ways in which residents of Vine City could earn some extra money during the week. We plan to set up some craft classes and have already started with braided rugs. Underemployment is a great hearship here, where the average income is only $50 per week. Our hope is that through the manufacture of some thing at home while watching children or at the Vine City Council House, it will be possible for some individuals to supplement their incomes.

We plan to sponsor a group of high school students from Vermont who will come for three weeks in March and April to live in homes of Vine City residents while helping with a neighborhood survey. We are also working on plans for a work camp with mid-western Mennonite and local high school students participating.

Proposed Budget 1966

Vine City Council

Executive Secretary salary 1 yr.	$2,600.00
Neighborhood co-worker " "	2,600.00
Total budget 1966	$5,200.00
To be raised locally through the Vine City Thrift Shop	$1,300.00
To be raised from other sources	$3,900.00

Note: We anticipate that the Blacks moving to a larger house early in 1966 will give the Thrift Shop better commercial possibilities on a busier street (hopefully Magnolia St.). We also will have more room for the Shop, for classes and for meetings and the newspaper. The Blacks will take care of expenses in connection with the house. We plan that a large share of the repairs on the new location will be volunteer labor by residents.

Wider War on Poverty

Mon - Nov. 14 - 1966 The Wall Street Journal

Slum-Renewal Drive Is Joined by Industry, As Firms See Potentially Huge New Market

By MONROE W. KARMIN
Staff Reporter of THE WALL STREET JOURNAL

WASHINGTON—As the Federal Government mobilizes for its "total attack" on city slums, a vital ally is beginning to march to the same beat—private industry.

Signs of the trend:

—The American Plywood Association, a manufacturers' group, today will announce a plan to invest $150,000 to rehabilitate dilapidated dwellings in a two-block area in Cleveland's grimy and racially tense Hough slum. "If this project is successful," says C. L. Morey, the association's president, "other cities would be considered."

—U.S. Gypsum Co., which already has plunked $1,250,000 into renovating six tenements in New York City's shabby East Harlem, is expanding this effort and soon will duplicate it in two other unidentified cities. Graham J. Morgan, company president, says there's "a good likelihood" the company will move into even more cities later on.

—Armstrong Cork Co. next month will announce a test rehabilitation project on a single aging building in a Negro-Puerto Rican neighborhood of North Philadelphia. Though Armstrong's initial step will be small, John Baldwin, a company official, declares, "We have gotten very much interested in rehabilitation."

"Model Cities" Program

This private-industry concern with slum rebuilding is the product of Johnson Administration encouragement and industry's self-interest. The encouragement comes from the President's "model cities" program, the most ambitious Federal attempt to eradicate urban decay. The program features a new concept of how to do the job.

Out of style is the bulldozer system—leveling blighted buildings and forcing residents to move elsewhere. The new approach seeks to rehabilitate run-down buildings for those living in them. The Johnson Administration knows new rehabilitation techniques are needed to do the job. At the same time, builders and building-supply companies, suffering from the continuing home-construction slump, see a potentially enormous new market.

Urban Secretary Weaver depicts the slum-rehabilitation market for private industry in dizzying terms. He estimates that eight million city homes now are dilapidated or deteriorating. In New York City alone, he says, 58,000 buildings are in need of rehabilitation, requiring 800,000 kitchens and bathrooms, millions of windows and doors, billions of square feet of walls and floors, at a cost of $5 billion to $7 billion over the next decade.

"To project the figures for the nation as a whole," Mr. Weaver says, "raises the prospect of dealing with numbers of walls, windows and kitchens so astronomical that only a computer could comprehend them."

Industry's Involvement

The prospect whets industry's sales appetite. "We believe urban rehabilitation opens a tremendous untapped market for our products," declares U.S. Gypsum's Mr. Morgan. "Some estimates indicate it could approximate

six tenements on Harlem's East 102nd Street for its rehabilitation experiment. Work is near completion on two of the buildings and is in process on the other four. Now the company is negotiating to acquire another six buildings on East 103rd Street, with the goal of rehabilitating a square block in Harlem. Mr. Morgan says U.S. Gypsum's newest projects in the two other cities could begin "in a matter of weeks."

The projects pose new problems for the company, and sometimes lead to development of new products. The first building to be rehabilitated on East 102nd Street needed a heating plant, and the company developed a radiant heating system embedded in gypsum ceiling panel because the company doesn't make floor paneling. The experiment turned the company's attention to the floor, and it developed a gypsum slurry that hardens into flooring. The company also developed its own long-lasting epoxical paints, and will test a new gypsum wallboard with pre-cut holes for electrical conduits.

The plywood association's effort will be disclosed today by Mr. Morey at a convention of the National Forest Products Association in Las Vegas. He will ask that group to join in the project. The association had selected a two-block target area in Cleveland's Hough district that contains 140 run-down living units, including apartment buildings and single-family homes. Mr. Morey hopes work can begin in six months.

Armstrong's Project

Armstrong's North Philadelphia project is limited to a single building, a three-story home built at the turn of the century that will be converted into a three-family apartment house. The company isn't disclosing cost figures yet, and Mr. Baldwin describes Armstrong's slum-project involvement so far as only "fingernail deep." But the company's interest is strong and could grow stronger, depending on the outcome of the coming test.

The U.S. Gypsum, plywood association, and Armstrong projects differ in ways other than size. Gypsum is buying buildings with its own money and managing them for now. The plywood group plans to operate with a nonprofit sponsor to borrow needed funds from a private lender and obtain cut-rate mortgage insurance from the Federal Government. Armstrong is merely leasing a building from the Philadelphia Housing Development Corp.

None of the three sponsors wants to become a landlord permanently. U.S. Gypsum hopes to show that slum rehabilitation can be profitable by selling off its properties eventually at an 8% to 10% return. The plywood association plans to recover its money after the sponsors get their mortgage loan; property management would be left to the nonprofit partner. Armstrong figures to return its property to the Philadelphia authority after the rehabilitatiton, and recover most of the cost.

Each of the slum projects is designed chiefly to determine what products private industry can produce to assist the Federally inspired

labor problems have delayed the experiment, Federal officials now are convinced they'll be able to achieve their goal—not necessarily a two-day rehabilitation, but more likely, for cost reasons, a 48-hour rehabilitation accomplished in six eight-hour working days.

With this schedule, the Federal experimenters hope to acquire perhaps as many as 100 tenements in order to try organizing new, speedy techniques so as to complete the renovation of buildings at the rate of one a day. "That's the next logical step," says James Simpson of the Federal Housing Administration, "and construction-wise we are ready to take that step." The policy decision is up to his superiors.

Problems Encountered

This experimenting with old tenements has led to development of products or techniques by manufacturers to solve specific problems.

Some examples:

One problem encountered in slum rehabilitation is security, the identification of persons seeking entry to a renovated building in a still-shabby area. Government officials have discussed with Motorola Inc. the possibility of developing a closed-circuit television system for this purpose.

Another difficulty in rehabilitating slum buildings is that, in many cases, the floor-supporting beams have sagged. Timber Engineering Co., a subsidiary of the National Forest Products Association, has developed a metal fastener to adjust the level of new flooring. Union Carbide Corp. has developed a plastic floor-leveling device.

Windows are another problem; most are of odd size and in bad condition. Rusco Industries Inc., a Cleveland-based building-supply manufacturer, came up with a solution: A prefinished, adjustable window assembly that can be inserted in variable openings without having to be cut or fitted by carpenters on the job. This window unit is being tested in the experiment on New York's Lower East Side. "The things we are learning on this job," says Harry M. Reigelman, a Rusco vice president, "may help us provide new products for the general market."

The prospect whets industry's sales appetite. "We believe urban rehabilitation opens a tremendous untapped market for our products," declares U.S. Gypsum's Mr. Morgan. "Some estimates indicate it could approximate a new residential market" — meaning something roughly equal to the present new-housing market.

U.S Gypsum's is the biggest of the present ventures. A year ago the company purchased

Try on one of our coats.

Some corrugated boxes should wear special coats for the trip to market. So O-I technicians have developed a wide range of special purpose coatings to solve protection or handling problems. There are O-I coatings which help corrugated board to resist grease, oil, abrasion and scuffing. Coatings that keep out moisture or inhibit corrosion. Nonskid and quick release coatings. About 30 in all, with more on the way. Chances are we have a coating to fit your problem.

erty to the Philadelphia authority after the rehabilitatiton, and recover most of the cost.

Each of the slum projects is designed chiefly to determine what products private industry can produce to assist the Federally inspired campaign to rehabilitate blighted neighborhoods cheaply, quickly and on a mass-production basis.

Slum-dwellers, it is hoped, will benefit not only from the test projects themselves, but from the incentive to others to attempt similar endeavors. U.S. Gypsum says its Harlem experiment has brought inquiries from some 275 private companies, groups and nonprofit organizations interested in starting similar projects.

Protecting Investment

Some companies are getting into the urban rehabilitation business to upgrade the neighborhoods around their plants and thus protect their investments in the plants.

For example, Smith Kline & French Laboratories, whose plant is in the same decaying North Philadelphia area where Armstrong has its project, is in the midst of a program to rehabilitate the neighborhood. The company got together with city officials and a local developer, and work began last July on the program's first phase, which involves 70 run-down mutli-family dwellings. Estimated cost of the rehabilitation is $2.4 million, but Smith Kline & French's share will run no more than $20,000.

"Our purpose is to improve the neighborhood in which we are located and to spur others to do the same," says a company spokesman.

Warner & Swasey Co., a machine tool maker whose main plant is located at the edge of the Hough slum in Cleveland, has set aside $115,000 to launch a neighborhood rehabilitation project. "We think we should do something to improve the general area in which our plant is located and in which a number of our workers live," explains James C. Hodge, president.

Warner & Swasey also has its eye on Mount Pleasant, another decaying Negro neighborhood in Cleveland that houses some of the company's employes. Mr. Hodge hopes to persuade other corporations to join in setting up a fund to stimulate a rehabilitation effort there. One partner he doesn't want: Uncle Sam. "We want to do this ourselves," he says. "We think we can do it more efficiently and easily than the Federal Government."

Another Ghetto Experiment

In Los Angeles, Aerojet-General Corp., a subsidiary of General Tire & Rubber Co., is pioneering a ghetto experiment of a different nature. The rocket-engine manufacturer will open a factory in Watts, scene of the 1965 Negro riots. This plant, to make tents under a Pentagon contract, will employ more than 200 workers from the area.

Aerojet is investing nearly $600,000 in this new subsidiary. Wayne Mullane, an Aerojet vice president and chairman of the new subsidiary, says: "Other companies have shown a definite interest in what we are doing and from what we hear they want to see how things work for us. If we're successful, we think they will follow along."

While these private ventures progress, the Federal Government continues to experiment with new technology. This experimental program, in operation in three cities, may be on the verge of a major breakthrough. A test project on New York's Lower East Side seeks to rehabilitate tenements in 48 hours. Though

Kaman Aircraft Contract

NEW YORK—Kaman Aircraft Corp. said it has received a second contract, valued at more than $10 million, from Lockheed Aircraft Corp.'s Georgia division for production of wing flaps for the military transport. The new contract brings to more than $13 million total awards from Lockheed this month, Kaman added. The contracts cover work extending through 1969.

more important in stock selection, industries with relatively low labor costs are being scrutinized. A large number of major labor negotiations are slated in 1967 involving apparel, trucking, auto and rubber contracts, among others, and the signs are that average wage costs may rise 5% to 6%. Contract expirations will affect more workers in 1967 than in any year since 1958.

Analysts believe the wage factor will become increasingly significant in the appraisal of specific stocks in coming months. It has already started to show up in the buying interest apparent in such low-labor-cost industries as the oils, utilities, tobaccos and banks.

Last Week's Markets—

The Dow Jones industrial average eased moderately on Monday and then after Election Day advanced the rest of the week; it ended Friday at 819.09, a net gain for the week of 14.03 points, or 1.74%. Tracing a similar pattern, the railroad average climbed 0.87 point, or 0.44%, to 200.53 during the week. In a rare occurrence, the utility average closed Friday at 137.54, unchanged from a week earlier.

Volume on the New York Stock Exchange last week was 30,112,780 shares, down from 31,501,720 the prior week. However, last week included one less trading day due to the Election Day closing. In the comparable 1965 week, which consisted of five sessions, 31,786,680 shares were traded.

Matter of Fact . . . . . By Joseph Alsop

A Modest Proposal

1-27-67

W. Post

IN THE PROLIFERATING literature on the terminal cancer that threatens our great cities, there is a new and ominous phenomenon of great importance.

Alsop

The ghettoes are the heart of the illness. And new studies of the "Negro subculture" of the ghettoes are now appearing, which might well be taken for vicious racist tracts, if it were not for their impartial, anthropological, Freudian-permissive tone.

An example is the work of Lee Rainwater, done for the National Institute of Mental Health, and partly published in "Daedalus."

These studies suggest, by implication, that there is no practical way to attack the urban cancer. But this, one must hope and believe, is no more than pseudo-scientific nonsense. It ignores, for one thing, the real history of the ghettoes.

The urban ghettoes only became the nightmare-quarters that they are today, when they were swamped, postwar, by the vast inpouring of Southern rural Negroes. And among all these immigrants, the central, predominating, fatal handicap was their tragically deficient education, which left them unable to cope with urban life.

WHAT HAS BEEN caused by deficient education, can surely be undone by adequate education, at any rate for the children of the ghettoes. But the dire poverty of ghetto-experience, going so far as crippling speech-impoverishment, creates an educational need that is enormously difficult to meet. No real attempt to meet this need has ever been made, in fact, in any American city to date.

The need is for a wholly new kind of public school system. Such a system would absorb the children much earlier, at the age of four, or even three. It would teach the children in classes less than half the present size, with 15 pupils as the absolute maximum. It would have many other radically novel features, such as the organization of the schools as round-the-clock neighborhood centers, and especially as recreation centers for the children.

This is no place for an essay on educational methods. Enough has been said above to indicate the most important point, that this kind of radically improved school system will be vastly more expensive than anything we have today. Yet every nickel spent will produce a dollar's worth of return, if only this kind of school system proves able to pry open the door of the ghetto-trap for the next generation.

There are two difficulties. First, doubts have been raised about the effectiveness of this kind of educational investment, by such studies as Rainwater's. Second, experiment with a single school, such as that proposed by Professor Julian Levy of the University of Chicago, will start under too heavy a handicap—for the children of the unimproved school in the next block will pull down those in the improved school.

A WHOLE NEIGHBORHOOD, like Bedford-Stuyvesant in New York, or a whole city, like Washington, must be the scene of any fair test. And why not choose this wretched District of Columbia, with its schools which are 92 per cent Negro— this unrepresented national capital, which is really one vast ghetto, masked by a thin white Federal facade?

The current District school budget is $110 million. President Johnson has just requested an increase to $164 million, which will permit poulticing and patching on a considerable scale.

But what is wanted is general reconstruction, radical improvement, total reform. Let the budget be tripled, then, to $330 million, and let another $100 million be voted for capital construction to reduce classroom sizes.

These may sound like huge sums to spend on education in a single city—but in its absent-minded way, the Federal Government is currently pouring out over $4 billion per annum in various kinds of aid to education—most of it, in aid to middle and upper class education.

Cannot the amount needed to test education aimed to liberate the children of the ghettoes, be chipped off the sums allocated to improve the education of the more fortunate?

A test is in order—a careful and methodical test—because almost everything that has been done, to date, and done with the most virtuous purposes, might have been designed by a malevolent Providence to make matters worse.

Too often, slum clearance has created still worse slums in the new projects. Too often, school desegregation, carried through without measures to maintain school quality, has merely extended the borders of the ghetto.

But one must be a racist to believe that children cannot be aided by much better education. And this test, please remember, is aimed to find a cure for a social cancer, which is now near-terminal.

Don't forget Pre-School

Let's stop kidding ourselves

Our programs to house the poor do not cut the mustard and it's time we all faced up to a few hard facts

Fact No. 1: There are today in the U.S. almost ten million families who anyone reading this page would describe as poor.

Fact No. 2: About half of these families are virtually trapped in cramped and often stinking quarters in our urban cores, where they erode the tax base and hasten the flight of businesses and the affluent to the suburbs.

Fact No. 3: FHA's 221d3 program and rent supplements are workable, but they are a drop in the bucket and will remain so. Why? Because it is bad politics to give some borrowers a subsidized interest rate while everyone else pays up to 7% and to pay part of someone's rent because he doesn't earn enough to pay it himself.

Fact No. 4: Public housing can't do the job either—partly because it, too, is bad politics and partly because of its unusually high cost. Over the past decade, public-housing construction has averaged 20,000 new units a year, even though the average authorized has been 30,000. And if Congress authorized 30 times that amount for the next ten years, the total would still not be enough to house all the families who live in one kind of slum or another.

Fact No. 5: Urban renewal programs have not involved much low-income housing because local agencies have not designed them for that purpose.

Fact No. 6: Rehabilitation of old and dilapidated housing is workable only on a block-by-block basis, and it's too risky to tempt private enterprise on big jobs. Rehab costs cannot be estimated with anything like the accuracy of new construction, so they can range from 50% less than new-building costs to 50% more.

Fact No. 7: There's a steady increase in substandard housing. In New York City, for example, the number of substandard units has risen from 420,000 to 520,000 since 1960. Replacing these slum dwellings with state-subsidized public housing would now cost roughly $14 billion. And New York City is not about to get more than a tiny fraction of that amount for existing programs.

The latest anti-slum plan—known informally (and erroneously) as the Comsat Corporation for Housing and formally as the Urban Development Corp. (see p. 18)—is bold and visionary. But it is already shackled by what it ignores.

As a first step, UDC would buy and rehabilitate 30,000 dwelling units in at least three cities. In the next decade it would build 4,344,000 units and rehabilitate another 656,000. Total tab: $50 billion.

What may kill this plan is that its sponsors start out by overlooking two basic factors:

1. Most Americans and their elected representatives will not accept the subsidizing of home buyers and renters. This country's economic development, created by private enterprise, generates an almost passionate belief that subsidizing people not only does them no good but is also morally wrong. Evidence: the almost futile efforts of all our low-income housing programs over the last 30 years.

2. Construction costs—excluding land—are already dirt cheap. But UDC envisions new technology to cut costs in half in ten years. Apparently, the UDC sponsors didn't do their homework on costs. Otherwise they would have realized that the direct building cost of the average house, priced at $22,000 in 1966, was only $12,000. The house included two baths, full air conditioning, and 1,600 sq. ft. of living area. So its cost per sq. ft. was only $7.50. What's more, a few builders have sq.-ft. costs of under $6.50, and some mobile-home makers get below $6. Fact is, we couldn't build mass-produced housing any cheaper if we used mud block.

Actually, there is a better, more politically palatable way to provide low-income housing: Don't subsidize people; subsidize the land. Such a subsidy would simply involve municipal ownership and improvement of new-housing sites. It would be a one-time, known-price tag on the land alone, and the city could own the land in perpetuity.

On this land private enterprise could provide good housing—two- and three-story townhouses at densities of 20 to 30 per acre—for $60 to $70 a month, including amortization, management, and realty taxes equivalent to those on the original slum property.

All of this discussion springs from two very real forces:

First, housing the poor better may soon become a hard political fact of life. In California today, one-third of all families can't afford to buy or rent a new dwelling unit. They represent a political force that, if aroused, could vote in its own form of housing subsidy.

Second, like it or not, we are already subsidizing the poor in our slums. A slum exacts a subsidy from a city in the taxes it does not pay, in the extra police and fire protection it needs, and in the social and economic problems its residents create.

To sum up, if present programs to house the poor won't work, we've got to find programs that will.

Urban Affairs

Cancer of the Cities: Two Views

2-11-67

In his column of Jan. 27 Mr. Joseph Alsop, in his habitual style of viewing with alarm and predicting a cataclysm, presents yet another discussion of "the terminal cancer that threatens our great cities." For some months now Mr. Alsop has been rewriting the same column, in which he tells us that within the next generation all our great American cities are going to be black, and therefore, by definition, destroyed. (Mr. Alsop seems to be ignorant of some very elementary demographic facts; he consistently exaggerates the rate at which the Negro population of the cities is growing by using public school population figures as if they represented total population.) In this most recent column, Mr. Alsop refers to my research, and in a blanket kind of a way to the research of a good many of my colleagues; therefore, I feel it incumbent upon me to indicate to readers some of the ways in which they are being misinformed.

First of all, Mr. Alsop implies that "new studies of 'Negro subculture'" are appearing which somehow suggest a totally new view of race in urban America. Yet in fact the current researches on Negro subculture represent a refining and updating of patterns which have been described, for example, by Frazier in the '30s, Cayton and Drake and Allison Davis in the '40s, Kardiner and Rohrer and Edmonson in the '50s. The fact that the larger society has been indifferent to their findings does not make the current studies "a new and ominous phenomenon." What is perhaps ominous from the point of view of some public officials and some influential persons is that for the first time knowledge about the destructiveness of American society toward Negroes and other deprived groups is becoming widely diffused, and is beginning to be taken seriously by some who participate in political decision making.

Mr. Alsop taxes social scientists for suggesting "by implication, that there is no practical way to attack the urban cancer." This can only mean that he has not seriously examined the works of social scientists who are studying the life of Negro Americans. For example, he cites my article in *Daedalus* but overlooks the final section of that article which deals specifically with needed remedies and emphasizes the importance, first, of employment and income maintenance programs, and secondly of educational programs. If he is acquainted with the *Daedalus* volumes on Negro Americans, Mr. Alsop should also know that it contains excellent articles by James Tobin dealing with economic solutions and by Robert Dentler dealing with school desegregation solutions. Further, as a Washington journalist he should know that in December five specialists in the study of Negro communities—Kenneth Clark, Robert Coles, Herbert Gans, Daniel P. Moynihan, and I—testified before the Ribicoff subcommittee and developed most of their testimony to discussing specific practical ways to attack what Alsop calls "the urban cancer." If Mr. Alsop does not like our proposed solutions, he should say so and not accuse us of "pseudo-scientific nonsense."

Mr. Alsop considers that urban ghettoes have produced as many problems as they have because of the "tragically deficient education" of Southern rural Negro migrants to the city. Like most Americans, he places too many eggs in the educational basket and slides past the fact that the "central, predominating fatal handicap" of Negroes is not their lack of education but rather the cupidity and stupidity of whites who by their discrimination and their failure to create an economy capable of absorbing Negro immigrants' unskilled labor have failed to provide them with the same kind of opportunity to establish themselves that was available to other immigrants and have thus created and today maintain the modern Negro ghetto.

With the partial exception of Kenneth Clark, the social scientists who have looked most closely at the Negro subculture have not been particularly sanguine about the schools as the major level for helping lower class Negroes to get out of the vicious circle into which they are born. Most of these social scientists put major emphasis on employment and income supports, and assign education a second priority. The Coleman study, financed by the U.S. Office of Education, seems to suggest that the kind of added investment in the schools for which Mr. Alsop is arguing would accomplish relatively little. In the Coleman report, two main factors stand out as important for greater achievement for Negro school children: (a) the amount of school integration the child experiences, and (b) the socio-economic status of his family. The latter factor, by far the most important in Coleman's study, can be attacked only by employment programs and income maintenance programs. Where choices have to be made in the kinds of programs the Government is to stimulate, it would seem that the payoff from employment and income maintenance programs will be much greater than from added investments in the educational bureaucracy.

For example, Mr. Alsop would like to see an additional $23 million per year invested in the District of Columbia school system. There are approximately 175,000 school age Negro children in the District of Columbia. The $23 million represents $1300 per Negro child and perhaps $2000 per *poor* Negro child, or as much as $5000 per *poor* Negro family. That amount added to the family incomes of poor Negro families in the District, if the results of our studies have any validity at all, might well "liberate" not only the children of the ghetto but also their parents and grown-up brothers and sisters as well.

Mr. Alsop is certainly right in suggesting that it is unjust to spend huge sums to inform the education of the more fortunate so long as the ghettoes exist, but it does not necessarily follow that more expensive education for ghetto children is the most efficient way of assisting them to solve their problems. This latter is a naive, middle-class analysis of the pathology of the ghetto. One does not have to be a racist (the McCarthyist epithet of some commentators on civil rights) to believe that super-funded education is not what poor Negro children need most; one need merely know something about the totality of ghetto life. For that matter, can anyone doubt what the free choice of ghetto families would be between an additional $5000 in family income or the same amount in school investment? Mr. Alsop wants to give these families educationist cake when they need the bread of a decent American standard of living.

LEE RAINWATER,
Professor of Sociology and Anthropology, Washington University.
St. Louis, Mo.

There are only three things to be said about Mr. Rainwater's letter. In the first place, I am entirely familiar with almost all the research and testimony to which he refers. The exceptions are two or three of the earlier studies.

Second, I defy anyone to read Mr. Rainwater's *Daedalus* article in its original, unexpurgated form, as I have done, without concluding that it could very easily be transformed into an overt racist tract, simply by leaving the facts as stated by Mr. Rainwater, and omitting a few of his own observations. Even in its present form, there is a clear danger of its use by racists. Fortunately, I am convinced that the kind of family pattern described by Mr. Rainwater prevails in no more than a small minority of Negro families in our urban ghettos.

If I am correctly informed, in fact, the bulk of Mr. Rainwater's research was done in a St. Louis housing project comparable to the two notorious Anacostia projects which have recently received so much attention. If a city administration is idiotic enough to concentrate under a single roof all its worst and most hopeless welfare cases, results like those described by Mr. Rainwater are of course to be expected. And they ought to be expected whether the artificially created pool of failure, misery and petty criminality happens to be colored, white, brown or yellow.

Third, it is obvious that the kind of people described in the darker passages of the Rainwater study would prefer sunset and addition to their own incomes to the rescue of their children. But if Mr. Rainwater's facts are reliable, then the persons he describes are past rescue. The important thing is to rescue the next generation.

It is hard to know, in truth, whether more harm is done to the cause of justice and equal rights by the alleged educators who say, in effect, that Negroes are ineducable, or by sociologists of the stripe of Mr. Rainwater. They make one thank God for the pride and common sense of the black power advocate, Floyd McKissick, of CORE.

JOSEPH ALSOP.
Washington.

GROUPS FOR POOR GET ADDED HELP

3-23-67

Support for Agencies in Housing Field Set by Urban America

WASHINGTON — Urban America, Inc. has broadened its support of nonprofit groups seeking to meet the housing needs of lower-income families in their communities.

Executive Vice President William L. Slayton announced Monday the establishment of a nonprofit housing center by Urban America and the addition of four housing experts to its staff.

The center replaces Urban America's local development services division. Its activities will be financed under a Ford Foundation grant extended to the division two years ago and renewed last fall.

James P. Twomey, who headed the division, will be director of the new center. The division's advisory committee will be continued in the center under the chairmanship of Chicago mortgage banker Ferd Kramer.

Appointed to the center's staff were the following:

Milton P. Webster, an attorney active in slum clearance and redevelopment in Chicago, as deputy director for development funds and housing development corporations.

Tom Lord, a former housing analyst in the Legislative Reference Bureau of the Library of Congress, as an assistant director, working under Mr. Webster.

George J. Feltovich, formerly a specialist in urban renewal and moderate cost housing development in Boston, as the center's assistant director for the West Coast.

Lawrence M. Upton, an authority on church-sponsored nonprofit housing and former member of the national staff of the United Church of Christ, as assitant director for the Midwest.

Slayton outlined the functions of the center as follows:

1. It will guide religious organizations, labor unions, fraternal groups, and other nonprofit sponsors of low and moderate-income housing through the complexities of government assistance programs;

2. It will help local leaders form development funds, which are nonprofit, privately subscribed investment pools established to give initial impetus to housing construction.

MS

A self-help program stirs a Negro slum

Some idealistic young Negroes, with an assist from business, are training Watts residents for jobs, and setting an example that is helping the hard-core poor in other cities

It was in August of 1965 that Negro rioters in Watts and adjoining slum areas of Los Angeles stamped their slogan, "Burn, baby, burn," into the consciousness of millions of shocked Americans. Today, a handful of other Negroes, helped by some Los Angeles business organizations, are working to change that motto to "Learn, baby, learn."

Operation Bootstrap, an ambitious self-help program there, is aiding hundreds of Negroes—once considered all but unemployable—to find jobs. Its program includes vocational training—key-punching, computer programming, electronic assembly, power sewing—that makes use of $100,000 worth of equipment loaned by such firms as IBM, Singer, Litton Industries, and Scientific Data Systems.

But more important, the program deals heavily in motivation training—courses in Negro history, social problems, communications skills, and "sensitivity" group sessions run by two psychiatrists.

Confidence. The object of the program's social side is to raise the low self-esteem of slum Negroes and to instill in them a sense of purpose and of trust in their ability to help themselves. At the same time, it is intended to prepare them to handle the social aspects of the jobs they are training for.

Operation Bootstrap co-founder Louis Smith, western regional director for the Congress of Racial Equality, sums up: "Our dream is to change ghetto hopelessness into creativity."

Motivational approach at Bootstrap includes interracial "sensitivity group" sessions—aimed at changing "ghetto hopelessness into creativity."

I. A colossal problem

Operation Bootstrap's social training may indeed be a partial answer to the slum problems outlined by a Dept. of Labor study released last week. The study includes an important, if unorthodox, measurement of slum unemployment—what it calls

Vocational approach—as seen in key-punching classes here—is made possible by $100,000 worth of equipment loaned by Los Angeles businesses.

A CILCO Land Profile

Morton, Illinois does have a big idea . . . and a good one. It's a 2480-acre industrial park within city limits, complete with paved access road, sanitary sewer, water mains, fire and police protection, ample electric power and natural gas for industrial use. Morton, "The City of Beautiful Homes", is a handsome, thriving community of 8,300 . . . just 10 minutes from downtown Peoria via expressway . . . and within a metropolitan area of 333,200 population. Four railroads and modern four-lane highways serve the new park, including Interstate Route 74. City water is available, with Morton's high water table assuring an unlimited water supply not dependent on surface drainage.

PLANN

The new Morton Industrial Park is one of the more than 40 choice Central Illinois industrial sites featured in the CILCO Land Profile Kit now available from:

Plant Location Assistance Nationwide Network

Central Illinois Light Company
PEORIA • SPRINGFIELD

MARK B. TOWNSEND, Vice President, Area Development
CENTRAL ILLINOIS LIGHT COMPANY
Dept. 171
Peoria, Illinois 61602

"sub-employment." Its numbers include part-time workers looking for full-time jobs, workers employed beneath their skills, and people who have dropped out of the labor market from simple discouragement.

With the sub-employment figure included in its computations, the Labor Dept. finds unemployment in 10 urban slum areas it has studied to run about 10%, three times the national average. Interestingly, the study argues that lack of job opportunities is not the primary cause of unemployment. It finds that "inferior education, few skills, discrimination, police records, unnecessarily rigid hiring restrictions, and hopelessness" account for a good deal of it.

"No conceivable increase in the gross national product," the study says about slums, "would stir these backwaters."

The slum complex. This dismal negative blend of unproficiency and despair is intimately related to the high cost of maintaining police, health, and welfare programs. This mixture makes slums one of our cities' most urgent social problems.

Perhaps the figures speak for themselves: Unemployment in Los Angeles' South Central area (which includes Watts) is now 10.7%, compared with 4.2% for the city as a whole. Another 22% are "sub-employed"—with part-time or very low paying jobs. This third of South Central families have incomes of less than $3,000 annually.

One businessman who has done something about these figures—he has helped find jobs for thousands of the area's unemployed—is H. C. McClellan, former chairman of Old Colony Paint & Chemical Co. As president of the business-supported Management Council for Merit Employment, Training & Research in Los Angeles, he recognizes the importance of Operation Bootstrap's work.

Beyond a skill. "There are thousands of jobs available here for people who can reach the job entry level with the right motivation," he says, "but thousands must have pre-vocational, motivational, and remedial training. Industry will teach a skill, but not math or attitudes."

McClellan, whom California Governor Ronald Reagan recently appointed statewide Coordinator of Employment and Training Opportunities, says frankly: "We need more Bootstraps."

Other businessmen also praise Bootstrap. Victor M. Carter, chairman of Republic Corp., and a major donor, says: "They're trying to motivate their own people to help them-

80

selves, and I feel this is extre[illegible]. worthwhile."

Success. Just how worthwhile the program promises to be can be seen by a survey of its first graduates. All 140 are working, and two-thirds have received raises or promotions.

Bootstrap, which subsists entirely on private financing, is understandably small at this point in its history—a drop in the bucket of the need. Presently, it has only 75 people in job training, another 30 in remedial classes. But there are 1,000 on its waiting list.

Enthusiasm for the program—variations of Bootstrap are spreading to many other cities—indicates the "people to people" approach it uses to reach disaffected people may be a big step on the long road to slum solutions.

II. A national approach

Current self-improvement programs actually go back to 1964 and Philadelphia. Rev. Leon H. Sullivan, a Negro minister, had helped open up new job opportunities for Negroes only to see them go begging—this, because of a lack of skilled Negro applicants. To remedy the situation, Sullivan started an Opportunities Industrialization Center (OIC), which offered courses in remedial education, job skills, even proper grooming and manners.

In Philadelphia alone, according to Thomas J. Ritter, OIC's executive director, the group has placed 3,400 trainees in jobs. As a successful prototype, it has spread to such cities as Washington, Seattle, Little Rock, and Erie, Pa. They have received grants totaling $5.7-million since 1965 from the Office of Economic Opportunity, the Labor Dept., and the Dept. of Health, Education & Welfare, for comparable programs.

Spreading. And the Dept. of Labor has just awarded a $5-million grant to Cleveland's Council for Economic Opportunities in order that it may recruit and train 2,000 hard-core unemployed people. Chicago has two related programs—Jobs Project and Jobs Now—aimed at helping hard-to-employ people.

Operation Bootstrap, though similar, emphasizes personality training more than do most of its counterparts. Louis Smith is proud of the operation's independence. He rejects government funds as "paternalistic" and meets the program's $10,000 annual budget entirely through private contributions.

Business support. Bootstrap welcomes industry help. It asks companies for job and skills requirements and for volunteer instructors

WALL STREET JOURNAL, WEDNESDAY, JUNE 11, 1969

Slum Renovation: The Profit Is Elusive

By LEE BERTON

NEW YORK—The motives of U.S. Gypsum Co. in pioneering private slum renovation have been "far from altruistic" as far as Harold Collen is concerned. Mr. Collen is a New York City urban renewal project director who is skeptical about the aims of the "private sector" in offering a helping hand.

"I assume you aren't storing up credits for heaven but are exploring profit possibilities," he recently told a U.S. Gypsum official touring a dilapidated tenement area fringing a city renewal project he oversees in the Bronx.

Though he adamantly believes creation of more decent low-income slum housing should continue to be in the public charge, Mr. Collen himself invited U.S. Gypsum to eradicate the urban decay that surrounds and will surely reinfect his city project.

For its part, the Chicago-based building materials company is delighted at the chance to sink its teeth into a really massive rehabilitation effort. The Bronx project would involve 50 buildings with 1,500 apartments. For ever since it entered the field of slum renewal with much fanfare here in 1964, U.S. Gypsum has proceeded only in dribs and drabs.

Still in the Red

Only 32 buildings with 768 apartments in four cities have been completed, and U.S. Gypsum's five-year rehabilitation project is still in the red.

"We started out aiming our sights too high and thought we could originate pilot efforts in nine cities to attract many other private contractors into slum renovation as a market for our building materials," says Warren J. Obey, U.S. Gypsum's project manager here. Unfortunately, no other big for-profit corporations are busting down U.S. Gypsum's door to buy its building products.

And so the company, after an "agonizing reappraisal" last year, has decided to continue its rehabilitation work with the hope that its hard-won experience in the slum may eventually pay. If not, U.S. Gypsum officials reason, housing rehabilitation has enhanced the company's reputation as a public-spirited corporate citizen contributing to eradicating growing inner-city decay.

If anything, U.S. Gypsum's problems as general contractor at "rehab" projects in New York's Harlem, Cleveland's Hough area, Chicago's Lawndale and in Detroit's crumbling inner city have likely cooled the ardor of other corporations who might have considered tapping the potential of slum-housing renovation as a source of income.

At least one has already abandoned such efforts. Armstrong Cork Co. of Lancaster, Pa., says its experience in rehabilitating nine run-down houses and reselling them to low-income families showed that such corporate action isn't economically practical. Armstrong, which discontinued the project late last month, says it lost about $5,000 on each house it repaired.

Aside from the construction difficulties encountered in converting old tenaments into sound apartment houses, U.S. Gypsum met enormous public relations hurdles. Slum residents often want "too much, too soon," once they learn a big corporation is supervising the project, say U.S. Gypsum officials. A militant neighborhood group threatened to picket a U.S. Gypsum project in Chicago if Negro contractors weren't employed. And an East Harlem tough tried to intimidate the company

cealed, are being discovered during rehabilitation. "To repair them costs money and is bringing renovation costs perilously close to the cost of new public housing," says Mr. Obey. Since U.S. Gypsum began its project here five years ago, its cost per unit has spurted up to 45% while the average cost for each new public housing unit has risen only 15%, he notes.

Greedy landlords also boost acquisition costs. Albert Brod, a real estate agent who had been acquiring property quietly for U.S. Gypsum here, says that after landlords learn the company is interested in their building, "the sky is the limit, even if the building is a vacant blight and a tax drain."

William Small, vice president for construction of the U.S. Gypsum subsidiary handling rehabilitation, says the company "learns a new lesson with each new city it tackles—some of them costly." In Cleveland's Hough, for example, use of a local black contractor who employed some inexperienced men for job-training purposes hiked the final outlay 20% from original estimates, he says. "In one case, we had to completely redo leaking plumbing, which together with water damage cost us an extra $1,300."

The Do-Gooders

In the past few years the private sector, encouraged by nearly everyone, has become increasingly involved in social programs—programs that have often lead companies down unfamiliar paths toward unfamiliar destinations. What motivates the businessmen who made these departtures? How successful have they been? This article is the second in a series.

In Chicago, the problem has been more critical. A militant black organization in Lawndale has demanded that U.S. Gypsum hire only black contractors, even though one of every two skilled workers at each rehabilitation site is a Negro and seven of every 10 craftsmen are nonwhite. "The fear that such militants will picket and ruin a contractor's reputation has driven many builders away from ghetto work," says Roy H. Chambers, former general superintendent for a Chicago construction company that has handled U.S. Gypsum projects. Mr. Chambers' former employer has cut back on his work, causing him to get a new job, he notes.

Even if U.S. Gypsum acceded to the Chicago militants' demands, it probably couldn't hire a competent construction company run by Negroes right away, admits George W. Collins, a Negro alderman in Lawndale. "While I agree that renewal work should be done by black people, the two or three black contractors in Chicago that know their stuff are up to their ears in work for months to come," he says. But Alderman Collins admits that knowing this doesn't satisfy the militants. "They've seen black people get the short end of the stick so long, they want a piece of the action day before yesterday," he adds.

U.S. Gypsum believes that reasonable demands of slum groups should be met. In many cases, the same organizations making the demands take over the projects from U.S. Gypsum with the aid of government subsidies that reduce interest payments on mortgages held by Federal agencies or banks to as low as 1% for the new, non-profit landlords. This keeps rents low enough—about $135 per apartment in Harlem—to enable slum residents to move back into the rehabilitated apartments with the aid of Federal rent supplements.

But the company often finds it is over its head in trying to help solve neighborhood social problems. "Big business alone can't clear up the nation's slums," asserts Mrs. Hortense Gabel, an urban development consultant here who is credited with interesting U.S. Gypsum in housing rehabilitation back in 1964 when she was rent and rehabilitation administrator under then Mayor Robert F. Wagner.

"There is no way to fix up rotting buildings and improve the upward job mobility and stake in society of the people who live in them without massive infusions of Federal money," she adds.

Incentives Needed

Some housing specialists believe that for corporations to make a profit on slum renovation, they must be given income tax relief as an incentive. "Otherwise they'll just continue tilting at windmills," says Neal J. Hardy, an assistant administrator for New York City's Housing and Development Administration and former commissioner of the Federal Housing Administration under President Kennedy.

Even the highly idealistic Mr. Collen at the Bronx urban renewal project admits that to expect a big corporation to relocate slum tenants in competition with the city, while renovation is being done, is "unreasonable." New York City, mostly with Federal money, pays displaced families an average of $650 for moving and relocation expenses, while U.S. Gypsum can only afford $50 for moving expenses to keep its project feasible and rents low.

U.S. Gypsum hopes to push its rehabilitation effort into the black by next month, but it recognizes that it may never earn a rate of return measured against usual housing construction. "Most builders aim for a minimum of 10% to 12% profit on investment, but right now we're aiming at 3%," says Jerry H. Pintof, president of the rehabilitation subsidiary. "This may not sound like much, but it certainly doesn't measure the contribution we may be making to the local communities and the entire field of slum rehabilitation. Who knows if we ever can?"

countered in converting old tenements into sound apartment houses, U.S. Gypsum met enormous public relations hurdles. Slum residents often want "too much, too soon," once they learn a big corporation is supervising the project, say U.S. Gypsum officials. A militant neighborhood group threatened to picket a U.S. Gypsum project in Chicago if Negro contractors weren't employed. And an East Harlem tough tried to intimidate the company into paying him $50 weekly protection to keep a rehabilitation building "free of fires."

So far the more unreasonable of these demands have been resisted by U.S. Gypsum officials. "We never stop talking with local residents, but we also know when to make our stand," says Mr. Obey. "If we didn't, we could never continue on these jobs without getting so intimidated that we could never complete our construction schedule." Three years ago, for example, he scared off the Harlem tough asking "protection" by threatening to go to the police.

Because doing business in the slums involves great social responsibilities, Mr. Obey often works as many as 60 hours a week. Birger Nilsen, a project superintendent for a local construction company who works for him, says he has become "a teacher, a father-confessor and a social worker" for the local residents.

Mr. Obey, for example, has had to show building residents how to defrost their new refrigerators. Many had ice boxes in their old apartments. "I've spent up to a half hour showing how to set the dial and where to put the water pan," Mr. Obey says. "Some have told me they're confused by the manufacturer's instructions but they've finally admitted they can't read."

One recent weekday the U.S. Gypsum official was stopped on the street by a resident worried about her friends who used to live in the apartment house before it was renovated. She told him a woman and her son now living in another old tenement have become ill and are "going to starve to death" unless someone brings them food. "I'll look into it, Mrs. Banks," Mr. Obey said. "That's Beatrice Banks and she's 76 and concerned about people," he adds, moving out of her hearing. "We'll have to get city welfare people working to help these people she's worried about."

As he surveys the construction work, Mr. Obey picks up a jagged-edged broken wine bottle from the sidewalk and deposits it into a nearby garbage can. "We find the tenants generally follow the example of the builder—at least for the first few months," he says.

Seeds of the Slum

A tour of a six-story building renovated by U.S. Gypsum in East Harlem reveals that entranceways and stairs have been kept clear of the litter and bags of garbage that is strewn in hallways of nearby dilapidated tenements. But inside some apartments, which have been occupied since only early March, the seeds of the slum are already evident. Rumpled clothing and candy wrappers are scattered on the floor, amid unmade beds and on window sills. One tenant, a 35-year-old Negro woman on welfare, has six children and says she and her husband are separated. A man, whom she describes as a "friend," sits in the living room watching TV.

Tenants say life is much more pleasant in their new surroundings. A 42-year-old mother of three says she "can now go shopping without worrying that the furniture will be ruined when I get back." In her old apartment in the same building, plaster fell from the ceiling and water pipes in the wall leaked into the living room. Two appliances would blow a fuse.

U.S. Gypsum bought the building, removed all interior walls, put in new retaining partitions to prop up sagging floors and installed new electrical wiring and plumbing. All new apartments were given bathrooms, and old bathtubs were removed from kitchens. Unsightly overhanging roofs that mar the building line of most old tenements here were replaced.

Unexpected construction faults, such as previous fire damage that had been con-

State Charged With Ignoring Minorities in War on Crime

By PETER H. BINZEN

Of The Bulletin Staff

Two national organizations charged today that Pennsylvania has failed adequately to involve minority groups in its federally-financed anticrime effort.

Urban America and the Urban Coalition also suggested that the Commonwealth was earmarking too much money for police improvements and too little for the courts, correctional institutions and other criminal-justice activities.

The findings came in a joint study of planning in 12 urban states under the Safe Streets Act of 1968. This law required states to plan reforms in their systems of criminal justice as the basis for federal grants-in-aid.

$12 Million Expected

Pennsylvania received $881,-650 in planning funds and $1,186,-711 for programs in the fiscal year ending two weeks from Friday. In the next fiscal year it expects to get $12 million.

The study accused the 12 states of restricting planning roles to a small number of professionals in law enforcement, courts and prisons and a few elected officials. Businessmen, community agency representatives and citizens living in high-crime areas were generally excluded, the two organizations charged.

They singled out for criticism Pennsylvania's 40-member advisory council on implementing the Safe Streets Act. They said the council was composed almost exclusively of "criminal justice personnel, law professors and elected officials."

Absentees Noted

"Conspicuous by their absence," the report said, "are representatives of the poor or minority groups, private businesses or organizaitons, and officials of agencies in such fields as welfare, health, or manpower whose concerns relate closely to crime."

The report quoted an unnamed Pennsylvania planning staff member as telling an interviewer:

"Criminal justice is an issue for the experts; the 'minority' question should not be brought into it."

J. Shane Creamer, the Pennsylvania Crime Commission's executive director, said he couldn't believe the statement was made by a member of his staff because it ran directly counter to the commission's thinking.

Soul-Searching Promised

"The system of criminal justice has been left too long to the so-called experts," he said. "We are committed to the broadest possible representation."

Creamer said he believed the poor were adequately represented in planning Pennsylvania's crime control and criminal justice reforms but added:

"This is a very serious allegation and we'll do some soul-searching. We want to look into this very carefully."

Advisory council members are appointed by the governor. There is no chairman but Attorney General William Sennett has been presiding at meetings. Among the members is Philadelphia Police Commissioner Frank L. Rizzo.

Creamer said three legal representatives of the poor now are sitting on the advisory council while a dozen others are members of the state's eight regional councils.

The joint study charged that the "heavy representation" of law enforcement officers on the advisory council might explain Pennsylvania's allocation of crime-control funds. It said the state was spending $1 million on police of a total federal-state allocation of $1,949,000.

Creamer took issue with this finding. He said only $500,000 had been "tentatively programmed" for police.

Some Cities Cut

The report also charged that cities in all states surveyed were being cut out of planning anticrime programs because of the failure of regional advisory councils to start functioning.

Creamer said that six of Pennsylvania's eight councils are now functioning and the other two will be in business in 10 days or two weeks.

One of the active councils is Philadelphia's. It is headed by Common Pleas Court Judge Frank J. Montemuro. Among its 21 members are half a dozen minority-group representatives.

Ghetto Gangs Go 'Conservative'

By RALPH de TOLEDANO

In the semantics of our times, the word "conservative" has had many meanings — some good, some bad. But now it has picked up a new one which should baffle those who think of it in terms of hard-hearted Simon Legrees out to grind down the poor.

DeTOLEDANO

In the ghettos, "conservative" now applies to those gangs and depredators who have changed their ways and now work to improve themselves and their environment. In Chicago, for example, a gang known as the Vice Lords has changed its name to the Conservative Vice Lords, Inc.

This is how the leader tells the story:

"As a gang," he says, "we ruled the streets of Lawndale. Cars were stocked with shotguns, we were mauled in street battles, and many of us were arrested and sent to jail. But now that's over . . . We began to become a conservative club one evening when we were sitting around — some drinking wine, some pitching pennies, and others were getting their heads together in secret. About eight leaders from different sets were together at one of our hangouts. We were talking about close calls with death and how the chances of being cut up for life were pushing in.

• • •

"WE WERE INTERRUPTED by one of the younger guys who told us he wanted to take about 50 guys later that night to make a fall. Why? They wanted to take up where we left off, to hurt anyone or everyone who walked the streets that night.

"We sat up all night. We told them how we saw people die, people begging not to be hit with a baseball bat any more, how guys got cut up. They said, 'Well, we got to have something to do. We can't get jobs, we're too old to go back to school, we're too big to play games. What else is there to do?

"We told them we didn't want them to hurt anyone and we would try to find something for them to do. Most of them wanted jobs. Others didn't care what they got — they were just tired of the same old routine."

When the Vice Lords went conservative, they didn't change their structure. The first runner became president, the war chief became program director, and the war lord took charge of public relations. They take on direct-service programs and try to support them through profit - making ventures. They usually need outside financial help at the beginning, but they try to make everything self-supporting.

• • •

IN PHILADELPHIA, an 11,000-member group which now calls itself the Young Great Society bought five old school buses, running excursions and contracting with the board of education and the University of Pennsylvania to transport students.

YGS also operates a halfway house for kids from problem homes, a day-care center for working mothers, and an alcoholic and narcotics center in conjunction with two hospitals. It set up Mantua Enterprises, Ins., named after the gang's West Philadelphia turf, which manufactures pillows, blankets, window cases, and electrical parts.

The Real Great Society in New York established a "University of the Streets" and in the first year registered 1,600 students in classes ranging from English and mathematics to art and the theory of jazz. The Way in Minneapolis operates the Chain Gang Laboratory School for 75 problem children.

Behind this conservative program is an organization called Urban America, Inc., and one of its most energetic participants is Lelan Sillin Jr., president of Northwest Utilities. Through its national co-ordinating office, Youth Organizations United, it has helped organize one-time criminal gangs into socially useful groups helping to bring work and hope to the ghettos.

Urban America and YOU know that It's "a long chain from a gun to a briefcase." It knows, too, that it can succeed only if those who argue that the rehabilitation of the ghetto must be the job of an aroused citizenry rather than a federal program to put their money where their mouths are. This means money and active support. If you agree, the address is 1717 Massachusetts Avenue, N.W., Washington, D.C. 20036. The hint couldn't be broader.

THE NEW YORK TIMES, SUNDAY, MAY 11, 1969

'Urban America' Aiding Five Nonprofit Groups

Urban America, Inc., which is dedicated to improving the social and physical environment of cities, has made seed-money loans totaling $154,500 to five nonprofit community organizations to help them develop housing for poor and moderate-income families. They were the first loans approved under a $500,000 revolving loan fund established through a Ford Foundation grant to Urban America.

The single largest loan of $50,000 went to the Committee for North Harvard, Inc., an interfaith community organization in Cambridge, Mass., representing two Roman Catholic parishes, two Methodist congregations and a Jewish congregation. The committee plans to construct 200 dwelling units in eight garden-apartment structures with space for a health clinic, a nursery school and shopping facilities.

The Concord Baptist Church in the South End section of Boston received $35,000 to aid in development of three highrise towers with some 300 family units for the elderly. Three loans totaling $44,500 were granted to the Freedom Development Corporation in Chicago, which proposes to buy three old buildings with 96 units and rehabilitate them.

A $5,000 loan to the Roman Catholic diocese of Austin, Tex., will permit it to retain an option on land where it proposes to build 170 housing units. An earlier emergency loan of $20,000 to the El Segundo Development Corporation in the Watts section of Los Angeles will permit it to acquire 900 single-family homes that would have been demolished for a new runway approach zone for jet aircraft. The houses will be removed to another site and rehabilitated.

THE NEW YORK TIMES, SATURDAY, JUNE 14, 1969

Plan for New Cities

If all the people in Britain and France were suddenly to move to the United States, the people of this country would be staggered by the size and complexity of the problems involved in finding houses and jobs for such an influx. The same number of people—approximately 100 million—is going to take up residence in this country over the next thirty years if the birth rate continues at present levels. Yet very little is being done to prepare for this vast expansion, and the public is largely unconcerned.

The report of a committee of Congressmen and Federal and local officials, sponsored by Urban America, has brought the consequences of the American population explosion into focus. It proposes a plan to build a hundred new small cities of about 100,000 persons each and then new metropolitan cities of about a million persons each. Much wider practice of birth control would curtail the need for such communities, but the committee's assignment was to deal with the reality of existing population trends.

Drawing upon the experience of the "new towns" in Western Europe as well as the few in the United States, the committee proposes a Federal-state program of grants and loans to local development corporations which would assemble land, construct the houses, utilities and community buildings, and attract businesses and industrial plants. The ideal is to achieve balanced communities in which people would work as well as live and where future growth would be planned.

New cities are urgently needed, and the legislative proposals set forth in the report appear to be workable ideas for getting on with an enormous job.

There are two imponderables which only more American experience with planned communities can clarify. The first is the effect of the automobile which enables individuals to live long distances from where they work. No people is so addicted to automobiles or so accustomed to relying upon them as is the American people. The effect of the automobile may be to turn new cities into bedroom suburbs rather than balanced economic communities.

A second imponderable is race. No European country has had much experience in developing new towns which are also racially integrated. Integration in a new city ought to be easier than in an old city with sharply defined community patterns, but experience in the southwest section of Washington, D.C., and in other urban renewal areas is not wholly reassuring on this point.

Despite these imponderables, the sheer pressure of population makes the planning of new cities imperative. The report underscores the need of this urban nation for a national urban policy on land use and development. The patchwork of local decisions and private initiative has failed to cope with today's urban sprawl. It cannot hope to manage tomorrow's urban explosion.

Newsweek, June 16, 1969

THE CITIES

New Styles for Streets

Unless one is seeking them out, U.S. city-street fixtures tend to slide across the eyeball like garbage on a polluted stream. Ignoring them is a defense mechanism, of course, because today's streetlights, trash baskets, mailboxes, telephone booths, directional signs and all the other effluvia of the urban streetscape are simply not fit to be seen. Designed for function alone, painted a municipal drab, they constitute one more ugly, mind-deadening element in what one critic calls "the urban ashtray."

Yet to a small but determined band of environmental designers, such fixtures carry the lofty designation of "street furniture." What's more, these designers subscribe to the novel notion that street furniture should be fashioned with the same concern for esthetics that helps shape furniture produced for the home. They rarely shout about it; they realize full well that such considerations reside on the back burner of urban priorities. But sooner or later, they contend, street furniture will have to be removed from the lengthening list of visual pollutions.

Total Effect: At least a few cities appear to be trying. One example is San Francisco, where a $24.5 million project to renovate 2 miles of downtown Market Street includes a remarkably integrated plan for street fixtures. The designs of everything from telephone booths (plain glass rectangles topped by plexiglass domes) to traffic signals (railroad-style semaphores with lights suspended from one arm of a pole, street-name signs suspended from the other) have all been marshaled toward a total effect. "We consider it micro-architecture," says the street furniture's designer, William Blackwell. "We're trying for a design that will still be pleasing twenty years from now."

In Washington, an equally coordinated effect has been achieved within a grandiose renewal project called "L'Enfant Plaza." Visitors to the plaza mall, which sprawls over six square blocks of former waterfront slum, are instantly struck by such innovative street hardware as twin streetlight poles, supporting both directional signs and litter receptacles, and tasteful revolving kiosks that quietly advertise the plaza's stores and services one level lower. Ironically, the stores have not been luring their expected business, and disgruntled merchants are pinning the blame partly on the low-keyed kiosks. That raises a depressing question: has the American psyche been so desensitized by the perpetual assault of ugly, chaotic information that it is incapable of noticing signs that are organized and handsome?

Hang-up: A more immediate stumbling block lies at the governmental level. This time the major hang-up is not money. "Good design doesn't cost any more," claims Chicago architect John Cordwell. "With all the stamping processes we have in this country, there's no excuse for a bad wastebasket." What's choking off most of the motivation toward reform is the boggling number of official agencies that have a say in the subject.

Washington's street fixtures, for example, require sponsorship, installation or maintenance from no fewer than 25 departments. While complicated items like power lines understandably call for such multimanagement, it is hard to imagine why four separate agencies must oversee public benches. Even trash bins have two masters—the sanitation department for sidewalk baskets and the park service for trash cans in the park.

Yet Washington is at least starting to grope for a coordinated approach. The Department of Transportation commissioned Urban America, a private Washington-based organization, to come up with a sort of national blueprint for coordinating street furniture. As reported in a study completed this week, the aim is to encourage the creation of an intercity advisory team that will develop unified design specifications, then pass them along to industry.

In the meantime, a handful of communities are going their own way with some imaginative, if modest, experiments. In San Antonio, bunches of purple flowers geyser from the tops of some litter baskets; beneath the flowers lie drawers for the placement of trash. Los Angeles has installed clusters of clear globular lights—mounted hatrack-style on aluminum poles—in a new office and shopping complex. A sidewalk in Washington carries a series of trim, metal-thatched trash containers anchored to matching grates. At Boston's Park Square, tourists can get tips about the city from a phalanx of balloon-topped, mixed-media kiosks. Maps point out directions while slides and sound movies illustrate upcoming events.

Somewhat similar information kiosks now stand outside New York's Bryant and Central parks, while the city's news vendors are now able to acquire well-styled, aluminum-and-glass newsstands to replace their shabby wooden ones. Manhattanites, however, may no longer enjoy the blessing of garbage trucks that blend quietly into the streetscape. Redesigned and painted an innocuous white two years ago, the trucks apparently blend in so well that motorists have been plowing into them during snowstorms. As a result, the Sanitation Department is considering repainting them a loud orange.

Perhaps, among other things, the movement needs a national champion. Lady Bird Johnson's beautification program, for example, not only endowed Washington with fresh flowerbeds but inspired the postal department to paint its mailboxes a cheery red, white and blue. With Lady Bird gone and the budget for beautification drastically slashed, the solution seems obvious. "Mrs. Nixon needs her own thing," suggests a city official. "Why couldn't she crusade for better street furniture?"

Tupelo (Miss.) Journal 4/16/69

Nation Said Still Not Moving Toward Better Houses For Poor

WASHINGTON (UPI)—The said truth is that after a year of government and private studies and ungings, the nation still is not moving much faster toward better housing for the poor.

Sadder still is the conclusion that not much progress can be made until the nation in general changes its negative attitude to the poor—and especially the poor of minority groups.

These points were driven home recently by yet another committee formed to study the studies and pass on the recommendations of the committees which previously have scrutinized the problems of our cities.

And this report, by the combined staffs of Urban America Inc. and the Urban Coalition, the two private research centers here on city problems, was especially critical of the progress—or lack—in housing.

The report minches no words about the nation's housing plight. It notes that both the Kaiser Commission and the Douglas Commission on urban housing problems "have told the nation all it needs to know—perhaps more than it wants to know—about housing problems and programs."

Poor Condition

It also noted that out of the nation's 66 million housing units, 2.7 million are rundown, 4 million are without indoor plumbing and 6 million are overcrowded.

The report was bitter about congressional leaders who approved rent support and homeownership programs and then refused to appropriate the money to get the programs started.

It also criticized congress for passing a fair housing law in 1968 and then giving enforcement agencies less than 20 per cent of the funds needed to make the law a meaningful one.

"As long as such obstacles stand, it will be impossible to achieve the (Douglas) commission's goal of opening broad new housing choices outside of the ghettos to the minorities and the poor," the study stated.

"And as long as this remains impossible, it will be unlikely that the 1968 Housing Act's production goals for subsidized housing will be achieved, even with an increase in public and private investment."

Gen. Schriever to Key Role Of Business in Slum Erasure

(M 9S)

By ROBERT B. SEMPLE JR.

(Copyright 1968 by The New York Times)

WASHINGTON—The secretary of housing and urban development, Robert C. Weaver, will shortly appoint one of the nation's most respected military figures — Gen. Bernard A. Schriever—as a special consultant for "business participation." The appointment will be another step in the effort to enlist the support of private industry in the fight against slum housing.

Weaver is also expected to announce formally the establishment in his agency of an office of business participation, to be headed by Robert A. McAuliffe, a systems planning executive from the International Business Machines Corp. McAuliffe's deputy will be Robert Lubinsky, presently director of the housing agency's neighborhood facilities program.

Schriever, highly regarded both in and outside the military profession, was responsible for developing the nation's intercontinental ballistic system. As head of the Air Force Systems Command, he supervised not only the research but also the production phases of the missile program. He retired from the Air Force in 1966.

His appointment and the establishment of the office, which are expected this week, are tied closely to President Johnson's recent message on the cities.

The message called for the construction of six million housing units for low and moderate-income families over the next 10 years, and offered a major role in the project to private enterprise.

The message suggested that business would not only be asked to carry out the construction of these units—with appropriate government incentives—but would also be called upon to develop new technological means for reducing the cost of housing and speeding the construction process.

According to informed sources here, Schriever would have at least two major functions: To find out precisely what business could do to solve the urban crisis; and to develop ways in which the government, by tax and other incentives, could encourage business participation in the slum-rebuilding process.

Schriever's new role will not require his resignation as head of Schriever associates, a management consultant firm near Washington. Schriever has been organizing a consortium of systems-oriented business firms to help solve urban problems. The consortium would, in effect, "rent out" its services to individual cities in need of skilled planning assistance.

The Office of Business Participation will deal with many of the same questions that will concern Schriever.

Eugene Patterson

The Facts of The Matter

Dixie Hills, where the trouble started, is not a slum, though isolated. Most of its streets are paved. It has a neighboring park. Economic Opportunity Atlanta runs one of its most active antipoverty centers there to help meet needs.

But the Negro residents feel a fear—fear dating far back into the past, fear requiring remedial efforts far into the future—a fear of policemen (and because fear feeds on itself, the police fear them.) They have needed a pathway to shorten the distance to the neighboring park. They have felt the bind of low wages paid for unskilled jobs, and high prices charged at the grocery store.

* * *

But most important of all, perhaps, they have lived with joblessness.

A very large number need work.

Older men with or without skills, and younger people consigned to idleness, need decent jobs.

EOA has helped. A variety of federal and state programs has helped. Private enterprise has helped by creating an economic boom in Atlanta. Everything that could normally be expected as treatment for short-term symptoms is being administered, amid much grumbling from the comfortable.

But the abnormal illness persists. Men need work. There isn't enough work for the unskilled; there aren't enough openings offered in businesses or unions for the skilled.

* * *

Masses of Negroes are outside the economic boom, for obvious reasons. Prejudice against their color persists. Comfortable firms and unions ignore the discomfort of those shut out, and most often bestir themselves to do something affirmative about it only when the federal government prods them out of the torpor of their own security. They are products of inferior schooling, inflicted upon them by segregation; yet they hear whites who segregated them demanding to know why they aren't as "qualified" for jobs now as whites are, and then they see even such a modern county as Fulton twaddling about desegregated schooling for their children too, instead of driving with maximum effort to salvage a generation. And even if the Dixie Hills man got a job that paid enough to enable him to move his family to a nice house in the suburbs he knows—as the white suburban reader full well knows—that he would have mighty poor luck finding one for sale to him.

So round and round it goes, this three-spoked wheel with a flat—jobs, housing, education—while the comfortable try not to think about it, and the uncomfortable can think of nothing else.

Violence, hatred and riot can't help the situation; they hurt it by giving the comfortable an ersatz justification for their unconcern, which is SNCC's supreme folly. But the problems are not going to go away. They are intensifying, and reaching a point where some decisions are going to be required by this society. Repression can put down a riot, and should. But denial of the existence of cruel problems cannot be put away from Atlanta's conscience. Until schools, housing and jobs are opened fully to Negroes Atlanta will be a house divided against itself. Schooling, and housing which is related to it, can rescue the future. Only jobs can salvage the present. But first, a decision must be made by the comfortable.

Neighborhood Stabilization

Trade Chief Hunt Is

The question of who will be the new director of the State Department of Industry and Trade was still up in the air Wednesday—way up.

A board member said Wednesday the board is in a dilemma at this point because Gov. Lester Maddox continues to veto every prospect it comes up with.

Although the industry and trade board has the constitutional authority to name the director, there was an agreement with the governor — in an effort to maintain harmony after the recent controversies surrounding the department — that there would be a mutual agreement on the new director.

"We have had four or five outstanding people in mind and the governor won't agree on any of them," a board member said Wednesday.

THE 'WORST' BLOCK IS NO LONGER THAT

First Rehabilitated Home Is Occupied in Harlem Area

By STEVEN V. ROBERTS

Cynthia Ashe, 1½ years old, wore a pretty pink dress and a look of utter bewilderment yesterday as her mother received the keys to a glistening new apartment on East 100th Street between First and Second Avenues. The apartment is in what was once called the "worst block" in the city.

The Ashes were the first family to move into one of five tenements that are being rehabilitated by a group of community organizations in the East Harlem neighborhood of Metro North.

The group, called the Metro North Housing Society, has also signed an agreement to purchase 12 more tenements in the neighborhood, now being renovated by the United States Gypsum Company.

The members of the society are Union Settlement, St. Lucy's Roman Catholic Church, the Church of the Resurrection, and the Kate Maremont Foundation. The 17 buildings will be financed by Federally insured, low-interest mortgages totaling almost $5-million.

The New and the Old

As 100th Street echoed with cheers, laughter and band music, life went on routinely around the corner, on 101st Street. Idle youths scuffed at the cracked sidewalk. Some snapped their fingers to the blare of Spanish music in a dingy storefront. The stench of rotting garbage in the basements of the grim tenements pervaded the glass-strewn street.

The residents of Metro North are making a determined effort to renew their neighborhood, but the scenes on the two streets indicated yesterday what a big job they have.

The community has drafted plans for redevelopment of the entire area from 99th to 104th Street between Second Avenue and the East River. Work has already begun on 275 units of public housing, and Federal grants for almost $1-million have been requested for a plaza and several small parks.

Local groups also plan to sponsor one of the first combined housing and public-school developments along the river between 100th and 102d Streets. And they are encouraging private landlords to refurbish their own stores and apartments on the major avenues.

Five years ago the decay and degradation of East 100th Street led journalists, in a series of newspaper articles and television shows, to call it the city's "worst block."

Through the community's efforts, the block is no longer the "worst." But unemployment and the other indexes of social and economic blight such as low average family income and narcotics addiction, remain high. A job-counseling service that opened last year on 100th Street is now closed, the victim of dwindling antipoverty funds.

While the housing society will own and manager the renovated tenements, the Ashes and other tenants—working through the Metro North Citizens Committee—will set the building policy on such matters as maintenance.

The committee has subcommittees concerned with everythings from parks to relocation. Recently it convinced the City Housing Authority to reduce the public-housing development from two 20-story towers to several lower buildings that would blend in better with the six-story tenemants in the area.

The 27 families who will live in 310 East 100th Street with the Ashes have been staying temporarily in other buildings on the block.

Rents have doubled in the building, which was almost completely rebuilt, but Federal rent subsidies will supplement the income of the poorer families. Officials estimate that it cost about $12,000 to renovate each apartment and to outfit it with a new bathroom and kitchen appliances.

Franklin A. Thomas

Stuyvesant. He now lives at 25 Eastern Parkway, just a few blocks outside the predominately Negro area.

But the roots that Mr. Thomas, himself a Negro, still holds in the area are a part of what draws him back now.

"This area is home to me," he explains. "My mother and sister still live there and I'm only a block away. You dream of a chance to go back like this."

He was urged to take the job not only by city officials but also by Senators Robert F. Kennedy and Jacob K. Javits. But he also feels that it is important that the corporation wanted him too. "They came to me," he said. "They asked me to take the job."

The corporation the 32-year-old former Columbia College basketball star will head is one that was born in controversy.

About five months ago, Senator Kennedy and the Central Brooklyn Coordinating Council formed another group—the Renewal and Rehabilitation Corporation—to channel public and private funds into the community for a wide variety of housing, antipoverty and educational programs.

The corporation's board was heavily weighted with leaders of the coordinating council, a federation of more than 100 local religious, civic and fraternal groups. The board's chairman, Civil Court Judge Thomas R. Jones, soon began advocating the expansion of the board to include more young people, trade union leaders, representatives of civil rights groups and Puerto Ricans.

What ensued was a dispute that ended with Judge Jones walking out of the original group and forming the new corporation, which quickly won approval of political and business leaders.

But it left a split in the community that offers an immediate challenge for Mr. Thomas. "I hope to act as a cohesive force," he said. "The trick is to get started and we need unity to take a step."

A. Remaley Jr., appeared in Suffolk County District Court here for arraignment on a charge of first-degree murder in the slaying of Mrs. Christa arfero, 21. Judge Morton issman ordered that he be ined by psychiatrists of Islip State Hospital.

Property-Insurance Bill Clears House Unit

Measure Would Let U.S. Write Policies

9/30/70

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—The House Banking Committee approved a bill that calls for the Federal Government to write property insurance in cases where private insurers charge rates judged to be too high.

A slightly milder version of the same measure passed the Senate last week.

The House committee's provision is contained in a wide-ranging but fairly noncontroversial housing bill that was cleared yeserday for floor action. Among other things, the bill extends various Federal Housing Administration programs and authorizes continued spending for urban renewal, public housing and Model Cities projects.

In a related action, the committee voted unanimously to investigate alleged abuses in the operation of some Federal housing programs. The committee staff has found evidence suggesting that some Federally subsidied and insured loans were being used to finance existing houses "which were little better than slums . . . and houses which had been given very high and completely unwarranted price markups" in a brief time.

Banking Committee Chairman Patman (D., Texas) complained yesterday that the Housing and Urban Development Department has reacted to the staff material "in a self-serving manner" and has dismissed the findings a "insignificant and unwarranted."

The Banking Committee measure would re quire the inclusion of crime and fire insuranc in companies' state insurance pools. It als would provide for direct Federal writing of a property insurance if excessive private or po rates oculdn't be justified by state regulator to the satisfaction of Federal authorities. Ex cessive rates are defined as those equal t 175% of the minimum for the insurance cate gory.

The Senate bill doesn't use the 175% guide line. Instead. it refers to "affordable rates. The HUD Secretary would have to decid whether rates in a state were higher than res dents could afford.

Also, the Senate bill provides for a one-yea delay before the Federal program takes effec The idea is to give state legislatures time t adopt a state program providing insurance a "affordable rates." A further difference is tha the Senate bill applies only to burglary an theft insurance.

If, as expected, the House passes the com mittee measure, House and Senate conferee will seek to work out a compromise version.

Among other issues presumably to be re solved by conferees is a provision in the Senat bill that would lower the minimum down-pay ment requirements of the FHA's basic home mortgage program. The House committee bi doesn't contain such a section.

Under the Senate provision, buyers of FHA insured homes would have to put down 2% the first $15,000 of appraised value (rather tha 3% under present law), 10% of the value be tween $15,000 and $30,000 (rather than betwee $15,000 and $25,000 as at present) and 20%

PROM Center St. Paul, Minn.

ENVIRONMENT IS ALSO A SMALL TOWN

THE SMALL TOWNS INSTITUTE was founded to do something about the decline of small town and rural life in America. Our first task is to bring together a membership who shares this concern and supports us in an all-out quest to find answers to the problems small communities are facing in an expanding urban society. STI is non-profit and tax deductible. Our efforts will focus on education, research, and on increasing the role of high schools and colleges in helping small towns to survive as healthy communities. We would appreciate your support and membership.

THE ENVIRONMENT of a small town produces far more creative people than does the environment of a large city. Small towns must be allowed to continue to provide youth with this unique educational experience, if even cities are to solve the problems of this decade.

Educators, businessmen, and those in political life must become increasingly concerned about today's threats to their communities. Youth are leaving in such great numbers that the future of both local government and small business is threatened.

Other problems for action include: housing and rural poverty, decline of the family farm, manpower and job development, quality of education, aging and retirement, medical and nursing facilities, environment and rural ecology, downtown revitalization, utilities, public services, and the improvement of local cultural institutions. All of these problems must be solved if small towns are to remain viable communities.

TODAY'S EXPANDING POPULATION requires that we solve these growing social and economic problems with increasing concern for the physical surroundings that have made most small towns ideal places to live. The small town environment must become a part of our educational program, and be an increasing factor in planning for growth and development of a community.

STI is concerned with developing new programs to solve these problems threatening small towns and rural America. Your membership or contribution will help to develop practical new programs for community revitalization, and will enable us to provide graduate fellowships to encourage students to focus their studies on the problems of small towns.

ALL DUES AND CONTRIBUTIONS ARE TAX DEDUCTIBLE

THE IMPORTANCE OF RURAL DEVELOPMENT

HON. CATHERINE MAY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 16, 1970

Mrs. MAY. Mr. Speaker, on February 9, our distinguished colleague, Mr. EVINS, who has done so much to emphasize the importance of rural development as an integral part of any effort to find solutions to both rural and urban problems, inserted an article by former Deputy Undersecretary of Agriculture James L. Sundquist.

Knowing it would interest him, I sent the article to Dr. Clayton C. Denman, the president and codirector of the Small Towns Institute in Ellensburg, Wash. He and his colleagues at the institute have been, and continue to be, deeply and constructively involved in developing programs directed toward the revitalization of small towns in America.

Dr. Denman has now responded—and because his thoughtful comments merit the consideration of all of us who are involved in the problems of rural, as well as urban, areas of our country, I am submitting Dr. Denman's letter and remarks at this point in the RECORD:

MARCH 6, 1970.

Hon. CATHERINE MAY,
2332 Rayburn Building,
Washington, D.C.

DEAR MRS. MAY: Thank you for bringing my attention to Mr. James Sundquist's article on small communities published in the *Washington Post* on February 8th.

I have two rather opposite feelings in reading this analysis: basically it is an excellent description of the real situations facing small town and rural America. While I would agree that we are not now well organized, I resent his implication that the business of revitalizing small towns must be managed by urban rather than small town institutions.

Mr. Sundquist is obviously not aware that small towns are concerned about the problems of which he speaks and that a Small Towns Institute already exists. But the failure of small towns and rural communities to actively pursue programs of revitalization lies in the fact that we are not able to exert the pressures on business and government that urban leaders have at their command. The Urban Institute of which Mr. Sundquist speaks, for example, is a federally chartered corporation, and the director alone receives an annual salary of $50,000. By contrast the Small Towns Institute was organized by small town people and our entire income in 1969 was less than $500. Perhaps Mr. Sundquist's insights are really predicting our failure rather than criticizing our initiative.

As Co-Director of the Small Towns Institute I have been seriously concerned with the influences that urban-oriented planners will have on rural communities and small towns. Last February 5 I was asked to speak at a public gathering in the town of Zillah, Washington, sponsored by the Zillah Lion's Club. The enclosed transcript of my remarks indicates much of the Institute's concern with encouraging small town leaders to plan the future of their own communities.

I would be very pleased if you could support our point of view with publication in the *Congressional Record;* or at least forwarding a copy to Mr. Sundquist.

Thank you for your continuing help to our program.

Sincerely yours,

CLAYTON C. DENMAN,
President and Co-Director.

SMALL TOWNS ARE THE FUTURE OF AMERICA

(By Clayton C. Denman)

Recent concern with environmental pollution has pointed up crucial reasons for considering small towns an important part of America's future. Those of us who live in rural communities or small cities are relatively free of the problems that come from crowding and overpopulation. We already enjoy life styles much like those which city planners and urban engineers hope to create in the future, perhaps in "new towns" now being proposed as a way of relieving urban population pressures. Small town residents whose communities are in a state of economic decline have a simple problem to alleviate compared to the urban dweller's task of finding solutions to crime, smog, and overpopulation.

Most of the 72 million people now living outside of urban complexes enjoy low crime rates, minimum air and water pollution and less social decay than the majority of Americans living in big cities. We all know that small towns do have serious problems of poverty and unemployment, but these conditions are largely a result of economic pressures and technological change and not the result of overpopulation and lack of rational planning for change. It took protests and even riots before the cities started planning; and then it was through the efforts of private organizations such as Urban America Inc., the National Alliance of Businessmen, and the Urban Coalition that the fight for remedial programs was undertaken as soon as it was.

To the urban planner of today, small towns seem to be existing in a state of apathy regarding their own problems, a view which has led some analysts to suggest that if small towns are to be revitalized, the leadership will have to come from the cities. If these people are right, it will not be because small town leaders are not capable of their own planning, but because they have not organized to make themselves heard in the policy-making centers of this country. In fact, as a group, small town leaders were active in pointing out and solving problems long before urban planners became aware that cities were headed for disaster. The main reason for this is that small towns have retained a sense of community—the essential social ingredient that enables men to work together. This is something that cities have lost, something that they try to re-create in "new towns"; it is also a reason that they are hungrily eyeing our small towns as places to direct their unwanted populations.

Most of us will welcome new members to our communities, especially if they are accompanied by small industries fleeing overcrowding and decay. But I also suggest that we retain control over the process of redevelopment; that we must have funds for retraining and housing, for expanded public and private utilities, for preventing a repetition of pollution that fouls the cities, and for the necessary expansion of educational facilities.

This means that small towns will have to organize, will have to support organizations such as the Small Towns Institute which have their origins and interests in small towns and their goals the economic revitalization and continuity of community functions in the towns they serve. Since its founding over a year ago, the Small Towns Institute has been concerned with developing a more modern economic base for small town life, new ideas for prosperity of the small businessman, the family farm, the retired and the elderly. We have also attempted to develop opportunities for youth in small towns—opportunities leading to the continuity and increased prosperity of institutions that make up the "sense of community."

We have been particularly concerned with developing a program that would encourage small town leaders to guide community affairs and to bring the economic benefits to local institutions. We have not played the role of "big brother" to the small town, opening up new resources for large industries and thereby destroying the right of the small entrepreneur to increased benefits from an expanding economy and population. We have thus forfeited financing and donations from large corporations and investors. It is for these and similar reasons that there are not many small town organizations compared to the proliferating and well-financed urban institutions; for most of these are begun by those already prosperous. But it is untrue that small towns and rural communities are not aware of their problems or are not capable of speaking out and of planning for future prosperity. The only thing lacking is a measure of aid in the form of increased communication among towns and a voice in decision-making processes.

PRESENT CONDITIONS

Many small towns suffer from conditions of economic and population decline—factors which contribute significantly to poverty and decay of housing and business properties, to poor educational and medical facilities, and to continued unemployment. I might point out, however, that these conditions are a result of economic and technological changes created in, and for, urban needs. Agricultural technology is a product of urban industry and city oriented marketing and pricing systems. High paying jobs—the "better opportunities" of educational advertising—are creations of urban demands for goods and services. These and similar conditions have all combined to stimulate out-migrations from small towns and farms, leaving behind people more dedicated to rural life styles than to visions of vast wealth. Some of us are, like myself, returnees to small towns, some are struggling small town businessmen, some are retired, and many are living in poverty conditions as a result of technological unemployment. All of us, however, have chosen to maintain small town life styles; to save these values we must now adapt them to modern conditions in our society. This should be our job, not that of those who have already failed in the cities.

I would agree that housing in many small towns is in need of replacement, and that incomes, educational facilities, medical services, and public utilities need improvement. But we should not allow city oriented planners to equate rural or small community life styles with poverty, nor to demean the average small town dweller for not having aspirations for a $450 a month "middle income" apartment.

Small towns are good places to live precisely because they lack the pressures of cities; because they offer a more personal and serene atmosphere; and, I repeat, have a sense of community and cooperation. All citizens benefit from closer association with the elderly, with young people, with farmers, businessmen, with teachers and with one another. These are some of the factors that have attracted the attention of city planners, as well as the more often expressed reason of open space.

In the past, government policy and attention was focused almost exclusively upon the cities. Urban conditions had resulted in riots,

rising crime rates, unemployment for minorities; school, housing, employment, and transportation crises; as well as an increasing breakdown of traditional family living and rebellion among youth. No one seemed to realize that a major cause of these urban problems was increasing population pressures on an urban system that was designed for much smaller numbers and for the life styles and technology of the past century.

Increasing urban population was not only a result of a rising birth rate after World War II, but of a massive out-migration of young people, farmers, and especially unskilled minorities from rural areas. Most of this migration was a direct result of change in technology, but a good proportion of it was in response to a false belief that a better life was to be attained in the cities. We now know that the city offered millions greater hardships than it did answers to dreams. It also left many small towns with decreasing populations; small businesses, schools and town governments with new problems; and a self-fulfilling prophecy that small town and rural America were on the decline.

MYTHS AND FACTS ABOUT THE SMALL TOWN

It wasn't too many years ago that small towns were looked upon as the backwaters of America, as places forever alien to the progressive and exciting life in the cities. Small towns have suffered from this mythological image fostered by negative thinking in such novels as Sinclair Lewis' *Main Street* and Edgar Lee Masters *Spoon River Anthology*, two early twentieth century literary works which presented small towns in a light of "conformity, stupidity, loneliness, and physical ugliness," in addition to ideas about an entrenched elite who ran the community from behind the scenes.

These beliefs were perpetuated by many professional community studies that did not go far enough to understand the diversity that exists in every community. Even Robert Lynd's classic study of *Middletown* in the 1920's and 1930's failed to point out that the economic conditions producing poverty and a confirming class structure had their roots, not in the small town community, but in the reflection of urban conditions on agriculture and small town industry. It was not until the publication of Aaron Wildavsky's book *Leadership in a Small Town* (1964) that even the objective social scientist began to understand the diversity of interest and process in small communities.

In the past ten years, however, these out-of-date myths have rapidly dissolved. Academic researchers are now aware of diversity in small communities, and the average American has come to look with favor upon life in our small towns. A recent study conducted for the National Rural Electric Cooperative Association showed that most Americans think positively toward people in rural communities: 81 per cent think small community dwellers are warm and friendly toward others, and only 7 per cent think city people are this way. Nearly 65 per cent think small town mechants are more honest, and only 6 per cent think city merchants are more honest. When asked about emotional differences, 83 per cent thought that city people were more tense and pressured in their daily lives, and only 5 per cent thought small town and rural residents were more tense and pressured. About 22 per cent of the people surveyed thought there were no differences between urban and rural community life.

In fact, this study indicated that 82 per cent of all Americans would prefer to live in rural communities if they could find suitable employment opportunities. Other studies show similar impressive results. A 1968 Gallup Poll indicated that only 18 per cent of Americans would choose to live in cities, while 56 per cent would prefer to settle in rural areas if the same economic opportunities were available to them as in the city. A study of University of Nebraska graduates in agriculture now working outside of that state showed that sixty per cent desire to return to Nebraska if suitable employment were available.

The prospective of these studies strongly indicates that small towns have been the victims of the urban myth and of an unchallenged faith that technological developments were a contribution to human progress to which men had to adapt their lives even if it meant a change from satisfying social environments to the chaos of the modern city. The desire to return to rural America indicates a shift in our values from a blind faith in technology to a realization that men must live together in a social context before technological progress can become meaningful. As further proof of the truth of this premise, we are on the threshold of a concern with environmental conditions that will eventually include the quality of living as an integral part of economic profits; and economists are increasingly feeding social costs into cost-benefit formulas.

Our communities will share in this new awakening to the values of quality in both our natural and social environments. We are finally realizing that small towns, even though they have serious problems, represent the basic life styles to which a majority of Americans aspire. Furthermore, most small towns and rural communities exist in more ecologically balanced environments than do cities. If we can come to better understand these conditions and improve upon them where they are headed in undesirable directions, we can proudly present our towns as models which cities have only begun to think about. A small town free from environmental threats and still maintaining its sense of social community will have a prime asset for attracting both population and industry that can no longer tolerate the deterioration of urban services, as well as declining physical and social environments. The people who left the small towns and farms of America in the last two decades are fast discovering that the economic and psychological pressure that led them to the city in a search for greater abundance are melting away before the realities of social and environmental crises.

THE SENSE OF COMMUNITY

We have already touched upon some of the important factors which make small towns good places to live today and to build upon for a more livable future.

One of these important features is what I have called the "sense of community," a critical need for human beings living together and sharing even minimum values, goals, and expectations of the good life. In recent years, planners and policy makers alike have discovered that most small towns have never lost this desirable feature, even though many of them have sharply declined in population and economic viability. Heavily funded federal urban programs have many times tried to re-create in cities the social values associated with community. Most of them have failed to reach this goal. In fact, many city programs such as urban renewal, freeways, and public housing, have probably destroyed more functional communities than they have aided. The result is social disorganization seen by all of us as higher crime rates, decreasing respect for schools and other public institutions, juvenile delinquency, drug abuse, and a host of other socially disruptive conditions. We now depend upon formal law enforcement agencies rather than community pressures to hold these disruptions in check.

Without the sense of community, there is no sense of social commitment to fellow citizens, no longer a relationship between people that can be channeled into making our social and physical environments better places in which to live. Small towns still have a sense of community—even if we are sometimes apathetic, we at least know who is active and who is not—and we can use this sense of community as a foundation upon which to build for a more prosperous future.

With an absence of social community in the cities, many human values are no longer transmitted by the group in which growing up takes place. Children tend to learn only the more artificial values of mass media, the schools, and of course the inexperience of their peers. What is missing is not so much abstract truth, but knowledge of how human groups live together; for no longer do the young, the mature, and the aged share common interests.

Thus in cities there is no longer a blend of the enthusiasm and energy of the young, the experience of their parents, the wisdom of grandparents, all focused into a goal of realizing an "American Dream." Urban life has dispersed this interlinking between these basic assets that all societies—whether primitive hunters or modern industrial—have shared.

It has been these attributes of community and the interlinking of the contributions of young and old that has built our country. Where these tend to break down, as we have seen them do in the cities, our society gives way to despair, lawlessness, splintered family life, and other forms of disorganization. Small towns have not been entirely immune from his process, and they are vulnerable during periods of decline as well as growth. Therefore it will take a measure of vigilance to avoid the loss of community values as towns begin a regrowth in the seventies. Most of us are already familiar with the loss of community solidarity when small towns decline. Signs of a dying community are numerous, and they affect everyone. The loss of economic and social institutions can be the initial cause of decline, eventually leading local residents to become dependent on services from other communities. Young people leave for opportunities elsewhere, small businesses fail to interest fresh management, industries stand still or close, maintenance of stores and houses ceases. Absence of young families means no prosperous schools, so necessary to attract new industry. Even those who choose to retire in such a place find retail facilities closing and community services faltering.

Although the loss of the sense of community in the city leads to crime, poverty, and disorder, it is not as critical for survival there as it is in a small town. A city's services are far more diverse than those of small towns, and citizens can always trade in another district. Public services are always available from a distant governmental source; but in the small town there is little appeal to outside agencies. The solution to the problem is to retain the sense of community, and to maintain the ability and motivation to work together for mutual benefit.

TRENDS FOR THE FUTURE

New federal domestic policies are being centered on the basic roots of current national social problems. The major social pressures on the cities are not generated wholly within them, but arise in the imbalance of rural to urban migration of the unskilled and of young people who in past decades would have become the future leaders, businessmen, professional people, and responsible citizens of their home communities.

Even though small towns may be in a process of economic decline, they still provide a basic foundation upon which to build a new and revitalized America of the 1970's. In a nation whose cities have been devastated first by social crises and now by lethal environmental pollution, the small rural community can offer a less encumbered environment where vast expenditures to correct the mistakes of the past will not be necessary.

Many new bills designed to encourage increased settlement of people and development of industry in non-urban places are

now before Congress. They range from the long overdue Rural Job Development Act, introduced by Senator James B. Pearson of Kansas, to the recent $800 million appropriation for the development of sewage treatment facilities.

All of these programs will help ease the transition that will take place when population growth increases in small towns. Before these influxes begin it will be our job, as leaders and planners, to see that change comes in an orderly fashion, preserving the social values of our communities at the same time that we gain economic prosperity. We must be vigilant in seeing that economic prosperity accrues to the people and institutions of our communities and does not arrive in pre-packaged bundles of new industries and new workers who hope to use our treasured environments for the benefit of only themselves and not the entire community.

When this population reversal occurs, towns must have outside funds to expand sewer and sanitary facilities, education and medical institutions, and highways and transportation without overburdening the retired and the small businessman who has been subsisting for years at the break-even level. Small town residents must learn how to retain the positive features of their life styles and also to adapt to the benefits of a progressing America.

We must now begin to prepare for this future development of our towns. Taking a lesson from the failures of the cities, we should start by planning far reaching local programs designed to assure growth patterns that will maintain or increase the health, aesthetic, social, and educational standards of our communities. Quiet towns with clean water and pure air, adequate sewage and garbage disposal, up-to-date utilities, and social concern for all citizens will draw new industry and new residents far faster than the town that is willing to submit its leadership and integrity to interests that are concerned only with profits and little with community responsibility. The "small town atmosphere," once seen as a sign of being left behind is, in this dawning era of environmental concern, a positive asset upon which to build a prosperous future.

The kinds of people who will be leaving the cities are looking to the small town to provide a more desirable environment than the one they now live in, and it will pay small town leaders to begin thinking about plans to preserve the environment they have enjoyed, to attract newcomers by those virtues, and to improve those desirable features for the future.

PLANS FOR ACTION

It is not enough to present facts, praise ideals, and warn of the consequences of inaction in the future if we are really to solve the social, economic, and environmental problems now facing us. We can no longer confront the future merely with plans for studies and research. Social scientists, economists, and small towns themselves have conducted numerous studies and surveys which now lie unused and often unknown to those who are ready for action.

Research in a valuable tool, but it should always be linked to a remedial program if it is to accomplish practical results. This failure to make use of expensive studies is one of the reasons that the Small Towns Institute was organized. We decided that it was now time to make problem-oriented research useful and to reclaim some of the value of past studies by using them to develop practical formulas to alleviate small town problems. What are some of these programs and where do we start?

One of the first places to start a practical revitalization program is with people. "Manpower development" is the technical phrase—but it all boils down to planning a program which will focus upon the present and potential human resources of the community. Manpower is basic because it is one of the essential ingredients in industrial development. People build up the institutions of a town, they sustain small business; and most important, people are the crucial factor in that all important "sense of community" that I previously indicated was an essential virtue of the small town.

Each community needs to look seriously at its efforts to induce young people to become involved in local businesses or to learn skills that are marketable within the community. In many of the towns studied by the Small Towns Institute, we found an overwhelming number of high school seniors who expressed a strong desire to settle in their home communities (or to return there after college or military service), but who have *not* been encouraged to obtain training in skills that are locally marketable. Young people are not encouraged to take over businesses whose owners plan retirement and closure. Thus these towns are losing valuable assets—fewer small businesses and a continued out-migration of young people who really would prefer to stay.

Communities also fail to keep track of the skills of those who move away but who would like to return. A program designed to list manpower resources ready to return to a small town would be a crucial factor in persuading an industry to leave the crowded, polluted, violent environment of the city and rebuild in the smaller community.

Meanwhile, the town that retains its small businesses, improves its schools, updates its medical, nursing and hospital facilities, and provides jobs for youth who want to stay, is a community well on the way to revitalization. These improvements require some major effort to bring young people into management levels of business, to introduce locally marketable vocational training into the schools, and to encourage new payrolls based on an extensive listing of skills available from outside the community.

To make these new programs work, there will have to be some changes in small town economic attitudes, for we have encouraged our youth to leave by pointing out that the more lucrative economic opportunities are in the cities, yet we often fear having to pay comparable wages in the small town. We too often expect a new employee to have a college education, yet seldom credit him with any more experience than we allowed an eighth grade graduate fifty years ago. With simple changes like these, we can retain many of the old values that we are concerned about losing. In such cases we must make decisions that lead to survival of the community.

Another place to start is with *environment*, which all of you know is an issue topping the priority lists of most political leaders. I predict that it will soon be of crucial importance to most businesses, and that the relatively unexploited environments of small towns will become assets sought by industries looking for places to expand or to escape from intolerable urban conditions. The town in the best bargaining position will be the one which provides a more desirable environment into which industry can move, not one which allows an industry to merely escape public pressures to clean up the results of years of irresponsibility. The town that makes of itself a haven for deserters from responsibility will soon find that its short term prosperity has shorn it of a future with continued growth based upon solid ecological principles.

The way to attract responsible industry is to have ready the technological tools to supplement the industry's needs. Public funds are becoming increasingly available for these purposes and a community need only have ready a comprehensive plan for ecological balance to favorably impress granting agencies.

Ecology is much more than merely air, water, trees, and waste products. Human resources are a part of the environment also. Adequate sewage and waste disposal, water supplies, and clean air are vitally important to supply industrial requirements; but people planning to move to your town will be concerned about medical facilities, care of the aged, excellent schools, and many other private and public services. An industry will be reluctant to move if its key people will not move, and you will have to sell your town to them as well as to management.

There are of course ways to revitalize a town without attracting basic industries. The most promising of these is the *special image town*, ultimately based upon an influx of visitors. Not every town can develop its own special image, just as not every town will be able to attract industry. But there have been some notable successes where towns have concentrated on converting themselves into European-styled ski resorts such as the town of Leavenworth, Washington, or Long Grove, Illinois, which has met success as an antique center, offering unique restaurants and afternoon relaxation. Visiting small towns could easily become a new form of excursion for tourists, once they discover that small communities provide contrast with the frustrating experiences of urban living.

Farming is not yet a lost cause, even though corporate farms have purchased vast acreages and forced the development of incredibly expensive machinery which stimulates the exodus of farm workers and owners. The farm problem is much too complex to analyze extensively in these brief remarks, but after considering the analysis of such ecologists as Stanford's Paul Ehrlich and John Holdren, it is apparent that family farms will continue to be the more efficient level of land utilization, and may well rise again in number if our population increase is not sufficiently checked in the coming decades.

I will conclude with a note of optimism on the future of small towns in America. We are beginning to move forward out of the patterns of decline so typical of the past two decades. Future prosperity will not come as a gift on the winds of inevitability, but will arise out of sincere efforts directed toward expanding our assets and avoiding the mistakes so vividly pointed up in the urban experiment. Small town leaders must now take the initiative, exchange ideas through their own national organizations, and look to the future.

ENVIRONMENTAL CONCERNS AND CONFLICTS IN THE COUNTRYSIDE

In our rush to halt the devastating effects of environmental pollution we have often overlooked the fact that many of our smaller businesses suffer far more than the big polluters whose discharges first drew our attention and incited public wrath. The large foundry which produces a steady stream of pollution up its stack can well afford to install an electrostatic precipitator. But what about the town blacksmith who bellows a puff of smoke once a week? Both come under the same strict anti-pollution laws unless we create a special awareness of the problem and design our laws to fit a variety of situations.

In one rural community, farmers used to burn weeds from roadside ditches. Local laws banned burning, so the county road crews now spray the weeds with toxic herbicides, leaving the roadside a dry deathly brown during the hot summers. Many of these roadsides catch fire from careless smokers and burn anyway -- at the most dangerous season for fires when crops are ripening and most vulnerable.

Small towns have always been economical places to live, and have thus been desirable places for retirement, for establishing a small business or for everyday living while commuting to a job in a nearby city. Today there is a desire to jump on the bandwagon and bring in experts to design new sewers, water systems, streets, gas and electric utilities, and a variety of other public services. Up go the costs of living for many of those older people on fixed incomes who make little use of modern life styles. It's surprising how little understanding planners sometimes have for "Yesterday's People" as author Jack Weller so compassionately terms many of the poor and the elderly of Appalachia. One of the priceless experiences of living in a small town is having an elderly person for a neighbor; yet too often the demands of our modern technology confine older Americans to special segregated housing developments, or in some states to special towns where children and

even middle-aged people are not allowed to live. Yet there are no programs for providing good care for the elderly in their own choice of life style; there are no programs which would make life easier if an older person chose to live with a technology of an older era -- one he is familiar with. What are the needs? Funds should be available to provide home delivery of foods, for transportation to stores and to recreation, for repairs to an old but familiar house (perhaps only temporary repairs, to last the projected lifetime of the occupant). Younger people could be paid to provide services such as cleaning house, chopping and stacking wood, yard maintenance, shoveling snow, repairing fences, and doing many kinds of tasks.

What do the elderly have to do with the environment? They are part of the human environment, of the total ecology in which people have a role as well as trees and birds and mammals. And it is that sense of community, still the most important social asset of the small town, which we must begin to preserve and develop fully as much as the more tangible parts of the environment.

SMALL TOWNS AND THE NATIONAL LAND USE POLICY ACT

On December 14, 1970, the Committee on Interior and Insular Affairs of the Senate issued a report which may result in an amendment to the Water Resources Planning Act. Title III of this amendment, "A National Land Use Policy and Program of Assistance to the States" will especially concern small towns because it provides funds to states in planning the directions of change in the countryside. The new act would create a federal policy to "favorably influence patterns of population distribution in a manner such that a wide range of scenic, environmental, and cultural amenities are available to the American people"; and to "contribute to the revitalization of existing rural communities and encourage, where appropriate, new communities."

Federal guidelines will require states to identify those areas "which are best suited for agricultural, mineral, industrial and commercial development; where transportation and utility facilities are or it appears should, in the future, be located; which furnish the amenities and the basic essentials to the development of new towns and the revitalization of existing communities." Small towns should be prepared to influence these policy decisions.

FAMILY PRACTICE OF MEDICINE ACT VETOED BY PRESIDENT NIXON

A federal bill which would have authorized an appropriation of $225 million over the next three years to train more family doctors and general practitioners was vetoed by President Nixon on December 26th.

The bill would have created separate departments of family medicine in medical schools to train doctors for general practice. Known as Senate Bill 3418, the measure was overwhelmingly passed by both houses (Senate, 64 to 1; House of Representatives, 346 to 2).

Today's shortage of doctors, especially in small towns and rural communities, is growing. It is estimated that 50,000 doctors are needed to care just for existing needs. The seriousness of the shortage becomes even more vivid whem we realize that in 1931 we had 1 family doctor for every 1000 persons while today, 1971, we have 1 doctor for every 3000. Today, only one doctor in five is a general practitioner; in 1931 the ratio was 3 family doctors out of every 4.

These grim statistics take on even more critical significance in towns too small to support doctors who have specialized in their medical training.

NATIONAL AREA DEVELOPMENT INSTITUTE

Recently we received a letter from Mr. Richard Preston, executive vice-president of the American Industrial Development Council, Inc., telling us of the formation of a National Area Development Institute. Based at Lexington, Kentucky, the new Institute has been funded for a two-year period by the Ford Foundation. Its Executive Director is Mr. Richard Hausler.

The new organization is designed to promote a regional development concept in non-metropolitan America. Its goal is a redistribution of population and systematic development of communities "where clean air, clear water, and unclogged highways are combined with a range of public facilities, social services and economic opportunities which people desiring to live in these areas want and deserve."

Mr. Preston, an STI member, was recently appointed to the Council of the NADI.

RESPONSE FROM MEMBERS

Mr. Willard J. Vondrashek, Executive Director of the Medford Area Development Foundation, Inc. (Medford, Wisconsin) enthusiastically responded to our request for comments on the item entitled "Impact of Urbanization on Man's Environment" (Small Town, No. 4).

Local organizations like the MADF can have an important impact on the future of the countryside, especially in convincing industry that quality of life is an important asset which must be preserved and

improved for future generations. In excerpts from his newspaper column, Mr. Vondrashek says, "In our correspondence with industrial leaders who are located in large metropolitan areas we define the 'Quality of Life' as the peace and quiet of rural living, the basic honesty of people from an agricultural area, the low incidence of crime, the clean air and water, and the more personal attention and treatment given to the hospital patient and school student. Very important is the quality of work and dedication to doing a good job...."

"Very important also is the closeness to work, church, school and recreation facilities that a rural area offers its citizens."

Many responsible industries are concerned with relocating in a healthful, attractive environment, and small towns can use their environmental assets to attract companies away from cities and industrial suburbs. Strictly enforced environmental ordinances are one way of writing a guarantee to industry that the area in which they invest will not be despoiled in the future. And it takes strong local concern such as that shown by Mr. Vondrashek and the Medford Area Development Foundation to stress the assets of beautiful land and the sense of community still existing in our smaller places.

ABOLITION OF RAILROAD PASSENGER SERVICE TO SMALL TOWNS

The new National Railway Corporation (Railpax) which will attempt to take over most railway passenger service by May 1, 1971, has been designed by the Department of Transportation to serve passenger needs only between large cities. If the program is established as currently planned, even cities of 50,000 would be bypassed by railway passenger service. This would be an unfortunate blow to small towns whose passenger service would be eliminated if this program is enacted. Many small railroad communities have already suffered severely from curtailment of rail passenger service. Unless small communities express themselves immediately and vocally, there is danger of further service reduction.

The newsjournal *Small Town* is published monthly throughout the year by the Small Towns Institute and is distributed free to members. Annual dues for individuals, $10.00, students $5.00; business and institutional membership: non-profit institutions $25.00, small businesses $25.00, chambers of commerce $50.00, towns and county governments $50.00. SMALL TOWNS AS DISPERSED CITIES

Caught in the web of modern economic pressures, small towns have devised many ways to fight for survival. They have sought to replace agricultural or mining payrolls with those of industry, have encouraged tourists and new residents from nearby cities, or have depended on colleges and government installations. But many more towns have failed to stem the economic decline that begins the ugly cycle of physical and social decay.

Recent research by Professor John Fraser Hart of the University of Minnesota has suggested that several small towns may form a kind of "dispersed city" where a few very successful business enterprises in each town serve the residents of all the towns in the system. In the mid-western towns studied by Dr. Hart and his colleagues, it was found that significant population losses occurred in only 25% of small towns, even though these same towns had experienced serious economic decline. A subsequent study of sales tax records showed that "nearly every village has a few individual businesses that are doing remarkably well."

Although local residents had not recognized the fact, these towns were surviving (even expanding) economically because a few very successful businesses were drawing shoppers from other nearby towns. What is needed is some way to organize these dispersed communities under a single political voice. Such towns, once they recognize their interdependence, should learn to work together rather than vying with one another to see who can attract the largest payrolls. Perhaps some diversity is in order here, with factories in one town, hospitals and schools in another, and retail stores in a third. At least we know that some towns are already successfully functioning as "dispersed cities" without help. State planning agencies and local governments need to recognize these new conditions and assist in improving them.

Small towns worried about economic decline should begin by studying their most prosperous local enterprises to determine the total area from which they draw customers. Similar surveys could ask local citizens where they go to shop. It should then be possible to cooperate with other nearby towns in developing a prosperous countryside city -- a regional community where the benefits of small towns and rural life might be

enjoyed by many more people. Existing towns would form the core areas of such "cities," thus eliminating the need for vast government expenditures for new towns. - CCD

FEDERAL AID FOR REBUILDING ROADS TO SMALL TOWNS

In a letter to STI, Charles Sonneborn, former director of the Office of Small Town Services, points out that Senate Bill 4418 (the Federal Aid Highway Act of 1970) contains language directly resulting from the Pearson Bill reported in Small Town (No. 5, December, 1970).

Section 10(h) on Project Priorities reads, "In appropriating programs for projects on the Federal-aid secondary system, the Secretary shall give priority to projects which will encourage the location of business and industry in sparsely populated areas, and provide rural citizens with improved highways to such public and private services as health care, recreation, employment, education, and cultural activities, or otherwise encourage the social and economic development of rural communities."

If these priorities are retained in the final bill, they will be an important influence on the location of industry and on future population movements.

SMALL TOWNS TO BE SHORT-CHANGED BY HOUSING AND URBAN DEVELOPMENT ACT

The Conference report on the new Housing and Urban Development Act proposes a bill to provide "for the establishment of a national urban growth policy, to encourage and support the proper growth and development of our States, metropolitan areas, cities, counties, and towns with emphasis on new community and inner city development."

While Title VII (Urban Growth and New Community Development) mentions small towns and existing communities in several sections, the stressed purpose of the act is to provide financial assistance to large commercial developers to construct new towns or to build "major additions to existing communities."

Of course it is difficult to know how such programs are going to look after administrative procedures are added to the basic law. But it is probable that new towns and additions to old towns will not be adequate solutions to the more basic problems of revitalizing the countryside and of building viable communities on existing assets. The writers of the Conference report give the impression that they see all towns as much alike with similar problems. Yet the most impressive revelations of recent research are that small towns have many unique problems rooted in their social and economic diversity. Some towns badly need more adequate medical facilities, or housing for the elderly (near stores and other facilities, not on the outskirts of town); others need loans or grants to repair existing housing (which often complements the life-style of local residents). Each town's collection of needs is different. But no town needs only a "major addition" or needs to compete with a nearby "new town" which is federally subsidized.

RELIEF FOR RURAL HOSPITALS

Recently the problems of staffing rural hospitals with an adequate number of registered nurses have forced the closure of some small facilities unable to meet standards imposed by the Medicare program. The problem was first noted in a Congressional Record article and reported in Small Town last November.

Since that report, an amendment to Title XVIII of the Social Security Act was proposed by Mr. Hale Boggs of Louisiana. The measure would authorize the Secretary of HEW to waive the requirement that small rural hospitals have registered nurses on duty 24 hours a day, if the hospital could provide such nurses during the day shift and show that it was making a continuing effort to fill the gaps on other shifts. Hospitals would have to be in areas where other hospitals as well as nurses were in short supply. Waiver could be granted for only one year at a time. It was suggested by the sponsors that while a well staffed hospital is a desirable goal, current shortages of nurses should not force small facilities to close entirely.

BOOK REVIEWS

Landscapes: selected writings of J.B. Jackson, Edited by Ervin H. Zube. Cambridge: University of Massachusetts Press, 1970; 160pp, $6.00

Landscapes is a book of insights about the city, the small town, and the countryside. Jackson's views are at once penetrating in their social criticism and irritating for their acceptance of much that the social scientist and the environmentalist has come to dislike about our modern world. The book is therefore profoundly thought-provoking: for those who might agree with his conclusions may take issue with his reasoning -- and vice versa. This is the kind of book that lends itself well to stimulating public discussion and will do more to make a group of concerned people aware of the problems of town planning than any book I have reviewed in recent years.

In these essays, J.B. Jackson suggests new concepts of American landscapes. As the editor and publisher of Landscape magazine from 1952 to 1968 he sought to introduce the human element into his observations of the American city and countryside. It is this concern with understanding the role of man in the formation of environment that leads Mr. Jackson to explain American landscapes in terms of present day culture and social values. He also looks to history -- to Jefferson, Thoreau and other observers of past centuries to show that American landscapes of each era were created to fit the social and material needs of people who lived in them. Thus the small family-oriented village of New England, the isolated farmstead of 19th century Illinois and the agri-business of today are seen as reflections of more basic human relationships.

To Jackson, landscapes include far more than natural environments. He can speak of the landscapes of small towns as easily as of untouched wilderness. But he is always concerned with the human role in landscapes.

I'm not sure that Mr. Jackson really likes small towns or even prefers them over the most debilitated of cities. But his comments on small town life suggest that the best town landscapes are those which serve the existing needs of people rather than those that conform to abstract aesthetic values. He is critical of towns that design their main streets for maximum traffic flow rather than for the enjoyment of pedestrians, and perceptively observes that even signs in small towns are placed high above the street to catch the eye of passing motorists rather than of the shopper on foot. Yet streets are planned as thoroughfares which encourage an even flow of traffic rather than inviting the motorist to stop. Jackson seems to lament the trend away from community use of a town's downtown streets, especially where a central square provides space for play or relaxation.

The aesthetics of environment are also treated with considerable importance, but the author takes a different view of the causes of the decline in landscape quality than do most critics. He blames the blight of roadside billboards, junk cars decaying in front yards of rural slums, and even strip mining on the economic poverty that besets thousands of rural Americans. Jackson sees the real causes of these blots on the landscape as vain efforts of the poor (even the less affluent land owner) to eke a few more dollars of income by selling his view to an advertising company, or leasing mining rights to the highest bidder; even the junk car is seen as an attempt by the poor to maintain a cheap supply of spare parts. It is to these economic conditions that Jackson attributes the deterioration of the landscape, rather than to the irresponsibility of industry.

Whether true or even representative of part of America, Jackson takes a unique view of the landscape. His ideas would be most excellent for a small discussion group, or for serious consideration by a town council. Jackson does not toe the line of any single faction: his views run from defence of large neon signs and roadside franchises, to criticism of modern traffic patterns and the routine of suburbia. And he is neither friend nor foe of conventional ideas about the landscape. - CCD

Small Town

Volume 1, Number 8, March, 1971

A PHILOSOPHY OF DIRECT ACTION

There is an old story that tells of a summer tourist from New York who was enjoying a week's vacation in a small fishing village on the coast of Maine. One day, after partaking of the breathtaking beauty of the town and its natural setting he approached an old fisherman who sat quietly mending nets on the pier surrounded only by the sounds of the sea slapping at piling and the occasional cry of a gull floating overhead.

"What a beautiful place to live," exclaimed the tourist, "the trouble with people here is that they really don't appreciate the beauty they have around them. If you had to live in the city you'd know the real value of this place."

"Well," answered the old fisherman as he gazed familiarly across the cove, "local folks appreciate it enough to live here all year around."

For two years now, STI has been struggling to develop a variety of programs to help alleviate the problems of small towns, and I think we are now beginning to see light through the clouds of disinterest that plagued our earlier efforts. In the process, we have learned that the quickest way to tackle a problem, even one so vast as saving countryside towns, is by applying direct action, even in minute amounts, directly upon the problems at hand. We spent a lot of time and money asking for support from corporations and from foundations, most of which we found couldn't care less about small towns or the countryside or the quality of life.

Now that we are concentrating on publishing a newsletter we are beginning to attract new membership. If current interest keeps up at the same rate as it has for the past four months, we should be able to continue to improve the quality of our information services. Applying action directly to a problem may sometimes be a slow means of achieving success, but it is a much more certain method than constructing a long series of Rube Goldberg devices.

I'm wondering if the tendency to create a whole hierarchy of actions to get a simple thing accomplished isn't a basic fault of the way we go about things in today's fast changing world. Here I'm reminded of a businessman in a small town who had a very positive idea for developing a small industry in his community; but he and others in the town were

afraid to invest their own savings in it. After two years of attempting to promote this idea to outside investors without success, they discovered that they had spent well over $50,000 in cash and incalculable amounts of time, which could have been spent on financing the project themselves.

In another town, a lady who wanted to help provide funds to her church rented a store building and started a rummage sale which she operated three days a week. The sale did little in community services (such as promoting the sense of community that often derives from fund-raising dinners or art shows) and it produced less money than the church would have received if the lady had donated what she had paid in rent!

The same philosophy could apply to the "86% of all Americans" identified by a National Rural Electric Cooperative Association study as wanting to live in small towns if economic opportunities were available there. I wonder how many of these people really could take advantage of existing opportunities in small towns? In most towns, there are retirement opportunities, and possibilities of operating a small business to supplement retirement income. Opportunities for young people are perhaps even more numerous, especially in the past year when economic possibilities have declined in cities. Recently one town under 2000 population needed a baker (employee or owner), a bank trainee on the managerial level, a doctor, a sawyer for a lumber mill, a grocery store owner, a lathe operator, a gardener, plus a few less specialized jobs. Not many to choose from? There are over 20,000 small towns in the United States and Canada. And if job opportunities like these were listed and made available to anyone interested in moving to small communities there would indeed be a comprehensive choice.

Such a program would do something more: it would help save our human and economic resources as well as our natural resources. Many small town job openings go unfilled as they did in the town where I discovered those listed above. Lack of people to fill jobs is often resolved by disintegration of community resources -- by the closing of businesses or by sale to outside corporate interests. Every job that can be filled in a small community helps to keep that community together and economically alive. Such jobs build on already existing resources whose functions may form crucial links in a fragile economic and social web. And for every town which loses its vital economic resources, more people are forced to live elsewhere -- in overcrowded cities or in sprawling suburbs -- while housing, public buildings, and the very quality of life in small towns are allowed to deteriorate.

What can we do about it? Each individual can actively and directly work toward making his own town a better place. He can realize that a contemplated move to the city is very indirect action in striving for a more satisfactory way of life. The man who believes that the affluence of the urban life will make him able to retire in the quiet of a small countryside town will find such places gone by the time he is ready to return. Once we realize the wisdom of going directly toward our goals we can act effectively -- and we can point this out to our children instead of telling them that the future belongs entirely to the cities and to the suburbs. - CCD

INCREASED FUNDING FOR SEWAGE DISPOSAL IN SMALL TOWNS

Senator Mark Hatfield and twenty-four co-sponsors have introduced a bill to increase by $230 million grants available to small towns under the Farmers Home Administration Act. Sponsors of the bill point out that "without satisfactory sewage treatment plants in these areas, economic growth is stifled and economic decay receives unwitting assistance." They note that the lack of a growing tax base serves as further shackle on job development with the result that more and more people move to large cities.

PRESIDENTIAL MESSAGE SEEKS PRESERVATION OF ARCHITECTURAL AND HISTORIC HERITAGE

In a recent annual report on the State of the Nation's Environment, President Nixon proposed that we extend environmental concern to our cultural heritage. In his message he noted that, "Too often we think of environment only as our natural surroundings. . . . Unfortunately, present Federal income tax policies provide much stronger incentives for demolition of older buildings than for their rehabilitation."

"Particularly acute is the continued loss of many buildings of historic value. Since 1933 an estimated one-quarter of the buildings recorded by the Historic American Building Survey have been destroyed. Most lending institutions are unwilling to loan funds for the restoration and rehabilitation of historic buildings because of the age and often the location of such buildings. Finally there are many historic buildings under Federal ownership for which inadequate provision has been made for restoration and preservation."

Unfortunately, the President oriented his concern to the architectural heritage in cities and did not mention the importance of the architectural heritage in small towns. But his proposals, if enacted, should help the cause of preservation everywhere. Included were proposals for new tax measures to favor restoration rather than rebuilding; a Federal plan to insure improvement loans for historic residential properties; and a program to review the historical significance of Federally owned properties before demolition is allowed.

Small town interests could help write these bills so that they would contribute to the rehabilitation of downtown areas and older residences of architectural significance.

IOWA COUNCIL FOR RURAL COMMUNITY DEVELOPMENT

Iowa has joined the growing number of states which are coordinating federal and state programs for rural development under a single agency. Early in February, Governor Robert D. Ray established a Program and Council for Rural Community Development. Composed of the directors of major state offices, the Council will authorize the formation of Rural Development Task Forces to coordinate the separate programs in local

government, agriculture, employment opportunities, transportation services, education, manpower, law enforcement, health, social services, housing and environment, and focus them directly on the problems of rural communities. Governor Ray sees strong rural development programs as the key to stemming the migration from small towns to urban centers, and in alleviating rural poverty.

We are indebted to Mr. Neil Maurer (Sun Publishing Co., Laurens, Iowa) for bringing Governor Ray's program to our attention. We hope members will forward news items that will be of interest to other towns.

PUBLICATIONS

Small towns planning industrial development programs might find it useful to consult The Industrialization of Southern Rural Areas: A Study of Industry and Federal Assistance in Small Towns with Recommendations for Future Policy, a study conducted for the Office of Economic Research, Economic Development Administration, U.S. Department of Commerce, by Abt Associates, Inc. during 1968. The three major findings of the study are: 1) that small towns may frequently achieve "near-autonomous growth" by acting "as the employment center of a sizable labor market" from surrounding areas; 2) disadvantaged groups "have not shared in the benefits of this growth to a satisfactory extent"; 3) "A 'market for industry' exists, in which a few towns with inadequate information about industry tend to offer too high a price to attract industry; industry is not significantly motivated to locate by subsidies which are normally offered, and cannot obtain adequate information on labor market potential, the possession of which can be a prime inducement to locate." The 148 page report includes a 20 page bibliography on Southern rural areas, industrial development, and manpower needs.

A New Life for the Country: The Report of the President's Task Force on Rural Development, March, 1970, is available from STI. This 49-page report is an important reference document for those interested in the countryside.

EROSION OF THE SMALL TOWN IMAGE

This is a sample of the new sectional center cancellation which will replace the traditional postmark. The change will bring an increased loss of identity to towns already overwhelmed by the pressures of modern mass society. This postmark "NY 137" was from a letter originating in the town of Oneonta, New York.

The newsjournal *Small Town* is published monthly throughout the year by the Small Towns Institute and is distributed free to members. Annual dues for individuals, $10.00, students $5.00; business and institutional membership: non-profit institutions $25.00, small businesses $25.00, chambers of commerce $50.00, towns and county governments $50.00. Small Towns Institute, Post Office Box 517, Ellensburg, Washington 98926.

THE MYTH OF EFFICIENCY

In America today many people believe that efficiency is a desirable goal and that the bigger things become the more efficient they are. We have been taught to believe that businesses must conglomerate into infinitely growing corporations, that family farms must become "agri-business" and expand indefinitely, and that human beings must concentrate themselves into metropolitan areas, where even cities lose their identities in the megalopolis.

The argument runs that bigness and expansion will yield increased profits, and with increased profits we will be able to buy a new kind of luxury and leisure -- a "better way of life" -- which was not available under the older and less efficient social order. But we have bought this "better life" by destroying many of the small, human institutions, by sacrificing the family farm and the small business and even human choice to the management of people outside of our communities.

Most of today's social problems are in some degree a consequence of our belief that improvements come with increased size. But when we look at our new giants of industry we find that they have produced more social problems than lasting human benefits. There has been no contribution to a better way of life when unemployment reaches figures of 18% or above in some of our towns, or when thousands of skilled engineers and machinists are out of work because the giant aircraft industries have mismanaged their affairs. We have allowed railroads to consolidate and provide increasingly poorer service; even our lending agencies are forcing an increasing number of Americans into corporately owned housing. We have been told that all this was good for America, but today our aircraft, railroad, and housing industries could not even exist if their demands for special loans and subsidies were not met by government.

Just how efficient are corporate farms, for example? Do they produce food more cheaply than the family farm? Considering the entire spectrum of effects on American life, the consolidation of farms tends to increase the amount of energy and natural resources used by individuals, and compared to a small subsistence farm of forty acres the average American now requires over twice that amount in public and private space to support him. For every man who leaves the farm, a city or suburb

must provide streets, parks, airports, stores, schools, highways, and other modern services, while the rural towns fall into ruin even for those who choose to remain.

This breakdown in our smaller communities and farms has scattered families, increased mobility, and encouraged wasteful consumption to the point that it has far outrun any savings that technology or size might have produced. When we add the tensions, dissatisfactions of young people, drugs, crime, unemployment of both the unskilled and the educated, and pollution of the environment, there is no possible way in which increased size has given us a better way of life.

Several thousand years of human history has shown us that small communities are the most successful environments for satisfying human needs. Great cities rise to glory, but it is always the countryside communities which provide their most creative residents and it is these rural towns which remain when cities finally decay. Nations before have tried to feed increasing populations by large corporate farms or through rural collectives, but always they have fallen victim to misconceptions about man himself. For the worshippers of the technological society have assumed that humanity could abandon the sense of community upon which all human societies rest. This basic need of people can be fulfilled only when human values come before the destructive philosophies of unending growth and the supremacy of technology.

Small towns have already achieved this sense of community but we must use it as a foundation upon which to build the future. - CCD

A COOPERATIVE SOLUTION TO RURAL PUBLIC TRANSPORTATION

by Alan Hansen, Executive Director, Vision-17, Inc.

As living in the United States changed from rural to urban, systems of public transportation also had to change. In cities this meant more street cars and buses. In the country it meant that declining traffic caused passenger train service and bus service almost to disappear. Improved automobiles and roads further eroded demand for bus and passenger train service, and became the single mode of transportation for people on farms and in small towns.

There remains a demand for public passenger transportation in rural America, but it is marginal -- older people, students, one-car families, visitors, and those who don't drive. Adequate public transportation might well induce more people to live outside cities and create a better market, but right now the demand is too sparse for conventional public transportation services to be economically feasible.

It is this sparse market that makes necessary the reorganization of social systems. Whether transportation, health services, government, education, or recreation, we must find new patterns, new methods, new economics to change the deteriorating vestiges of 1900 services to new supportive forms for rural living in the 1970's.

An exciting approach to public transportation is being tried in Southeast Nebraska through Vision-17, Inc., a private, non-profit Nebraska

corporation organized to stimulate the economic development of the 17 counties making up the southeast corner of the state. Supported by contributions from about 250 individuals, civic organizations, towns, counties, businesses, banks, and utility companies, the one man - one girl staff has been involved in helping to develop a regional health planning function, promoting livestock production, downtown improvements, rural water districts, industrial development, recreation, tourism and other planned development.

Having proved the validity of regional cooperation, Vision-17 is now arranging federal funding to employ Area Development Directors to work with citizen-leaders in six Planning and Development Regions within the 17 county area.

Examination of public transportation in Southeast Nebraska revealed that only 35 out of 160 towns had bus service. Five counties have no bus service and six county seat towns have none. For most of the 370,000 people in this 100 by 100 mile area, a car is necessary to get to the county seat or to the State Capitol in Lincoln.

Discussion of this problem brought interest from leaders in Saline County, whose county seat, Wilber, is about 25 miles southwest of Lincoln. The Saline County Economic Development Commission, consisting of leaders representing all areas of Saline County, had organized itself in 1970 with the help of Vision-17. Its Board of Directors determined to solve the public transportation problem within the county and to other towns. President Chester A. Roberts, from Dorchester, arranged for help from Saline County's Blue Valley Community Action, Inc. Robert Catherall, Executive Director of BVCA, assigned Mrs. Floyd Herman of his staff to work with James Novotny, Saline County Extension Agent, who also serves as Secretary of the Saline County Economic Development Commission.

Mrs. Herman and Mr. Novotny discussed transportation proposals with county citizens, and collected economic data about bus transportation. Their conclusion was that there is interest, but the cost of a profit-organized, scheduled service would result in fares prohibitive to potential customers.

Through Vision-17, the problem was discussed with the United States Department of Agriculture officials who referred it to the Farmers Cooperative Service. Dr. Job Savage, Assistant Administrator, and Mr. Carl Deitemeyer, Director of Rural Service Agency, visited Saline County to discuss possibilities of organizing a transportation cooperative. They provided information about other rural transportation efforts and consultation to Saline County.

The Saline County Economic Development Commission is determined to pursue the co-op structure. Blue Valley Community Action, Inc. provided funds for a county-wide users survey, with the cooperation of the Computer Services Department at the University of Nebraska. It appears from this survey that co-op members, for a small enrollment fee and reasonable fares, can have one or two days a week service in 10-passenger vans from their towns to places within the county and certain points outside.

Other 16 counties are closely watching Saline's pioneering effort. If the economics prove feasible, Vision-17 hopes to introduce the co-op

system into other counties and to tie in with commercial bus schedules to make an effective regional transportation pattern.

For information on this project, write to: Mr. James Novotny, County Extension Agent, Saline County Court House, Wilber, Nebraska 68465, or Mr. Alan Hansen, Executive Director, Vision-17, Inc. 5555 "O" Street, Lincoln, Nebraska 68510. Information on the federal role in local transportation planning can be obtained from Mr. Carl Deitemeyer, Director of Rural Service Agency, Farmers Cooperative Service, Washington, D.C.

RURAL COMMUNITY DEVELOPMENT ACT TO EXCLUDE DYING TOWNS

A new Rural Community Development Act to be financed through revenue sharing was proposed to Congress by the President on March 10th.

The new proposal would combine the efforts of eleven existing programs and provide considerable additional funding. In introducing the measure the President said, "The major challenge facing rural America is to diversify its economy and provide full opportunity for its people to enjoy the benefits of American life. Meeting the challenge will enhance the quality of life for those who remain to operate the nation's family farms and for all their neighbors in the small towns and countryside of America."

Even though up to $1.1 billion may be poured into this program, it will provide little help to the small towns which are having the greatest difficulty surviving. For in this program, funds are to be concentrated in "areas of potential growth" and denied to communities which have had difficulty replacing industry or keeping population. Presidential press releases state that "Experts in rural development feel that the most leverage is achieved by reinforcing healthy development trends, rather than fighting them -- that is, by concentrating aid in those smaller and medium sized cities of a rural area which have shown strength and effort at attracting industry."

"Experts" in rural development apparently are uninterested in what happens to the thousands of countryside people who value their way of life and do not intend to sacrifice it to allow an ever-expanding economic development of already prosperous places.

The newsjournal *Small Town* is published monthly throughout the year by the Small Towns Institute and is distributed free to members. Annual dues for individuals, $10.00, students $5.00; business and institutional membership: non-profit institutions $25.00, small businesses $25.00, chambers of commerce $50.00, towns and county governments $50.00. THE FUTURE OF THE COUNTRYSIDE

For many years we have been neglecting one of our most important environmental resources -- the American countryside. We have allowed much of its beauty to be defaced without thought for the future, and we have seen its towns and villages decline as viable economic and social communities. Until recently, few have cared that the quest for an efficient agriculture has reduced the numbers of farm owners and nearly destroyed a way of life that will always have a good deal more to offer man than just economic value.

Fifteen years ago, long before most of us had considered doing very much about the continuing decline of the countryside (or maybe even when we were assuming that its demise was inevitable), Mr. G.B. Gunlogson of Racine, Wisconsin, began helping small communities and promoting educational programs to change these trends. Currently he is writing a book to further this work. It is a book which describes the countryside environment as a place where future generations can live a better life, closer to the realities of nature and to basic institutions of the human community. In today's world we have gone too far from our countryside and from the values and experiences that only life in such an environment can teach. We don't have to go "back" to be part of the countryside; we have to start from the present, care for what we have, and build greater quality into our lives. A chapter from Mr. Gunlogson's book follows:

WHAT IS THE AMERICAN COUNTRYSIDE?

by G.B. Gunlogson, The Countryside Development Foundation, Inc.

The countryside is the great body of America that lies outside the boundaries of big cities and their suburbs. In many parts of this vast area, a new kind of economy and a new way of life are emerging. Ever since the country was a wilderness, it has been called rural. It is no longer a wilderness, and it is no longer just "rural." Rather it has become a countryside complex which embraces more than 98 percent of the United States in area and thousands of towns and small cities. These places are becoming vital centers around which the future development of the countryside revolves.

There are so many different notions about this countryside and its economy that we must first define what it includes and what is new about it. Our economic history has tended to fragment the countryside. The public image still reflects its character and pattern of development in pioneer days despite vast changes and physical improvements that have taken place since, especially during the last few decades.

In 1780 the population of the entire country was 5.3 million, and this was scattered mostly in eastern areas. Immigrants were pouring in from nearly every part of the world; and for the next century they, along with the earlier newcomers, kept pressing into all corners of the hinterlands. By 1900 the population had grown to 76 million, and thousands of new settlements and towns had been established across the continent.

The vast and varied resources of this new land yielded richly to the unbounded ingenuity and enterprise of these early settlers who had brought with them a greater range of backgrounds, skills, and cultures than had ever before assembled anywhere else on earth. At the beginning of this century America was still a new country, but the unprecedented enterprise of these people had made it a world power. Among other accomplishments, it had developed the most efficient agriculture in the world; and farm production had turned the country from a borrower to a lender nation.

Despite great mechanical inventiveness and industrial development that was going on, it was the agrarian character that dominated the American profile up to this time. At the turn of the century, 70 percent of the people lived on farms or in small country places. Industry became centered in the more populated places because it was there that transportation, communications, electric power, and other public facilities were first to develop. Outside these centers, America was literally rural at the time.

Thus, the first census more than 200 years ago attached the rural label to about 99 percent of the country's area and the people who lived there. This designation has tended to perpetuate an unrealistic image.

The Countryside Became Fenced Out

There were many elements that enabled the cities to become more aggressive and take on a special place in the public mind. They were compact geographical areas, and their interests were more homogeneous. The manufacturing industries and other business enterprises that centered there were expansionary and promotional by nature. The mass media also centered there was largely urban oriented.

The country was looked upon as the producer of natural products from the land, forests, and mines. The continued use of the term "rural" established a barrier between the two economies. This has adversely affected a more normal balance in the development of the nation's economy and population distribution. What is ironic is that even our own government continues to designate all non-urban areas and people as rural -- a term which often implies backwardness, boorishness, and lack of progress.

Webster's dictionary defines rural as "pertaining to the country as distinguished from the cities or the towns; rustic." Government and dictionary definitions change slowly, but technology has completely changed

the face of rural America. It has tied together the towns and surrounding country, and it has brought the amenities of the cities to these newly forming communities. Even in the most remote regions, only minutes now separate the back country from the town.

The New Countryside

It is important that the significance of these basic changes be fully understood. The technological progress in many areas has outdistanced that in the cities. In farming, for example, which is the most important industry in the country, the production per man is about five times what it was three decades ago. Crop yields have doubled and trebled since 1935. Corn yields in 1935 averaged about 25 bushels per acre and 84 bushels in 1969. Yields of 200 bushels have become common. Yields of potatoes have trebled. Total soybean production has multiplied 20 times. Mechanization in terms of horsepower is more than ten times what it was a generation ago. These achievements have contributed more to the basic economy of the nation than all the skyscrapers built during the same period.

A total inventory of the physical improvements in the countryside would stagger the imagination. It includes some 300,000 miles of surfaced highways, 250,000 miles of natural gas transmission lines, 215,000 miles of railways, electric power, and communication facilities everywhere. In land area and natural resources, the countryside includes 98 percent of the United States. It includes 2,800,000 farms, thousands of parks and recreational areas, lakes, rivers, and mountains. This is the countryside that has superceded rural America. It is a new frontier where we can now build a new future.

Inventing a New Future

Our future has always been invented. We have invented machines and practices that have been changing the course of America for 300 years. They have enabled people to open up every corner of the country and to establish thousands of communities. They have built great citites. They contributed to over-concentration of people and industry. They have contributed to pollution of air and water and deterioration of the human environment.

They have brought painful experiences to millions of people in the country and forced them to migrate to unknown cities seeking chances to make a living. They have brought abandonment and left dying countless country communities.

In the New York - Newark area the population is nearly ten times the total population of North and South Dakota. The area is one percent. This provides a rough measure, not only of pollution potential, but of what is happening to America. There are many areas in the United States that have become critically congested, where human character and efficiency are deteriorating, where costs and taxes are getting out of control, and where public services are beginning to break down.

If our ingenuity and technology have gone too far in one direction, we

have the capabilities to redirect these forces and achieve a greater compatibility between the earth's resources and human welfare. The great body of America still has greater potential for mankind than ever, and it is more available. But first ideas must be adjusted to realities of a changing world.

For too long we have been restricting all priorities to a choice between urban and rural living only. There is much evidence to show that it would be better if more people lived in smaller towns closer to the earth and to a more natural environment. There is no other way to make our natural resources and living space available to the greatest number of people. It would help to relieve the big cities of suffocating population pressures and other problems.

We can bring the advantages of big cities to small cities situated in the country, but we can't bring the country into the big cities. The fields and the forests which may be putting three or four tons of oxygen per acre into the air we breathe will never be a part of a big city. Nor can we transport to a central city the open spaces and the green chemistries of living nature. Only by decentralization can some of these goals be achieved. A great deal of experience has already been gained. There are hundreds of communities across the country that offer valuable examples.

The situations vary from place to place, but they provide impressive examples for those who would improve living conditions and further a broad program of national renewal.

(1) First we must come to the recognition that a town must have people and the people must have jobs and opportunities to live there. The day is gone when a community can provide these requisites on a single source of economy, be it farming, forestry, mining, or a one-plant manufacturing. The "trading post" era is gone. Without diversification in employment opportunities, people leave. The more venturesome and enterprising go first. Stagnation takes place, and the town withers away. Some of these towns may seem to stabilize for a while, but at a level so low that they are no longer good communities.

When this stage is reached, rebuilding becomes more difficult. It is like managing any business. If the enterprise is permitted to run down, the customers lose their spirit and drive. It takes these same human qualities -- vision and enterprise -- to build a prosperous community.

(2) Once a town has made a start by providing a new payroll to supplement the basic economy, which in most country towns is farming, it seems to take on a new life. The opportunities for further diversification or growth become better than anywhere else. A larger share of the people is benefited directly than in a big city. Even a small payroll can start a chain reaction resulting in improvements and growth that seem to feed upon themselves.

Some of these opportunities can be created. For example, it has been estimated that at least 2,000 country towns are now in need of better facilities for elderly people. The most ideal facilities consist of retirement homes in conjunction with rest and nursing care. In most cases these are quite easily financed from local contributions together with aid and loans from federal agencies. These projects contribute to the quality of

a community in many ways, and at the same time create new income for the town. An increasing number of people everywhere are thinking about security in old age. Such facilities along with hospital and health services can be a big factor in the future prosperity of thousands of country communities.

(3) More recreational areas have become one of the most urgent needs of the nation. These, too, we must begin to disperse. The grandeur of some of our great national parks is rapidly deteriorating. Throngs of people occupy every available camp site, motel, and hotel accommodations. Traffic, pollution, vandalism, and social problems multiply with this increasing pressure. Instead of rest and relaxation, there is turmoil and frustration.

In the world we live in today, people need more than ever to pause now and then amidst woods and waters. There are too many children growing up that have never heard the songs of birds or seen little animals in their native habitats nor breathed the fresh air of the woodlands. Every community needs parks and playgrounds. But there is something new that should be added. Many more local nature areas should be set aside for education and inspiration to provide enjoyment and stimulate appreciation of nature. These developments would add greatly to the dimension of American life.

The centers for future developments will be the country towns. To become attractive, a town must become a good community; and in the process must take on the amenities essential to quality of life. A good community must have job opportunities and sufficient economic diversification to offer young people some choice and challenge. The town must have sanitary facilities, paved streets, schools, churches, hospital, recreational facilities, and some cultural interests. A high degree of interrelating with the surrounding country enhances quality of life and economic stability. This may be in the form of golf, horseback riding, fishing, picnics, nature trails, pet farms, and many other enterprises. This is town and country living.

A clearer definition and more information are needed about the total countryside and its vast and varied resources in terms of better living. The majority of the American people would prefer to live in the countryside if they had their choice.

A countryside movement would bring major opportunities to people and industry. Jobs can be created in the countryside more economically than in big cities. Nowhere else are there to be found greater future opportunities for industry and new business development. This movement would help to revitalize a flagging national spirit and bring new challenges to the younger generation.

NEW PUBLICATIONS

STI has recently received copies of New York Community Comments, a bimonthly publication "Dedicated to the Preservation and Revitalization of Rural America." Published by a group of students at the State University of New York at Oneonta, Community Comments tells of successful community projects ranging from improving environmental quality to attracting new

industry. Under the editorship of Andrew J. McKean, the publication includes reprints of articles on small towns, and editorial comment on life in countryside America. Mr. McKean plans to attend law school, and there is little doubt that his knowledge and enthusiasm for small towns and the countryside environment will have an influence on the future.

Subscription rates to Community Comments are $5 per year. Address Box 375, Oneonta, New York, 13820 - ASD

WISCONSIN PROPOSAL TO BAN CORPORATION AGRICULTURE

Reprinted from Farmer's Friend and Rural Reporter, Green Bay, Wisconsin

MADISON - A bill to prohibit conglomerate corporate farming in Wisconsin has been co-authored by State Rep. Cletus Vanderperren (D-Green Bay).

The proposal would ban large corporations, principally engaged in non-farm industries, from operating in competition with family farmers, Vanderperren said. There is no ban on a family forming a corporation for business purposes.

In the last legislative session, a similar bill passed the Assembly but died in the Senate. It was endorsed by the Wisconsin Farmers Union and National Farmers Organization of Wisconsin.

"Conglomerate corporations provide unfair competition for the family farmer because of their access to tax loopholes and their ability to write-off losses accrued in farm operations and apply those losses to profits in other areas," Vanderperren said.

Excluded in the proposal are corporations who acquire land by bequest or land that is acquired in the normal operation of business; corporations of which 75 percent of their members are actual farmers; corporations engaged in the production of forest products; corporations holding land for agricultural experiments; commercial seed firms, and corporations engaged in canning and fruit production who lease land to raise crops for processing.

The measure would provide that non-exempt corporations dispose of rural holdings acquired before Jan. 1 by Jan. 1, 1977. Violations are subject to a $1,000 per day fine.

HEARINGS ON SENATE BILL 10, TO REVITALIZE RURAL AMERICA

Excerpts from the opening statement of Senator John L. McClellan, April 27, 1971

I am convinced that the problems of rural America do not stand alone. They are intimately related to the problems of urban America. They are a significant factor behind the near-bankrupt and overly-compacted conditions of our cities. They cannot be isolated or set apart from other pressing problems of society which face us today.

This fact becomes indelibly clear when we observe the statistics of migration within our country. Once a nation 75% rural, we have become, 100 years later, a nation 73% urban. More than 142 million people -- 70%

of our population -- now live on only 2% of our land. Since 1945 there has been a net migration from rural America of over 25 million persons, making it one of the largest movements of people in recorded history. Each year over 500,000 Americans from farms and rural communities migrate to big cities. Indeed, between 1960-1970, 43.5% of the nation's three thousand counties lost population.

This massive outmigration from towns and farm-yards to the big city has already had catastrophic effects at each end of the population distribution scale. Despite using up more of our productivity and lavishing most of our resources in treating the plagues of mammoth squalor and inhumanities of overcrowding, the billions spent thus far have done little towards advancing a cure. Our cities, insolvent and unmanageable, infected with pollution, garbage, ghettos, intolerance, crime and just about every other social ill known to mankind, are barely staving off the last rites of total extinction. Even our peripheral suburbs -- once an oasis of escape for man's greener instincts -- have now become inexorably linked with the larger metropolitan slums. The seams of urbana have burst, like the dreams of better tomorrows our rural migrants yearn to find there but seldom do.

Those left behind must endure even greater pain and suffering. For as bad as things had become before their sons and daughters left, this loss in human resources has compounded their problems. Hopes of diversifying the local economy and fostering a progressive community life have been muted into silence. Most who have remained are often worse off then before. Their chances of escaping from poverty, avoiding further deprivation, or even easing their burden have been reduced. They have found it harder to pay for and provide critically needed services -- schools, health facilities, transportation systems, good sewage and water and other infrastructure attractive enough to keep people in rural America or to lure jobs and opportunities there.

S. 10 looks toward the revitalization of rural America, and an end to its economic distress, by encouraging industrial growth and activity, effective manpower training and development. It looks toward a healthier urban and rural environment, which will enhance the quality of life. It calls for substantive programs of action.

The adoption and implementation of a national policy to achieve these objectives would:

1. Ease the proliferating population growth in the main centers of pollution;
2. Relieve the major metropolitan areas of their growing pains and pressures; and
3. Afford an opportunity for prudent, orderly, growth in rural areas for present and future generations.

The time to do something about urban-rural disparities is now. Our teeming, festering cities -- our underdeveloped, impoverished, underpopulated towns cannot wait for additional drawing board solutions, advisory panel reports, commission recommendations, or campus research to come to

their rescue. The subject of rural America -- its problems and its needs -- has already been studied to death. Our libraries are full of the results. At this point in history, we need action, not rhetoric or good intentions.

We have to change our traditional view of rural America -- its function, its relation to the rest of the nation, and the social and economic assistance required to assure a better life for rural people.

1971 ANNUAL MEETING OF THE SMALL TOWNS INSTITUTE

The Small Towns Institute will hold its third annual meeting on May 27th, 1971 at Grupe Conference Center, Central Washington State College, Ellensburg, Washington. The Board of Trustees will present the Annual Report and consider issues brought before it by the membership.

With the Departments of Business and Economics, Anthropology, and the Office of Continuing Education at Central Washington State College, STI is sponsoring a "Symposium on the Future of Small Towns," to be held at Grupe Conference Center on the same day. Registration will open at 9:30 am. and the program will begin at 10:00. The morning session will be entitled "The Future of Small Towns: Economic Trends and Public Policy." Speakers will be Dr. Theodore J. Kreps, Professor Emeritus of Economics from Stanford and author of numerous books and articles on business economics; Jann W. Carpenter, attorney and business economist; and a representative from Environmental Resources of the Weyerhaeuser Corporation.

Luncheon will be served at noon and the symposium will resume at 1:00 pm. Speakers at the afternoon session, "Programs for Action: Government and Private Resources," will include Francis DeLucia, Director of the Office of Small Town Services, Department of Housing and Urban Development, Washington, D.C.; Clayton C. Denman, President and Co-Director of the Small Towns Institute; David Stevens, Washington Planning and Community Affairs Agency; and a representative of Sears, Roebuck and Company. Discussions and questions will follow each session. Registration fees will be $7.50 if returned before May 20, and $10.00 after that date. Fees include coffee, luncheon, and copies of the proceedings of the symposium.

The STI business meeting will follow the symposium at 3:30 and is open without cost to all members and interested persons.

The newsjournal *Small Town* is published monthly throughout the year by the Small Towns Institute and is distributed free to members. Annual dues for individuals $10.00; business and institutional membership: non-profit institutions $25.00, small businesses $25.00, chambers of commerce $50.00, towns and local governments $50.00. Small Towns Institute, Post Office Box 517, Ellensburg, Washington 98926. *All Dues and Contributions are Tax Deductible.*

Mr. C.L. Fair, Dir. of Administration
Doxiadis Associates, Inc.
1058 Thomas Jefferson St, NW
Washington, D.C. (20007)

Dear Mr. Fair:

Thank you for your August 17th letter. I am happy to hear that you are interested in discussing the possibility of my employment with your firm.

At present, I don't have specific plans for making a trip to Washington. Until Mr. Smith's projected trip the last part of October to confer with you and Dr. Doxiadis materializes, I will not know if I will be one of the ones representing SRC. I will keep you posted as it develops from this end.

Sincerely yours,

(Miss) Susan Bresler

Dear Miss Bresler:

1. Thank you very much for your letter and your kind comments about our firm and Dr. Doxiadis. On the other hand, we feel that you, too, are working on an exciting project.

2. In answer to your inquiry about possible employment, we are always interested in seeing people interested in our work. If you are in the Washington area in the near future, we should be delighted to have you stop by to speak with me and my colleagues. Please advise us as to what arrangements you may make.

Sincerely yours,

C. L. Fair
Director of Administration

PROPOSAL FOR A SOUTHEASTERN STUDY

Background

Our era is the first time in history that planned urban development and renewal has become of major importance and has drawn such public attention. On the other hand, with all that has been and is being done, there is no indication that urban areas in the U.S. are improving. According to the HHFA's 1959 annual report, based upon the statistical result of rehabilitation of living units between 1950-1956, it would take the U.S. 100 years to eliminate all substandard living units.

Although the problem of human settlement has always been complicated even when humanity lived in small, practically static, settlements for thousands of years, today we have a dynamically changing situation with an increasing rate of change. It is estimated that the U.S. population within a century will be at least five times as large as at present. This changing structure of our settlements creates a fantastically complicated situation. Heretofore, we have faced these problems of change within our urban areas in a static way with urban renewal projects, thus aggravating our situation. We are trying to meet continuous, dynamic change with static solutions.

S.E. Study

It is proposed that effective solutions will be reached only

through a multi-disciplinary study of the potentials of the region.

What are the possible benefits of a S.E. regional plan? The South is still making the transition from agriculture to industry. Illiterate cotton-pickers lack the basic education and skills to compete for the new industrial jobs. Cities of all sizes are competing for industry, but the cities lack the resources to attract the industry to provide the jobs. Some choices have to be made if the unskilled are to be trained and educated for an industrial economy. Some choices have to be made if the economy is to be sound, diversified, and prosperous.

A regional plan can provide a guiding framework for pooling the South's limited resources to meet the needs of its changing economy.

Urban centers, employment centers, educational centers, transportation centers, and government expenditures can be coordinated toward productive, rather than haphazard, development.

Furthermore, regional planning can anticipate future changes and prepare for them. The change from cotton to soybean production was predicted decades before it happened. Had there been a regional plan, the great waste of human resources might have been avoided.

Nothing less than an organized scientific analysis can help us understand the problems of the human settlements we are living in.

This multi-disciplinary approach should include:

- Economics
  - Agricultural Development
  - Commercial Development
  - Industrial Development
- Political Science
- Sociology
- Psychology
- Technical (Physical Planning)
  - Engineering
  - Architecture
  - Landscape Architecture
- Government
- Education
  - Normal
  - Adult
  - Demonstration Centers
- Transportation
  - Railroads
  - Highways
  - Air
  - Rapid Transit
- Communication
- Recreation
  - Individual
  - Group

Recreation continued

Spectator

Participator

Entertainment

Cultural Frameworks

Arts

Music

etc.

A study of the Urban Renewal Movement in the U.S., promoted by the National Association of Housing and Redevelopment Officials and carried out by Dr. C.A. Doxiadis, Athens, Greece has developed this multi-disciplinary theme. The final conclusion of this analysis was that the broad view or over-all approach of the Region or Nation is the only sound projection and that the local project or solution most likely works against the long-range best interest of that ~~the~~ community.

Therefore, it is our considered opinion that for the SRC-UPP to be the most effective we should implement for the earliest possible projection a Master Plan for the Region which would help effect the opportunity for a better way of life through a better regional environment.

Proposal

To this end it is proposed that a discussion be held with Dr. Doxiadis, Doxiadis Associates, Inc., to explore the possibilities of going into a joint study:

1. Survey of
   Problems
   Today's Solution

2. Projected or recommended Regional goals
   Policy
   Conception
   Programming
   Methodology

It would be hoped that the SRC staff could implement as many of these studies as possible within the outlined scope as set up by Doxiadis Associates, Inc.

An appointment with Dr. Doxiadis has been requested sometime between October 15-31 but excluding the 20-27th. Your reaction would be appreciated.

Comment

The eleven Southern states encompassed in the proposal for this study comprise one-fourth of the area of the United States. The solution of the science of human settlement possible within this region should be of far greater significance than the potential solution in any other area in the whole United States, influencing the transition from a war world to a world dedicated to peace. It is with a strong conviction in the commitment of this region that we believe that here we will find the true

meaning of equal opportunity. Although the thesis of equal opportunity for all citizens regardless of race, creed or color must be a fundamental basis for any true democracy we feel that in the proposed Master Plan Study one premise must be taken for granted: in any projection of good planning there must be a strong emphasis on the legal position of OPEN OCCUPANCY as an essential ingredient if good planning is to become effective. This is outside of and as important as the moral, ethical, or political overtones of this principle. Open occupancy is good economics, good business, and therefore an essential ingredient to good planning. The proposed study would assume that open housing will eventually be the law of the land under the Fourteenth Amendment to the U.S. Constitution.

"When we endeavor to make for ourselves an atmosphere in which to live and work . . . we are performing a genuine service not only to our time but especially to the future."

(Frank Lloyd Wright)

December 21, 1966

Mrs. Bem Price
The Potomac Institute, Inc.
1501 - 18th Street, N. W.
Washington, D. C.

Dear Mrs. Price:

Thank you so much for your note and your cooperation on the neighborhood project. I am afraid I was rather a dud while you were here. Wednesday at noon I "folded my tent" and went on home and stayed in until the following Monday. I hope I didn't give you whatever "bug" I had.

We are negotiating the printing of your pamphlet, and as soon as I obtain a copy I will forward it along.

I hope your further thoughts will come up with a project we can work together on.

With best wishes for the holiday season, I am

Sincerely,

Moreland G. Smith, Director
Urban Planning Project

MGS/mmj

I didn't realize I wouldn't get to see you after lunch today, to say goodbye properly.

Thank you so much for all your courtesies. It has been a great pleasure working with you on the neighborhood project.

I hope to see you soon.

Again, thank you.

Margaret Price

Dear Mrs. Price

Thank you so much for your note and your co-operation on the neighborhood project. I am afraid I was rather a dud while you were here. Wednesday at noon I "folded my tent" and went home and stayed in until the following Monday. I hope I didn't give you what ever "bug" I had.

We are negotiating the printing of your pamphlet and as soon as I obtain a copy I will forward it along.

I hope your further thoughts will come up

with a project we can work together on ....

With all of the best wishes for the holiday season, I am,

Sincerely

Mr. Smith.

A PROPOSAL TO THE SOUTHERN REGIONAL COUNCIL

Prepared by:

DOXIADIS ASSOCIATES, INC.
Consultants on Development and Ekistics
1058 Thomas Jefferson Street, N.W.
Washington, D.C. 20007

DOX-USA-WS 30
February 1967

A. INTRODUCTION

1. Background

1. In 1966 the Southern Regional Council established an Urban Planning Project, an adjunct to its continuing efforts to improve the human condition and to attain equal opportunity for all peoples in the South.

2. The Urban Planning Project is a judicious first step aimed at the pursuance of planning research into the future of the Region, an area in which the Council is normally concerned with eleven states: Texas, Virginia, Arkansas, Louisiana, Mississippi, Alabama, Florida, Georgia, South Carolina, North Carolina, and Tennessee. This area is outlined on the map attached as Exhibit A.

3. As noted in the Project Director's Proposal for a Southeastern Study, attached as Exhibit B, the cited area encompasses approximately one-fourth of the area of the United States. In the context of a dynamic national development, the Region lags badly in many economic and social areas and is still primarily agrarian in nature.

4. These conditions have not served well the human situation. The Region's advance toward an industrial economy is harnessed by an unskilled and often illiterate labor supply. The evidences of poverty are a concomitant feature.

5. The Urban Planning Project, wishing to deal with these symptoms of economic and social disease, believes it best to conduct an organized scientific analysis of the Region. Such an analysis is presumed to be the best approach within the effort of yielding effective long-term answers to the Region's problems, and then only on the basis of multi-disciplinary studies. The result of these studies is seen to be a Regional Master Plan "which would help effect the opportunity for a better way of life through a better regional environment."

2. Preliminary Discussions

6. In the belief that Doxiadis Associates can be of assistance in these studies, several meetings between S.R.C. and Doxiadis Associates have been held over the past few months. In particular, the meeting of 31 October 1966, which was directed by Mr. C. A. Doxiadis, resulted in initial mutual understanding of the goals which S.R.C. desires to pursue. It was agreed at that time that a total study for the Region, probably costing several millions of dollars, might be too difficult to finance at this time.

7. On the contrary, a small study, or a series of small studies of limited scope, could not develop the degree of understanding necessary to the massive problem presented, i.e., preparation of a Regional Master Plan.

8. For these reasons, it was agreed that a study of limited scope should be designed as a first step and in such a way as to provide a model for the total study.

9. It was also believed that a pilot study would be preferable for immediate implementation because of the value which such a study might lend to the pursuance of the initial goal. Accordingly, Doxiadis Associates agreed to prepare a pilot study proposal, to which purpose and to the definition of the study design this document is devoted.

B. THE PILOT STUDY

1. The Study Area

10. Since the pilot study is intended to create a subregional plandand to indicate a model program for action, it must be based upon a thorough understanding of current conditions in the Study Area. Initial conversations have tentatively identified the Study Area as surrounding Atlanta in a ring reaching midway between Atlanta and Birmingham on the west, Chattanooga on the northwest, Columbia on the east, and Savannah on the southeast. This area is outlined on the map attached as Exhibit C.

11. One significant aspect of the area thus defined is believed to be its relationship to a more accurate delineation of the sphere of urban influence belonging to the area's central city - Atlanta. Thus,, an obvious aspect of the pilot study will be the research within this facet of the regional structure.

12. Another element of importance is the fact that the defined area embraces numerous counties in portions of four states, thus lending to the pilot study additional dimensions in terms of intergovernmental coordination and interstate aspects of research.

13. One of the major purposes of the study design will be the final delineation of this Study Area, based upon better understanding and the refinements gained through the design process.

2. The Study Frame

14. The aforementioned early discussions have placed several goals and restrictions upon the frame of the pilot study. In general, this study must contain the following features:

a.) The capability of precipitating the participation of public agencies such as appropriate units of the City of Atlanta; the key cities of Athens, Augusta, Columbus, East Point, Macon, Marietta and Rome; and some 85 counties falling within preliminary study boundaries.

b.) Provision for involvement of the Southern Regional Council.

c.) Provision for maximum impact in terms of immediately usable conclusions such as information to generate applicable Federal or State programs.

15. It has been agreed that it is imperative to gain an understanding of all forces at work in the Study Area. In this effort, it should be possible to utilize knowledge and techniques gained through studies performed elsewhere by Doxiadis Associates - that of the Developing Urban Detroit Area, the Human Community study, and the City of the Future study - in order to provide backdrops on several scales, against which purely regional phenomena may be viewed. It is reasonably assumed that there should be a planning period sufficiently long so as to permit judicious interpretation of these forces and phenomena.

3. Bases for the Pilot Study

16. By definition, the pilot study would provide a research model for the whole Southeastern Region and, most certainly, a model for the total study for the Region. It is definitely not intended to be typical of the Region.

17. More important, it is believed that the pilot study can effectively demonstrate the Council's interest in such research, the ends of which should have manifold applications in all aspects of the regional situation.

18. We hope this study can effectively demonstrate the Council's interests in research into the problems and potentials for this Region and the essential value of a comprehensive study focusing on the Region's entire social, cultural, economic and governmental structures. Only through such a broad dynamic approach, starting with an analysis of available resources, can the Region's development proceed on a sound basis. Progress cannot be achieved in a vacuum. It is hoped, therefore, that this pilot study will stimulate other studies with similar design and purpose, both within the Region and elsewhere in the country.

19. In pragmatic terms, the pilot study can be expected to yield the following:

a.) An inventory of primary planning data.

b.) A compendium of resources - physical, social, etc.

c.) Determination of problems and needs.

d.) Formulation of a detailed program indicating priorities for action.

d.) Program recommendations and implementation.

20. Since the courses of social action are such strong determinants in the Region's future, and since S.R.C. has strong capabilities in this area, there should be amphasis upon these aspects of the ekistic whole. The plan must also include available alternatives of social action in terms of promoting the goal of equal opportunity.

C. THE PRELIMINARY STUDY

1. The Study Design

21. It has been agreed that the purposes of the pilot study will be best served by a preliminary study design, the aim of which should be the optimum preparation for the pilot study. Patently, the preliminary study design may be used as an aid in attracting financial assistance for the pilot study.

22. The framework for this study design can be expressed in terms of the following elements:

a.) Preliminary formulation of goals and policies of the pilot study.

b.) Area delineation.

c.) Outline of the nature and scope of work.

d.) Cost and time estimates for completing program elements.

e.) A critical path program.

f.) Division of the study into logical priority work programs which may, if possible, be undertaken independently.

g.) Organizational arrangements.

2. Organization of the Preliminary Study Design

23. Previous discussions have indicated the amount of $15,000 as a reasonable estimate for the cost of services to be rendered by Doxiadis Associates in the effort required to produce a preliminary study design. It is still appropriate to think in these financial terms, since DA's past experience warrants consideration of such an amount as being close to the mark.

24. Approximately three months should be sufficient to complete the necessary services, outlined under paragraph 22, above, and further detailed under 3. below.

25. An indication of the personnel considered appropriate to the production of a preliminary study design may be found in Exhibit D. This exhibit also lists time allocations for personnel and for each phase of the study design.

3. Scope of Services

26. The scope of services for the preliminary study design may be further expressed in the following terms:

a. Preliminary Formulation of Goals and Policies

i. Definition of problem areas.

ii. Identification of policy questions needing exploration.

b. Area Delineation

i. Survey of jurisdictional, economic, and other factors.

ii. Determination of Study Area limits.

c. Outline of the Nature and Scope of the Work

i. Inventory of possible study elements.

ii. Selection of promising areas of investigation.

iii. Preliminary postulation of study services and programs.

iv. Final formulation of goals.

v. Preliminary design of the pilot study.

d. Cost and Time Estimates

i. Identification of reasonable phases for the pilot study.

ii. Costing.

iii. Establishment of preliminary time periods.

e. Critical Path Program

i. Preparation of complete study charts.

f. Work Programs

i. Identification of work units.

ii. Preparation of logically complete programs for the joint effort.

g. Organization

i. Relation of personnel and facilities to work programs.

ii. Finalization of time periods.

D. CONCLUSIONS

27. The foregoing discussion summarizes the background of this study and isolates study elements and the practical requirements pertaining to their preparation.

28. It is believed that the effort is a noteworthy one for both parties, since it would bring to bear on the problem the great experience of an outstanding human relations group and the substantial qualifications and pertinent past studies of an international planning organization.

29. Because of the importance which we attach to this proposal and because of the sensitivity required of its product, Mr. C. A. Doxiadis will assume personal direction of the study effort.

30. It is also felt that the study design process will best mobilize the talent and experience grouped in each organization. More important, this arrangement will result in a perfectly clear planning process, the goals and means for which have been predetermined.

31. Finally, there is every reason to believe that these research activities can also serve the purpose of stimulating similar large scale research efforts elsewhere in the country.

TO CONSTANTINOS DOXIADIS

It was with pleasure that I read of your designation as the third winner of the Aspen Award for humanistic achievement. Your concern with man's place in an increasingly technological society strikes a responsive chord in many, including myself, who believe that new concepts of planning are indeed necessary to prevent annihilation of "man" through the accelerating mechanization and urbanization of our environment.

In response to these changes the Southern Regional Council, a human relations organization begun in 1944, this year established an urban planning project. After 100 dorman years the South is proceeding into major urban development. The primarily rural character of the eleven Southern states means, at least, that this section does not have to compensate for the urban mistakes of the past; it has little that must be rebuilt. But there are other difficulties which face anyone attempting to direct planning for the future. The primary difficulty is racial attitudes dating from the settlement of the region; this prejudice, sanctioned by local government, has been built into the towns through city ordinances, overt discrimination and tacit understanding among the white community. Negroes traditionally have been allotted the worst areas of the city for living quarters and have been denied access to other sections by law and custom. Any unseemly blight caused by the Negro section was screened by park strips or boulevards and ~~expansion~~ buffered by railroad tracks and ~~was halted~~ warehouses. It is with these difficulties in mind and opportunities at hand that I call your attention to the U. S. South.

I believe strongly in the principles of planning which you advocate, and I feel that your opinion of our analyses and projections would be very valuable in helping us evaluate how successful we are in eliminating ingrained prejudice and conventional solutions ~~form~~ from our plans. ~~At~~ at Aspen

With this in mind I would like to meet with you either before or after the Aspen Award presentation on July 29th. At that time we could discuss the various aspects of urban planning in the South. In particular

I would like to discuss the possibility of the Southern Regional Council's sponsoring a conference which would be used to set goals and directions for urban planning in the South.

If, after talking together, we find that we both are interested in continuing this dialogue, I will try to obtain funding which would enable us to retain you as consultant for long range planning to the Urban Planning Project. As part of our activities the Southern Regional Council would like to publish a position paper by you on potentials of urban planning in the South.

It is my hope, Mr. Doxiadis, that your interest has been aroused by my suggestions and that you will want to undertake the challenge of the problems of the emerging, urbanizing South.

Sincerely yours,

MGS

Hope to see you in Aspen

KOINONIA PARTNERS PHONE (912) 924-7253

ROUTE 2 Americus, Georgia 31709

KOINONIA FALL NEWSLETTER #1 SEPTEMBER 1970

Many people out in the county around Koinonia are frustrated and angry these days because of the recent total integration of schools. They are quick to find fault with anyone who disagrees on this "crisis." Add to this explosive situation the ingredient of a "more visible Koinonia" due to (1) new families moving in and an increasing flow of visitors and volunteers, (2) an expanded farming and rural industry program and (3) a vigorous house-building project for displaced rural families, and you come up with potential trouble. So when open hostility, which has been dormant for several years, flares up again, it is deeply regrettable but no real surprise.

"Incidents" involving Koinonia people have been increasing in recent weeks. First, some of our young people were cursed at in front of the Dairy Queen in Americus. Then, several days later, food was thrown at them at the same place. In mid-August, Nelson Frey, George Maendel, and Dan and Beverly Prutsman were yelled at by a group of young men in a car in town. The youths followed our car beyond the city limits where they crashed a beer bottle into the side of the Koinonia car, as they roared past.

During the last week of August, Rodney Zook, the ten-year-old son of Al and Ann Zook, was stopped on the highway at Koinonia by a man who cursed him out for living with "a bunch of nigger-loving communists." Later that same day, Dallas Lee and Ed Young were driving toward Americus when a car pulled up behind them. The car followed right on their bumper for several miles and then the driver began making gestures as if he were reaching into the glove compartment. At that point, he pulled alongside the car and dramatically threw up his arm toward the driver of the Koinonia car as if to shoot a gun. Fortunately, he was bluffing. As the car tore on past, he swerved right in front of Ed causing him to move to the shoulder. At the first stop sign south of Americus the man's car was stopped. When Ed and Dallas came along, he jumped out, cursing and challenging them to a fight. When no response was made, he crawled back in his auto and roared off.

A week later, following our weekly Bible study, Jerry Anthony, Don Chappell and Ladon Sheats were walking up the highway toward Sunny Acres, the house occupied by most of the single fellows at Koinonia. About a hundred yards north of the main gate, a car approached them. The car slowed down, and just as it pulled even, an object was hurled out the window. It struck Ladon square in the face, felling him instantly. The car then raced off as Don and Jerry pulled Ladon to the shoulder of the road. Then they noticed that the car had stopped. Jerry ran for help as Don pulled Ladon further into the bushes. Moments later the car pulled on off down the road, not to be seen again. Jerry returned within moments with Millard Fuller and Jim Barnard. Ladon stumbled into the back seat, and they raced to the hospital. There the damage was assessed. His left nostril was ripped open, a deep gash

was cut in his upper lip, and several teeth were chipped. It took 2-1/2 hours to sew him up and bandage his wounds.

Our response to all of this harassment continues to be one of Christian love and forgiveness, as best we know how. We confess our inadequacy to get many "results" in this environment, but we steadfastly believe that God has called us to faithfully proclaim His Word on peace and brotherhood and sharing. We have no intention of compromising this witness to achieve an unjust "peace" with some racist neighbors. We need your continuing prayers as we move into an uncertain future.

While the above report is bleak, there are hopeful signs too. As reported in an earlier newsletter, several Koinonia people have been attending churches in town. Largely as a result of this, a few white townspeople have ventured out to visit with us. We have enjoyed good fellowship and the exchange of views has been encouraging. Our door remains open and we earnestly desire reconciliation with all people--white or black, northerners or southerners--for Christ calls us to "one great fellowship of love throughout the whole wide earth." To that end we are committed.

We continue to have excellent relations with our black neighbors in the larger community--and they number 60% of Sumter County's population. Much of the fear that has gripped southern blacks for decades is slowly wearing away. Black families are readily responding to Koinonia's housing village and are moving into their new homes without fear. This month the fourth and fifth families moved in. Next month we expect the sixth and seventh families to occupy their new homes. Ashton and Marie Jones, referred to in the last newsletter, will be one of those families. (The Joneses are white. Other white families will live in Koinonia Village, too.) The eighth, ninth and tenth houses in Koinonia Village are under construction. Ten houses should be complete and even more houses under construction before Christmas. We want to build steadily until all 42 houses are built.

A very successful Bible school was held during the last 2-1/2 weeks of August under the leadership of Mike Tiernan, a student at the University of North Carolina, and with the help of several Young Life kids from Philadelphia and Connecticut. Over forty children attended the daily sessions in the Koinonia Village park and playground.

We are happy to report that Koinonia Partners, Inc. has been declared eligible for tax deductible gifts by IRS. This status was applied for a year ago and a favorable ruling was expected all along, but getting it is truly a bit of GOOD NEWS! Any gift you make to this work in the future will be tax deductible. Make your checks payable to KOINONIA PARTNERS, INC. Your gifts automatically go into the Fund for Humanity at Koinonia to build houses for poor families on a no-interest basis, to start other partnership farming ventures or partnership industries, and to help carry on our outreach ministry of preaching and teaching the Good News of Christ. (The total philosophy and program of Koinonia Partners is explained in a little brochure entitled "Koinonia Partners." Write for a free copy if you don't have one.)

Another item of truly Good News is that a Koinonia "partner" in Denver, Colorado, has donated money to erect a building for a new pecan shelling plant. This building is near completion. For the time being, the old equipment will be used in the new facility, but new, much needed, machinery will replace the old as soon as funds are available. This new, expanded shelling plant will enable us to produce many more pecans for our "nut" partners and, more im-

portantly, provide several more jobs for local people. Our hearts are full over this beautiful act of concern and sharing. We know you rejoice with us about this.

The budding Tie-Dye and Dashiki Sewing Industry, referred to briefly in the Summer Newsletter, is growing by leaps and bounds. Carol Brink, Linda Woods, Laurie Fuchs, and Linda Fuller are the partners in this venture. Four more women from the larger community are working with them and even more will be hired in weeks to come. Venora Ellis, a long time friend and partner of Koinonia from Westport, Connecticut, came down with her friend Jaqui Dendy, during the first week of September to help launch the production line for this enterprise. The shirts are advertised on the inside back page of the enclosed products catalog. Your orders will help this industry grow. The partners take only a modest living allowance, and other profits, as with all partnership ventures, go into the Fund for Humanity. Incidentally, sewing machines are needed. If you have an extra one that is gathering dust, ship it down. We'll put it to good use.

The harvest is on! Peanuts are all in now. We had an excellent crop this year although some nuts were lost due to heavy rains during harvest. Our average yield was in excess of a ton per acre on 127 acres. Grapes are in too--another good crop--over 14 tons. Corn is presently being gathered and that crop looks very good too.

Our friend G.T. Miller, over in Luverne, Alabama, is still having it rough with that lingering Ku Klux Klan boycott. He's lonely in the struggle, too. Drop him a note during a spare minute. His address is simply: G.T. Miller, Luverne, Alabama, 36409. Send him a little grocery money, too, if you've got any extra in your bank account. He'll go under if we don't help out.

Right now, sit down and order your pecans, fruit cakes and candy, plus some of the other items listed in the products catalog. We ship every day and want to fill your order. Your purchases enable this little enterprise to grow and create more job opportunities for so many people. And, profits go into the Fund for Humanity, as on other partnership ventures. Some of you may want to sell Koinonia products through your club or church group, or personally from your home. A couple in Philadelphia last season sold $10,000 worth of Koinonia products from their home! On volume sales, you or your group make a profit and so does Koinonia. See the price list for volume discounts.

Most important of all, please keep us in your thoughts and prayers, and may the God of love and peace continue to rule in your hearts and guide you into acts of love, peace, kindness, and mercy in the months ahead.

KOINONIA FALL NEWSLETTER #2 OCTOBER 1970

THIS MONTH MARKS THE FIRST ANNIVERSARY OF THE DEATH OF CLARENCE JORDAN. HIS LIFE AND GREAT SPIRIT HAD A PROFOUND INFLUENCE ON THIS PLACE CALLED KOINONIA, BUT HE TOUCHED LIVES ALL ACROSS THE LAND THROUGH HIS LECTURES AND BOOKS. HIS SPIRIT IS STILL ALIVE HERE AT THE FARM AND CONTINUES TO INFLUENCE AND INSPIRE US ALL. IT IS ALIVE BECAUSE IT IS THAT SAME SPIRIT WHICH DWELT IN CHRIST. THAT SPIRIT NEVER DIES. WE DEDICATE THIS NEWSLETTER TO CLARENCE JORDAN--CO-FOUNDER OF KOINONIA, LECTURER, AUTHOR, HUSBAND AND FATHER, OUR FRIEND AND BROTHER IN CHRIST.

Our September newsletter told you about the harassment we have been experiencing lately. Happily, we can report that we have had no more "incidents" since Ladon Sheats was hit in the face with a bottle in early September. We are also pleased to inform you that Ladon has made a remarkable recovery from this attack, and has only minor scars on his face. Many, many thanks to those of you who kept us in your thoughts and prayers during this time.

In the meantime, we continue to see our task as that of communicating and applying the radical ideas of the God Movement as best we know how, South and North. Millard Fuller and Ladon Sheats, especially, are spreading the word. This fall, Millard has spoken in Alabama, Wisconsin, Ohio, Illinois, and Canada. Other engagements this fall will take him to Indiana for a statewide United Church of Christ Youth Conference, to Illinois for a Discipleship School, to Florida twice for statewide inter-denominational Youth Conferences, and to Alabama and Florida for programs with local churches.

Ladon has spoken this fall in New York and North Carolina. He has also conducted a discipleship school in Iowa and visited at Reba Place Fellowship in Evanston, Illinois. On his agenda for the remainder of the fall are a RAP Conference with college-age young people in North Carolina, another Discipleship School in Ohio, and a speaking engagement at Trinity Church in Florence, Alabama.

Our communications, or preaching, work continues here at the Farm, too. A steady stream of visitors comes to see us, and this affords a wonderful opportunity to receive them in Christian love and hospitality and to share with them God's Word and Way of love, peace, sharing, and brotherhood. You are welcome to visit Koinonia, too. Come to see us and share with us the good things of God!

We communicate through books, records, and pamphlets as well as by the spoken word. The enclosed catalog lists these items. Two of the books just off the press are SERMON ON THE MOUNT and THE COTTON PATCH VERSION OF MATTHEW AND JOHN, both by Clarence Jordan. These books sparkle with life from the heart of the Gospel. Consider the

following passages from Matthew 19:16-26:

One day a fellow came to Jesus and said, "Doctor, what is the good that I should follow in order to get spiritual life?"

"Why are you inquiring about 'the good'?" Jesus asked.

"'The good' is one. But if you want to come into the life, abide by the rules."

The fellow said, "Which ones?"

Jesus answered, "Why, the ones that say, 'Don't murder, don't sleep with someone you're not married to, don't steal, don't lie, take care of your father and mother, and love your neighbor as yourself.'"

"I've kept them all," cried the young man. "Why am I still flunking?"

"If you want to be a mature man," Jesus said, "go, sell your stuff, give it to the poor--you will be spiritually rich--and then come share my life." When the young fellow heard that bit, he walked away crying, because he had quite a pile. Jesus said to his students, "I'm telling you a fact; a rich man finds it extremely difficult to come into the God Movement. I say it again, a pig can go through a knothole easier than a rich man can get into the God Movement."

Upon hearing this, the students were completely flabbergasted. "Who can make the grade?" they asked.

Jesus looked straight at them and said, "Humanly speaking this is impossible, but with God anything can happen."

Bessie Thomas, Jan Carlson, Sally Johnson--Work Day at Koinonia Village.

In addition to the publications listed in the products catalog, several new records are coming out within a few weeks. You may place your order now for delivery as soon as they are available. Here's a list of what is coming:

JESUS, THE REBEL - Reproduced from a tape by Clarence Jordan (Side 2 - Jesus and Possessions)	-- $3.98
METAMORPHOSIS - Reproduced from a tape by Clarence Jordan (Side 2 - Love Your Enemies)	-- 3.98
FRIENDS - A musical record by some of the young people at Koinonia (With Ed Young, Barb Watt, Pete Clark and others-- Vocal with guitar, banjo, and flute)	-- 4.98
AIN'T THAT GOOD NEWS - A Negro Spiritual Record on the life of Christ (With Bennye Terrell Milton and accompanist)	- 4.98

Sims family in their old home

On the application side of the Koinonia coin, we are still hard at work building houses for displaced rural families. The Sammy Rufus Sims family was the fifth one to move into the growing Koinonia Village. They left behind a three-room shack at the crossing of two dusty red dirt roads. Now in a modern five-room house with bath, new furniture, curtains, and a spacious yard, they have a new outlook on life. Mr Sims, Sammy Rufus's father, who also lives in this house, excitedly exclaimed after moving into the new home, "I sure hope it rains soon. I want to see what it's like

to be in a house that doesn't leak!"

Annie Lou White's shack

This month the sixth and seventh families move into their new homes. Next month, two more families will move in. . . . Bessie and Ditter Thomas, their two children, and an elderly aunt, will occupy one of the houses. Bessie and Ditter used to live in a shack without toilet or cooking facilities where the roof leaked so bad there wasn't a dry place to put the bed. Ditter worked for a farmer who paid him $25. a week. He didn't make enough money to keep his children from being hungry. When Koinonia learned of the plight of this family, they were moved to a small house on the Farm and Bessie started working in the pecan sorting room. Ditter got a better-paying job in town. The day the Thomas family moved here, Bessie's father, Mr. Reynolds, who helped them move, said, "This house sure is nice, Mr. Fuller. If these chillun don't appreciate this house, I know they won't appreciate heaven!" Bessie and Ditter are awaiting the move into an even better house--one step above heaven!

Inside Annie's shack

The aunt who will move into this bigger house with the Thomases is Mrs. Annie Lou White, an eighty-year-old woman who is nearly blind. She has been living with the Zook family at Koinonia since she was discovered several weeks ago living alone in a shack insulated with egg crates. It had gaping holes, no heat or stove. Mrs. White sat alone all day with a bed and radio as her only possessions. When she was visited by several Koinonia young people, she was nearly starving, deserted by her children, and having her social security check stolen by neighbors whose living conditions were almost as bad as hers.

All of these new houses are made available to families like the Sims and the Thomases on a twenty-year no-interest payment basis. Monthly payments range from $25 to $32. The type houses we are building would cost $75 a month and more with conventional financing. Koinonia's Fund for Humanity takes the burden of interest off the backs of the people and enables them to live in a decent house. The Fund's money is from shared profits from Koinonia ventures and from tax-deductible gifts from friends around the country and from non-interest loans. We receive no government support or foundation grants and we seek none.

We believe God has called us to a ministry to pocketbooks--those with too much money and those with too little. We encourage people everywhere to enter into a warm, brotherly spirit of sharing and partnership with their less fortunate neighbors.

The newly formed Koinonia Sewing Industry is off to a good start. Many new items have been added since the last newsletter was issued. See the enclosed flyer for a full listing of available items. Everything is made here at the Farm. Your orders give work to people who desperately need income. Profits go into the Fund for Humanity.

Little porkers are always hungry

Farming partners Joseph Johnson, George Maendel, Chris Ficker, and Ed Young are still busy in the corn harvest. We only have one old combine which has broken down at least once a day since harvest began. Nevertheless, harvest should be completed by early November. The newest farming venture is the pig program. We now have 300 squealing pigs gracing our just-harvested peanut and corn fields. They are cleaning up the peanuts and corn missed by the combine. The junior pig partnerships of Zook-Fuller and Johnson-White are doing well. Their little pigs are now hogs, weighing about 150 pounds each.

Debby Schaper, recently arrived from Connecticut, is launching a new partnership industry: pottery-making. She is working diligently right now to convert an old garage into a pottery shop. She should be in production by Spring 1971.

Thomas Woods was elected president of his school's FFA (Future Farmers of America) in a run-off against his white classmate. Integration of the shools has been without major incident so far this year. Maybe the parents will learn something from the young people.

Mike Felton has been apprenticed to Al Zook, the candy man and fruitcake baker. Al has help now meeting a back-breaking schedule that doesn't stop for holidays and weekends. Mike is handy with the spoon and chocolate pot.

The Board of Directors named a fifth member at its last meeting. Ted Swisher, a student at Princeton University, spent February to September at the Farm. He organized a tutoring-enrichment program for high school age blacks, helped with construction, and was work coordinator this summer. We feel he is a grand addition to the Koinonia team.

Don't forget to send in your order for pecans and candy and fruitcake and all the other good stuff described in the products catalog. And don't forget your friends either!

One step above heaven

All of the partners at Koinonia send you warmest best wishes for the upcoming holiday season.

Re: Koinonia Housing, Route 2, Americus, Georgia 31709

Koinonia Village is the first existing low-income housing development in the Southeast to be assessed by SRC's Housing and Planning Department.

Koinonia Village consists of 1400 acres, originally an interracial cooperative farm founded in 1942 by the late Clarence Jordan. The orientation from the start has been toward a deeply Christian commitment to brotherhood. The very survival of the community through the darkest days of the Civil Rights Movement attests to the fortitude, dedication, love, and deep faith of the founder and those who joined in this venture. Shortly before Clarence Jordan's death last year, Millard Fuller joined the Koinonia family and brought to it sound business experience which has enabled it to move into new fields and expand its effectiveness without in any measure diminishing its religious emphasis.

The attached pamphlet, Koinonia Partners, is a help in understanding the motivation and philosophy of the movement, as is a recently published book, The Cotton Patch Evidence, by Dallas Lee, (Harper & Rox. $5.95)

> "...Understand the mind of Clarence Jordan whose stubborn faith gave rise to this dramatic christian

experience. The experiment has been a stormy, strife torn adventure-- because of the violent reaction of the larger community around Koinonia. Koinonia is a story about a lot of people; but it is a story built upon the strength of Clarence Jordon's spirit which all the red dirt in Georgia could not bury."

The Cotton Patch Evidence, by Dallas Lee

As of this date, 17 houses have been built. Ten are occupied, two almost completed, and five in various stages of construction. They range in cost from $6000 to $8000, with the higher figure being for a 4-bedroom house. Three bedroom houses range between $7,500 and $8,000, 2-bedroom at $6,000. One 3-bedroom with carport cost $8,5000, and one 1-bedroom reached the figure of $7,750. Average construction cost was $8.00/ sq. ft., the lowest being $6.50/ sq. ft. Basic construction is as follows: floors, concrete; walls, 8" x 12" concrete block waterproofed outside with paint*; prefabricated wood roof truss; asphalt shingles; aluminum windows; central bottled gas hot air heating (one experimental unit heated by electricity). The homes have been built mainly by two Black contractors, Mr. Davis and Mr. Sinclair Maddox (age 24). Mr. Davis also handles all plumbing and electrical work. One construction crew consisting of volunteer Mennonites is also doing an excellent job on houses and industrial buildings. Kitchen cabinets are built cooperatively as an extra, with materials costing $40 to $50.

*Toch Bros. water paint, 328 Hanley Indust. Ct., St. Louis, Mo. 63144

The Rev. Henry Duagherty is constructing an experimental house for which it is anticipated the materials, excluding paint and septic tank, will cost $2000. Paint is to be donated. The septic tank, constructed cooperatively by the residents, can be built for $200.

Manditory down payment for each house is $500. If possible, the $200 cost of the septic tank is paid at the same time, though this is not required. The loans to the owners are without interest on a 20-year basis, coming to $25 to $30 a month. The deed for the land (see attached) is for 30 years with an option for renewal. This deed is similar to the one for Jekyll Island property composed by Atlanta attorney Paul Webb for the State of Georgia. (It should be noted for SRC's confidential information, that Homestead Exemption has been allowed for Koinonia Village homeowners.) Koinonia policy is to consider that God owns the land and therefore it is not a commodity. Thus far, there has been no required will arranging for disposition of the owner's equity upon his demise. This could create problems and expense, and needs to be worked out.

The house plans have been obtained primarily through plan books--FHA, Department of Agriculture, and other low-cost housing developments. Good taste and judgement have been exercised and variations to the exteriors judiciously utilized so that the village image is quite pleasing. New lawns, flowers and shrubbery attest to the pride of ownership.

It is contemplated that the pre-school child day care center will be under construction within a few months. It is interesting to note that the park and accompanying playground is the only one existing in

the entire county. The day care centers will accommodate a present load of eight whites and twenty Blacks. Koinonia is also building a conference center to accommodate thirty-two people at present.

In addition to the construction partnership, there are income producing partnerships now functioning. These include various farm products such as peanuts, hogs, pecans, trees, vegetables. Pine trees in the village were planted in 1958 when harassment stopped other farming activities. Some Processing is also done. Pecan products, baked goods, candy, and publications are sold. A sewing guild produces dresses, dashikis, shirts, etc. Additional business ventures are in the stage of development, these being pottery making, a co-op general store, co-op drug store, co-op personal loan, jam and jelly making, and a pant factory to be managed by Bill Londeree, formerly with Lady Arrow in Ohio. $30,000 will be invested in this operation which will employ 20 people at the start and manufacture 100 dozen nylon knit women's pants per day.

Other new families bring other skills. Mr. Jim Goss, a horticulturist recently arrived with his family. His training will open new fields for the community.

Financing of all activities is done through the Fund for Humanity, which is comprised of donations and profits.

The contrast in the old industrial facilities and the new prefab Butler construction for the new industrial and administrative buildings is quite striking. Machinery and transportation is kept in top condition by a co-op maintenance shop.

There are three water systems, each with well, pump, and pressure tank. One supplies the houses, the cost for maintenance

water, and ground rent being $5.00 per month per house. Another serves the industrial work and the third the Koinonia "family" compound.

The two village streets are not yet surfaced, and it is hoped that this can be accomplished once all of the lots are full.

It is disappointing, but not unexpected, that so far no low-income whites have taken advantage of what Koinonia has to offer. The Rev. Jim Jackson is working full time trying to communicate with the nearby city of Americus, but has as yet met with no apparent success.

However, Koinonia does spread its influence beyond its immediate boundaries. Three full time people work with neighboring Blk/white? farm families, teaching skills, counseling, assisting with needed clothing and loans.

Last year, Koinonia had 4000 visitors, 10 communally working families, 50 to 60 full time volunteers, 15 to 20 short term volunteers, and from 50 to 80 persons at noon day meals. When one considers the long struggle with so few keeping it going for so long, and that as recently as 1968 there were only two families, the progress is phenomenal. Harassment has been unpredictable, inconsistent, and erratic. At times it has dimmed the candle, but it has never extinguished the flame. It glows brighter now than ever, a witness to the Genuine Christian faith and love in this happy community.

Americus, Georgia 31709

April 15, 1971

A SHORT NOTE TO OUR FRIENDS.

* In place of the regular Spring newsletter, we are enclosing a letter from Dallas Lee, the author of The Cotton Patch Evidence, the exciting story of Koinonia's unique past. Writing the book was a moving experience for Dallas, and he has taken this opportunity to share his thoughts and feelings with you. The Cotton Patch Evidence will come rolling off the presses of Harper & Row in June--we've just finished reading the galley proofs and we are really excited about it. The book will regularly sell for $5.95; but we are able to offer it to our friends at a special, pre-publication price of $4.95. We have enclosed an order blank for your convenience.

* We have also enclosed a copy of our updated Koinonia Partners brochure, which explains in detail the present efforts of the community and our hopes and dreams for the future. We will be happy to mail additional copies to all who wish them.

* Please order your pecan products (fruitcake, candy and nuts) immediately. Due to the severity of the summer heat, we must suspend delivery of all food products on May 15--all food orders received after that date will not be filled until September.

We will continue to ship our other products--books and records--all summer.

* Things have really been jumping here on the farm, and our Summer newsletter will be brimful of exciting news about recent discipleship schools, the expansion and growth of our rural industries, continued progress in the housing village, and the growth of our own community--three new families have come down to share our way of life as new members of the Koinonia Partners family! Right now we are planting corn and peanuts and celebrating this Spring of God's blessing. Please join with us as we sow the seed and celebrate the gift of life.

KOINONIA PARTNERS

PHONE (912) 924-7253

ROUTE 2

Americus, Georgia 31709

April 15, 1971

A PERSONAL LETTER FROM DALLAS LEE TO FRIENDS OF KOINONIA:

We met at Koinonia Farm in August, 1969 for that first Koinonia Partners board meeting--Tom Boone, Ladon Sheats, and I--grinning and shuffling and feeling a little numb from having been asked to be trustees of such a far-ranging dream. After the first few moments of embarassed uncertainty, we finally got rolling on the agenda, and Clarence set forth what he considered to be one of the major priorities: a book on Koinonia Farm.

The time was ripe, he thought, to get the story between covers and out to people--not because it would make heroes of a few, but because it would document a dramatic, human struggle for obedience in the face of great resistance. Clarence had refused eager writers in times past because Koinonia was still in the middle of something he himself couldn't quite articulate. But now an era had closed and a new idea was under way. It was time to tell the story of what Koinonia had been trying to be since 1942.

We were enthusiastic about this. All three of us had been stunned by Clarence's powerful teachings and by his magic storytelling of adventures at Koinonia Farm. We knew there was a big story here--a story with humor, tragedy, violence, and courage. We were certain it could make significant commentary on religion and culture in the U.S.A.

The question was: who should do it? I think we all sat there and searched our minds for the ideal writer, for the name of some giant-of-a-Christian-journalist. But in spite of our enthusiasm, names would not come to mind. This was an important decision to make, and it was obvious to all of us that we were going to need time. Obvious, that is, to all except Clarence, who never seemed to think about things quite the way most other people did. He could see things with a forthright simplicity which was almost breathtaking at times; in this case, Clarence would either think a person could do it, or he would think he couldn't.

He said he thought I could.

And I nearly dropped from the end of the couch. Oh, I was the first person I had thought about too, but that was out of sheer fantasy. Clarence's real words took me completely by surprise. My mind racing, I tried to respond to Clarence's suggestion. "Well," I stuttered, wrinkling my eyebrows in as serious a gesture as I could, "I...uh..," and unintentionally, I revealed my secret wish. I had intended to say - "Thanks, Clarence. That's a real honor. But we need to think of an established author who could...." Instead, what came out was - "Uh...well...I'll tell you this: if I were to do it, I'd find a way to get down here and spend some time, a lot of time. Yes sir!"

After collecting my thoughts which had become disordered with excitement, I suggested that Clarence himself write the book. He was a classic storyteller of the old spit-and-whittle brand, and I truly could think of no more powerful

communicator on the subject of Christian faithfulness. But Clarence didn't think it right for him to tell the story he was so intimately connected with, and he didn't wish to take the time from his translation work in progress. So we adjourned that first meeting without a final decision on the book, but with the definite intention of thinking of other possible writers.

I thought about the book more and more in the early Fall of 1969. I had plenty of time to--I was in bed with hepatitis. I finally wrote Clarence near the end of October and told him I thought he should do it himself, that the book deserved that sort of priority. And I meant it. But I also said something else I meant. I said that if he still felt he should not take on the project, then I would like to.

Clarence died in his study shack four or five hours after that letter arrived. He didn't leave an answer for me. Or, initially at least, I didn't think he did. As we buried him the next day, I hoped he had read the letter before he died, not because of its content, but because it was a communication to a man I loved. I hoped that whatever last gesture I had made in his direction had gotten through. (Florence told me after that he had read the letter.)

Millard called me a week or two later. Characteristically, he got right to the point--"How would you like to do the book? I think it needs to be done as soon as possible now." No modest second thoughts or lack of confidence entered my mind this time. I simply said, "I want to do it." And I did.

I just took a leave of absence from my job and moved to Koinonia, and walked each day for three months down that grassy road, across the winter field to Clarence's little green shack, and listened to him. The old Wollensak tape recorder had not been all that reliable, but I never had trouble. Each day I put on a tape of some lecture by Clarence, and began hungrily to take in the mind of the man whose stubborn faith gave rise to one of the most dramatic Christian tales of the 20th century.

In between tapes, I began rifling the files of letters, community meeting minutes, old newsletters, and clippings, and tracking down people for interviews who had given a portion of their lives to the Koinonia Farm experiment. I was used to working with lots of people around, and I had the habit of jumping up to share every interesting item that passed my way. But now here I was in a little shack, surrounded by frosted, wind-blown dirt, 300 yards from the nearest friend. I would stand suddenly and pace rapidly about the room and laugh or shout or open the door and say to the weeds, "Well, were you aware of <u>that</u>?" I felt like a little old domestic meat grinder through which someone was trying to stuff four tons of hamburger every day. I found myself praying simply, "Lord, if you can hold my clapboard mind and my sagging ribs together just a few months, I'll get all this processed for the world to digest." I honestly began to feel that when I completed this work I would be physically and mentally wasted like a small woman who had just delivered quintuplets.

But, of course, I evened out, got my second wind, and plunged on. I had taken a five month leave of absence from the Southern Baptist Home Missions magazine. Clearly, that wouldn't do. I resigned and spent a full year on the book.

The story was about people--people who disrupted a course tradition had set them on and gave themselves totally to an experiment in Christian lifestyle that put them on a pilgrimage of honest, active faith in a world of people who were afraid to live by their professed religious convictions. And so people were the primary resource for telling this story.

The experiment was a stormy, strife torn adventure--because of the violent reaction of the larger community around it and because of the inevitable internal struggles of many different people, each an individual, to forge a meaningful life together. You see, they had no heritage of such fundamental activation of the faith on which they could build. And asking the participants to open up and talk intimately about experiences that reached to the core of their spirits was a lot like asking a family to share its most intimate, internal successes and failures, its rages and its loves. But many from that old Koinonia family did communicate with me openly and trustfully to help me gain an understanding of the true nature of who and what they were striving to be.

For me, the most exciting part of the work was telling about Clarence's earliest dream, about him, and those who joined him, striding through smoking hell and high water to flesh out the dream, arriving, finally, after 20 hard years, at a somewhat disappointing end--and then telling about Clarence, rising up again with a tired body and incredible fierce spirit, to rumble out a new dream that is firing the imaginations of thousands again.

The Cotton Patch Evidence is a story about a lot of people; but it is a story built upon the strength of that man's spirit, which all the red dirt in Georgia could not bury.

FAITH/AT/WORK

THE LEGACY OF CLARENCE JORDAN
His final interview

SIGNALS for UNDERGROUND CHRISTIANS by Bruce Larson

A HERE AND NOW JESUS

In 1942 Clarence Jordan founded Koinonia Farm in southern Georgia. An interracial Christian community that grew to include some forty to sixty people, it bore witness to Christ in an area that tolerated, but could not comprehend, its style of life. *AN INTERVIEW BY WALDEN HOWARD*

The Legacy of Clarence Jordan

FOR fourteen years they lived and worked in comparative peace but the Supreme Court decision in 1954 outlawing segregation in the South made their presence intolerable to most of their neighbors.

As the Atlanta Journal said in 1957, "Had it not been for the Supreme Court decision and the terrible strain it placed on racial relations in the South, it (Koinonia Farm) might have gone down in history as a successful voluntary experiment in a field in which there is much theory, but very little practice.

"But this field became untenable in the South with the political action that followed this decision of the court. And Koinonia, though its name means fellowship, became a crisis, a sore spot, a rallying cry for the Klan, and as suspect as an encampment of Arabs in the middle of Israel."

For two years the community at Koinonia was subjected to violence and total economic boycott. Night after night they were shot at. Their roadside store was bombed. They could neither buy nor sell anywhere in the county. That they lived through the siege is due to the grace of God and the support of thousands of friends across the nation who bought pecan products from the mail order business they developed.

The irony of the situation was pointed out by Garry Singleton, in a letter to the editor of The Atlanta Journal, who commented at the time, "It was to escape just such persecution as Koinonia is undergoing that our ancestors came to this land."

After nearly thirty years the witness of Koinonia has taken on larger dimensions. A Board of Directors has been formed for Koinonia Partners and Millard Fuller has become its Executive Director. A Fund for Humanity has been established to solicit gifts and use them to build interest-free homes for the poor, and to establish joint ventures to business and farming. Younger leadership had already taken the reins at Koinonia when Clarence Jordan, suddenly on October 29, died of a heart attack.

Years ago, Jordan set aside a corner of the Koinonia property as a burial ground for the poor. On October 30, Jordan himself was buried in a plain pine box, in an unmarked grave, among his departed friends.

A graduate of the University of Georgia in agriculture, Clarence Jordan brought scientific farming methods to Sumter County and shared them with the poor: crop rotation, erosion control, improved peanut harvesting methods, poultry and egg production.

A great story teller with a rare sense of humor, Jordan charmed audiences in many places across the nation, then challenged them to a radical commitment to Jesus Christ. But he is best known, perhaps, for his "Cotton Patch translation" of portions of the New Testament. With his Ph.D. in Greek and his roots in the deep South, he reinterpreted the Gospel within the social and religious situation he knew, and suffered from, so intimately. Association Press has published his Cotton Patch versions of Paul's Epistles and of Luke-Acts.

We talked at six in the morning in the still-dark common room below the simple apartment where Clarence Jordan lived at Koinonia Farm, outside Americus, Georgia. The sun had not yet risen on what was to be a long and busy day. If we were to talk without interruption it would have to be now.

And so began what, to our knowledge, was to be the last formal interview with one of America's prophets before his death in October, 1969. He spoke briefly of the contributions Koinonia had made to the agriculture of the area, then moved on to talk about its spiritual impact.

HOWARD: *Why did you start the community at Koinonia?*

JORDAN: I'd have to go way back to my boyhood to answer that. I grew up asking some serious questions about the church. I was devoted to the church,

Continued

The Legacy of Clarence Jordan

but I used to pass the prison camp every day on my way to school and I saw how men were treated on the old-fashioned chain gang. I stopped and made friends with them. They were almost all of them black men, but they seemed more alive, more genuinely human, than the people I met at church.

The warden of the chain gang was a Mr. MacDonald, who sang in the choir. One hot night, after the choir had sung "Love Lifted Me" at an August revival meeting, and Mr. Mac had seemed to me to be especially carried away by the song, I heard one of the prisoners on the chain gang being whipped. His agonizing groans woke me up. It nearly tore me to pieces. That man's agony was mine and I was sure I knew who was inflicting it. It was Mr. Mac. I was twelve at the time and for a long time I was mad at God. If Mr. Mac was an example of love, I didn't want God.

My first impulse, as I grew older, was to be a lawyer and see that justice was done. But most of the blacks didn't end up on the chain gang. They were simply living in hunger and oppression. They needed justice, too. In fact, justice was needed in every area of life. That thought led me to study agriculture. I wanted to help the poor people lift the awful burden off their backs. But there was little of God in my motives.

In my senior year at the University of Georgia I began to realize that a dimension was lacking. You could give black men better cotton, but the whites already had all I wanted to give the blacks, and they were for the most part living in hell. What assurance did I have that giving blacks better cotton would land them in any less hell than the white folks?

So I was driven in desperation to search for spiritual resources. It occurred to me that I had thrown Jesus out because of Mr. Mac. Maybe Mr. Mac didn't really represent Jesus. I looked at the New Testament and it read differently than before. I read, "Man does not live by bread alone, but by every word proceeding out of the mouth of God."

I never lost my desire for bread but a new desire for the bread of life came in. I went to Southern Baptist Theological Seminary, not with any desire to preach, but out of a burning desire to know what were the words proceeding out of the mouth of God. I stayed until I got my Ph.D. in Greek. I just wanted the Bible to speak to me in the original language.

Having gone as far as I could in that direction, I began to ask, "Lord, what do you want me to do?"

The problem of the ghettos hadn't yet come to the conscience of suburbia, but I felt I wanted to be there. So for four years I worked in the Negro community in Louisville, Kentucky, in the heart of the ghetto. It was a spiritual awakening for me. Many were refugees from Georgia and Alabama who had been forced off the farms. The city was grinding them up. It drove me to get back to the areas that were vomiting these people up and see if we couldn't reverse the trend from the farms to the city.

I felt God wanted me to go back to my native state and implement some of "the words out of the mouth of God." So Martin England and I, and our wives, met to talk and pray. We felt like Abraham: "Get thee out of this country into a land that I will show thee."

We didn't know just how to implement them, but we felt we had the guidelines. There were three areas in which we felt that the churches were utterly failing to bear witness: race, and war, and materialism.

The four of us found a 400-acre farm in Sumter County, Georgia, and in 1942 we had our beachhead from which to operate.

It scared the devil out of us to think of going against Southern traditions. White men could disappear as easily as blacks. But were we going to be obedient or disobedient? Surely no one would argue over the revelation of the New Testament that God is no respecter of persons.

We were in World War II then. It bothered the daylights out of me that the song of the Church by and large was war, hate, and destroy your enemies. We had to break with that. That too scared us. As our fellowship grew our men went to the penitentiary instead of the army.

We felt that love was not a passive force. It was not copping out to choose love and forgiveness and reconciliation as a way of life. Since I was an ordained minister my draft board automatically deferred me, and put me in the 4D category, though I specifically registered as a conscientious objector. I didn't want an automatic deferment so I fought the draft board. But they said, "Regulations." Since they wouldn't let me put my life on the line, I chose, as an alternative, to fight Hitler and fascism in South Georgia rather than in Germany. And, believe me, he was quite well established in that area.

But we chose to fight with other weapons. We were committed not only to non-violence but to active goodwill to anyone who might attack us.

Finally, we wanted a fellowship where we could be brothers, where we could all pull up to the same table, the Ph.D. and the illiterate, instead of one brother living in a big house and another brother living on next to nothing.

So we rejected the world's system of distribution according to greed and accepted the early Church's principle of distribution according to need — that led to a common treasury, and the accusation that we were Communists.

HOWARD: *Dr. Jordan, you've made it quite plain that there is a negative side to Christian witness as well as a positive—that one must witness against false values as well as to Jesus and His values. What is the false value that Christians in America most need to bear witness against?*

JORDAN: The most obvious false value is the worship of mammon. America has become so success-conscious, so status-conscious, so materialistic! We tend to measure success in terms of possessions. This just devastates us.

The thing we must witness most against is this trend toward the worship of material things. It expresses itself in exploitation of all kinds. I'm quite sure the Negro, for example, is so terribly exploited because we want the benefits of his labor.

We have not found the deeper meaning of life, so we have to fill the vacuum with all kinds of trinkets and baubles, and we exploit

others to get more for ourselves.

A man can't get more than his share unless he's taking it from someone. And if you're taking more than your share, somebody is left with less than his share.

A person who is deeply satisfied at the spiritual level and has learned the deeper secrets of life can be happy with relatively few things. I think we have got to set the example of a simple life, of not striving for status and things. Here at Koinonia we have found that life can be very, very rich with a modest amount to meet our physical needs.

HOWARD: *Do you believe this style of life at Koinonia is the one intended for all Christians?*

JORDAN: I don't think there is any one form. But there's got to be a new spirit. We've got to demonstrate God's New Order in contrast to the world. The pattern of the world is that the big boy with big power and big energies gets a vast amount of money while the fellow with little energies and little abilities —who may be equally important to the success of a business, but unable to express his power—gets almost nothing.

HOWARD: *Are you recommending a new economic system? Is there such a thing as a Christian economic system?*

JORDAN: I don't think there is. But there is such a thing as a Christian spirit that will infuse any system and transform it and modify it to fit in with the Christian spirit of love and mercy and compassion and brotherliness and kindness.

HOWARD: *How might this work?*

JORDAN: It is conceivable to me that a man with a deep fulfillment inside could work for very little. Why couldn't a doctor or a lawyer say, "This money is really more than I need. I don't have to get into the rat race for status. My needs are adequately met. I'll turn some of my pay back in."

Let's put it this way. If I were pastor of a church and made $15,000 a year, and the janitor at our church had more children than I, and greater needs, why couldn't we trade salaries? I would get the five or six thousand he makes, which is all I need, and he would get the $15,000.

That's the Christian spirit. You have a brother sweeping floors and a brother preaching the Word. There is no difference between them in the sight of Christ. So the brother in the pulpit says to the brother with the broom, "I don't want to eat chicken while you're eating chitlins. Let's share in this."

HOWARD: *But how does a person determine what he needs, and where does he draw the line between what he needs and what he wants?*

JORDAN: It's pretty largely a matter of the inner man. The emptier a man is on the inside the more he feels he has to have on the outside. The Greeks had a saying that a true scholar didn't have time to be rich. He was involved with the fulness of life, and didn't want to clutter up his life with external things.

HOWARD: *What about art and music and books? What if I should feel the need for these things to fulfill myself as a person?*

JORDAN: Need is a relative thing. For instance, one of my biggest needs is books. I need books before I need food. Perhaps yours is for records and Hi-Fi because you love music. At Koinonia we recognize the need for more than food and clothing and shelter. There is no virtue in poverty. But just as each of us can tell when he's eaten too much, he can tell when he's taken too much and lived too high. We believe that the standard we live on at Koinonia is reachable for every man, woman, and child in America, if the goods of this country were equally distributed. So we say that if each of us in this country were willing to live on a standard that provided our basic necessities, nobody would have to go hungry.

The houses we're building for the poor will be as good as or better than anything we ourselves are living in. We build a three bedroom brick house for $6,500 and sell it for $25 a month, interest free, because Christian people have made their excess money available for this purpose.

HOWARD: *To carry out the Christian spirit, does one need to be part of a community like Koinonia?*

JORDAN: A community is a tremendous expedient. Instead of relying on savings accounts and life insurance we rely on the members of the community to care for each other. We are united as a family. A person who isn't in a community has to take care of himself. I have nothing against a man setting aside

money if he has to carry his own load. I think it's a poor system, but many people prefer it.

Suppose the astronauts who have gone to the moon took the position toward each other that we take in business. Suppose when Neil Armstrong first set foot on the moon, Buzz Aldrin had lifted the ship fifty off the surface and said, "Armstrong, what will you give me to set it back down?" We're capable of teamwork and cooperation, but too often we act only out of selfishness. We've got to have a new spirit.

HOWARD: *Is it possible for a Christian, then, to work in the present system and carry out his ideals?*

JORDAN: Inconsistency is normal for the Christian, living as he does, in tension, with an unChristian world and with his own selfish nature. But he is constantly trying to enlarge the areas of consistency so that his actions are more and more oriented around the Gospel and the teachings of Jesus.

Jesus spoke of this when they asked him about paying taxes. He asked for a coin and said, "Whose image is this?" When they said, "Caesar's," he went on, "Then give Caesar whatever has Caesar's image on it, but don't give him what has God's image on it."

Here's where I have to draw the line. If Caesar (the government) asks for my money he can have it, but when he comes asking for *me*,—I say, "I don't have your image on me. I'm made in the image of God. Only God can own me."

HOWARD: *How hopeful are you about the future? Do you see real signs of hope?*

JORDAN: A Christian is nearly always a pessimistic optimist. He is a child of hope. He knows that ultimately God has the world in His hands. But at the same time he is a realist. He's not looking at the world through rose-colored glasses. He sees the gathering storm, he faces crucifixion, but somehow or other he also lives in the light of Easter morning. He knows Christ is risen and that something *new* will come into the picture. There are dark forces at work in this world. Apart from Christian hope I would see nothing but darkness ahead, as though we're on a collision course with doomsday.

What bothers me most is that America in the years ahead is going to be called on to make far-reaching decisions involving not only ourselves, but the destiny of the world. And I don't think we have the spiritual wisdom to make the right decisions.

There's a clear picture of America drawn in one of the characters of the Old Testament. Even the name corresponds. His name was Samson, and our name for the United States is Uncle Sam. Samson was very strong, but his strength was external and therefore quite vulnerable. It lay in the length of his hair, just as ours lies in our technology, in our scientific achievements rather than our spiritual and moral character.

When Samson was stripped of his power and his eyes put out, they put him in prison, but they forgot that his hair would grow back and with it his strength. So when they made sport of him one day he pulled down the pillars, destroying not only himself but the whole house.

What we've got in America, I'm afraid, is that kind of blind power. We have the potential not only for self-destruction but total destruction. It may come to the point some day, that if Uncle Sam is made sport of, he will just push all the buttons on the console, and say, "Let them blow, boys, let them blow!"

HOWARD: *Do you ever wonder, Clarence, if your living out something in a small community in an obscure place has accomplished any good? What can any of us, or any small group of us, expect to accomplish?*

JORDAN: Well, one always lives with the hope that he is doing some good. But he never dares make his basic decisions on whether or not they will do good, but only in the sense of being a person of integrity.

I've wondered many, many times how much good we were doing by letting those people ride by here and shoot at us. You hope and pray that good will come of it, but you do it in your struggle for integrity. I don't suppose the disciples ever thought of the crucifixion as doing good. But ever since that Man on the cross prayed, "Father, forgive them," this world just hasn't been the same. Perhaps the thought went through His tormented mind, "Well, what good is all this?" But you can't make your decisions on that basis.

To think in those terms becomes strategy. And love is never "strategic." The minute you love your wife so that she will cook you a steak, it isn't love any more but a polluted form of selfishness. You believe deep down that love does good, but that's not the reason you love. You love for love's own sake. Ours has been a struggle for integrity. What will come of it? I hope we can say, "We've been obedient."

Ω

WHAT WE NEED

It was the Saturday before Labor Day. At breakfast I said to our three children, "I'm going downtown shopping today, so if there's anything you need for school next week, let me know. This is your last chance."

"Oh, Mother, can I go with you?" they all asked together.

"No, I haven't time to take anyone with me," I replied. "Just write what you need on a piece of paper and give it to me."

"But I've *got* to go," our oldest protested.

"Why do you have to go, Susan? I asked.

"Because I don't know what I need 'til I see it."

—M'lou Jacoby
Springfield, Pennsylvania.

TERM DEED

STATE OF GEORGIA

COUNTY OF SUMTER

THIS INDENTURE of lease, made this _____ day of _____ _____, 19___, by and between the KOINONIA PARTNERS, INC., a charitable corporation chartered under the laws of the State of Kentucky, hereinafter styled "Lessor," party of the first part, and _____ of the State of _____, and County of _____, hereinafter styled "Lessee," party of the second part;

W I T N E S S E I H:

That the said party of the first part, in consideration of the payment of the annual rental hereinafter set forth, and the covenants, terms, and conditions hereof, does by these presents, grant, bargain, sell and convey unto the party of the second part, for the term of years hereinafter specified, the following described property of Koinonia Partners, Inc., in the County of Sumter, in State of Georgia, shown and designated on a Plat Book at the offices of Koinonia Partners, Inc., to-wit:

Lot(s) _____ of Koinonia Village Subdivision _____, and more particularly described as follows:

To have and to hold unto the said Lessee, _____ _____, heirs, and assigns, together with all and singular the rights, members and appurtenances thereof, to the same being, belonging, or in anywise appertaining to the only proper use, benefit and behoof of the said party of the second part, _____ _____, heirs, and assigns, for the term of years hereinafter specified.

The term of this lease is for the period beginning the _____ day of _____, 19____, and ending on the _____ day of _____, 19_____, for which the Lessee agrees to pay the Lessor, at its offices in Americus, Georgia, or at such other places as the Lessee may from time to time be directed, an annual rental of $_____, payable in advance, (the first payment due upon the execution and delivery hereof), with the option of renewing said Lease Indenture for successive thirty (30) year periods for so long a time as the Lessor may by law be authorized to make such extensions

THIS LEASE IS MADE UPON AND SUBJECT TO THE FOLLOWING TERMS, CONDITIONS, AND LIMITATIONS:

FIRST

It is mutually agreed by and between the parties that the leasehold estate hereby granted is, under Georgia law, an estate for years.

SECOND

It is mutually agreed by and between the parties that the leasehold estate hereby granted may not be sold or assigned by the Lessee without the express consent, in writing, of the Lessor; PROVIDED, HOWEVER, that if such express written consent of assignment of sale is given by Lessor, that each and every provision, covenant, condition, power, and agency created by this lease be extended to, be binding upon, or inure to the benefit of the

successors, administrators, Executors, heirs, and assigns of the parties hereto.

THIRD

The Lessor does hereby grant, bargain, sell and convey unto the Lessee the house and appurtenances thereto constructed on the lot(s) described herein for the sum of _____ _____ Dollars ($) lawful money of the United States to be paid in 240 equal monthly payments, without interest, on the first day of each month, commencing on the 1st day of _____, 19_____ and continuing until said purchase price shall have been paid in full. As evidence of said obligation to pay said purchase price, Lessee has concurrently herewith executed and delivered to the Lessor a Promissory Note for _____ Dollars ($) payable on or before twenty (20) years after the date hereof, without interest, in monthly installments of _____ Dollars ($) at the office of Koinonia Village, commencing on (1) month from the date of execution of that document. Nothing in this Term Deed shall be construed to limit or restrict the right of Lessee to encumber said dwelling or building by mortgage, security deed or other proper instrument. PROVIDED, HOWEVER, that should Lessee desire to sell or convey his interest in said dwelling or building, he shall first offer it to Lessor in the following manner:

(a) Lessee shall serve notice in writing to Lessor at the office of Koinonia Partners, Inc., Americus, Georgia, by registered mail, return receipt requested, indicating that Lessee has a bona fide offer for the sale of his dwelling or structure, the name and address of the person desiring to purchase the same, and the sales price and terms of payment of such sale; said notice shall also contain an offer to sell said dwelling or structure to Lessor upon the terms and conditions set forth in the aforesaid bona fide offer.

of sale.

(b) For a period of thirty (30) days after the receipt of said notice, Lessor shall have the right to purchase said dwelling or structure according to the terms of said bona fide offer. If Lessor fails to exercise such option, Lessee may sell or convey its right to the dwelling or structure to the party making the aforesaid bona fide offer, but only at the price and upon the terms as specified in said notice.

PROVIDED FURTHER HOWEVER, that nothing in this paragraph shall prevent a sale by Lessee of its interest in a dwelling or structure on the premises described herein at any time provided Lessee receives prior approval in writing from Lessor.

FOURTH

Only one (1) dwelling house may be constructed upon the lot(s) and it and all appurtenant structures shall be constructed subject to the rules and regulations on file at the office of Koinonia Village. No auxillary dwelling, building or structure may be constructed or installed by Lessee without the written permission of Koinonia Partners, Inc.

THE LESSEE HEREIN CONVENANTS AND AGREES:

FIFTH

The Lessee herein agrees to be solely responsible for the prompt payment or discharge of any and all taxes which may be assessed against, or become leins upon, said leasehold interest and the improvements located thereon.

SIXTH

To pay promptly, when due, the annual rental hereinbefore specified.

SEVENTH

That any dwelling, building or improvement upon said premises shall be kept in a good state of repair and any dwelling or other structure shall not be removed from the premises nor shall

any of the said improvements be altered or modified in any way so as to violate the conditions set forth in the rules and regulations of Koinonia Village. A copy of said rules and regulations is on file at the office of Koinonia Village.

EIGHTH

That the Lessor does not assume responsibility for protection of, or liability for, or trespass upon the property demised, nor shall it be in any way liable for damages to the property or improvements thereon on account of fire, windstorm, water or any other cause whatsoever. That the Lessee hereby releases the Lessor from any and all damages to both person and property suffered upon this leasehold, and will hold the Lessor harmless from all such damages to third parties during the term of this lease.

NINTH

That the Lessee will be permitted to do the necessary and desirable grading and clearing of the property but only upon written consent of the Lessor, all other cutting of trees and grading being expressly prohibited.

TENTH

The Lessee shall at all times have the right to encumber by mortgage or security deed, or other proper instrument in the nature thereof, as security for actual indebtedness, Lessee's estate for years or leasehold estate, together with Lessee's right and interest in and to the building and improvements on the premises herein described, and in other property so affixed to said land or building as to be a part thereof. However, any and all such encumbrances shall at all times be inferior and subject to the prior right, title, and interest of the Lessor herein.

ELEVENTH

The holder of any security deed may notify Lessor, at its offices at Americus, Georgia, of the address of the holder of such security deed in order that copies of all notices of default, as hereinafter provided, may be mailed to such holder of any security deed against said property, and the Lessor covenants that copies of all notices, as hereinafter required, will be mailed to such holders of security deeds as have complied with the requirements set forth in this paragraph, and the prosecution of the rights of the Lessor pursuant to such default shall be ineffectual against such holder of a security deed unless such notice shall have been so mailed.

TWELFTH

In the event of default as herein provided, and after mailing of notices hereinabove required, and the Lessee, or his successors in title, or the holder of any security instrument, shall have not, within the prescribed time, cured such default or defaults, then and in that event the Leysor may proceed to declare this lease to be terminated and to sell all the right, title, and interest of the Lessee to the property herein described, together with all improvements thereon, and for the purpose of divesting the interest of the Lessee herein, the Lessee does hereby constitute the Lessor his agent and attorney-in-fact to make to the purchaser at such sale a good and sufficient title to the estate for years vested in the Lessee by this instrument; it being understood and agreed that the foregoing power, being coupled with an interest, shall be irrevocable by the death of the Lessee; the making of a deed to the purchaser under the powers herein contained shall divest all right, title, and interest of the Lessee, his heirs, and assigns, in and to the

said property; and that by agreement the said Lessor, its agent or legal representatives or assigns, shall be authorized to proceed summarily to put purchaser or purchasers in possession; the said Lessee covenanting and agreeing to surrender the possession of said premises without let or hindrance of any kind; and that the powers herein contained shall inure to and vest in the successors or assigns, agents or legal representatives of the Lessor; and the proceeds of any and all such sales made pursuant to this power of agency shall be applied first to the expense of the sale and next to any arrearages due Lessor, and the remainder of said proceeds to be paid to the Lessee, his successors, heirs, administrators, executors, or assigns.

THIRTEENTH

No failure of the Lessor to exercise any power given the Lessor hereunder, or to insist upon the strict compliance by the Lessee of any obligation hereunder, and no custom or practice of the parties at variance with the term hereof shall constitute a waiver of the Lessor's rights to demand exact compliance with the terms and conditions hereof. And if the Lessee remains in possession after expiration of the term hereof, with the Lessor's acquiescence and without any agreement of the parties, the Lessee shall be a tenant at will and there shall be no renewal of this lease by operation of law. The covenants herein shall be binding upon the successors, heirs, administrators, executors, and assigns of the parties to this lease.

FOURTEENTH

Lessee agrees to maintain and keep all grass and weeds on said premises cut and to keep the premises clean and clear of all trash and debris according to rules and regulations on file at the office of Koinonia Village and to abide by all other of such rules and regulations.

WITNESS THE HANDS AND SEALS OF THE PARTIES aforesaid, the

date and year first above written.

PINE CONES FOR THE HOLIDAY SEASON

This year the pine cone business has three partners: Danny Wittkamper and Lena Hofer, both high school students, and Otis Reynolds, a freshman at Georgia Southwestern College. These students are anxious to fill your order for pine cones.

The cones are gathered here on the Farm. Each one is perfectly shaped and in beautiful natural color or in decorative silver. We will pay all postage. The list price is all you pay. (Sorry, we cannot accept foreign orders.)

Be sure to specify whether you want natural or silver. For just 50¢ extra, your cones will be packed in Spanish moss.

	Natural	Silver
JUMBO CONES (5½-8" tall, 3-5" diameter)		
1 dozen	$2.95	$4.45
2 dozen	5.35	8.35
3 or more dozen	2.45 a doz.	3.95 a doz.
MED.-LARGE CONES (3½-5½" tall, 1¾-4" diameter)		
1 dozen	$2.45	$3.45
2 dozen	4.35	6.35
3 or more dozen	1.95 a doz.	2.95 a doz.
MIDGET CONES (2-3" tall, 1-2" diameter)		
1 dozen	$1.95	$2.20
2 dozen	3.40	3.90
3 or more dozen	1.65 a doz.	1.85 a doz.
MIXED CONES (1/3 Jumbo, 1/3 Med., 1/3 Midget)		
1 dozen	$2.45	$3.35
2 dozen	4.35	6.20
3 or more dozen	2.00 a doz.	2.90 a doz.

The Southern Center for Studies in Public Policy

AC

MEMO FROM THE DESK OF:

Pat Watters

In the interest of better utilizing board members as sources of information and advice and references for people seeking specific local information, Lynn has compiled the attached state-by-state list of said members and how to get hold of them.

THE SOUTHERN REGIONAL COUNCIL, INC.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

January, 1970

OFFICERS*

PRESIDENT

Raymond M. Wheeler

VICE-PRESIDENTS

C. G. Gomillion

Josephine Wilkins

Lucius H. Pitts

Frank Smith

THE EXECUTIVE COMMITTEE

Vivian W. Henderson, Chairman

Hodding Carter, III

Henry Marsh

Joan Cashin

McNeill Smith

Julius L. Chambers

John H. Wheeler

James M. Dabbs

H. Franklin Williams

Donald L. Hollowell

James Youngdahl

LEGAL COUNSEL

Joseph F. Haas

EXECUTIVE DIRECTOR

Paul Anthony

*Address of officers are given in the attached list of Members of the Council. All organizations and positions are shown for identification purposes only.

Members of the Council

CLASS OF 1970

Mr. Bradford D. Ansley, Jr.
Businessman
7501 Midnight Pass Road
Sarasota, Florida (33581)

Mr. Julius L. Chambers
Attorney
216 West 10th Street
Charlotte, North Carolina (28202)

Mr. Edward E. Elson
President
Atlanta News Agency
3875 Green Industrial Way
Chamblee, Georgia (30005)

Dr. Edward E. Haddock, M. D.
1133 West Franklin Street
Richmond, Virginia (23220)

Dr. Robert J. Harris
Dean
Division of Arts and Sciences
University of Virginia
Charlottesville, Virginia (22903)

Mrs. Martin L. Harvey
415 N. Farish Street
Jackson, Mississippi (39202)

Dr. Vivian W. Henderson
President
Clark College
Atlanta, Georgia (30314)

Mr. Harry Huge
Attorney
Alexandria, Virginia
(1823 Jefferson Place, N. W.
Washington, D. C. - 20036)

Mr. Earl Johnson
Attorney
625 West Union Street
Jacksonville, Florida (32202)

Mr. Henry Marsh
Attorney
3211 "Q" Street
Richmond, Virginia (23223)

Mr. William T. Mason, Jr.
Attorney
716 E. Brambleton Avenue
Norfolk, Virginia (23510)

Dr. Samuel Nabrit, Director
The Southern Fellowships Fund
795 Peachtree Street, N. E.
Atlanta, Georgia (30308)

Mr. J. Allen Parker
President
Alabama Exchange Bank
Tuskegee, Alabama (36083)

Mr. J. Rupert Picott
Executive Secretary
Virginia Teachers Association
316 Clay Street
Richmond, Virginia (23219)

Dr. Jewel Prestage
Chairman, Department of Political Science
Southern University
Baton Rouge, Louisiana (70813)

Rabbi Jacob Rothschild
The Temple
1589 Peachtree Street, N. E.

The Rt. Rev. Msgr. Alexander
O. Sigur
P. O. Box 2250
Lafayette, Louisiana (70501)

Dr. Vasco A. Smith, D.D.S.
505 Vance Avenue
Memphis, Tennessee (38126)

Mr. Walter Sharp
Route 2, Beech Creek Road
Brentwood, Tennessee (37027)

Mr. James Stokely
Author and Poet
405 Clifton Heights
Newport, Tennessee (37821)

Dr. William H. Townsend
Optometrist
1304 Wright Avenue
Professional Services Building
Little Rock, Arkansas (72206)

Mr. Nat Welch
2112 Castleway Drive
Atlanta, Georgia (30329)

Mr. Avon Williams
Attorney
1414 Towers
404 James Robertson Parkway
Nashville, Tennessee (37219)

CLASS OF 1971

Mrs. Lawrence Coe
Member, School Board
262 Stonewall Street
Memphis, Tennessee (38112)

Dr. Ralph Mason Dreger
Professor of Psychology
Louisiana State University
Baton Rouge, Louisiana (70803)

Mr. Fred Gray
Attorney
352 Dexter Avenue
Montgomery, Alabama (36104)

Mr. Martin L. Harvey
Dean of Student Affairs
Southern University
Southern Branch Post Office
Baton Rouge, Louisiana (70813)

Mrs. Julien J. Hohenberg
91 Morningside Park
Memphis, Tennessee (38104)

Mrs. Helen Howard
Director
Vine City Foundation, Inc.
558 Magnolia Street, N. W.
Atlanta, Georgia (30314)

Mr. Paul Johnston
Attorney
1142 Brown-Marx Building
Birmingham, Alabama (35203)

Mr. Sylvan Meyer
Editor
The Miami News
Miami, Florida

Mr. George Owens
President
Tougaloo College
Tougaloo, Mississippi (39174)

Mr. Robert J. Palmer
Businessman
304 South Main Street
Sumter, South Carolina (29150)

Mrs. Mary Sand
1447 Granada Street
New Orleans, Louisiana (70122)

Mrs. Jane Schutt
955 Pecan Blvd.
Jackson, Mississippi (39209)

Class of 1971 (continued)

Mr. John Siegenthaler
Editor
The Nashville Tennessean
1100 Broad
Nashville, Tennessee (37203)

Mrs. Alice N. Spearman
3401 Brookwood Court
Columbia, South Carolina (29204)

Mr. Lee B. Thomas, Jr.
President
Vermont American Corporation
500 East Main Street
Louisville, Kentucky (40202)

Mr. John W. Walker
Attorney
1304-B Wright Avenue
Little Rock, Arkansas (72206)

Mr. John H. Wheeler
President
Mechanics and Farmers Bank
Box 1932
Durham, North Carolina (27702)

Dr. Raymond M. Wheeler, M.D.
3724 Warrington Drive
Charlotte, North Carolina (28211)

Dr. Bell I. Wiley
Professor of History
Emory University
Atlanta, Georgia (30322)

Miss Josephine Wilkins
Sheraton-Biltmore Hotel
817 W. Peachtree Street, N. E.
Atlanta, Georgia (30383)

Dr. H. Franklin Williams
Professor of History
University of Miami
Coral Gables, Florida (33146)

Mr. Paul D. Williams
Publisher
3320 Gloucester Road
Richmond, Virginia (23227)

Mr. Marion A. Wright
Attorney
Topknot
Linville Falls, North Carolina (28647)

Mr. Jack Young
Attorney
213 Redmond Building, Suite 207
115½ N. Farish Street
Jackson, Mississippi (39201)

Mr. James E. Youngdahl
Attorney
711 West Third Street
Little Rock, Arkansas (72201)

CLASS OF 1972

Mr. Fred D. Alexander
Realtor
2140 Senior Drive
Charlotte, North Carolina (28208)

The Rev. Hubert Beckwith
Congregational Christian Church
of Fairfax County
P. O. Box 288
Annandale, Virginia (22003)

The Honorable Julian Bond
State Legislator
162 Euharlee Street, S. W.
Atlanta, Georgia (30314)

Mr. H. A. Hank Brown
President, AFL-CIO, Texas
Box MM - Capitol Station
Austin, Texas (78711)

Mrs. John Cashin
416 Owens Drive, S. E.
Huntsville, Alabama (35801)

Mr. Walter B. Clancy
Box 1025
Little Rock, Arkansas (72203)

The Rev. Philip Cousin
St. Joseph's A.M.E. Church
Markham Educational Building
804 Fayetteville Street
Durham, North Carolina (27701)

Mr. James McBridge Dabbs
Planter, Author
Rip Raps Plantation
Mayesville, South Carolina (29104)

Mr. Neil O. Davis
Editor-Publisher
The Auburn Bulletin
Auburn, Alabama (36830)

Dr. Albert W. Dent
2401 Gentilly Boulevard
New Orleans, Louisiana (70122)

Mr. Nils Douglas
Attorney
1110 Medallion Tower
344 Camp Street
New Orleans, Louisiana (70130)

Mr. E. H. Gadsden
Attorney
458½ West Broad Street
Savannah, Georgia (31401)

The Rev. Duncan M. Gray, Jr.
St. Paul's Episcopal Church
1116-23rd Avenue
Meridian, Mississippi (39301)

Dr. Charles M. Grigg
Director
Institute for Social Research
Florida State University
Tallahassee, Florida (32306)

The Honorable Brooks Hays
Attorney
Little Rock, Arkansas
(314-2nd Street, S. E.
Washington, D. C. -20003)

Dr. Aaron E. Henry
Pharmacist
213 Fourth Street
Clarksdale, Mississippi (38614)

Mr. George Lewis, II
President
The Lewis State Bank
Tallahassee, Florida (32301)

PROGRAM REPORTS

for

MEMBERS OF THE COUNCIL

November 1970

INTRODUCTION:

Attached are very brief program reports which reflect the work we are now doing.

The Council has had a difficult year. It took us some months after January 1, to analyze the new law regarding tax-exempt agencies and to adjust our programs to that law. As a part of the process it was necessary for us to devote considerable time to supplying foundations with information that was adequate for them to release funds they had committed for the year. (From July 20 until mid-October, Mrs. Ruth House Vick, the Secretary-Treasurer, and I had our own schedules disrupted and filled by the presence of three auditors from the Internal Revenue Service who conducted the most thorough investigation ever experienced by the Council. We do not yet know of the results of that investigation.)

Fortunately, the above were essentially administrative duties and left our program staff relatively free. Their work has been, in my opinion, productive and effective. While the following pages reflect this fact, the need for brevity does not allow the reports to do justice to all that has been accomplished. I hope the proceedings of the annual meeting will allow you to learn a great deal more and that you will consider this merely an introduction to that meeting.

Paul Anthony
Executive Director

EXECUTIVE ASSISTANT

The Executive Assistant's primary function is to assist the Executive Director in carrying out the administrative procedures and the program activities of the Council. This year with the creation of a new staff position, that of Administrative Assistant, the Executive Assistant has been able to devote more time to program. These activities include working with all of the existing programs of the Council and frequently acting as a sounding board. He has worked very closely with the Director in the areas of Hunger and State Councils, particularly the Mississippi Council.

He was asked to testify twice before the Public Works Committee of the U. S. Senate. The first time in January in Biloxi, where the Council's report "In the Wake of Hurricane Camille" was entered into the record. This report was jointly prepared with the American Friends Service Committee. The second testimony was made in Washington and was directly related to new disaster legislature.

In August he visited Corpus Christi, following hurricane Celia, for a brief inspection trip to determine whether federal and Red Cross disaster procedures had improved since Camille. The answer is a qualified YES.

The Executive Assistant has devoted some time to school desegregation problems. He called a meeting in January of representatives of the Southern Education Foundation, American Friends Service Committee, NAACP-LDEF, MCHR, and the Race Relations Information Institute. We believe this meeting spawned additional attention to the problem. He also attended a meeting in Baton Rouge where the problem of school desegregation was discussed primarily in the terms of how they relate to the economic growth of Louisiana, but with some concern for individuals evidenced. He assisted in finding funding for an "Offender Aid and Restoration" program in Virginia. This is a program, not so much directed at prisons, but at prisoners as individuals prior to and after their release.

James N. Wood, Jr.

INFORMATION AND RESEARCH

As director of information, I have tried during the year to assist as I could in preparation of publications, to continue the really undefined work of liaison with the press, local and national, and the equally ambiguous job of spreading the good news about SRC among those who didn't know us in the South and such national nerve centers as New York City. Work with the press has included assisting reporters and writers on specific stories, and in some cases suggesting stories to them. I was helpful in calling Pantheon Books people's attention to Tony Dunbar's SRC pamphlet "The Will to Survive" and they are to publish it and his other writing about Kentucky. I have also been involved in the following specific projects:

Writing articles that have appeared in The New York Times Magazine, Yale Review and Dissent. The Times piece was reprinted by the NAACP Legal and Defense Fund and given to all who attended their annual conference.

Completing work on a book which I am calling a personal recollection of the civil rights movement during the 1960's. It is to be published next fall by Pantheon.

Working with a National Educational Television crew on a one-hour documentary about the South which is to be broadcast nationally on December 7. The film includes a long segment on the VEP, with an interview with John Lewis and a scene showing him and Charles Sherrod calling on people urging them to register to vote. I shamble and drawl through the film doing interviews and speaking the narration.

Making appearances and the like attendant on publication in January of The South and The Nation. The book has had some good reviews in prestigious publications, including one just recently by Bob Coles in The New Yorker.

I have been much assisted in these doings by the efficient work of the department's secretary, Miss Lynn Bowker.

Pat Watters
Director

INFORMATION AND RESEARCH

RESEARCH

The Research Department clips and files some thirty newspapers as well as several periodicals. Its Library houses numerous pamphlets, special reports, and books. The Department makes these materials available to other members of the staff, to visiting researchers, and draws upon them in responding to requests for information, especially from the news media.

In addition to these service functions, the Department assists in Council research projects and works with Bob Anderson, the editor of publications, in the preparation of special reports. It completed in the summer the basic research for a new report on violence in the region. It is presently gathering and analyzing material for a major report on school desegregation.

The Department is staffed by a Research Associate (Doris Reed), two Research Assistants (Barnetta Jackson and Joyce Meekins), a Librarian (Bernice Morrison), and a Secretary (Lynn Bowker). The Director of the Department, Paul Gaston, joined the staff in July, taking a leave of absence from his post in the History Department of the University of Virginia.

Paul Gaston

INFORMATION AND RESEARCH

PUBLICATIONS

The publications section of the Information and Research Department, headed by editor Robert E. Anderson, Jr., has published three special reports and four issues of NEW SOUTH. The published reports include a study of violent episodes at Augusta, Georgia and Jackson State University; a report on the mood of black high school students at the beginning of what was possibly the most traumatic year so far in school desegregation; a report on efforts to cripple the Head Start program in Mississippi. Publications in progress include a study of southern health services; a survey of the effectiveness of efforts to bring about equal opportunity in housing in the South; a report on the meaning of race related violence, and a report on school desegregation (see report of director of research).

Wilson J. Minor in the winter issue wrote of the Mississippi schools crisis following implementation of the Alexander decision in early February. The article was widely quoted in Harper's Magazine by Willie Morris, the editor, shortly after publication. Ray Jenkins of the Alabama Journal wrote an analysis of the meaning of the Wallace election in the summer issue. Jack Bass of the Charlotte Observer's Columbia bureau wrote of the trial of Cleveland Sellers, the former SNCC field worker who was indicted in connection with violence at Orangeburg in 1968. In addition, excerpts from the book The Orangeburg Massacre by Mr. Bass and Jack Nelson, Publitizer prize winning report for the Los Angeles Times, appear in the fall 1970 issue.

Other significant NEW SOUTH articles included an exclusive interview by free lance writer William Winn, with Erskine Caldwell, evaluating the South since publication of Tobacco Road 30 years ago; an in-depth look at student activities by three University of Wisconsin professors who are writing a book about the students who participated in the voter registration drives in the south four years ago; an evaluation of Southern churches in the period since the Brown decision by Donald W. Shriver, Jr.; an analysis of the so-called "southern strategy" and its effects on school desegregation, by Hayes Mizell, S. C. state director of the American Friends Service Committee; a

sensitive, scholarly look at the religion of poor whites in an Atlanta white neighborhood, by Harry Lefever, an Atlanta University sociologist; an important essay on the South and efforts by both southerners and northerners to exploit its human development by Richard Goodwin, former political strategist for Senator Robert Kennedy and Senator Eugene McCarthy; a thoughtful, on-the-scene report of hearings in Jackson, Mississippi on the violence at Jackson State University by Harry Huge, writer, and Washington attorney; an in-depth analysis of the options and strategies available to poor whites in Appalachia by Si Kahn, a young community organizer and author of a book on community organization published this fall by McGraw-Hill; a moving human memoir of the late Mrs. Dorothy Tilly, who worked for the Council so many years, by Margaret Long; excerpts from the book, A Mind to Stay Here, dealing with the work of Lucius Pitts at Miles College; a particularly eloquent and thoughtful article on the black writer in the southern experience by Alice Walker, Mississippi writer and novelist; a study of North Carolina labor-organizing by Durham, N. C. freelance writer Elizabeth Tornquist; a study of the aftermath of a mill closing in a small Georgia town, by Kathy Kahn; a study of how blacks, whites and Mexican-Americans in Houston organized around a community issue earlier this year, by University of Houston Professor Harold Nelson; an essay on the southern environment by Frank Smith, director of The Tennessee Valley Authority.

The editor of publications also works in close cooperation with the Director of the Resources Development Center and his staff. Together with the center director, he is exploring ways to best make use of the 1970 census data as it relates to the concerns of the Council.

Robert E. Anderson, Jr.

RESOURCES DEVELOPMENT CENTER

INTRODUCTION

The Resources Development Center was established by the Executive Committee, at the suggestion of staff, to increase the Council's effectiveness in those areas dealing with economic development and the development of the region's human resources. The Center provides for greater coordination among existing Council programs which touch economic and human development programs. It serves as a vehicle for the consideration of new program areas and for the development of proposals for the implementation of such new programs.

We feel that through the Resources Development Center we can better respond to special, short-run needs within the region. Occassionally these are emergency situations, and our role is made more effective by insuring a response which can include several program specialities if required. At other times a particular effort may be of short duration, almost experimental, but giving us experience and helping us formulate ideas for possible future programs either by the Council or another appropriate agency.

Four divisions of the Center make up its main program areas at this time. These divisions are: Housing and Planning, Community Organization, Leadership Project, and Manpower. Special projects which do not fall into any one division are undertaken frequently and constitute an activity area by themselves. The Center is currently interested in the expansion of some of the divisions and is attempting to develop new divisions which will specialize in areas such as education, delivery of health care services, and the creation of meaningful deliberations on problems among leaders who are broadly representative of this changing region. A discussion of existing individual programs follow.

Emory Via
Director

RESOURCES DEVELOPMENT CENTER

MANPOWER DIVISION

The heading "manpower division" more accurately reflects the broad interests of the labor project. Our basic interest in providing adult education to union members and officials continues as does the interest in problems of employment discrimination. This division will seek to become increasingly involved in the whole manpower field but with a special focus on what constitutes good manpower practices and how manpower efforts affect the poor and members of minority groups.

Except for the educational activities of certain union programs, there is almost no other continuing program aimed at reaching working people within the region on those matters which concern this Council. This work, then, is of special importance. Our efforts to cooperate with union groups, to provide consultative services, to work with those few universities with programs, to encourage the establishment of labor education programs at universities, and the promotion of special labor education ideas will continue.

In the area of employment discrimination we are striving to encourage and to relate to efforts that attack discrimination broadly in the sense that patterns are changed which affect large numbers of people. Currently we are working on plans to relate action effort to recent research so that both the Council's activities and those of other groups will be more effective. We feel that the dissemination of research results and action strategies can be useful to local, regional, and national efforts to end discrimination.

There is a need within every state for a better understanding of manpower needs and what constitutes relevant manpower programming. If we can help develop public understanding, serve as encourages of good programs, and if we can be the critics of what is inadequate, we will make a significant contribution to the development of human resources in the region.

RESOURCES DEVELOPMENT CENTER

COMMUNITY ORGANIZATION

The Community Organization Project, in keeping with the purpose and goals of the Resource Development Center, will focus a major portion of its time and resources upon the area of economic development during the 1970-71 program year. Towards this end, the following priorities and goals have been established for the Community Organization Project:

(1) To develop an ongoing file (report) on all Southern economic development endeavors.

(2) To serve as an information and service center for emerging and existing groups engaged in community development.

(3) To motivate creative programs which will use indigenous resources in fostering economic and community development.

(4) To disseminate pertinent information and publications to groups engaged in Community Development.

The Community Organization Project activities of the past few months are consistent with the project goals and priorities.

In the area of field orientation/program review, I have reviewed economic development projects in Beaufort, South Carolina and West Point, Mississippi. I have also attended two economic development conferences, one at Penn Community Center, Frogmore, S. C., and the Conference on Minority Financing at the University of Chicago. The information gathered from these and subsequent field trips will be used in developing the economic development file.

For the past month, the resources of the Community Organization Project have been focused on the area of program development. The Community Organization Project is attempting to utilize college volunteers from throughout the South as resource personnel for secondary students involved in school desegregation. Leon Hall, a former SCLC organizer has been employed to coordinate the project.

Clarence Wright, Jr.

RESOURCES DEVELOPMENT CENTER

LEADERSHIP PROJECT

The Leadership Project, concerned with extending the Council's impact upon leadership of various levels throughout the region, was less than a year old as 1970 began but its methods and approaches were fairly well established. Using its own mailing list of 5,000 carefully-chosen names of civic, business, religious, union, grass-roots and other leaders as well as SRC's regular lists, the Leadership Project was doing its work principally through South Today, a tabloid-size monthly digest, and occasional other publications, such as the booklet entitled The Chickenbone Special, second in the Leadership Series, published in March. Those in the Leadership Project also were participating in the general activities of the Resources Development Center and the Council in general.

South Today, with 16,000 copies monthly, is the principal vehicle for Leadership Project reports on regional problems. This publication continues to find good response from readers. Perhaps more importantly, it consistently attracts the attention of the regional and national press. It has become the most widely quoted publication in the South. Newspaper and magazine coverage of its reports give these analyses of Southern problems the additional impact of millions of readers.

Among the Leadership Project reports which have appeared in South Today during 1970 were those which critiqued Florida's state programs dealing with migrant workers; disclosed widespread ownership of slums by state and local welfare departments; explored the plight of local-government employees, such as garbage workers, and the need for better city hall methods of dealing with the lowest-income workers ; revealed for the first time nationally the Treasury Department's use of agents to obtain names of borrowers of certain library books, a practice which was halted because of the disclosure; showed that "segregation academies" are busing more children and busing them further than public schools; examined racism in Hollywood films and in Southern college and high school athletics;

studied the Catholic Church's performance on Southern social problems; and reported on the price of pollution and corporate collusion with government in the despoliation of Amelia Island, Fla. In addition to these special reports, South Today published numerous other articles of its own on Southern problems, as well as reprints of significant articles appearing elsewhere.

To enhance its use by libraries and by scholars, South Today has now issued a 17-page index of its first year's issues and this has been distributed to 1,100 libraries as well as to others.

During the year the director of the project testified before the Mondale education subcommittee on the subject of segregated private schools. The IRS has taken a first step toward denying such schools tax exemption, as advocated for some time in Leadership Project reports on the schools. The Project continues to monitor this important subject.

RESOURCES DEVELOPMENT CENTER

HOUSING AND PLANNING

The Housing and Planning staff, consisting of Moreland G. Smith, Director; Arthur Campbell, Associate Director; and Horace Barker, Staff Assistant,has undertaken the following activities during 1970.

We have surveyed a number of regional and sub-regional housing groups working in rural areas and/or small towns. A study of the Farmer's Home Administration by Bill Winn, is an outgrowth of that survey. Hopefully, the study will suggest geographic areas where programs would be beneficial.

The program is providing assistance to a group of Fairfield, Alabama residents who are interested in sponsoring a low-income housing program. We have advised the group on possible courses of action and have arranged for a consultant from the Foundation for Cooperative Housing to advise the group concerning its eligibility for a low-income housing project and the necessary steps to pull together a corporation.

We have been assisting a Georgia Tech graduate student in his research of planning problems associated with racial transition of residential neighborhoods. We intend to publish a report based on this data which focuses on six Atlanta neighborhoods.

Horace Barker has been collecting information on the problems of equal housing opportunities, beginning with a study of state and local fair housing laws in the South and the enforcement of the federal open housing act of 1968. The study will include a list and discussion of community organizations throughout the South that are working to promote open housing.

We are also doing background work for organizing a metropolitan entity to promote fair housing in the metropolitan Atlanta area.

We are reviewing SRC's association with the Panola Land Buyers Association primarily through the Federation of Southern Cooperatives. Our goal is to assist the association in developing immediate and long-range plans for its 1164 acres in Sumter County, Alabama.

In addition to the above activities, the Housing and Planning staff has been working in the following areas:

(1) Advising the Low-Income Housing Development Corporation of North Carolina on land banking operational techniques and how it might be used for housing development.

(2) Serving as Housing Advisors to the Urban League's regional office.

(3) Prodding AIA and AIP on social awareness in Georgia and the United States to implement their avowed social responsibility.

(4) Advising New Communities, Inc., Albany, Georgia in planning layout for land utilization for housing, light industries and commercial purposes in the implementation of utility plans, sewer, water, electricity and gas.

(5) Advising Tuskegee Institute on their interest in Tuskegee's Model Cities.

(6) Pushing regional agrarian medical service delivery in five-county area ajoining Tuskegee Institute.

(7) Continuing efforts to get in operation the Atlanta Regional Plan Study by Doxiades.

C O N C E R N S

A L T E R N A T I V E S

The following, in very brief outline form, is an indication of our current and proposed programs, an indication of some of the questions and problems we have with them, and some of the alternatives that deserve consideration. It is prepared for the information of the Members prior to their discussion of Council affairs on November 17-18.

In this outline we are underscoring "problems" of our several programs. We believe these need exploration and attempt here to focus on them. In considering them, however, we urge you also to read the report of current programs which partially illustrate the productivities of these activities.

########

INFORMATION-RESEARCH & PUBLICATIONS:

Finances:

Problem: How to meet a growing demand for our publications with limited income and rising costs.

Alternatives:

(1) Change our policy of wide free distribution.

(2) Create an "associate member" category at $20.00 per year. (See also Policy)

New South:

Problem: (1) How to increase circulation.

(2) How to use more black writers.

(3) Should state roundups be reinstated?

Alternatives:

(1) No significant suggestions to offer.

(2) Do we enter more seriously into programs to promote and encourage black writers?

(3) If the roundups are valuable is there a better - or less expensive way - to distribute them? Should space for some articles be turned over to the roundups?

Other: Comments on the contents.

INFORMATION-RESEARCH & PUBLICATIONS:

South Today:

Problems: (1) Should the circulation of 16-18,000 be expanded?

(2) How can we finance present and expanded costs?

Alternatives:

(1 & 2) Establish a fixed and rather sternly imposed subscription fee.

Other: Comments on the content.

Information & Research:

Problems: A limited staff (3) of research associates to respond to a growing member of serious requests for information and research.

If this function of a priority that calls for expansion in light of a limited budget and other program priorities?

Alternatives:

(1) Restrict the number of inquiries responded to.

(2) Increase the staff.

(3) Charge for the service.

Problem: We know our research is pertinent. What areas are being ignored that should not be?

Alternatives:

A review of priorities.

INFORMATION-RESEARCH & PUBLICATIONS:

Information & Research:

Other: A review of our interests in sponsoring meetings of university related researchers - and others - to call on their resources and to assist them in their work.

A review of our relationship with the media.

THE RESOURCES DEVELOPMENT CENTER:
(except the Leadership Division) → is it; or is it not!?

Housing & Planning:

What service could/should we offer.

Problems: (1) How can a two person staff really have an affect on housing and planning in the region?

(2) Where can we have impact? ~~is our impact likely to be the greatest~~, in urban or in rural and small town areas?

(3) people assisted need more than merely info. (direct assistance)

Alternatives:

(1) Attempt to affect policy rather than offer the services of an architect and a planner to groups and communities that want them.

(2) Concentrate on a few important geographic areas which may later be important to regional and national policy in housing and planning.

(3) Consider increased research related to housing and planning, and the policies and effectiveness of the several federal agencies working in these areas.

THE RESOURCES DEVELOPMENT CENTER:

Community Organization:

Problems: (1) How can one professional person be most effective?

(2) Do we expand? If so, into what areas?

(3) Should our primary objective be to influence broad social policy or should it be to provide technical assistance to emerging self-helf economic oriented groups?

Alternatives:

(1) Determine the matter of expansion in light of all of the priorities of SRC.

(2) We may determine to continue our emphasis almost exclusively on black community organization.

(3) We may determine to expand to a specific interest also in white poverty, the rationale being to deal with all of the problem - and to remove a racial identity from the existence of poverty.

Manpower and Labor:

Problems: (1) Should we attempt to have a two person staff? One would concentrate on manpower problems and the other would offer educational services to unions.

THE RESOURCES DEVELOPMENT CENTER:

Manpower and Labor:

(2) What are some of the ways of increasing the effectiveness of efforts to end employment and training discrimination?

Alternatives:

(1) Continue to combine the two interests in one person plus using some of the time of the RDC director in these fields. Discontinue one area unless funds and personnel are available.

(2) Utilize some of the more basic research now available for more popular dissemination and as the basis for new interagency strategies.

Leadership Division:

(See "Information, Research and Publications" and "Policy, Administration and Future Programs.")

FUTURE PROGRAMS:

Public Education:

Question: Is this now a crucial area in which the Council should be doing more? If so, what can we best do?

Health Care Services:

Question: This is a complicated field in which the Council has done little. Many needs now being discussed require legislation which the Council cannot promote legally. What then, if anything, can we do?

FUTURE PROGRAMS:

Assembly of Southern Leadership:

Comment: The Executive Committee has authorized this program to reach the emerging new and generally younger white and black leadership in the region, to expose them to each other and to the most pertinent issues of the day. Funding is now being sought (thus far unsuccessfully). What comments are there on how this program should be developed and what is its priority given all program considerations?

Creation of Associate Membership:

Comment: Some thought has been given to creating an "associate member" category (perhaps at $20.00 per year) for persons who wish to have some formal relationship to SRC. The purpose would be largely to raise funds from individuals. This is a significant departure from our present policy and needs serious deliberation.

PROGRAMS - CONCERNS - ALTERNATIVES

The following, in very brief outline form, is an indication of our current and proposed programs, an indication of some of the questions and problems we have with them, and some of the alternatives that deserve consideration. It is prepared for the information of the Members prior to their discussion of Council affairs on November 17-18.

NEIGHBORHOOD STABILIZATION:

A PROGRAM

February, 1966

With the aid of recent legislation, increasing education, and greater financial security Negro Americans are restive at being confined to areas of old and poor housing. Negroes are moving more frequently into formerly all-white neighborhoods or using their newly-found political power to demand municipal services and aid in upgrading their present dwellings. Community groups formed to articulate these demands or to resist exploitation by unscrupulous real estate speculators have become units with great political potential. So the pressure by Negroes for better housing may lead to a real revitalization in America of local democratic processes as an extremely important by-product.

All over the country newspapers are reporting the effects of local initiative on communities, local governments and federal agencies. This country's social development has been based on action by concerned and dedicated local citizens. Even as recently as the turn of the century there were numerous groups in our cities applying the fabled American organizing genius to social justice causes. And in the last decade the same energy has been expended imaginatively in cities and towns, north and south, in the campaign for recognition of equal rights for all Americans.

An organized local group can make its case known to the public and become the basic unit in instituting, directing and implementing public policy. With cohesiveness, effort and dedication, such groups exert pressure on lawmakers

and law enforcers, who, yielding to this expression of grass roots wishes, support those measures advocated by them. This interplay can continue in such a way as to make the democratic process a reality in a populous and highly technical country.

Neighborhoods are particularly apt units in which to foster a strong community voice; common problems create common bonds. Neighborhood associations have developed in neighborhoods facing the fact or possibility of their first Negro family; neighborhoods which have been short-changed or ignored by city governments or federal agencies; neighborhoods which want to expand equal opportunity to include housing in their own areas.

. . . . .

Suppose we examine a neighborhood where a strong neighborhood association will be a necessity if the neighborhood is to survive. In an older section of town, rather near the city's center, stand pleasant, spacious single-family dwellings. The average age of the owners is about 55; these have been family homes and the children have grown up, moved away and established themselves in other cities or other neighborhoods. There are some new families moving in, but property taxes are high, and the down payment required to buy a house here is more than most young families feel they can afford. But the community has many advantages - wide, quiet streets lined with tall trees, houses with large, high-ceilinged rooms, proximity to activities in the city, better

public transportation facilities and shorter commuting time for the wage earner. The neighborhood is near a cramped area inhabited by Negro citizens, cramped because the city's lack of fair housing laws has allowed housing discrimination to operate for years offering Negroes little possibility of escape into more comfortable, less crowded sections of the city.

This neighborhood with its many advantages is marked. Real estate dealers view it as speculative property; they hope to buy very low and sell high. And they will accomplish their ends if the neighborhood isn't careful. A middle-income Negro family perhaps will purchase one of the houses owned by an old resident who wants to move to an apartment. When this occurs, or simply by suggesting it might occur, real estate speculators "block bust"; they attempt by scare tactics, constant harassment and circulation of rumors to frighten other residents into selling fast before property values decline drastically. So a house properly assessed at $20,000 may be sold for $14,000. This house will be resold at $25,000 to a Negro family desperate for housing. If the residents don't scare easily then the speculator may sell a house to a Negro with low income and convince him that he can make the payments of several hundred dollars a month by turning the property into a rooming house for other Negro families. Thus, the speculator makes his profit and assures neighborhood devaluation by changing in this manner the character of the neighborhood from single-family, owner-occupied property

to multiple-resident rooming houses. But the realtor probably won't have to resort to this system, for white residents have been told for years that Negroes cause property decline,[1] that Negro residents won't take care of their homes,[2] that schools cannot maintain standards with many Negro children enrolled.[3] These are all myths, but unless facts are forcefully presented to old residents they will be victims of the "self-fulfilling prophecy" - people will act in a manner to assure their prediction will come true. The panicky owners throw their houses on the market at the same time, the sudden oversupply naturally depresses prices, and therefore, it is shown once again that the entrance of Negroes into a community lowers housing values. Negroes? White property owners have managed to cheat themselves by their fright and foolishness. And neither does this aid Negroes, for they are victimized by realtors. All that is produced is another "instant ghetto." Everyone loses except the speculators.

This is the picture, as dark as it can be made. There is hope - but only if the community will take action itself. No one else is going to save it; no one else is directly concerned about stabilizing the neighborhood. What can be done must be done quickly. It is practically impossible to halt

---

neighborhood decline after the panicky rush to sell is well along.

Pioneering has been done by a number of communities. Their experiences, varying in success, furnish encouragement and guides to those who would emulate them. There is now a literature on neighborhood reclamation and a great deal of interest by individuals, groups, foundations and government in local efforts at stabilization. No community need feel they stand alone even though the will and effort must be theirs. A formula for self-help follows.

. . . . .

ORGANIZE

If the area has an old neighborhood association, reactivate it to form the basis of organization for the new fight. If there is none, then find among various acquaintances those people in the community interested enough in their homes and neighborhood to make the long, tedious and sometimes unpleasant struggle required. These willing, dedicated and persistent ones are the core of the resistance. If there is one such person for each block or two blocks, he can talk with others in the block to find out what their feelings are without arousing distrust and suspicion. Block by block, person by person, is the best way to confront and confound the

rumors and myths. Here is where the worker can point out that it is not a scientific fact that Negroes depress housing values, but that the opposite appears to be the case from the data.[4] At the same time people can be located who are thinking of moving for reasons other than racial prejudice, whose homes are too large now with family grown, who have been transferred out of the area, or who genuinely want to move into a suburb. If these residents are responsive to arguments of self-interest, ask them to be careful in placing their homes on the market and to do so when they can obtain a fair price. Finally, those who will allow racial prejudice to defeat every argument can also be identified and thenceforth avoided.

MOBILIZE

The next step will be to increase the cadre with all who want to be part of the neighborhood stabilization action. Notify residents by circulars or letters of the purposes of the

---

[4] See Laurenti, Property Values and Race. After an investigation of 10,000 real estate transactions in seven cities, the Commission on Race and Housing reported that in 85% of the cases, prices in areas entered by non-whites kept up with or exceeded those in all-white areas. In 15% of the cases, there were declines of from 5 to 9% which were usually short term and followed by rises to or above former prices.

neighborhood action and when meetings will be held. Put all volunteers to work - there will be plenty to do. Every successful neighborhood organization has stressed this point. They emphatically say an unused volunteer is a lost volunteer.

COMMERCIALIZE

To stabilize the neighborhood new white buyers must move into the area while older residents stand pat. All over the country in case after case, once a Negro has moved into a formerly all-white neighborhood, this community has been written off as being of no interest to whites.[5] In most cities realtors have refused to review their decisions. This means that although the neighborhood is the same as before Negro families moved in, and the advantages it offers are identical, no new white family will be shown it. In the South it may even be listed for "colored only" if the local newspapers still allow such classifications. Other neighborhoods have faced this

---

[5] MacGregor Estates, Houston, Texas; Hyde Park-Kenwood, Chicago, Illinois.

same problem, and a few have found after long canvassing a few realtors who would show to Negro and white homeseekers. If such men can be found, urge residents who must move to list their homes with these real estate agents. In most cases, however, the neighborhoods themselves have had to set up their own realty offices with listings of neighborhood property for sale on an equal opportunity basis. These offices usually have been non-profit and operated by volunteers.

UNIFY

Prospective buyers respond to confident neighborhoods where old residents are determined to remain and aren't abandoning their homes to move to lily-white suburbs which will themselves be integrated inevitably. With great success several besieged neighborhoods urged residents to place signs in their front yards declaring THIS PROPERTY IS NOT FOR SALE.

PUBLICIZE

To lure stable buyers into the area the neighborhood association must see that the neighborhood receives favorable publicity.

Often newspapers have been prevailed upon to write complimentary stories on the community and its activities. Other ways neighborhoods have gained valuable exposure are through art and book fairs, open houses and garden tours, and the distribution of their own literature to universities, government agencies and other groups to whom they felt their neighborhood might appeal.

CAPITALIZE

Once interested persons are ready to buy in the area, another hurdle is reached. In city after city where associations fought to revitalize their neighborhoods, they have found homes in the area could not get mortgages nor would bankers lend for buying or housing improvements in the newly integrated community. The only recourse has been to pressure bankers and savings and loan people until one or two agreed to finance homes.

. . . . .

In our example we find our neighborhood is determined to resist exploitation. A local housewife is the first to become aware of real estate speculation, and she determines to do something about it. Over coffee with several friends from

near-by streets she decides to organize the neighborhood by blocks and to question people about their feelings toward the five or six new Negro families resident in the community. The group finds that most home owners do not object to the new neighbors but are frightened by the old myths and the scare propaganda of the real estate men. At block meetings these fears are dispelled by facts, and literature about neighborhoods successful at stabilization is distributed (neighborhoods like Hyde Park-Kenwood in Chicago and MacGregor Estates in Houston). The few who evidence real racial prejudice are not argued with but ignored.

The neighborhood begins to feel that it too can save itself. The people make plans to show their renewed confidence in their community as an exceptional place to live. A publicity group is formed which produces a clever brochure advertising the many advantages of their neighborhood, and this is distributed to local colleges, universities and businesses. The neighborhood association which now numbers 200 families holds a spring home and garden tour to entice people into the neighborhood to look at the houses and community. This gains favorable publicity in the local newspapers.

New white families begin to take an interest in the area. They contact the non-profit real estate office operated by the neighborhood association, and several eventually find houses that fit their needs. After some difficulties the first family receives financing for their house, but the

families who follow have less trouble. Financing institutions begin to realize that our community still has plenty of appeal to whites as well as to Negroes, and that such a vital neighborhood is not going to die. Gradually the neighborhood regains its confidence and relaxes. Panic is no longer the reaction when a resident must move, for the neighborhood feels sure that whether a white family or a Negro family decides to purchase the vacated house the neighborhood will be able to assimilate the newcomers and give them welcome.

. . . . .

Communities which have succeeded in stabilization efforts emphasize the need to sell to white families. At first glance this may seem discriminatory in emphasis if not in fact - for each neighborhood sold willingly to Negro families. The truth is that until there is a fair housing law in each city and each state, Negroes locked into restricted areas will be forced by severe need to take advantage of any additional housing. If whites abandon a neighborhood because one or two Negro families have bought there, then, of course, that neighborhood will become just another all-Negro block in the Negro section. If all areas were equally open to occupancy for all with the means and desire to live there, then no one area would be under more or less pressure than the next. Until that time, however, communities seeking to remain stable and integrated must exert extra effort to maintain racial balance; that is, they <u>must</u> interest new white families in living there. If

they do not, then realtors will continue to list or show for colored only, and mortgages and loans will be ever more difficult to obtain. This emphasis on the necessity of new white home owners may sound harsh, but the reality of the situation is too obvious to be denied - ask neighborhoods in Chicago, Denver, Washington, Philadelphia, Baltimore or Houston.

With all the plans, suggestions and work, the prime ingredient for neighborhood stabilization is dedicated, tireless, committed people. Leaders will arise and be worn out in the struggle, but new leaders must be ready to take their places. Sometimes leadership has been entirely voluntary from the beginning through many years. Some communities hired a professional worker after local initiative organized and began the association. One association with its permanent salaried employee has expanded activities to include many useful community and educational functions, creating a real "esprit de corps," a sense of pride and unity, in the neighborhood.

One point is very certain; there is no one simple formula for all beleaguered neighborhoods. Each must adapt from previous efforts those methods which appeal to it and which will fit the community, and each must use imagination and ingenuity to solve its own problems in its own way. But the hope is this general outline first may awaken neighborhoods to the need for stabilization and secondly show them that with honest effort and hard work it can be done for it has been done.

SRC Wins Saturday Review Award

The Council is the recipient of the 1971 Saturday Review Award for "outstanding achievement during the past year in the field of institutional advertising that serves the public interest." This award was given for the ad "Take This Ad To Lunch," which appeared last year in The New York Times Magazine.

Executive Committee To Meet

The Executive Committee will meet May 21-22 to review and approve the secretary's revision of Plan A which was passed and amended at the recent meeting of the full Council. As soon as the Executive Committee determines that the document accurately reflects the action taken, members of the Council will receive that document and brief minutes of the meeting.

South Africans Visit Council

The Rev. and Mrs. Theo Kotze, regional director of the Christian Institute of South Africa, were in Atlanta May 10-12. Their visit to the United States is being sponsored by the Council. At a staff meeting the Kotze's gave a full briefing on the situation in South Africa, a situation recalling the South before the civil rights movement, only more bleak and despairing.

SRC Offices To Move This Summer

Number Five Forsyth, the old Atlanta Journal building, is going to be torn down. The landlord has given SRC notice that it must move out by August 31st. Since ACLU's Chuck Morgan has until October to move out there is a definite amount of leverage for SRC. However, Jim Wood is currently negotiating with realtors for a new location. While nothing has been decided, it seems certain that the office will remain in downtown Atlanta.

Board Member Elected President of Church Women United

Mrs. Clarie Collins Harvey of Jackson is the new national president of Church Women United, a national movement through which Protestant, Roman Catholic and Orthodox women express the ecumenical dimensions of their faith.

Paul Anthony Addresses Librarians

Our executive director spoke to the Alabama Library Association at the University of Alabama on April 16th. Shortly thereafter, Mr. Anthony began to appear in these offices dressed in bright-colored shirts and striped trousers. Whether his drastic change in appearance had anything to do with librarians has not yet been determined.

Research Department

Dr. Raymond Wheeler delivered a paper at the University of Texas in April on the subject of health and human resources development. Susan Morgan and Bob Anderson assisted him in preparation of the paper which will be published later this year by the University of Texas as part of a collection.

Americans for Democratic Action are reprinting Bill Winn's interview with Gunnar Myrdal which appears in the current New South. Also, editorial commentary was made in the Norfolk Virginian Pilot concerning this interview.

Paul Gaston lectured at Clemson University, April 21, on the history and prospects of school desegregation in the South. Two days later he participated in a TV talk show on WJCT Community Television, Jacksonville, Fla. Professor Gaston "participated" rather than appeared, because bad weather kept him from flying to Jacksonville. Instead he took part in the program by telephone, answering questions about The South And Her Children for 30 minutes.

Mrs. Jacquelyn Hall's six-month appointment as special research assistant has come to an end. While here she has inventoried our extensive archives and has prepared a guide to them. A doctoral candidate in history at Columbia, she will teach American history in the Columbia summer school. She expects to return to Atlanta in the fall and to write her dissertation on the history of SRC.

Resources Development Center

Emory Via, director, spent last week participating in a conference sponsored by the Equal Employment Opportunity Commission at Wing Spread, Wisconsin.

Community Organization Division

In conjunction with the School Desegregation Project (SDP), the Community Organization Division has held several planning and evaluating meetings with participants and coordinators from Alabama, Mississippi, Georgia and South Carolina.

Leon Hall, field coordinator of SDP, gave the opening speech at the Black Cultural Festival at Mercer College, Macon, Ga.

SDP assisted in planning and organizing the recently held NEA education conference in Jackson, Miss., and provided a panelist for the YWCA Institute on Racism in Charlotte, N. C.

The Community Organization Division continues to provide technical assistance to the Black Appalachian Commission. The staff helped with the meeting of BAC's sterring committee and is coordinating the BAC community self-study of the Appalachian counties in north Georgia.

Members of the COD staff participated in a statewide Economic Development Conference held at Penn Community Center, Frogmore, S. C. and in a seminar on economic development sponsored by the Urban Training Center of Georgia State University in Atlanta.

Housing and Planning

The H&P staff, in conjunction with South DeKalb Neighbors, planned and coordinated a project called "Shoppers Sunday." The project was designed to document discrimination by real estate agents. On May 16th, after a brief training session, approximately 70 volunteers fanned out over Atlanta shopping for houses and testing selected real estate brokers for racial discrimination. Results of this effort will be published June 11th as a part of a nationwide report by National Neighbors, the national sponsoring organization.

In Jackson, Miss., what started out to be a small, internal workshop on open housing has turned into something much bigger. H&P and a workshop committee of the Jackson Council on Human Relations has structured a one-day conference to be held June 16th. The goal of the conference is the development of a major non-governmental/non-establishmentarian housing agenda for Jackson. The initial research gives ample reason to believe that the planned forum will have significant impact on furture housing activities in Jackson.

Art Campbell spoke to a seminar of graduate city planning students at Georgia Tech about SRC's urban and rural planning role--past, present and future.

Horace Barker's article in the March issue of South Today was reprinted in the May 8th edition of the Atlanta Journal. The following week, the Journal carried a pro-open housing editorial which made reference to Horace's article.

In addition, H&P is continuing its efforts in the following areas:

1. The revitalization of the Atlanta Metropolitan Housing Conference.

2. Development of Panola's intern and housing programs.

3. Housing survey of selected counties in the region.

Leadership Project

The story told in the second of our Leadership Series of booklets, The Chickenbone Special, has now been published in book form under the same name. SRC published the booklet, written by Dwayne Walls, in March, 1970. Walls, a reporter with the Charlotte Observer, had spent weeks with a black family in South Carolina tobacco country and traveled with the young man of the family, Donnie Gibson, to New York. Through Donnie Gibson's saga, Walls told the story of lack of opportunity for young blacks at home and their frequent disappointment after going to the big cities of the East. Walls' expanded version of this booklet has been published by Harcourt, Brace & Jovanovich. (Walls talked about it recently on NBC's "Today" show.) Copies of his SRC booklet are still available at 30 cents a copy, 20 cents each for orders of 10 or more.

Betsy Fancher's new book, The Lost Legacy of Georgia's Golden Isles, which Doubleday published in February,has gone into a third printing. Besides Betsy's lively, flowing prose, the book has excellent photographic studies of some of the islands' most fascinating people, including the increasingly popular fold singer Bessie Jones of St. Simmons.

Women's Lib And All That
or
Your Editors Note

It seems that the very mention of the feminist movement around SRC causes great anxiety amongst our men folks. Not being creatures to let a good thing pass by without capitalizing on it, the ladies went to lunch on Friday, April 30th, "leaving the men behind," the invitation read, "to fend for themselves, the answer the phone, to pay the postman and (to) attempt to look charming for visitors."

The men did a fine job in our absence and ought to be congratulated for their feat. However, they are looking worried instead of proud and it is rumored they fear an uprising. To assuage their troubled minds, let me personally assure them that the cocktails which were served averted the revolution and demands for a window in every office have been postponed until we can recover from our hangovers.

Journalism Award Won By Cleghorn

The Atlanta Journal takes the credit for that headline. The copy, dated June 8th, reads: "Reese Cleghorn, veteran Atlanta newsman and editor of South Today, the monthly newspaper of the Southern Regional Council, has won the Green Eyeshade Award of the Atlanta Chapter of Sigma Delta Chi, professional journalistic society.

"In competition among newsmen and newswomen in all media in six Southeastern states, Cleghorn was honored for his investigation of inquiries by Internal Revenue Service agents at several libraries about persons checking out books on explosive(s)."

The Green Eyeshade Award is an especially coveted award, if for no other reason than that's about the only way you can get one anymore. Being a modest fellow, Cleghorn has not worn his prize around the office, though we all suspect he puts it on when he closes the door to his office-something he's been doing a lot of lately.

University of Florida Crisis

At the request of Local 1880, American Federation of Teachers, and the Student Government Association of the University of Florida, the Council put together a "National Committee on the University of Florida Crisis" that held hearings in Gainesville on May 25. Paul Anthony was chairman of the eight-member committee; Paul Gaston served as a member. The Florida crisis developed out of the suspension and arrest on April 15 of 66 black students. A brief press release issued after the hearings urged dismissal of charges against the students, the implementation of a plan for a minority affairs division (already approved by a committee of the university) and further investigation of the situation by HEW and/or the U. S. Commission on Civil Rights. Subsequent to the May 25 hearings, an HEW team has visited Gainesville, and members of the state advisory commission to the Civil Rights Commission have conducted a one-day hearing. On June 10, seven U. S. Senators requested a full hearing by the U. S. Civil Rights Commission.

Summer Is.....

The entrance of bright, young faces in these offices...Student interns working hard, injecting vitality into our lives....The best season to be working at SRC.

Six outstanding young people have joined SRC's staff this summer:

Judy Hippler, an Atlantan, was graduated from the University of North Carolina, Chapel Hill, this spring. She plans to go to Yale Law School this fall. While at SRC Judy is researching the rights of secondary school students and examining their relationships with administrators and faculty. She reports that she is also working nights at one of Atlanta's newest restaurants and that she has successfully survived her first night as a waitress without spilling a drop on any one.

Grayson Kirtland is from Richmond and attends Brown University. He is working in the Research Department on the violence and intimidation files and on racial disorders in the schools.

Murdell Varnado is a senior at Spelman College and expects to graduate in December with a degree in English and philosophy. She is working with the School Desegregation Project, gathering information on school desegregation and keeping contacts and files up to date.

Also working with the School Desegregation Project this summer is Linda Hay, a graduate student at Georgia State University in vocational rehabilitation counseling. Linda, originally from New York state, is a summer intern with the Atlanta Urban Corps assigned to work at SRC. With Murdell, she is responsible for organizing and putting out a youth newsletter for students working on school desegregation projects in the South this summer.

Working on a comprehensive planning program for the Panola (Ala.) Land Buyers Association are two graduate students from Georgia Tech, both working on joint degrees in architecture and city planning. Andy Gray, born in Nottingham, England, received his undergraduate degree in architecture from the University of Florida. Eddie Cazayoux did his undergraduate work at the University of Southwestern Louisiana. This fall Andy and Eddie will use their summer's experience in one of their design classes at Tech to develop basic planning studies for Panola.

Research and Information

New South's interview with Gunnar Myrdal in the winter, 1971 issue was reprinted in its entirety in the ADA World, a bi-monthly publication of the Americans for Democratic Action.

Several SRC staffers in May met with Martin Karr, an NBC television producer who is working on a news documentary about migration patterns in the South and the region's economic problems in general. The Research department later provided Mr. Karr with a general description of various trends evident from the 1970 census. Mr. Karr is the producer of "Hunger U.S.A.," for CBS on migrant workers.

Pat Watters and Grayson Kirtland--a summer intern in the research and information department--in early June attended hearings on school desegregation problems in Albany, Georgia. The hearings were conducted by the Georgia Advisory Committee to the United States Civil Rights Commission.

Resources Development Center

The Center arranged for two "In-House Seminars." One was with Chuck Morgan of the ACLU to discuss the recent Supreme Court decision on school desegregation and the other was with David Heaps of the Ford Foundation

regarding his observations about economic development in the South.

RDC director, Emory Via, was interviewed by a director and crew from the Danish TV Network regarding the Changing South. He led discussions at the Washington-based Labor Studies Center (AFL-CIO) on developments in school desegregation with a group of national union representatives who have civil rights responsibilities.

The RDC director served as a resource person for a conference jointly sponsored by the Equal Employment Opportunity Commission and the United States Jaycees. He spend a day interviewing administrators, faculty, and students at the Harvard School of Business regarding our interest in developing an intern-technical assistance program.

Via spoke to the Montgomery, Alabama, Unitarian Church on social and economic developments in the South.

Manpower Program

Emory Via assisted three persons in preparing testimony for the hearings on discrimination in the Atlanta construction industry held by the Office of Federal Contract Compliance. He assisted in arrangements for a Chamber of Commerce leadership program related to unions and race. Via set up a luncheon with a manpower and industrial relations expert and the top staff of a public authority which expects to be confronted with both labor relations and equal employment problems in the near future.

The National Council of Churches held a seminar on problems of discrimination in the construction industry and invited Via as a participant. The Manpower Program Director conducted a seminar for prospective board members of the South Carolina Council on Human Relations on the role of unions and jobs and urban economic development. He participated as a consultant, at the request of the University of Alabama at Birmingham, on establishing a labor education program at the university. Via has recently returned from participating in the Southern Summer School of the International Association of Machinists.

Community Organization Division

COD continues to work primarily with the School Desegregation Project (SDP) and the Black Appalachian Commission (BAC).

It was a busy month for the SDP. It helped plan a meeting at Morris Brown College to initiate an Atlanta-based SDP through the college's human relations council. SDP also provided technical assistance to several related programs, among them Atlanta's Academy Theatre. Under a grant from the Emergency School Assistance Program (ESAP), the Academy Theatre has developed a most interesting play (almost a psycho-drama) about school desegregation in a small Southern town. Other projects receiving technical assistance from SDP were the South Carolina Student's Summer Project, Project Quest and the Virginia Council on Human Relations Youth Section.

Realizing that much of the potential conflict within our schools is due to uninformed administrations, SDP and other members of the SRC staff are assembling an informational packet to be mailed to school administrators this summer.

Other SDP activities in the past month include: a review of the Shawnee area community controlled educational plan in Louisville, Ky. and a student meeting in Columbus, Ga.

In conjunction with the Black Appalachian Commission, COD staffers conducted field tours in the Appalachian areas of Virginia, Georgia and Kentucky to introduce residents of these areas to the Black Appalachian Commission and to invite them to the BAC Conference which is to be held July 9-11 in Hendersonville, N. C.

Meeting this month in Washington with top officials in the Appalachian Regional Commission (ARC) were representatives from the Legal Defense Fund, the Black Child Development Institute, the Southern Regional Council, the Black Appalachian Commission and the Black Women's Community Development Foundation. ARC's representatives were Ralph Widner; executive director, John D. Whisman, states regional representative; and Donald W. White, general counsel and presidential advisor. The plight of Appalachian blacks and the misdirection of ARC funds in meeting black needs were discussed.

SRC's research department and COD provided information for a speech given by the field coordinator of the Black Appalachian Commission which was delivered at the annual meeting of the Council of the Southern Mountains in Berea, Ky.

COD has assisted BAC with the publication and dissemination of a report by Michael Bruland entitled The Status of Black People in Applachia. Additionally COD is assisting BAC in a community survey of resources and problems facing blacks in the nine Appalachian states.

Other activities of COD during the past month include: meeting with David Heaps, Ford Foundation economic development specialist, and, on an another occasion, with Bill Hudson, director of the Community Film Workshop. COD was also represented at the 50th anniversary meeting of the National Bureau of Economic Research.

Hunger Fund grants have been made to the Hogansville (Ga.) Community Improvement Association and to the Redeemer Episcopal Day Care Program in Cross, S. C. to assist in food and medical services.

Housing and Planning

On May 19th, in Atlanta, H&P conducted a training session on rural housing for a field representative from the U. S. Justice Department's Community Relations Service.

Art Campbell attended "a rural development colloquim" held at the rural development center in Tifton, Ga. This center, an agency of the University System of Georgia, intends to develop a wide variety of programs in the areas of: (1) agricultural and forestry production, (2) marketing and utilization of forestry products, (3) community development, and (4) manpower training. This is the first center of its kind in the U. S.

Horace Barker and Art Campbell attended the annual conference of National Neighbors which convened at Oberlin College in Ohio. A report was made to the conference on the findings of our recent project to test discrimination in housing.

Leadership Project

South Today is in the process of doing a follow-up on the Emergency School Assistance Program (ESAP). Numerous abuses were documented some time ago by several civil rights agencies. Betsy Fancher has been at work on this report, as well as on a summary of the activities of SRC's School Desegregation Project.

Reese Cleghorn has been at work on an extensive background paper on school desegregation which will be distributed nationally to newspaper and magazine education writers under the auspices of the National Council for the Advancement of Education Writing. The paper is intended to help reporters--specialists and non-specialists--understand the subject better, with suggestions about whom they should contact (at SRC and elsewhere) in their work.

Since there will be no July issue of South Today, Kitty Terjen took advantage of the lull to get out of the office and gather some fresh writing material. She visited Surry County, Va., the coast of South Carolina, and an integrated camp in North Carolina. She returned to the office with enough information to keep her dutifully occupied til Christmas.

July 19, 1971

Cleghorn to Join Charlotte Observer

Reese Cleghorn, director of the Leadership Project and editor of South Today, leaves the Council August 1 to become editor of the editorial pages of the Charlotte Observer. Having joined the Council in February, 1969, after a highly successful career as a newspaperman, Reese is returning to the profession which has claimed his interest since he went to work for his home town newspaper when he was 17.

In announcing Cleghorn's appointment, Observer editor C. A. McKnight said he "is one of the most talented newspapermen the South has produced in this generation." Those working closely with Reese on South Today know just how true these words are and feel that it has been a great privilege to work with him, and learn from him. He will be missed, but the standards he has set for all of us will remain.

South Today Staff Adjustments

Organizationally, South Today will be transferred from the Resources Development Center to Publications and Information section and will be under the supervision of Robert E. Anderson, Jr. Bob will continue to be editor of New South and overseer of SRC special reports.

Kitty Terjen, who has worked with South Today from its inception in July of 1969 will become managing editor, in charge of the day-to-day planning and production of the paper and reports that go into it. She came to the Council with a background in research librarianship and a C-minus in college English (due to a proclivity for coma splices and misspelling). Under the guidance of Mr. Cleghorn, she has since learned to use a dictionary, which apparently now qualifies her for the job of managing editor.

Working in tandem with Kitty Terjen will be Betsy Fancher, a veteran of magazine and newspaper work, having worked with the Atlanta Constitution, Atlanta magazine and the Macon Telegraph.

Mrs. Ruth Howard will continue her work as subscriptions manager and invaluable secretary for South Today.

The South Today staff is a team that works well together and chances are very good that South Today will continue to develop as a significant voice in the South.

Housing Report Released

Equal Housing Opportunities in the South: A Challenge, issued by SRC's Urban Planning Project under the direction of Art Campbell and Moreland Smith and written by Horace Barker and Bob Anderson, was released to the press July 18th.

The report declares that recent housing policies announced by the White House might perpetuate another generation of segregated housing patterns more inflecible than in the past.

Copies are available from the Council for 50 centa a copy. Ten or more copies are 40 cents each.

The next issue of this newsletter will report on press reaction to this report.

Black Appalachian Commission Conference Held

The Black Appalachian Commission Conference, held July 9-11 at Black Mountain, N. C., culminated months of hard work by a lot of different agencies and people. The SRC's Community Organization Division has, for the past eight months, been providing technical assistance to BAC.

The conference was attended by more than 250 persons, black elected officials, students and others. Its objectives were (1) to provide resources and information on problems confronting black Appalachian residents and (2) to develop plans for continuing the Black Appalachian Commission.

Leon Hall, SDP Field Coordinator, conducted student workshops and Art Campbell, co-director of SRC's Housing and Planning Project, chaired a workshop on housing. The Voter Education Project and SRC's publications section also cooperated in this effort.

Pat Watters and the South

Our roving writer-in-residence has been traveling in southwest Georgia, Mississippi and Louisiana, gathering materials for writing and just talking to people about what is going on in the region. His observations will appear in the September issue of South Today.

Community Organization Division

The School Desegregation Project provided technical assistance to the South Carolina Study on Student Involvement, Columbia. A pamphlet about this project has been printed and copies can be obtained from SDP.

SDP also provided technical assistance to the Calvary Rehabilitation Project in Huntsville, Ala.

Organizational meetings were held with college and high school students in Aiken, S. C., New Orleans, the University of South Carolina, and Oxford, Miss.

SDP interns, Linda Hay and Murdell Varnado, are working on the first issue of an SDP newsletter. They have also assisted with the Mercer University newsletter.

While on a Black Appalachian Commission field tour, members of the COD staff observed two economic development projects in the Pittsburgh, Pa., area--the Urban Youth Action Inc. and the Allegheny Conference on Community Development. COD staffers plan to visit more economic development projects in the future.

Editors Note

Because many department heads are now on vacation and because of the transitional period now occurring within South Today, this newsletter is only a selective reporting of what's been happening at SRC during the past month. Activities of departments not included this time will appear in the next issue.

What a month!

SRC
SOUTHERN REGIONAL COUNCIL, INC.
NEWSLETTER

5 Forsyth Street, N.W., Atlanta, Georgia 30303

August 23, 1971

SRC Seeks New Director

On July 20th Dr. Raymond Wheeler, president of SRC, accepted the resignation of Paul Anthony, executive director of the Council since 1965. Paul joined SRC in 1956 to conduct a three-month survey of the newly spawned White Citizens Councils. When his "temporary" assignment was over, he stayed on at the Council, first as administrative assistant and then as field director. An article on Paul's career at the Council, written by Bob Anderson, will appear in the September issue of South Today.

SRC's Personnel Committee has met to consider names of possible candidates for the executive directorship. A final decision is expected shortly.

Paul has no immediate plans for the future, other than to get a good rest. Certainly he deserves one.

SRC Censures Nixon's Stand On Busing

Paul Anthony, in a press release to major newspapers in the region, sharply criticized President Nixon's strong stand against busing school children. He said, "President Nixon's statement of August 3 on school busing is a serious threat to quality education and good race relations in this region...

The President states that he is opposed to busing 'to achieve a racial balance.' The fact is that the Supreme Court has never--certainly not in its latest, most definite decision on the issue--required busing to achieve racial balance. For the President to imply that it has is to confuse an already delicate and complicated subject."

Anthony's response to the President's stand on busing came on August 4, weeks before Alabama's Gov. George Wallace took up the anti-busing banner.

Resources Development Center

There are several studies underway which may well point to programs for SRC and other agencies. One is an interim report on the economic background of 10 Mississippi counties. From this report it now appears that information and analysis will be forthcoming which will substantially aid in planning for economic activities with special impact on low income groups.

The other report of significance is one undertaken by a graduate student at Georgia Tech in cooperation with the Resources Development Center. This report, which is now in rough draft, applies systems analysis methods and a computer simulation program to the problem of labor intensive produce production. We are hopeful

that some of the problems in such an agricultural pursuit will be more sharply defined and at least some of the answers suggested.

Emory Via has been cooperating with a proposed project which would assist in opening better employment opportunities for black women.

Demba Diallo, a cabinet minister from Upper Volta, visited the offices for a briefing on Southern affairs.

Judy Hippler, a summer intern and recent graduate of the University of North Carolina, has finished her work at SRC. She handled a number of responsibilities this summer ably and with dispatch.

Community Organization Division

Butch Wright, Leon Hall and 50 teenagers are spending this week at Camp Fellowship, near Greenwood, S. C., to work on school desegregation problems. A full report on this most ambitious program will appear in the next newsletter.

South Today

Luther Munford's article on the misuse of Emergency School Assistance Program funds, which appeared in the July-August issue, has reportedly caused rumblings in Washington, especially within the Department of Health, Education and Welfare. In one report HEW denied the charges; in another, a HEW spokesman said he could not dispute the report. "We made an effort to closely monitor the funds," he said, "but we were limited by manpower."

Reese Cleghorn's farewell party, held July 27th at the Council, proved a promotional success for South Today. Many members of the press attended the gathering.

Associate Editor Betsy Fancher is out of the hospital where she spent two weeks in traction as a result of a back injury she received while covering a story for South Today in South Carolina. Betsy gallantly conducted business as usual from her hospital bed.

Editor's Note

Now that I am also managing editor of South Today, the SRC Newsletter is playing second fiddle. The September issue of South Today "went to bed" Thursday morning. I think you will find the articles up to our usual high standards and I hope you'll like some of the changes in format as much as I do.

Until the dust settles, I ask you to bear with my tardiness in regards to the Newsletter.

--Kitty Terjen
Editor

SRC SOUTHERN REGIONAL COUNCIL, INC.
NEWSLETTER

Administration

Jim Wood attended the National Catholic Council for Interracial Justice in New Orleans. The theme of the convention was "The Church in the City of Tomorrow." He went primarily to participate in the workshop on communications led by Eugene Schneider of the United Church of Christ. Most of the time in the workshop was spent exploring ways to protect citizens' rights in radio and television.

Housing and Planning

Eddie Cazayoux and Andy Gray, interns with the Housing and Planning Program during the summer have returned to Georgia Tech to complete work on their masters degrees in Architecture and City Planning.

During their tenure, Eddie and Andy developed three alternative site plans for a 100-plus unit housing development. They also wrote a 187-page report "Background Study and Evaluation" of the three sites, totaling 1164 acres, owned by the Panola Land Buyers Association. These preliminary plans will be presented to the Association at a meeting scheduled for September 23.

Horace Barker, also, has left the Council to do graduate work in Public Administration at the University of Georgia. Horace has made an invaluable contribution to the overall progress of the Housing and Planning Program. In addition to authoring a major report on Housing Discrimination, he helped put together a workshop and developed a proposal for establishing a metropolitan open housing organization in Atlanta.

Housing and Planning is convening a small group of housing experts on September 16 in Atlanta to get their advice on the establishment of a task force and action-oriented programs in housing discrimination. A statement on the outcome of this meeting and its significance will appear in the next newsletter.

Community Organization Division

Over the past few weeks, the Community Organization Division has focused upon two projects:

1) The Black Appalachian Commission. The COD has participated in three follow-up meetings (goal setting and program development) to the recent Black Appalachian Commission Conference in July. Meetings were held in Chapel Hill, N. C., Asheville, N. C., and Atlanta, Ga.

2) The School Desegregation Project. The primary focus of the School Desegregation Project in recent weeks has been upon the planning, implementation, and follow-up of the School Desegregation Institute for 32 black and white college and high school students from nine Southern states. An overview will be available upon request.

Publications

Paul Gaston, director of research, has returned to the University of Virginia, after a year's leave at the Council.

Equal Housing Opportunities in the South by Horace Barker, of the Housing and Planning Project and Robert E. Anderson, Jr., editor of Council publications, was released in July. The report was quoted by Frank McGhee on the N.B.C. Nightly News and drew editorial comment in several southern newspapers.

Virginia Foster's article in the Winter New South entitled "The Emancipation of Pure White Southern Womanhood" was re-printed in the National Observer of August 2, 1971.

South Today

It's always good to have friends in high places. Former South Today editor, Reese Cleghorn, reported that he reprinted portions of Frye Gaillard's story on the Lumbee Indians, which appeared in the September issue of ST, in the Charlotte Observer. We have also granted permission to reprint the Lumbee article in an anthology entitled Freedom, Society and Education, to be published by McKay Co. this winter.

Paul Hemphill's article on the "other side of Women's Liberation" which appeared in the July issue of South Today was reprinted on the Op-Ed page of the New York Times on August 26th, the 51st anniversary of the Woman's Suffrage Amendment. His article has come under attack from feminists, though Hemphill reports he has heard only good things about the piece. His mother-in-law, for example, thought it was a love poem to his wife.

Atlanta, Georgia 30303

October 18, 1971

SRC Relocates

Under the direction of Jim Wood, SRC has settled into its new home on the 2nd floor of 52 Fairlie Street. It wasn't an easy move, relocating 10 years of living at 5 Forsyth. The general disorder of packing was rampant until Friday when everything, including the confusion, was transferred to moving vans, push carts and the arms of weary staff members. Working in shifts Friday night and Saturday, the troops managed to have everything placed by Monday, only to have to undo most of the work so that the carpet and telephone men could finish their jobs. By Tuesday, everyone was complaining about damages incured during the move and searching frantically for misplaced items, but by Thursday damages had been repaired and the mysteries of the missing this, that, or the other had been solved. Today finds SRC past the tiring excitement of moving and back to the pressing business of the day.

Community Organization Division

The Community Organization Division focused upon three activities this month: (1) Moving (2) The Black Appalachian Commission; (3) The School Desegregation Project:

Moving:

Whew!!!!!!!!

The Black Appalachian Commission - Early this month the COD provided proposal writing and planning assistance for the BAC. Later in the month the COD and the BAC executive committee participated in a joint planning meeting (strategy building) with a representative of the Congressional Black Caucus in Washington, D. C. The COD is presently the central coordinator for the forthcoming meeting of the BAC to be held on October 16, in Atlanta, Ga.

The School Desegregation Project - Leon Hall has made three field trips (technical assistance, recruitment/orientation, and training) during the month. The areas visited were: Meridian, Miss., Jackson/Yazoo City, Miss., and Macon, Ga. Also, the SDP staff has participated in three School Desegregation Institute follow-up meetings. Two of these were held in Atlanta, one by the Educational Coalition Representatives, the other by The Reginald Heber Smith Community Lawyer Fellowship Program. The third meeting attended was held in Washington, D.C., by the Educational Coalition.

Limited draft copies of the SDP Institute Report are now available.

Staff Changes

We regret that Ronald Wray, Mozell Varner and Barnetta Jackson will no longer be with us here at SRC. The only comfort to be taken is that they have not strayed far, all three having gone to the Voter Education Project (VEP) which occupies the 3rd floor of 52 Fairlie Street. We wish them every success in their new jobs and hope they will come and visit often.

South Today

"On the Wire," a personal editorial comment on Southern affairs, made its debut in the October issue of South Today and will appear on a regular monthly basis henceforth. Penned by a noted journalist, who wishes to remain anonymous, "On the Wire" promises to be a lively addition to the paper.

Libba Carmichael, a recent humanities graduate of Emory University, has joined the South Today staff on a volunteer basis. In addition to helping with South Today production activities, Libba has been appointed by royal decree to be editor of the SRC Newsletter. This will mean, no doubt, that the Newsletter will not only rise to greater journalistic heights, but it will also appear on time.

The New Editor Has a Say

I very much appreciate the above vote of confidence. For an inexperienced BA, its a real ego boost. The warmth I have experienced here has completely dispelled my fears of a cold, cruel business world. I am very proud to be associated with SRC and am quickly coming to a deeper appreciation of my Southern heritage while furthering my understanding of all the potential that is ours.

---Libba Carmichael

28th Annual Meeting Postponed

Members of the Council are reminded of the notice dated November 2 from the Executive Director announcing that the Executive Committee has postponed the Annual Meeting from November 19-20 to a date to be announced.

SRC Staffer Attends Aging Conference

Mrs. Nobbie Morgan, Administrative Assistant, attended a three-day Conference on Aging held in Cartersville, Ga. The meeting began October 20 with discussions centering around task forces. The theme of the conference was how to make life for the senior citizen more livable.

Resources Development Center

During recent weeks Emory Via has met with representatives of other agencies interested in southern school desegregation. The Education Coalition, as the group is called, has also heard presentations from Clarence Wright and Leon Hall. Dr. Via has consulted with a small group of persons working with poor whites in Appalachia regarding ways of improving programs there.

Miss Gwen Gardner who works Antioch College programs and is engaged in research on in-school relationships in the Atlanta schools has made use of SRC materials, files, and discussions with Clarence Wright, Leon Hall and Emory Via.

Community Organization Division

Over the past few weeks, the Community Organization Division has focused its resources on two areas:

1) The School Desegregation Project. The primary focus of the SDP staff in recent weeks has been upon finalization of plans for the forthcoming program year. Program activities (orientation, recruitment, training) have been conducted on college campuses in Mississippi (University of Mississippi, Jackson State College, Tougaloo and Milsapps Colleges), and in Georgia (Mercer College). Technical assistance has been provided for the Selma Project Education Alternative Center. The SDP Field Coordinator Leon Hall was a panelist for the Education Workshop at the 56th Anniversary Convention of The Association for the Study of Negro Life and History, Inc. The convention was held in Washington, D. C. on October 21-24. Also, the third edition of the SDP Newsletter was also published during this period.

2) The Black Appalachian Commission. The COD coordinated the first Board of Directors meeting for the BAC. Follow-up technical assistance was provided by the COD to place the BAC office (records, etc.) in shape for the takeover of the newly appointed director on December 1, 1971.

Labor Project

Emory Via has had further consultation with the University of Alabama at Birmingham regarding their proposed Labor Education Program. Recently the Labor Project has consulted with a very worthwhile effort by the South Carolina Council on Human Relations and other organizations regarding problems involved in the implementation of portions of the Federal Emergency Employment Act in South Carolina.

Representatives of the University of Texas have almost completed their preliminary studies related to a pilot Black Female Employment Project. SRC's Labor Project will assist in the operational phase of this program.

Housing and Planning Project

Recently the HPP convened meetings in Epes, Ala. and in Atlanta, Ga. around the issues of housing discrimination and the Panola Project. Both were successful. Some ideas from the Housing Discrimination meeting were incorporated into next year's program proposal. The consultants attending the Panola meeting are living up to their promises: a preliminary cost estimate for constructing water and sewer systems was just received from one consultant, and another has revised site plans to reflect changes desired by Panola Land Buyers Association.

The HPP sponsored a field trip to Panola for the Georgia Tech class involved in that project. One item on the itinerary was a briefing/ debriefing session involving the students and representatives on the Federation of Southern Cooperatives who now have a training and research center.

Considerable time has been spent on developing program proposals and budgets for the coming year.

Publications

In the March 18 Newsletter, we reported that Robert E. Anderson, editor of publications, had written an introduction to a textbook on civil rights, entitled Civil Rights During The Kennedy Administration. The author is James Harvey of the political science department at Jackson State College. Now, we note that the book has been published by the University of Mississippi Press.

The Fall issue of New South to be out in December will be a special issue dealing with hunger and some related health problems in the South. The featured article is by Dr. Raymond Wheeler, President of the Council.

Pat Watters' forthcoming book, Up Til Now, has received a glowing pre-publication mention in The Nation.

South Today

Bill Winn's article on Surry County, Va., which appeared in the November issue, has had great impact. The Richmond Times-Dispatch and UPI ran stories on the article November 1st. The following day was election day in Virginia, and for the first time ever, predominantly black Surry County elected three black members to the five-man county board of supervisors. It was quite a victory.

The article has stirred up a controversy. A letter to the Times-Dispatch asked, "Why did your paper have to get an article out of a publication in Atlanta, Ga.? Don't you have enough correspondents to cover an area just 50 miles from Richmond?"

The Times-Dispatch, Sunday, Nov. 14th, carried a follow-up article on the Surry elections.

Ray Jenkins' article on George Wallace, which also appeared in the November issue, was given good coverage by the Atlanta Constitution.

Associate South Today editor, Betsy Fancher, attended a meeting of the Governor's Commission on Goals for Georgia in October. Later that month she spoke to the Georgia Library Association at Jekyll Island. Her subject was the process of researching her book, The Lost Legacy of Georgia's Golden Isles, which is now in its fifth printing.

Kitty Terjen, managing editor of South Today, spent a day in Chicago recently where she consulted with leaders of the American Library Association. She also had the pleasure of meeting with Meyer Weinburg, editor of Integrated Education, while she was in the Windy City.

Hank Terjen has been transferred to New York City, which means Kitty Terjen must leave the Council and follow her husband North. Hank will be departing immediately, but Kitty will hang around until after the first of the year and perhaps until spring.

Libba Carmichael who helped out with South Today during October on a volunteer basis found a paying job at Georgia magazine. We miss her already.

This issue of the Newsletter was edited by Miss Eugenia Kemp and Mrs. Betsy Fancher.

Interim Committee To Direct Council

The executive committee, at Paul Anthony's request, accepted his resignation as executive director, to be effective on or about November 15.

The committee expressed by resolution its grateful appreciation for the loyalty, the commitment, and the leadership which Paul Anthony has provided the Council during the past six years.

Three members of the staff were then appointed to administer the affairs of the Council as an interim committee: Mr. Emory Via--Programs, Mr. Jim Wood--Administration and Personnel, Mrs. Ruth Vick--Financial Affairs.

Staff Presents Plaque

On December 10, 1971, the staff expressed its appreciation of Paul Anthony's leadership by presenting him with a plaque signed by all the members of the staff, which read as follows:

> "In recognition of your many contributions to the betterment of the South, your encouragment of those seeking justice and understanding among people, your love of the Southern Regional Council and devotion to its goals and principles, and your leadership, exercised with wisdom, humaneness and good humor, often in the face of adversity, we present this permanent token of our respect and affection."

Resources Development Center

The long awaited report on the ten-county Mississippi area has been completed by the consultants at the University of Texas. It is a substantial document describing economic conditions, problems and prospects as background for evolving economic development proposals.

Labor Program

Recently Emory Via met with a dean and associate dean at the University of Georgia to discuss with a labor representative ways in which the University and unions might work together including the possibility of establishing labor education programs at the University.

Via has assisted in planning a national civil rights conference by the Amalgamated Meat Cutters and Butcher Workmen's union. Leon Hall was a participant in the program. The Labor Program also gave assisstance in planning the Advanced Southern Labor School and Emory participated in both. SRC materials were supplied for both of these meetings. Also for both of the meetings arrangements were made for John Lewis of VEP, Inc. to take part in seminar sessions.

Housing and Planning Project

In connection with HPP's interest in rural housing, Art Campbell has met on two occasions with representatives of organizations in Georgia who are interested in this problem. At the last meeting in Tifton, Georgia, this group began developing plans for a conference on rural housing to be held in April, 1972.

After many years of dedicated service to the Southern Regional Council--six years as director of the Housing and Planning Project--Moreland G. Smith is retiring on December 15. We wish Moreland well in retirement.

Community Organization Division

The Community Organization Division has worked closely with the National Medical Foundation in developing a list and contacting perspective doctors for a South Carolina Comprehensive Health Center.

In follow-up to the recent Black Appalachian Commission Board of Director's meeting in early October the Community Organization Division has conducted several orientation/planning sessions with the new director of the Commission, Jack Guillebeaux.

Recently, the Community Organization Division conducted a brief seminar with eleven students from Friends World College. Tentative plans for an on-going tri-montly seminar with the student group is now being considered.

The School Desegregation Project activities have been largely focused upon the recruitment and training of college volunteers. Recruitment and training sessions have been conducted at Auburn University, Auburn, Ala.; Birmingham Southern and Daniel Payne College, Birmingham, Ala.; Tulane University, New Orleans, La.; and Tougaloo College, Tougaloo, Miss. Bad weather forced cancellation of recruitment/training sessions at the University of South Carolina, Columbia, S. C.

Publications

Elizabeth Tornquist's article in the Summer, 1971, New South, "Juvenile Corrections in North Carolina" is being re-printed in the national publication of the American Civil Liberties Union (ACLU).

Bob Anderson, editor of SRC publications, was interviewed via telephone by a San Fransisco radio talk show, December 5, on the recent South Today education issue.

Also from the South Today education issue, portions of Eleanor Clift's story on Jackson, Miss. schools and Naomi Myles report on North Carolina private schools are being reprinted in the Charlotte Observer.

This issue of the Newsletter was edited by Miss Eugenia Kemp and Mrs. Betsy Fancher.

And merry Christmas to you all.

Administrative Affairs

Probably the most significant hope to emerge from the recent Symposium on the Contemporary South, co-sponsored by the Southern Regional Council, was that the North would be abandoned as an adequate model for Southern imitation in every field from human rights to the building of cities.

Said C. Vann Woodward, the Arkansas native who teaches at Yale University: "We are in fact still living with the progressive realization of Grady's dream of a Yankeefield South. Every new throughway, every new supermarket, every central city is an extension of it. The full horror of it is suggested, but slightly, by a drive between Tampa and Clearwater and what litters both sides of the throughway."

His viewpoint was shared by most of the other leaders of the symposium which was co-sponsored by the University of Florida at Tampa January 9-13. The four main topics included "Two Decades of Human Rights," "The New Southern History," "The New Southern Politics," and "The South Tomorrow."

The symposium was primarily the work of Jim Silver, formerly of Old Miss and the SRC Board and now a faculty member of South Florida University. Participants included: Paul Anthony, former Director of the Southern Regional Council; Reubin Askew, Governor of Florida and a leading spokesman for what he terms "the maturing South;" Julian Bond, former communications Director of the Student Nonviolent Coordinating Committee and currently a member of the Georgia Legislature; Leroy Collins, former governor of Florida and the first director of the U. S. Community Relations Service, Undersecretary of Commerce and recent author of FORERUNNERS COURAGEOUS; Leslie Dunbar, Executive Director of the Field Foundation and author of A REPUBLIC OF EQUALS; Harold Fleming, former Executive Director of the Southern Regional Council and Deputy Director of the U. S. Community Relations Service and president of the Washington based Potomac Institute; John Hope Franklin, a fellow of the Board of Foreign Scholarships, former history department chairman at the University of Chicago and author of THE MILITANT SOUTH and FROM SLAVERY TO FREEDOM: A HISTORY OF AMERICAN NEGROES; Paul M. Gaston, a Fullbright fellow, associate professor of History at the University of Virginia and author of THE NEW SOUTH CREED; Benjamin Mays, president of Morehouse College for 27 years, chairman of the Atlanta School Board and author of BORN TO REBEL and C. Vann Woodward, author of three award winning books about the South and a Sterling Professor of History at Yale.

Southern Regional Council staffers who attended the meeting included Bob Anderson, Art Campbell, Ruth Vick, Pat Watters and Jim Wood.

OUR LAND TOO caps Lillian Smith Award

In January, the Council announced that "OUR LAND TOO" by Tony Dunbar had won the coveted Lillian Smith Award which is presented annually for a distinguished literary work on the South and Southern affairs. The award this year includes a $500 honorarium.

Mr. Dunbar's book, describing life in a black community of rural Mississippi and in a coal mining section of Kentucky, is the product of the author's observations and insights as a field worker with the poor in both localities. The book draws upon recorded conversations with a black community in Mississippi telling of day to day problems of survival. Taped conversations with a retired coal miner are also skillfully interspersed with the author's commentary on misuse of people and power in appalachian strip mining operations. Through the book emerges the theme that although poor whites and poor blacks have been separated and alienated from each other, their eco-onomic and political needs are the same.

The Lillian Smith award, named for the Georgia novelist and humanitarian who died in 1966, is given to the book which in the opinion of the Council best reflects Miss Smith's interest and work. Members of the award committee include Bell I. Wiley, author and professor of history at Emory University, Atlanta; Howard Lee, mayor of Chapel Hill, N. C.; James Stokely, author and poet, Newport, Tenn; Hodding Carter, III, author and publisher of the Delta Democrat-Times of Greenville, Miss. and Dr. George Owens, President of Tougaloo College, Tougaloo, Miss.

Portions of the book have previously appeared as an SRC pamphlet entitled "The Will to Survive." A news release on the award was given to book editors for publication January 16.

Community Organization Division

The Community Organization Division has given special attention to two program areas over the last three weeks. The Black Appalachian Commission conducted a four day orientation for the new B.A.C. director Jack Guillèlaux and provided technical assistance on proposal writing. Leon Hall of the project conducted a five day tour of Mississippi, visiting Tougaloo Volunteers. He also spoke at the Martin Luther King Memorial Service at Meridian High School, Meridian, Miss. and organized interview schedules for persons interested in working with Project Opportunity.

Publications

Betsy Fancher's SOUTH TODAY article on the busing of children from the ghettos of Atlanta's Summerhill to two of the city's poshest elementary schools was reprinted in the CHARLOTTE OBSERVER and the ATLANTA VOICE.

Mrs. Fancher's first book, published under the name of Betsy Hopkins Lochridge and titled BLUE RIVER, a fictionalized account of relationships between the races in the South, will be reissued

February 28 with an autographing party at Rich's Department Store in Atlanta. The book was hailed as a "slender, lyrical, near masterpiece" by critic Sterling North on its orignial publication in September, 1956.

Naomi Myles' SOUTH TODAY article on North Carolina private schools was reprinted in the North Carolina ANVIL.

The NEW SOUTH special issue on health care was released on December 29 and received attention in both published and electronics media.

Pat Watters spoke at Dr. Paul Gaston's graduate seminar in Southern History and before the History Club at the University of Virginia in January. He was also a panelist at the Symposium on the Comtemporary South at the University of South Florida early in the month. During December, Mr. Watters was on a leave-of-absence to edit a book based on a conference to study the Federal Bureau of Investigation which was sponsored by the Woodrow Wilson School of Princeton University and the Committee for Public Justice. The book will be published by Doubleday later this year. His own book on the civil rights movement of the 1960's, DOWN TO NOW, was published by Pantheon Books in January.

SOUTH TODAY Staff Changes

Kitty Terjen's resignation as managing editor of SOUTH TODAY was effective January 31. Pat Watters, Director of Information, is now editor of the paper. Betsy Fancher continues as associate editor and Ruth Howard as the circulation manager.

Housing and Planning Project

During the past month, the Housing and Planning Project continued to work on a rural housing conference for Georgia. Art Campbell met in planning sessions on December 30 and January 7 in Macon, Georgia with representatives of the Coastal Plains Regional Planning Commission Rural Development Center, Georgia Department of Family and Children Services and the Urban Life Center of Georgia State University.

The Housing and Planning Project has contacted several individuals involved in rural housing in South Carolina concerning the development of a HPP-technical assistance program in that state in the area of rural housing.

HPP activities on behalf of Panola:

(a) Attended December board meeting of the Panola Land Buyers Association.
(b) Met with HUD officials and an attorney in Birmingham concerning the long range housing project
(c) Explored availability of technical assistance from the newly-created Housing Assistance Council(funded by a $4 million OEO grant to stimulate housing development in small towns and rural areas).

This issue of the Newsletter was edited by Mrs. Betsy Fancher and Miss Eugenia Kemp.

SRC SOUTHERN REGIONAL COUNCIL, INC.
NEWSLETTER

52 Fairlie Street, N.W., Atlanta, Georgia 30303

February 15, 1972

Administration

The Southern Regional Council recently announced the appointment of George H. Esser, Jr., as Executive Director.

Mr. Esser, 51, is a native of Norton, Virginia and has lived most of his adult life in Chapel Hill, North Carolina. He was associated for many years with the University of North Carolina and later gained wide recognition as Executive Director of the North Carolina Fund, established in 1963 as a private agency dealing with poverty and education in the state.

Mr. Esser, who will assume his duties with the Southern Regional Council on May 1, becomes the Council's sixth executive director in its 28 year history. Previous directors include Guy Johnson, recently retired from the faculty of the University of North Carolina; the late George Mitchell; Harold Fleming, President of the Potomac Institute; Leslie W. Dunbar, Director of the Field Foundation and Paul Anthony, immediate past director.

Following military service in World War II, Mr. Esser attended Harvard University Law School. After graduating in 1948, he came to the Institute of Government at the University of North Carolina as associate director. He subsequently became a professor of public law and government, working in the fields of municipal law and administration, urban problems, state and local tax policy, and state government re-organization. He served on the research staff of numerous major legislative commissions.

In 1963 he became Executive Director of the North Carolina Fund which was established under the leadership of former North Carolina Governor, Terry Sanford and funded by the Ford Foundation, the Mary Reynolds Babock Foundation and Z. Smith Reynolds Foundations for a five year period. Under Mr. Esser's administration, the North Carolina Fund supported eleven community action programs throughout the state, carried out research and training programs, sponsored a public information service, and operated experimental and demonstration projects in manpower development. The Fund helped establish financial support for various spin-off corporations which still operate in fields of public education, low income housing, manpower development and community and economic development, the latter corporations controlled and managed by poor black communities.

At the termination of the Fund in 1969, Mr. Esser joined the Ford Foundation as southern advisor on grants and projects. In his position, he has traveled widely throughout the South, gaining broad first hand knowledge of the region's problems and potential.

In accepting the directorship of the Council, Mr. Esser noted the contributions of his predecessors both to the Council and the region as a whole. "Following in the footsteps of such men is a high honor. I have known all five either personally or by reputation and I am aware of the immense dedication and competence they brought to their job. The South during the past three decades has undergone vast changes in race relations, in politics, in economic development, in social outlook. But there is much more to be done and if the region is to realize its promise and potential the job ahead must be approached thoughtfully, compassionately, accepting new and creative ideas, while drawing on the resources and knowledge of wise men who have loved and led the region throughout some of its most tragic times. The Southern Regional Council, because of its unique role in the South as a needed voice of informed reason and as an innovator in projects and programs designed to put both reason and justice into practice, has a large role to play in regional develop in the years ahead. I look forward to the opportunity and the challenge that the members of the Council have trusted to me."

Publications

A news release on Mr. Esser's appointment drew attention both in the national press--including the New York Times and Washington Post--and also in the newspapers throughout the region. The Durham Herald gave it from page attention in a six column headline and included a lengthy interview with George Esser. The Raleigh Observer and the Charlotte Observer carried special news articles and the Charlotte Observer commented on the appointment at some length in its Wednesday, February 9 edition.

"Mr. Esser," the Observer concluded "will add new strengths to a private organization which probably has been more influential than any other in changing the South for the better."

Robert E. Anderson, Jr. was taped by radio station WAOK in Atlanta on the appointment. Earlier he was taped by the State News Network on SRC's press release regarding problems of high school desegregation.

Community Organization Division

During the month of February, the Community Organization Division

has continued activities with the Black Appalachian Commission and the School Desegregation Project. Meetings were held with two professors at the Atlanta University complex concerning graduate candidates to conduct a four month study of the Appalachian Regional Commission. Several potential candidates were interviewed.

Leon Hall, Director of the School Desegregation Project, engaged in the following activities:

1. Field tour to check mass expulsions in Wilkes County, Georgia.
2. Participated in a meeting of the NEA Internal Council on the In-School situation in the desegregated school. Students from Mississippi and South Carolina also participated in the meeting.
3. Conducted workshops for Emphasis Conference at Emory and Henry College; Emory, Virginia.
4. Conducted a debriefing session for the participants in the Tougaloo Interim Project in desegregated schools throughout Mississippi.
5. Met with students in Meridian, Mississippi.

Additionally, meetings related to school desegregation and the establishment of a student advocacy program were held with Professor Ernie Ladd at Emory University and Paul Piersma of the National Juvenile Law Center in St. Louis, Mo. The fourth edition of the SDP Newsletter, under the editorship of Marge Manderson, has received a strong response from groups in several states.

Clarence Wright participated in a Community Crisis Intervention workshop at Washington University, St. Louis, Mo. and a meeting of training organizations and community groups concerning forthcoming changes in the OEO Program. He also served as a participant/observer at a youth conference in Birmingham, Ala., during the last week in January.

Housing and Planning

Art Campbell was recently elected as one of the seven from Fulton County to the executive committee of the Atlanta Metropolitan Open Housing Coalition.

Over the past month, HPP has been engaging resource people and developing the agenda for a Georgia rural housing conference to be held May 4-5, in Tifton, Georgia.

This issue of the Newsletter was edited by Mrs. Betsy Fancher and Miss Eugenia Kemp.

March 16, 1972

Administration

Jim Wood made two recent trips to Washington, one to attend a workshop dealing with the present state of the Tax Reform Act, 1969. This was a good conference, but no unique knowledge was gained. The second, a symposium at the Smithsonian Institute where a study entitled, "The Limits of Growth" was presented. The report was prepared by a team from M.I.T. for THE CLUB OF ROME. The club has an organization of 75 businessmen and scientists recruited on a world-wide basis by Aurelio Peccei, the founder and president. The report sees the world as a finite system in which at a certain point growth must stop or the system, i.e., the world will collapse. It is the judgement of authors that we have nearly reached this point. The report which is based on computer models is already highly controversial and will become more so. The symposium was lively and informative.

Resources Development Center

New Employment Project is Underway

The Resources Development Center and its Manpower Program are very pleased to announce the arrival of three staff persons to work in the new Black Women Employment Project. Alexis Herman is Director, Paulette Norvel, Associate Director, and Velvia Jackson is Administrative Secretary. This will be a pilot project to demonstrate the effectiveness of using diligent recruiting, reliable job information, and supplementary training in conjunction with thorough efforts in select industries to determine where the jobs are, company procedures, and job requirements. The project is an experimental expansion of the "outreach" concept in breaking employment barriers which has been used effectively in other job areas. The BWEP will focus on upper level white collar jobs that will either be at the professional, technical, or managerial level or will lead to such positions through advancement or company provided training programs.

The BWEP program focus has been determined by an analysis of the Atlanta labor market indicating both a special need for quality jobs for black women and that they are seriously underutilized in certain industries and job classes. Emory Via, Director of the RDC has been working with SRC members and University of Texas faculty member Ray Marshall in establishing the program. The University of Texas will provide research assistance and a careful evaluation of BWEP's efforts. Via has high hopes for the success of the project and feels that SRC is most fortunate in securing the services of a really competent staff for this effort in Alexis

Herman, Paulette Norvel, and Velvia Jackson.

Publications

Pat Watters appeared on a panel March 9 discussing "Civils Rights" before a group of European Newspaper correspondents from both sides of the Iron Curtain visiting Atlanta during a tour of America sponsored by the State Department. His article on "Workers, White and Black in Mississippi" appeared in a special issue of Dissent Magazine on the blue-collar worker.

Community Organization Division

The Community Organization Division has continued work with the Black Appalachian Commission in the area of program development and planning. For the next four weeks, Jack Guillebeaux, the Director of the Black Appalachian Commission will be working out of Moreland Smith's old office here at SRC.

The School Desegregation Project has engaged in the following activities:

1. Field tour of 14 project sites out of the Tougaloo Interim Program, Tougaloo College; Tougaloo, Miss.
2. Technical assistance to student groups in Auburn, Ala.; and Meridian, Miss.
3. Conducted workshops for the Alabama Educational Association at their statewide meeting in early March.
4. Conducted workshops and spoke at a student conference in Huntsville, Alabama.
5. Met with representatives of Harvard Center for Law and Education concerning legal strategies to aid students.

The Community Organization Division and the School Desegregation Project are extremely happy to have Mrs. Arminta Gatewood as Administrative Secretary.

Housing and Planning

Art Campbell, project director, met with 3 members of the Black Concerned Citizens of Greer, S. C. and public officials of that city concerning one initiation of a community advocacy planning project that would focus on several run-down sections of the Black Community. Currently, an investigation of private resources to implement this project is being conducted.

Presently, Housing and Planning is assisting one Atlanta Region Open Housing Coalition in program development. Art Campbell arranged a field trip to Louisville, Ky; Dayton, Ohio and Washington, D.C. for representatives of the Coalition to explore similar housing discrimination programs and potential funding sources.

The project director was also involved in two meetings over the past month relative to the Panola Housing Project.

Work on the rural housing conference is continuing.

This issue of the Newsletter was edited by Mrs. Betsy Fancher and Miss Eugenia Kemp.

SOUTHERN REGIONAL COUNCIL

5 FORSYTH STREET, NORTHWEST

ATLANTA, GEORGIA 30310

FIELD ACTIVITIES NEWSLETTER

January 20, 1967

New Executive Assistant at SRC

James N. Wood of Mobile has been employed by the SRC as Executive Assistant to the Director. Jim was born in Richmond some time ago. He was graduated from Fluvanna County High School and then enlisted in the Air Force. He served overseas in World War II as a fighter pilot and was discharged as a captain in 1945. He received his B.A. degree in psychology from the University of Virginia in 1950. Since 1952 he has worked in Mobile in the grain merchandising and ocean freight forwarding business, which involved work with small, country grain elevators over an area including northwest Florida, southern Alabama, Mississippi, Arkansas, western Tennessee, southeast Missouri, and northern Louisiana.

Jim has served as director of the Mobile Area Committee for Training and Development, which operated a rural training program for approximately 100 migrant farm workers under Title III B of the Economic Opportunity Act and is currently operating an experimental and demonstration project for 280 trainees, with a budget of about two million dollars.

Together with Mrs. Wood (Kathie), Jim has long been active in the affairs of the Mobile and Alabama Councils on Human Relations.

He will take up his duties at the SRC office in late January.

School Desegregation Boon

Human relations folks should be mindful of the beneficial effects of a recent decision and decree by the Fifth Circuit Court of Appeals on school desegregation. All school systems under court-ordered plans in the fifth circuit are now required to desegregate under approximately the same rules set forth in Office of Education guidelines for Title VI compliance. This simplifies the task of those working for school desegregation. The NAACP Legal Defense and Education Fund is reopening all fifth circuit cases. The fifth circuit covers Georgia, Alabama, Mississippi, Louisiana, and parts of Texas and Florida.

Southern Interagency Conference

The Southern Interagency Conference held its first meeting of 1967 at the Atlanta Biltmore Hotel on January 18-19. Most of the meeting was given to presentation and discussion of A "Freedom Budget" for All Americans, a program for the eradication of poverty recently proposed by the A. Philip Randelph Institute. Bayard

Rustin, Executive Director of the Randolph Institute made an overall presentation. Vivian Henderson, economist and president of Clark College, spoke on the "Freedom Budget" as it pertains to full employment and its proposal of a minimum annual income. Frank Smith, ex-congressman from Mississippi and now a T.V.A. Commissioner, talked about the Budget's proposals for regional development and conservation of natural resources. (SRC is the "secretariat" for the Southern Interagency Conference, a loose organization of some forty intergroup relations agencies for exchange of information and ideas.)

Tennessee Council on Human Relations

The TCHR Annual Meeting has been scheduled for January 28 and 29 at the Andrew Jackson Hotel in Nashville. Outgoing president Martha Ragland will address a luncheon meeting on Saturday. John Dyer, former director of the Office of Economic Opportunity for Tennessee, will speak that afternoon on utilization of available federal programs. Dr. Leslie Dunbar, director of the Field Foundation, will be speaker for the annual banquet on Saturday evening.

The Georgia Council on Human Relations

The Georgia Council has employed a new assistant to the director. The Reverend Al Henry will begin his work with the council in February. Al will come to Atlanta from Koinonia Community Farm of Americus, Georgia. Trained as a Southern Baptist minister, Al served the Pilgrim Congregational Church, Birmingham during the days of Bull Conner and the demonstrations. He was active in the Alabama Council there. The bulk of his efforts with the Georgia Council will be devoted to development of neighborhood councils in the Atlanta area. Al is married and the father of four children.

I have previously mentioned the booklet titled Know Your Rights which was published cooperatively by the Georgia Council and the American Civil Liberties Union of Georgia, utilizing an initiating grant from SRC. It has been a phenomenal success. Designed primarily to help poor people who have trouble dealing with the police, it uses drawings and basic-vocabulary text to clarify the rights of persons stopped or arrested. More than 30,000 copies have been printed and distributed. (The South Carolina Council is distributing the booklet with its own imprint--an arrangement available to other groups, also.) Somewhat to everyone's surprise, it got a favorable reception from police departments. Mrs. Florence Robin of the Georgia ACLU attributes this fact to its emphasis on the policeman's rights, as well as the rights of citizens. Atlanta Police Chief Herbert T. Jenkins ordered 1,000 copies and instructed all officers to read it. Police departments in towns like Augusta,

Gainesville, and Alma are using it, too. ACLU and the human relations council are holding a number of clinics around the state to explain citizens' rights, using the booklet and slides.

The Georgia Council has also expanded its program of education on welfare rights and will press school desegregation efforts again this year. Although many of us are disappointed with the weakness of "freedom of choice" desegregation plans, the GCHR feels that it is important to continue efforts to secure transfers during this year, lest momentum be lost and Negro parents be even more discouraged. In a series of five area meetings throughout the state the desegregation "rules" will be explained and community leaders instructed in the techniques of organizing for desegregation.

The Houston Council on Human Relations

The Houston Council has a new Executive Director. He is The Reverend Jack Murray, a Lutheran minister. Mr. Murray, who is originally from New Haven, Connecticut, has long been an active member of the Houston Council. He is an Air Force veteran and a graduate of Bethany Lutheran College and the Lutheran School of Theology at Rock Island, Illinois. He has been pastor of Augustana Lutheran Church in Houston since 1960. He has served on the faculty of Houston's Institute on Desegregation for School Teachers, Administrators and Counselors.

The Houston Council has developed an interesting program called "Meet the Mayor." It consists of a series of public meetings at regular intervals at which the Mayor speaks for about 20 minutes on some aspect of the city's administration or problems and then opens the meeting for questions. The Mayor brings along a secretary to help record complaints. The complaints are referred to appropriate departments of the administration and so far have been acted upon with approximately 60% completions, according to Frances Dukler, Acting Director of the Houston Council. Average attendance at the meetings has been 300. The project was initiated last summer when tensions were high. "We cannot take credit for a summer of tranquility because of these programs," writes Frances. "However, we will take credit that 1500 people sat down and talked with the Mayor about common problems, and this was a first for all of us."

The Arkansas Council on Human Relations

The Annual Meeting of the Arkansas Council was held at the Albert Pike Hotel in Little Rock on Saturday, January 14. Keynote speaker at the dinner meeting was Stephen N. Shulman, chairman of the Equal Employment Opportunity Commission. Paul Anthony, Executive Director of the Southern Regional Council, was a luncheon speaker.

The Arkansas Council has come out with a mimeographed Handbook for Local Councils on Human Relations, another of the commendable steps they are taking to organize and service local chapters. Incorporating materials previously prepared by the Florida and Houston councils, it includes specific suggestions of things to do in the areas of (1) education and public schools, (2) voter education, (3) labor and employment, (4) welfare and poverty programs, and (5) housing. Addresses of appropriate resource-agencies for each program area are given. There is also a sample constitution for a local council on human relations. The handbook is well done and seems to me to be a good idea for any of the state councils.

Among other things, the Arkansas Council is working extensively and effectively on prison reform and is in the process of forming chapters in El Dorado, Camden, and Arkadelphia. They have also been given a small special grant by SRC to conduct a study of welfare programs in three counties in eastern Arkansas.

The South Carolina Council on Human Relations

In her quarterly report, Alice Spearman says:

"In the main, most decision-making in South Carolina is done quietly and behind-the-scenes, presumably by a relatively small group of people. To say how much this is because of accepted power patterns, lack of faith in democratic processes, or actual fear of the uneducated, uninformed masses would merely be to hazard a guess. Much evidence points to the need for building a widely representative, informed, and socially motivated citizens' movement. Granted such a process would be slow and require adequate resources and skill, we believe that this should become the articulated, long-range goal of the South Carolina Council on Human Relations."

The SCCHR has made a commendable start in that direction. A year ago they had 957 dues-paid members living in 80 South Carolina communities, and there were eight organized chapters. Now there are 1,178 members from 153 communities and 12 active local councils. In addition there are ten affiliated Rural Advancement Project groups and eight student human relations groups.

A Couple of Movies

For church groups...Aubrey Brown of the Virginia Council, who headed the planning committee for the "Conference on People, Religion and a Changing Virginia," says that a movie shown at the conference seems to have made a great impression on those who saw it. Titled A Time for Burning, it was produced by the Lutheran Church and tells the story of a minister who tried to lead his congregation to come to grips with prejudice and discrimination.

In the end he is pressured into resigning, and the film portrays all of rationalization by some and growth by others in the process. It may be obtained at $20.00 per showing from Contemporary Films, 267 West 25th Street, New York 1, New York.

On conditions in the rural south...Francis Walter of the Selma Inter-religious Project highly recommends Lay My Burden Down, a 16 MM documentary film of social and political conditions among rural Negroes in the vicinity of Selma, Alabama. One hour in length, it illustrates how little recent laws have changed the lot of Negroes in Alabama, what Selma is like now, and the circumstances which drive rural Negroes into city ghettoes. The film may be ordered from National Educational Film Service Audio-Visual Center, c/o Mr. James Cole, Indiana University, Bloomington, Indiana.

Department of Humans Related

A story in the Charlotte Observer about South Carolina Council director Alice Spearman, written by reporter Jack Bass, was headlined "SOUTH CAROLINIAN DOESN'T PUSSY-FOOT ABOUT LIFE" (in huge type). Because the wirte-up was so fascinating and because it says something about, as well as to, the kind of folks involved in human relations in the South, I want to quote the first few paragraphs here--and hope that I don't get into trouble for plagiarizing.

"For almost three years as a young woman, Alice Buck Norwood traveled the world, living on skimpy savings, $500 from her father, and by her wits.

"She spent six weeks in Russia with a student group in 1930 and later found herself branded a Communist as a result.

"To save money, she slept on the floor of train stations in India--with hundreds of the native poor.

"Through it all, the South Carolina banker's daughter developed a sense of compassion, a rejection of race as a measure of individual worth, and a desire "to teach people to raise hell and do something."

"As Executive Director of the S. C. Council of Human Relations, she took over a sickly organization in 1954 with 78 members and has given it her own drive and vitality.

"She has been Mrs. Eugene Spearman for almost 30 years, a smartly-tailored--but not overly stylish--animated aristocrat committed to democracy.

January 20, 1967

"Strangers meeting her for the first time usually guess she is in her early 50s. It is almost unbelievable that she will be 65 next year--a fact she easily volunteers--and is talking of retirement.

"'You have only one life to live and you have to choose whether you want to go around pussy-footing about what you believe is right,' Mrs. Spearman says."

PAUL ANTHONY
EXECUTIVE DIRECTOR

A Council to attain the ideals and practices of equal opportunity for all peoples in the South

FIELD ACTIVITIES NEWSLETTER

February 16, 1967

Helpful Publications from the Tennessee Council

In January the Tennessee Council on Human Relations put out four mimeographed publications which human relations councils may find helpful. Two of these are tailored to Tennessee, but certainly would be suggestive for councils in other states. They are preliminary draft of a Welfare Study, by Jerry Wiersema, and Housing Handbook, by Harry Wiersema, Jr. Excellent and generally applicable is The Coordination of Anti-Poverty Efforts. State and local councils working or planning to work in these areas of concern can order these from the T.C.H.R., 1207 - 18th Avenue, South, Nashville, Tennessee 37212.

And deserving of a special paragraph is Special Gifts Campaign Guide. Every state and local council needs to be interested in that one. Order from the same address.

And from SRC's Urban Planning Project

Three brand new publications:

MR. MAYOR - SLUM GHETTOS IN YOUR CITY, Can We Solve Our Housing Dilemma? This is a guideline for city officials in facing the total problems of slums. (50¢ single; 40¢ bulk)

Neighborhoods - Where Human Rights Begin. Experiences and evaluation of three interracial neighborhoods. (50¢ single; 40¢ bulk)

A Guide to Programs for Better Homes and Neighborhoods. A layman's guide to government and private housing programs. ($1.00 single; 75¢ bulk)

(Published toward the end of last year were Neighborhood Stabilization, 30¢, and A Home of Your Own, 60¢.)

February 16, 1967

"Know Your Rights"

I mentioned last month the phenomenal success of Know Your Rights, a guide to citizens in confrontation with law officers, published by the Georgia American Civil Liberties Union and the Georgia Council. But I forgot to say how and from whom to order it. Order from A.C.L.U. of Georgia, 52 Fairlie Street, Atlanta, Georgia 30303. If you want it reprinted exactly "as is," the price is 9½¢ for any quantity over 500. If you want text changes (to substitute references to Georgia and/or to put your organization's imprint on the back cover), the price is 10½¢ and a minimum order of 2,000.

New Rural Advancement Project Director in Florida

Mr. Gye L. Long of Jackson County, Florida, will soon become the new director of the Florida Council's R.A.P. Mr. Long received his elementary and secondary education in Jackson County schools. He took a B.S. degree in natural science from South Carolina State College, and he holds a Master's degree in school administration from Florida A. & M. He served in the army during World War II and has taught in Jackson County since 1952.

Annual Meetings

The Alabama Council had its annual meeting at the Dinkler-Tutwiler Hotel in Birmingham on February 3 and 4. Featured speakers were Dr. Herman Long, President of Talladega College, and Frank Smith, T.V.A. Commissioner and former Congressman from Mississippi. Dr. C. G. Gomillion was re-elected president.

The Louisiana Council will hold its annual meeting in Baton Rouge on February 25. Speakers will be Paul Anthony, Executive Director of the Southern Regional Council, and Father L. J. Twomey, Director of the Institute of Human Relations, Loyola University. There will be workshops on school desegregation, employment, and voter education. This will be the first meeting of the L.C.H.R. since their staff was employed and the office opened in Baton Rouge.

Executive Directors Meet in Washington

The executive directors of all ten state councils and the Houston Council met in Washington, February 8, 9, and 10. They had consultations with officials of the Office of Economic Opportunity and the Department of Health, Education, and Welfare. Meeting in the conference room of the Potomac Institute, they also had conversations with Harold Fleming, Executive Vice President of that organization and a past executive director of Southern Regional Council.

On the 9th and 10th they attended a conference on "The Treatment of Minorities in Textbooks and Other Training Materials," sponsored by the Commission on Professional Rights and Responsibilities of the National Education Association. At the end of the conference the directors held a joint press conference at which they issued two statements.

In one statement they "called upon the state textbooks committees and commissions in their respective states to begin intensive analyses leading to the adoption of textbooks which adequately reflect the multi-ethnic nature of American society." Proper recognition should be given to the contributions of Negroes and other minority groups, the directors said, for the good of children of all races. "If our white children are to be adequately prepared for a world in which they are the minority," they added, "the textbooks and training tools used in their education should reflect the more realistic, multi-ethnic point of view."

The second statement expressed "a deep concern...about the reduced momentum of the anti-poverty programs in the South." The directors lauded, despite all admitted problems, "the benefit derived from communities' fighting common enemies rather than each other," calling such programs of community action "our best hope for an orderly transition in the South." They noted apparent attempts to reduce appropriations for the "war on poverty," the transfer of anti-poverty programs to "old line government agencies," failure to secure poverty programs in the most impoverished rural areas of the South, and "signs of unrest and frustration" among anti-poverty workers in the South.

Which Way the Movement?

Bayard Rustin is one of the germinal thinkers of The Movement. At the meeting of the Southern Interagency Conference in January he made a presentation of the "Freedom Budget" proposed by the A. Philip Randolph Institute. He graciously agreed to a suspension of the SIC rules, in order to speak "on the record," and his remarks were so stimulating that I would like to review (from my notes only) some of the things he said.

The Movement's dynamism, he pointed out, has heretofore been based on the brutality of southern whites, not on analysis of conditions and political realities. We can no longer rely on this dynamism. We now need a document of priorities, analysis of cost, and systematic planning. Changes in the economic and social structure cannot be wrought by casting the struggle in terms of civil rights alone. Basically, he added, we have two jobs to do: (1) implement what we now have in principle and (2) place everything else to be done within a framework.

He refuted the notion--fanned by right wing conservatives--that "Negroes are trying to get something for nothing." It is always supposed that the poor are poor because of some flaw in them. The fact is that no immigrant group has ever "pulled itself up by its own bootstraps." But previous immigrant groups have

had "stairsteps" available to them--steps which no longer exist and must be replaced if the poor of the present are to enter the mainstream of American life. These opportunities, which were available to other groups and have never been available to Negroes are: (1) plenty of virtually-free land, (2) salability of muscle power (only skill is valuable now), (3) low taxes, (4) wide-open market for speculative investment, and (5) a burgeoning trade union movement for organization and protection of the poor masses--which automation now makes impossible.

Among the new "stairsteps" which he deemed necessary, and which the "Freedom Budget" calls for, are: (1) minimum wage provisions adequate in level and coverage; (2) redefinition of "work" ("if by 1975 half of the population will be under 25, we must redefine study as work--and pay young people to go to school"); and (3) full employment for all able to work, with a guaranteed annual income for all unable to work.

He called for the nation to stop kidding itself with half measures. What value is training without a plan and program to maintain full employment? Of what value is Head Start, if children must go back to slum conditions? War experience has shown, he said, that people can be trained quickly when the job is there to be done and people are hired and trained on the job.

The Movement, Rustin said, must face up to the political reality of a need for broad alliances. We must act politically--protest alone is not enough. Realistic steps must be taken to secure political power and economic resources--and that means forming coalitions, even with groups which may at other times be opposed. "The key word," he concluded, "is coalition."

I was interested to hear Dr. Herman Long make about the same point in his speech to the Alabama Council membership two weeks later. The papers, he said, lead us to believe that the picture today is one of total polarization, with "black power" on the one hand and "white backlash" on the other. That is a distortion, and we need constantly to review our assumptions, which may be false. We must "seek to strengthen the bases of commonality, of identification."

Speaking of Great Speeches....

Martha Ragland, outgoing president of the Tennessee Council, laid it on the line in her address to the Annual Meeting of the TCHR. Speaking of the rising tide of unrest among the colored peoples of the world, she said,

> We started this revolutionary era with our own American Revolution. It was not just a revolt against England. It was a revolt against the whole idea of an elite who would run things by and for themselves.

> It is a dark irony that now we so often seem to be cowering in neurotic fear before the forces to which we gave the original impetus.
>
> ....
>
> The question is: are we going to square our traditional American high profession...are we going to square our big talk with reality and make this truly a country where all men are created free and equal and where all can share in the bounty of our society?
>
> I think we have talked ourselves out on a limb and are going to have to put up or shut up. A world, largely colored, and torn by revolution bears in on us.

She then described the powerful efforts of right-wing groups to frustrate all progress toward social justice by means of discrediting all who work for civil rights or peace or economic opportunity for the poor. And she concluded:

> This element in our society is stronger now than it has ever been. Can this challenge be met? At this point I am inclined to doubt it.
>
> Yet here we stand, the chained giant, the richest country in the world, faltering in its long-overdue efforts to equalize opportunity. And as we falter, the lustre surrounding our country since its founding is fast eroding.
>
> Because in the end what we do about race and poverty will determine our role in the world--or whether we even will have a role.

Thunder on the Right

We here at SRC have had brought to our attention a new outbreak of bewhiskered and libelous charges of communist influence in the SRC and the state human relations councils (apropos Martha Ragland's comments, above). All such charges are demonstrably false, and in fact we have been successful in securing full retractions and apologies when, in two or three instances, they have appeared in reasonably responsible papers. It is a different problem, however, when such charges are made through completely irresponsible hate sheets--of which there are many in the South. A number of sound, practical considerations make it the policy of our executive committee not to seek legal redress in such instances. We would be happy to supply documents, however, to any group or individual wishing to set the record straight. These would include reprints from the Congressional Record and the

above-mentioned reputable newspapers giving the proud and honorable facts, and information about the founding and history of the Southern Regional Council.

Department of Humans Related

The February 20 issue of Newsweek contains an article about my friend Father Brice Joyce, ex-pastor of Our Lady of Grace Mission, Sheffield, Alabama, and for a number of years a vice-president of the Alabama Council. He recently was ordered by Archbishop Thomas J. Toolen to return to his monastery (his is a Benedictine), leave the state, or be stripped of his priestly functions. He chose to leave the state "after a rousing fried-chicken farewell dinner from his flock," and hopes to continue his work for social justice in his native Pittsburgh.

Father Brice was assigned to the Sheffield mission "to give Sheffield-area Negroes a church of their own." However, he soon was escorting Negro children into formerly all-white schools and beleaguering administrators in two area hospitals for non-discriminatory treatment for Negroes. Such activities caused many white Catholics in those parts to refer to him as the "Nigger" priest. He preferred to be called that rather than "Father," saying, "Only God is your father."

He soon had an integrated congregation. Scores of white Catholics came to see what the "nigger priest" was up to and stayed. One white parishioner is quoted in the article as saying, "When you hear the colored people singing 'Out of the depths I have cried to you, O Lord,' you can't help but feel closer to God."

It was all too much for the Archdiocese of Mobile-Birmingham.

Father Brice was never one to pussy-foot around an issue, and I fondly remember his telling me about his sermon to a white congregation in a nearby church where once he celebrated Mass. "I just told them straight," he said. "'You can't be a segregationist and a Christian too. If you're going to be a segregationist, go on over to the Baptist Church and go to hell on you own time.'"

PAUL ANTHONY
EXECUTIVE DIRECTOR

A Council to attain the ideals and practices of equal opportunity for all peoples in the South

FIELD ACTIVITIES NEWSLETTER

March 27, 1967

Another Helpful Publication

Most enthusiastically to be touted to local human relations councils is a brand new publication by SRC's Labor Project, of which Emory Via is Director. It is a Minimum Wage Kit providing everything--except motivation--that a group would need to organize an effort to secure full utilization of the new minimum wage law in its locality.

I am enthusiastic about it because such an effort seems to me an excellent way to render valuable service to, and thus perhaps to form a coalition with, laboring folk--especially those in the low-income levels. And, as Bayard Rustin keeps telling us, at this stage of the movement, "coalition is the key work."

The "kit" includes and outline of a way to proceed and things to do, a fact sheet on the new Wage and Hour Act, an illustrated pamphlet titled More Money For You? Your Rights Under the Minimum Wage Law (somewhat in the format of the Know Your Rights pamphlet with which some of our readers will be familiar) for distribution to workers and others, a list of field offices of the Wage and Hour Division of the Department of Labor, a sample form of information useful in developing a complaint, and some data on the extent of wage-hour violations. All of these items were prepared by the Labor Project. In addition there are samples of important and appropriate government publications.

The complete Minimum Wage Campaign Kit is available at $1.00 from the Labor Program, Southern Regional Council, 5 Forsyth Street, Northwest, Atlanta, Georgia 30303. The pamphlet, More Money for You? is 15¢ per copy, 10-50 copies for 10¢ each, over 50 copies at 8¢ each.

Film on The Mercer Project Is Available

The Community Relations Service of the Department of Justice has produced and is distributing a 25-minute black and white 16 mm film titled The Mercer Project: A Path to Peaceful School Desegregation.

This film was produced in Macon, Georgia. It is the story of the efforts of the Macon Council on Human Relations to organize and conduct a project that would help smooth school desegregation in the city.

Macon's schools were desegregated under a court order calling for freedom of choice. The first year of school desegregation was 1964-65. Only a handful of Negroes took advantage of the plan. Fear by Negro students of not being able to do well in the white schools was a major source of the reluctance.

The Mercer Project was conceived to help alleviate this fear. Members of the Council asked themselves what they, as private citizens, could do to facilitate school desegregation and accomplish this end in a manner that would not disrupt the order of the community.

The film shows how a tutorial project was undertaken, financed through private efforts and using volunteer tutors. It touches on the fears of Negro parents and also on the problem of teacher training in the South and the reaction of white teachers to their first formal contact with Negro students. The documentary is designed to stimulate discussion on all of these problems. Discussion guides are available from CRS, along with the film.

For further information or to borrow the film (free), write to Media Relations, Dept. MP, Community Relations Service, Washington, D. C., 20530.

What One Council Did

Thinking of wage-hour concerns, I remember a remark of Dr. C. G. Gomillion, President of the Alabama Council and member of SRC's executive committee, to the effect that a lot of good things are done by individuals who belong to the human relations councils because of ideas and friendships created through the councils. These may not be "council projects," he commented, but nevertheless probably would not have happened had the council not existed.

A case in point is an organization in Huntsville called "The Sisters of Concern Club" (SOCC). Sometimes called a "maids' union," SOCC has more than 200 members. Its organization was actively assisted by members of the Huntsville Council on Human

Relations. It was formed last summer, and one of the first things it did was to conduct a survey which showed that many maids, motel and hotel workers, and cafeteria workers in Huntsville (which has the highest income levels in Alabama) were putting in a 60 hour week for $25 to $32 per week. These workers banded together and have been successful in demanding a minimum of $1.25 per hour. They have an executive director who negotiates with employers and a field worker who organizes the employees. Since getting to work is a problem, the club has organized car pools. They are also forming a credit union, in order to escape the clutches of loan sharks, and are not applying for a federal charter for the union.

On Public Assistance Problems

Most of the state council directors have copies of the Welfare Manual issued last spring by the Georgia Council on Human Relations and the NAACP Legal Defense and Educational Fund, Inc. Local council leaders, however, may not know about it, and they should, for it is a great aid in asking the right questions about your state and local welfare operations. (It is written for Georgia, or course, but the federal requirements would be applicable everywhere and the manual will suggest the kinds of information one would need to work on public assistance problems in his own state.)

Prepared with the help of the Columbia University School of Social Welfare, the manual describes fully the rights of families and individuals under the following programs: Aid to Families with Dependent Children, Old Age Assistance, Aid to the Blind, Aid to the Permanently and Totally Disabled, and the Surplus Commodities and Purchase Food Stamps Programs.

Plenty of illustrative examples are included to help the reader understand the rules, regulations, and policies described.

More Audio-Visual Aids

I recently ran across a catalogue of National Educational Television films and highly recommend the use of these films by human relations councils. Write for their catalogue titled Issue-Oriented. Notice especially the films on "The Negro in America," "The Disadvantaged," and "Cities." These documentaries are cheap to rent and, properly used, could be valuable educational tools for use in you council meetings and with appropriate groups. The address is:

NET Film Service
Indiana University
Audio-Visual Center
Bloomington, Indiana

Notes on the State Councils

... Robert Valder, who has been Associate Director of the Alabama Council since the summer of 1965 has been named Executive Director.

... Glennis Barnes, who is currently teaching school in Vicksburg, will become Assistant to the Director of the Mississippi Council on Human Relations about June 1.

... The state council directors will meet at SRC in Atlanta on April 6 and 7.

... A new chapter of the Florida Council has been formed at Lakeland under the leadership of The Reverend Caxton Doggett, who is on the Board of Directors of both the Florida Council and SRC. More than 50 Lakelanders are already members. The local paper, The Ledger, has taken favorable editorial note. The Florida Council has 19 local chapters now.

... The Annual Meeting of the Louisiana Council, held on February 24th had 103 people present who registered their attendance. (Some late-comers did not register.) This was their first annual meeting since beginning staffed operations, and, judging from participants' comments, it was a good one. Among the speakers was Paul Anthony of SRC, who outlined three significant features of the current race-relations situation in the South: (1) The poor are no longer staying "considerately out of sight"; they are getting angry and demanding justice. (2) The white South has changed tremendously, and they honestly think that Negroes now have an equal chance--and that nothing else is needed or justifiable. (3) Negro Americans are disillusioned, even embittered, and questioning the validity of the whole organization of our society.

... On February 8-10 the state council directors met in Washington. In addition to conducting their own business, they attended a National Education Association conference on "Treatment of Minorities in Textbooks." At the end of the conference, they held a press conference and issued two statements, one on textbook bias and one on curtailment of the community action program of OEO.

... At the press conference just mentioned, I was struck by the fact that, as reporters drifted in and asked preliminary questions, they repeatedly wanted to know how the state councils were financed. I have heard this question often before from people hearing about councils on human relations for the first time. It is as if they want to find out if such biracial groups are really indigenous to the South or exist only because of "outside agitation."

March 27, 1967

Speech Fodder

I liked this from an article titled "Foreign Policy and the Crisis Mentality," by Senator George McGovern of South Dakota in the January issue of The Atlantic:

"But there is a disturbing American tendency to overreact to certain ideological and military factors while overlooking issues of vastly greater relevance to our safety and well-being. A civil insurrection in Santo Domingo or Vietnam is dramatic, but what is its significance compared with such quiet challenges as the proliferation of nuclear weapons, the surging nationalism and social upheavals in the developing world, or the mounting crisis of hunger and population? What, too, is the relationship of the quality and strength of our own society to our position in the world? How will the world see us if we succeed in pacifying Vietnam but fail to pacify Chicago?"

Or, as Another put it, "What will it profit a man, (or nation?) if he gains the whole world and forfeits his own life?"

Along that line, while I was in North Carolina recently, I landed in Wilmington on the night that Howard K. Smith, the ABC news commentator, was speaking at the local college. At the beginning of his speech he expressed alarm at the "deterioration in the quality of our national life." If we had sufficient sense of urgency about it he said, this nation could correct our problems of poverty and the like "almost with ease." "Last summer," he added, "there were erruptions in 38 American cities. I will venture the prediction that, unless action is taken soon, we shall see disturbances in approximately 60 cities this summer."

And Then There Was...

... the argument of Georgia House of Representatives member Tom Palmer against inviting the Wallaces of Alabama to address a joint session of the state legislature. He said it would lay the General Assembly open to snide remarks. And he added, "You are all familiar, I am sure, with the giant billboard outside Chicago which says: 'I dreamed I was governor of Alabama in my Maidenform bra.'"

PAUL ANTHONY
EXECUTIVE DIRECTOR

A Council to attain the ideals and practices of equal opportunity for all peoples in the South

FIELD ACTIVITIES NEWSLETTER

April 24, 1967

SRC Executive Director Honored

Most of our readers will already have heard, what I foolishly neglected to mention in the last newsletter, that Paul Anthony, Executive Director of the Southern Regional Council, received an honorary doctoral degree from Miles College, Birmingham, on March 17, 1967. In conferring the degree Dr. Lucius H. Pitts said:

> That element which produces man's humanity to man is far too often a heartbreaking lack. It is an event when a fresh and fervent young person emerges on our scene with the courage and energy to devote his life to what could be a society of men who know and practice mutual respect, who undertake mutual goals for the good of the whole....
>
> It is fitting that...you are the director of this great Council which has continuously contributed to the improvement of human relations in the South.... The Southern Regional Council has already prospered under your direction and will continue to develop as a force in southern life - indeed as a force for good in the nation.
>
> Thus, Paul Anthony, in recognition for all the personal sacrifices you have made to improve citizenship in the South, for your creative work in human relations, it is a deep and personal pleasure to confer upon you by the authority vested in me by the Board of Trustees of Miles College, the Honorary Degree of Doctor of Humane Letters....

April 24, 1967

Staff Changes

The SRC had a small farewell party a week ago for two departing staffers, Al Ulmer (and Robin) and Louise Cole.

Louise, who ran the paperback books project so efficiently and did some research, too, has taken a job with Economic Opportunity, Atlanta.

Al has been Director of the Community Organization Project. He has bought a tract of land, literally a mountain top straddling the North Carolina-Tennessee line, and is repairing to the simple life. He and Robin plan to hew out of the wilderness, in due time, a camp-ground to which low-income folks can be brought for a period of time for rest and training in community organization.

It was all very touching as the staff gave Al a shovel and Robin the head of a pick--with the explanation that she could pick up a handle over at the state capitol. Chuck Morgan asked, "Al, do you remember what Emerson asked Thoreau when he visited him at Walden Pond?--What are you doing out here, David?" To which Al answered, "Yes, and do you remember what Thoreau's reply was?--What are you doing in there, Ralph?"

Actually, Al will still be around from time to time, doing free-lance consultant work for the SRC and other agencies.

Oh, yes--he donated some of his books to SRC's library: The Poor Pay More, Business Be Damned, and Vice President in Charge of Revolution.

State Council Directors' Meeting

The state council directors met in Atlanta April 6 and 7. In addition to taking care of a number of housekeeping details and consultations with the SRC staff, the directors planned tentatively for a four-day retreat, for planning and recreation, in early September. We hope that it will involve most of the professional staffers from SRC and all of the state councils.

Southern Interagency Conference Meeting

The SIC met at Southern Regional Council on April 18. Principal items on the agenda were a report on a joint effort by six agencies to promote merit employment in the textile industry, a presentation on the new Fair Labor Standards Act by Emory Via, and status reports on southern justice (Charles Morgan, ACLU), hospital desegregation (Frank Pohlhaus, NAACP) and school desegregation (Harold Williams, Office of Education).

Notes on the Human Relations Councils

The Houston Council's Housing Committee has completed a report on the need for low-income, low-cost housing in Houston. Some members of the council are contemplating formation of a non-profit corporation to sponsor a pioneering housing project. The chairman of the housing committee, Mr. John Stewart, was recently appointed Executive Director of the Mayor's Committee on Housing. Other programs of the Houston Council include:

-- A series of bus tours through slum areas of the city for education of middle-class citizens. 250 persons have taken one of the five tours conducted last quarter.

-- Sponsorship of 22 VISTA workers in poverty areas of Houston.

-- The MacGregor Tutorial Program, which buses 149 children from an elementary school four afternoons each week for tutoring in math and English by education majors at the University of Houston.

-- Efforts by their new Police-Community Relations Committee to recruit Negro policemen, secure a human relations course in the police training school, and provide education about dealing with the police for minority-group citizens.

-- Continuation of their programs of neighborhood stabilization and conciliation.

The Reverend Jack Murray is Executive Director of the Houston Council.

The Arkansas Council has a new chapter at El Dorado. About 25 people regularly attend meetings. "Magnolia, Hot Springs, Camden, and Arkadelphia will soon be ready to organize local affiliates," says Elijah Coleman, Executive Director. The state council has also completed a thorough investigation of a Title VI violation in Palestine School District and has secured the promise of an investigation by the Department of H.E.W., and they have concluded an eight-week survey of public assistance administration in St. Francis and Phillips Counties. The latter survey, conducted by Howard Himmelbaum, revealed, among other things, that "too many people are afraid of the welfare workers. anticipating embarrassment and rejection, and hence do not apply for assistance. Too many are unaware of their rights and responsibilities under the existing welfare system."

The Florida Council has two other communities, Stuart and Pensacola, "well on their way" toward formation of local councils. (The formation of the Lakeland chapter was mentioned in last month's newsletter.) Preliminary work has been done in four more communities, also. August VandenBosche, Executive Director, has been instrumental

in forming a Coordinating Committee for Farm Workers which has achieved some results in migrant organization and anti-poverty programs. Organizations involved include the NAACP, Miami Diocese Human Relations Board, Florida Christian Migrant Ministry, AFSC, Citizens Committee on Agricultural Workers, Community Action Fund, IUD -- AFL-CIO, and the Florida Council on Human Relations.

The Georgia Council held six area meetings on school desegregation in the state last quarter. Representatives of 63 towns in 44 counties attended the meetings. The council has continued its work in public assistance studies and "Know Your Rights" clinics. A project to provide basic education and job training for 50 heads-of-families, including 19 who are white, in Baker County has begun as the result of some hard work by Hubert Thomas, Director of Georgia's Rural Advancement Project. The project was funded at $89,000 by the OEO.

The Mississippi Council has received, at last, a tax-exemption certificate from the Internal Revenue Service as a "non-profit educational association." They finally took that route, after trying in vain for more than two years to secure a corporation charter from the state of Mississippi. Ken Dean, Executive Director, has been very busy with the open meeting on public assistance sponsored by the Citizens' Advisory Committee to the U. S. Commission on Civil Rights on February 17-18, emergency work in Natchez following the Wharlest Jackson murder, and assistance to a number of "visiting firemen"--including Senator Clark's sub-committee on poverty. (A picture in the New York Times showed Senator Robert Kennedy, father of ten, chatting with residents outside a general store near Greenville--while bachelor Dean dandled a chubby baby in the background!)

The Virginia Council is currently without an Executive Director The Reverend Robert Combs resigned in March, after two years in that post.

Title VI and School Desegregation

Of 4,143 school districts in the South (including Kentucky, Maryland, Oklahoma, Texas, and West Virginia), 39 have had federal funds terminated by the Office of Education, another 214 have been cited for hearing, 1,421 desegregation plans have been or are being reviewed, and 296 plans have been found inadequate. 209 systems are desegregating under court order.

Sometimes You Wonder...

...at the naivete of government planners whose "War on Poverty" strategy was to "mobilize the forces of the community" so that political leaders, economic powers, and poor people would work

"together" to eliminate poverty. It is becoming increasingly evident that in sections of the South where poverty is greatest the establishment not only will not cooperate in, but also tends to oppose actively, any effective effort to improve the lot of the poor.

Item: The now-famous CDGM controversy in Mississippi. At the Clark sub-committee hearing mentioned above Senator Stennis was still tossing around accusations of "throwing money away, payment of exorbitant sums for rent," a discrepancy of $500,000 in 1965 and $600,000 in 1966, etc., etc.--although the highest total of unaccounted funds ever mentioned by the OEO was around $650,000, and they were careful to say that this was not an accusation of misappropriation but an indication of poor record-keeping and that an audit might account for most of it. The audit did.

Item: The swooping of Alabama's two senators and four of its eight representatives upon the Office of Economic Opportunity to oppose funding of a $500,000 grant to the Southwest Alabama Farmers Cooperative Association--at the bidding of Selma's Mayor Joe Smitherman and other Black Belt Alabama leaders. SWAFCA is a ten-county organization of low-income farmers. Their proposal was designed to enable them to purchase equipment and supplies, find assured markets, and secure necessary credit on a cooperative basis, so that they could switch from traditinnal cash crops like cotton and peanuts to vegetable growing. The need was desperate, for automation and the use of chemicals, together with some reprisal for exercising civil rights, have come to mean serious unemployment and underemployment. Within three years the cooperative could be self-sustaining. OEO's Washington and Atlanta offices had both agreed that the plan was workable--no mean achievement in itself. And they were ready to fund the organization when the powers-that-be got wind of it. Now everything is held up. And since it is planting time, a little delay is as good as a year.

Item: The Lafayette, Louisiana, Daily Advertiser conjured up the ubiquitous spectre of "communist influence" in anti-poverty programs in southwest Louisiana--and secured a two-day hearing by Louisiana's Joint Legislative Committee on Un-American Activities. About a month later, District Attorney Bertrand DeBlanc of Lafayette, who is running for re-election, sent "interrogatories" to the Southern Consumers Cooperative about the finances of their Head Start projects and other war on poverty programs. The interrogatories, which must be answered under Louisiana law, did not ask for a complete financial statement, but on the basis of the partial report he had requested, DeBlanc ordered the cooperative's books subpoenaed, promising that "any misconduct of financial activities will be prosecuted." He ordered an audit by a CPA firm of his choosing, although the OEO had just completed an audit which found everything in order. DeBlanc said he "would use a CPA firm that has not been identified with the war on poverty."

So I Reckon That...

...the mood of the "new South" is fairly well captured in a bit of doggerel attributed to an anonymous OEO worker and quoted in Paul Hemphill's column in the Atlanta Journal, April 17, 1967:

We don't rave and we don't hate,
Lord knows we don't discriminate;
Black and Tan, Snick and CORE,
We love'm all, just so they're poor.

FIELD ACITIVITIES NEWSLETTER

June 21, 1967

Starvation in the South

We have been trying by a number of means--including memoranda already sent to a number of readers of this newsletter--to get out the word about an outrage that continues in several parts of the South. Literally thousands of people, particularly in the Delta sections of Mississippi and Arkansas and in the Black Belt, are on starvation diets. And present policies of the Department of Agriculture fail to provide relief where the need is greatest, either under the Surplus Commodities program or Food Stamp program. In fact, these programs are effective in inverse proportion to the need, because the poorest counties with the most starving people and the most oppressive local government are least willing to take steps necessary to utilize those programs.

Ken Dean, Executive Director of the Mississippi Council on Human Relations, wrote about this two or three months ago. His observations were confirmed by the Senate committee headed by Senator Clark after hearings in Jackson. An article by Robert Sherrill, titled "It Isn't True That Nobody Starves in America," in the June 4 issue of New York Times Magazine, reports:

> Agriculture officials concede that in the South there are 17.5 million people in poverty (nearly half the nation's total) but only two million are receiving Federal food.
>
> Of the 283 poorest counties in 15 Southern and border states, 93 counties--the home of three million people considered poor by OEO standards--have no form of food distribution whatever. In the other 190 counties live 7,100,367 poor people, but only 1,029,331 get food aid.

By the time you get this the SRC will have issued a special report on the situation, a report prepared as the result of an investigation by a delegation of medical doctors sent to six counties in Mississippi. Among them were Dr. Raymond Wheeler, Chairman of our Executive Committee and Dr. Robert Coles, noted child psychiatrist. Dr. Wheeler reported, for example:

> Running noses and legs covered with indolent sores was the rule rather than the exception,--evidences of lowered resistance to disease due to malnutrition and poor hygiene. Thin arms, sunken eyes, lethargic

behaviour, and swollen bellies were everywhere to be seen. Even cursory examination of tongues, eyes, and nailbeds disclosed unmistakable evidence of anemia and vitamin deficiencies in many of the children.

Let me take this means to urge you to do one small thing. Sit down and write to The Honorable Orville L. Freeman, Secretary of Agriculture, Department of Agriculture, Washington, D. C. State that you have seen reports of this situation and are deeply concerned about it. Inquire whether emergency policy changes can be made to get free food to the people affected.

That is a small step. But it won't cost you much. And, if enough people do it, along with other efforts being mounted, it just might get some results.

State Council Notes

The Mississippi Council has employed Mr. Hermel Johnson to work for ten weeks this summer among students at Jackson State College and with unemployed adults and high school dropouts in the surrounding neighborhood. The program was devised in response to the recent riot in the area. Following up on the work Mr. Johnson begins will be Mr. Glennis Barnes, newly appointed associate of Director Ken Dean.

Hermel Johnson has just been graduated from Jackson State. He is the outgoing president of the student body and has a scholarship to Ole Miss Law School

The Arkansas Council has secured a special grant from SRC for a six weeks project on welfare administration. Howard Himmelbaum will prepare a manual of Arkansas welfare policy and law and a series of meetings will be held in various parts of the state to guide local councils and other organizations in efforts to improve public assistance services.

The South Carolina Council has recently formed a new chapter at Florence....The SCCHR Board has approved a plan aimed at doubling the membership of the Council.

The Virginia Council has employed Frank T. Adams, Jr., as Executive Director. Mr. Adams, 33, is a native of North Carolina; has a B.A. from Goddard College, Plainfield, Vermont; received his M.A. from Antioch-Putney Graduate School of Education; and has been teaching urban studies at Goddard for the past year. His experience includes truck driving, six years as a reporter for the Norfolk Virginian-Pilot, service as Director of Information for Goddard College, and volunteer work with the American Friends Service Committee, the American Civil Liberties Union, and in community organization in Norfolk slums.

State Council chairmen will have their annual meeting at the Atlanta Biltmore Hotel, July 7-8.

Helpful Publications

Higher Educational Opportunities for Southern Negroes has just been published by the Southern Education Foundation. This booklet provides a wealth of information, including lists of tutorial programs, Upward Bound Projects, special programs for talented low-income and minority students, and other aids to preparation for college. There is information on where to get assistance with college adimissions, college admissions procedures, and types of financial aid for college. A bibliography of guides to financial aid is provided. There are addresses to which to write for information about a large number of careers. The booklet even has a section on support for graduate study. Order from Southern Education Foundation, 811 Cypress Street, N. W., Atlanta, Georgia 30308.

The Voter Education Project of the SRC has just published Know Your Georgia Government. This is the first of a projected series of booklets which will include one for each southern state. Designed for use in citizenship education projects of the VEP, it gives concise information on the operations and functions of all departments and agencies of the state government, the courts and jury system, and the tax structure. There are chapters on city government and county government. Order from the Southern Regional Council.

The VEP has also issued the first edition of V.E.P. News, an occasional newsletter about voter education efforts all over the South.

Books for Equal Education

Books for Equal Education (BEE) is an organization collecting and distributing used-but-usable books of all types to anyone who needs them. Begun in 1964 under the auspices of the United States Youth Council, it provides books for college libraries, VISTA projects, tutorial programs, Head Start projects, etc.

The warehouse and office are at 416 Marietta Street, N. W., Atlanta, Georgia 30313. Telephone: (404) 523-1046. (After September 8 correspondence should be addressed to BEE Director, U. S. Youth Council, 236 East 46th Street, New York, New York. 10017.)

They operate informally and have, really, only one rule: Those who donate books must provide shipment or transportation to the warehouse, and those who want books have to provide shipment from the warehouse. Some bring a truck or rental trailer. Some use commercial carriers. BEE will, if necessary, ship books by commercial trucking or parcel post.

They have stacks of books in the following catagories: good fiction, poor fiction, English, dictionaries and reference, health and hygiene, natural science, physics and math, business and economics, home economics, religion and philosophy, history and politics, social sciences, foreign languages, sub-college, children, and early school.

Southern Director is Shawn Boles and Warehouse Manager is Phil Bullard. Write to them at the above address for further details. (They even have "guidelines.")

And Now A Word From Our Sponsor

For a pause that is stimulating, sit down once each quarter and read New South. If you do not subscribe, shame on you! No kidding, folks, New South is the best for keeping current and knowledgeable ("in depth") about the changing South. Use the blank on the enclosed flyer. It will be the best $3.00 investment you ever made! If you already are a subscriber, pass along the subscription form and timely suggestion as a favor to a friend.

On The Romantic Side

Mr. and Mrs. Kenneth Dean have just returned to Mississippi from their honeymoon in Newfoundland. Following is the text of a communication we received from Corner Brook, Newfoundland, Canada:

> It's cold and wet up here on this 600 mile long rock! Strictly for the Eskimos. Have been having a pretty good trip, tho. Have seen 28 moose, 3 herds of goats, 14 jack rabbits, 2 Russian ships, a bunch of wild horses, 1 nun and 3 priests and 2 native Newfoundland dogs. See you soon. Ken.

Well, I guess that beats a lot of the things he sees in Mississippi!

FIELD ACTIVITIES NEWSLETTER

July 20, 1967

About the Hungry Children

Much has happened since this time last month, when the plight of starving people in the Black Belt was mentioned in the newsletter. SRC's "Special Report" by six doctors was issued on June 23. It received wide coverage by the news media; some papers sent reporters into Mississippi and other parts of the South to verify the report. The Department of Agriculture cut from $2.00 to $.50 the minimum cost of food stamps in Mississippi and issued a flurry of defensive news releases, giving figures to show percentage increases in the number of participants in their food distribution programs over the past ten years. Predictable denials have come from the Mississippi press--including one editorial comment about the reported diet of cornbread and molasses, some beans, and little else: "of course... that is what they like."

The testimony of the six doctors before the Senate Subcommittee on Employment, Manpower, and Poverty on July 11 was one of the more promising developments. Dr. Raymond Wheeler, Chairman of SRC's Executive Committee, testified that the situation was "not only a medical emergency, but a national disaster." Senators Stennis and Eastland of Mississippi were there and, picking Dr. Wheeler as spokesman for the group, tried to discredit him and the other doctors. All of this the television networks reported. But they missed, for the most part, the moving statement Dr. Wheeler made toward the end of the day, a statement he had hastily hand-written. He spoke of how he had "watched the southern black man and white man walk their separate ways distrusting each other, separated by false and ridiculous barriers--doomed to a way of life tragically less than they desire...." And he added, in part:

> And through all of that dreadful pageant of ignorance and suspicion and mutual distrust, the most distressing figure of all has been the southern political leader who has exploited all of our human weaknesses for his own personal and selfish gain--refusing to grant us the

> dignity and the capability of responding to noble and courageous leadership--when all of us had nothing to lose but the misery and desolation which surrounds our lives.

Houston Councils Sends Caravan to Belzoni

According to Jack Murray, their Executive Director, the Houston Council on Human Relations will send a caravan of fifty automobiles to Belzoni, Mississippi, on Saturday, July 22, in response to the furor about the children's condition. Each auto will be loaded with foodstuffs, clothing, and vitamins. The council is appealing to food wholesalers and drug wholesalers for supplies, and they are taking cash donations from individuals to by vitamins. Murray says that, in addition to whatever temporary relief the supplies might give, the Houston Council looks upon the caravan as a way of dramatizing the issue and keeping it before the nation. He suggests that other councils and allied organizations might want to do something similar on successive weekends.

Sick, Hungry Children in Florida, Too

It seems to me that some of those caravans might well be sent to other parts of the South. To tell the truth, we are a little afraid that people will get the idea that its "only" Mississippi. It's not. For instance Augie VandenBosche, Executive Director of the Florida Council, has testified to the Rural Development Subcommittee of the House Committee on Agriculture that the annual wage of a migrant farm worker in Florida is between $698 and $1,379, according to the Department of Agriculture. (It averages $1,055, according to the Social Security records.) VandenBosche continued:

> Farm workers continue to exhibit high rates of disease and sickness incomprehensible in modern 20th Century America. For example, in one of Florida's smallest counties 100% of all migrant children between the ages of 0 and 15 years have parasitic diseases, 43% of these also have skin diseases and 96% of them under 5 years suffer from diarrhea.

New State Council Personnel

The Alabama Council has employed William Henry Harrison of Yantley, Alabama, As Associate Director. Mr. Harrison attended the public schools of Choctaw County, Alabama, and earned his B.S. degree at Alabama State College. He has done graduate study at Alabama A. & M. College. A school teacher for thirteen years (social studies), he has a lengthy record of activity in community affairs and organizations.

The Florida Council has also employed an Associate Director, William H. Miles. Mr. Miles began his work with the FCHR on July 10. A native Floridian, he grew up in Jacksonville and West Palm Beach and attended Florida Normal Memorial College in St. Augustine. He has been a policeman in Miami, a recreation director with Miami's welfare department, and house parent in a Dade County juvenile home. He too has a long history of involvement in civil rights and human relations organizations and programs.

Random Notes from Quarterly Reports

...The Arkansas Council has two new chapters--in Wynne and Forrest City--and is hard at work on one in Camden.

...Three local affiliates of the Tennessee Council are concentrating on housing problems. The Nashville chapter is setting up a clearing house for persons wishing to buy, sell or rent on a non-discriminatory basis. The Memphis Council is just getting to work on residential housing integration. The Chattanooga chapter has a reservation for 100 units of 221d3 rent-supplement housing and is in the process of site selection.

...The East Alabama chapter of the Alabama Council has recently formed a credit union, with membership in the ACHR as the required "common bond," and has received its credit union charter. This is an interesting idea which enables some council members who are fortunate enough to have a small "nest egg" to put it to better use than just drawing any old kind of interest--and at the same time provides a much needed service to folks who otherwise might get into the clutches of loan sharks....The Huntsville chapter, for about the third year in a row, has had house-to-house visitation to get "freedom of choice" school transfers. About 60 people helped do the work, and they got 673 requests for transfers!

...The Mississippi Council has begun its summer program in the Jackson State College area. The Executive Director, Ken Dean, has been doing a survey on the Medicare program in Mississippi and has helped with another on discrimination in public parks and swimming pools. He has also been introducing poor people to a lot of reporters. A statewide meeting on poverty is planned for August 5.

...On June 18, the Chatham chapter of the Georgia Council sponsored a "Community Service of Prayer for Racial Harmony." There was a special worship service, and the Mayor proclaimed the 18th a day of prayer. The response of the community was generally positive. (For copies of the "Order of Worship," including unison prayers and litanies used, write the Georgia Council, 52 Fairlie Street, Atlanta.)

...The Louisiana Council has a new, growing, and active local affiliate at Franklin. The LCHR, a newly-staffed state council, has over 400 members now.

...The Houston Council has placed 20 VISTA volunteers throughout the city. Mr. William Ainley, a Peace Corps veteran (Uganda) and graduate student at Rice University, has been employed as VISTA supervisor....Some time ago the Houston Council purchased the motion picture film, "A Time for Burning." It continues to be widely shown and discussed throughout the state of Texas. (It was even shown once in Mississippi.)

Worried About Extremist Organizations?

Through the National Association of Intergroup Relations Officials we heard about a new organization called "Institute for American Democracy." It aims to help make democracy work by keeping a watchful eye on extremists of both right and left. The IAD has published a pamphlet, How to Combat Air Pollution, which explains how to make use of FCC's Fairness Doctrine when legitimate groups or organizations are attacked by extremists. "This," quote the NAIRO newsletter, "may be of special interest to intergroup relations agencies in the South and rural areas." So, if you are getting a lot of "nut" programs over your radio, you might want to order this pamphlet. ($1.00 per copy. I.A.D., 1330 Massachusetts Avenue, N. W., Washington, D. C. 20005.)

Sort of interesting to me was the IAD's run-down on extremist groups of the left and the right in a recent newsletter. The right-wing groups are far more numerous, far larger, and far, far richer. For example, the largest left-wing group in the U.S. is the Communist Party, USA,--according to the IAD--and their membership is about 12,000 and estimated income $148,000. The largest right-wing group is the John Birch Society with a membership of about 80,000 and an estimated 1965 income of $4,089,000. The "20th Century Reformation Hour" (Carl McIntire's program) has 625 radio outlets and an income of $3,040,000, according to IAD.

"Police Rudeness"

The Atlanta Constitution's Dick Hebert ought to get some sort of award for his editorial in the July 13 editions. After the Dixie Hills riots, during which he had observed Atlanta's police at work, Hebert wrote that though he was often with police at such scenes, he had never seen proof of outright brutality. "What I have seen is more subtle, harder to fight in court," he said. He went on to suggest the term police rudeness, pointing out that "rudeness," according to the dictionary includes "the desire to wound."

He had heard policemen call a Negro "boy." He had seen a policeman refuse to step aside to let a Negro pass. He had seen Negroes shouldered aside needlessly. No court would call these "brutality," he suggested, but enough of such rudeness can have the same effect as brutality.

Atlanta knows it must meet the slum tragedy head-on if it is to silence the angry. It must provide opportunity for jobs, housing, education. More immediately it must see to it that those with authority in their hands recognize that Negroes are due their rights, including the same personal dignity all men seek, and that Negroes, too, are innocent until proven guilty.

FIELD ACTIVITIES NEWSLETTER

August 29, 1967

About the Riots

All hell has broken loose since our last newsletter, and it would seem awkward to begin this one without taking note of the riots. We can hope that it is about all over for this season, except for the analyzing--some of which turns out to be almost as agonizing as the riots themselves. In fact, on the assumption that nearly everything that can be said has been said, what I would like to do is comment on a couple of the commentaries.

One was an observation by Mr. Herbert Bienstock of the Bureau of Labor Statistics in connection with a report of the Bureau on unemployment and under-employment in the slums of the nation's cities. "The South sowed the wind," he said, "and the northern and western cities of greatest Negro population are reaping the whirlwind of never-ending joblessness and despair." He was thinking, of course of the "wind" of inadequate education and training, the lack of opportunity and therefore of motivation with which the South has burdened its Negro citizens before they migrated to those cities. On the other hand, a recently-published study of the Watts riot of 1965 found that a preponderance of the rioters and looters were not recent arrivals, but people who had been in Los Angeles for a long time--and had found the nation's promises fulfilled no better there than in the South. So let's face it: it is a national problem, and no city or region has "escaped" the riots, least of all the South.

Then, I find illuminating the insight of Frederick J. Hacker, a white University of Southern California psychiatrist. "What must be understood by the rest of America," he said, "is that, for the lower class Negro, riots are not criminal, but a legitimate weapon in a morally justified civil war." In other words, what appears to us insiders to be criminal irresponsibility appears to some Negro slum dwellers (I wish Hacker and a lot of others would learn to speak of "some Negroes" instead of "the Negro") as a highly responsible and moral rebellion against an immoral and irresponsible and chronically oppressive society.

Finally, there was the finding, not surprising, of both the Louis Harris and Gallup polls that white Americans are growing less sympathetic and more prejudiced. "The whites concern about the black man has been quickened," reported NEWSWEEK, "but it seems vitally lacking in affection. Fear and resentment have apparently displaced their weight in sympathy, and the white man's endorsement of massive aid to the ghettos may seem to him an imperative more pragmatic than moral."

> In a list of standard indexes of white prejudice toward non-whites, nearly every familiar stereotype of the Negro finds greater acceptance by white majorities than it did last year. Thus, 70 percent of the whites agree that 'Negroes have less ambition than white people,' against 65 percent who thought this way in 1966; 47 percent agree, 'Negroes keep untidy homes,' against 39 percent a year ago, and 58 percent accept a flat statement that 'Negroes have looser morals,' compared with 50 percent last year. The trend was the same on assertions that Negroes 'laugh a lot,' 'have less native intelligence,' 'want to live off the hand-out.'

What all of this means to me is that if, as I keep arguing, the special task of private human relations agencies like ours is enlightenment of the white majority, our job has been made bigger and more difficult even while the time available for doing it has been foreshortened.

The "Urban Coalition"

That impression was further strengthened by a sidelight on the Emergency Convocation of The Urban Coalition, held in Washington on August 24. The Urban Coalition is made up of prominent municipal officials, captains of industry, and civil rights leaders. The Emergency Convocation brought together 1000 such leaders to further the Coalition's goals, which are: (1) an emergency work program to provide job training and employment for the urban poor, (2) a major expansion of the private sector's efforts to train and provide jobs for the hard-core unemployed; (3) a long-range program for the physical and social reconstruction of American cities. The Coalition's steering committee includes men like Mayor Lindsay of New York, Mayor Allen of Atlanta, Henry Ford II, George Meany, I. W. Abel, civil rights leaders Roy Wilkins and Whitney Young, and John Wheeler, president of the Southern Regional Council. Co-chairmen are Andrew Heiskell of General Electric and A. Philip Randolph.

After adopting a very fine statement in which these people and hundreds similar to them committed themselves to the goals mentioned, a delegation went up Capitol Hill to talk to congressional and administration leaders about it. They were graciously received by

the Speaker of the House, who listed the administration's present legislative goals and asked for their support. But, according to published reports, the response of both Capitol Hill and the White House was notably lacking in a sense of urgency or imagination; the Emergency Convocation galaxy was just another meeting.

Which means that, if anyone around still thinks there is no need for private initiative and voluntary associations like human relations councils now that we have all of those civil rights laws,--he has another think coming!

South Carolina Council Chooses New Director

Mrs. Alice Spearman, Executive Director of the South Carolina Council on Human Relations, is retiring. She has been Director of the SSCHR since it was first formed, and it goes without saying that the Council and all of us who have worked with her are deeply indebted for the person she has been and the work she has done for so long.

Her successor, beginning September 1, will be The Reverend Paul W. Matthias, who comes to South Carolina from his pastorate in the Cashiers Methodist Church, Cashiers, North Carolina. Paul is twenty-nine years old, married, and the father of three small boys. He received his B.A. from Duke University in 1960 and his S.T.B. degree from Wesley Theological Seminary in Washington, D. C.

The Department of Good Ideas

While the council presidents were meeting in July, Dr. Stewart Wilber of the Houston Council on Human Relations suggested that the SRC promote gift subscriptions to NEW SOUTH. Commenting about the high quality of the magazine in its quarterly format, he said this would provide human relations council members with a way of putting the most thoughtful literature on the subject in the hands of friends who maybe have not seen the light--or at least haven't become accustomed to it. It would also be a good project for local councils to give annual subscriptions to public libraries, school libraries, church libraries, etc.

We rather liked that idea. Accordingly, there is a gift-subscription form with each copy of the Summer issue of NEW SOUTH, which is just off the press. In addition to all four 1968 issues, your gift-recipients will get a copy of the Fall, 1967 issue along with a gift subscription certificate in your name. Thus, you give five issues for the price of four ($3.00).

This is an opportunity to take the easy way out on your gift list for Christmas, Hannukkah, or birthdays without feeling guilty! It's for a good cause.

People who do not have a gift-subscription form may just send their lists of names, addresses and ZIP numbers along with a check in the appropriate amount. They should include themselves on the list, of course, since, if they don't have a subscription blank--they aren't getting NEW SOUTH.

And a "MUST" Book

Pat Watters, SRC's Director of Information, and Reese Cleghorn, Associate Editor of the Atlanta Journal, are the authors of a book to be published November 7, 1967, by Harcourt, Brace and World. The title is CLIMBING JACOB'S LADDER--THE ARRIVAL OF NEGROES IN SOUTHERN POLITICS. Leslie W. Dunbar, former Executive Director of the Southern Regional Council and now Executive Director of the Field Foundation, writes in the Introduction:

> A history of the struggle of Southern Negroes to gain dignity and the ballot in the 1960's, this vivid book brings intimacy and depth to its subject by drawing on the Southern Regional Council's field report files of the two Voter Education Projects. Excerpts from these reports show what it is like to be up against sheriffs, Klansmen, and artfully dodging public officials in hundreds of Black Belt towns; how Civil Rights professionals and idealistic students met the unlettered people of the cotton-field shanties; and how Negro communities, hitherto passive and numb, found the courage to demand the vote.
>
> There is analysis of the meaning of the new vote...the continuing power of White Supremacists, of the NAACP, SCLC, SNCC, and CORE and their differing senses of necessity, the emergence of "Black Power" and the problems it poses for the traditional alliance between white Liberals and Negro activists.
>
> CLIMBING JACOB'S LADDER is not just for the South, or for Watts, Chicago, Newark, Harlem, or Detroit, but for all America.

The price will be $8.95. Pre-publication orders may be sent to Harcourt, Brace and World, Inc., 757 Third Avenue, New York, New York 10017.

Dates of the SRC Annual Meeting

Dates of the Annual Meeting of the Southern Regional Council, originally set for November 8, 9, and 10, have been changed to November 1, 2, and 3. There has been some confusion about this, so the change should be noted--especially by state council directors and chairmen, who will be invited guests. As usual, the meeting will be held in Atlanta.

About That Wicked Federal Money

Citizens of Georgia were shocked last week when Governor Lester Maddox, who is normally a bit on the puritanical side, said that he was sorry there appeared to be no legal way to provide state money for private schools and that if the federal government keeps jeopardizing public education in Georgia with all of that school integration business, they should be told to "take their money and...and...ram it."

I just hope he doesn't ram it too far. The Tax Foundation reports that only seventeen states now pay the federal government more money than their own states get in return to finance aid programs. Georgia citizens pay the feds only 72 cents for every dollar they get in return, while folks in New Jersey pay $1.83 and, in New York, $1.40 for each dollar they receive. I should think the Governor would be grateful for such timely succors.

Mississippians pay 45 cents for a federal dollar, by the way, and most of the southern states follow the example. South Carolina pays 81 cents; Louisiana, 51 cents; Kentucky, 57 cents; West Virginia, 46 cents. And so it goes.

And Finally (I hope)

I absolutely promise not to clutter this newsletter with personal notes, which I realize most readers would find boring. However, I do like to conclude these things a little on the light side, and this time the joke is on me. Joyce and I are the proud and deliriously happy parents of twin boys, born Sunday, August 27, and doing nicely, thank you.

Bill Roberts, who is working with us on temporary assignment, is also newly the father of a son, born August 31 (for obvious reasons, I am finishing this thing three days after I started it!). And, Mrs. Carol Lockhart, Secretary to the Field Activities Department is "on deck."

What population explosion?

FIELD ACTIVITIES NEWSLETTER

October 27, 1967

SRC Annual Meeting

The Annual Meeting of the Southern Regional Council will be held at the Biltmore Hotel in Atlanta on November 1, 2, and 3. Highlight of the meeting will be an address by Dr. Kenneth B. Clark at the Annual Banquet on Thursday evening. Dr. Clark, a noted sociologist, is now President of the Metropolitan Applied Research Center in New York. Before taking that position he was Research Director at the Northside Center for Child Development.

State council affairs will be an important part of the program this year. The dinner on Wednesday, November 1, will be devoted to state councils. The chairman and executive director of each council have been invited to the meeting as guests of SRC.

Personnel Changes

Weldon J. Rougeau has been appointed field director of SRC's Voter Education Project. He began work on September 1. Mr. Rougeau was born in Tyrone, near Lake Charles, Louisiana. He holds a B.S. degree in sociology from Loyola University, Chicago. As an undergraduate at Southern University, Baton Rouge, he was active in the campus chapter of the Congress of Racial Equality. He was arrested and jailed for 50 days in 1962 because of his participation in the sit-in movement. He subsequently worked for two years as a field secretary for CORE, doing voter registration work in Louisiana and Florida. Mr. Rougeau is married and the father of two children.

John Lewis has been named director of SRC's Community Organization Project. Mr. Lewis is well known as the National Chairman of the Student Nonviolent Coordinating Committee from 1963 until 1966. He was an organizer of the Nashville Student Movement in 1960 and was

one of the original Freedom Riders in 1961. Mr. Lewis, who is single, was born in Troy, Alabama, and attended public schools there. He holds B.A. degrees in Religion from American Baptist Theological Seminary and in philosophy from Fisk University.

Frances Pauley resigned September 30 as executive director of the Georgia Council. Al Henry, assistant director, resigned at the same time. John McCown has been named to succeed Mrs. Pauley as executive director of the Council. Mr. McCown attended California Western University. His experience includes work as a community organizer with the Chatham County (Savannah), Georgia, Community Action Agency, voter education work in Alabama for SCLC, community organization in Hancock, Talliaferro, and Lincoln counties (Georgia) with the Southern Rural Action Project, and similar work in a seven county area for ACTION, Inc.

Isaac Richmond, who has worked in rural West Tennessee for the past year as an assistant to the director of the Tennessee Council, has resigned. Mr. Richmond will direct a training program for community leaders at Penn Community Services, Frogmore, South Carolina. Harry and Jerry Wiersema have also resigned from the Tennessee Council staff. Mr. Wiersema has been employed by the Memphis office of the U. S. Commission on Civil Rights.

Staff Retreat at Gatlinburg

A joint retreat for the staffs of the Southern Regional Council and the councils on human relations was held in Gatlinburg, Tennessee, September 5-8. Although we have frequent meetings for the executive directors of the state councils, this was the first time, to our knowledge, that all professional staff of both the human relations councils and the SRC were brought together for an extended period of discussion and planning.

Lest anyone get the wrong idea, let me pass along the comment of one of the state council directors. "If those three days were a retreat," he said, "I'd hate to put in three full days of work!"

The retreat was part of a process, still going on, of thinking through the program-roles and relations among the agencies concerned. This proved to be a fascinating exercise in group dynamics. That means we argued fiercely en route to some genuine clarity and understanding. The concensus seems to be that it was a very valuable meeting.

Human Relations Councils Show Steady Growth

Statistics do not tell the whole story -- fortunately, I reckon -- but the figures we have compiled about the human relations councils, in preparation for the Annual Meeting, indicate a steady growth over the past year.

Total membership in the state councils is about 13,500, compared to about 12,00 last year. There are 123 local councils, or chapters, where there were 109 last year. Funds raised from local sources came to about $135,000, which compares to about $120,000 in 1966.

I can't spill the beans as to who won the George Mitchell Award, but the three outstanding performances in membership growth were turned in by the Houston Council, Louisiana Council, and Florida Council. The Houston Council is tops in local funding, with about $32,000 in contributions from its membership and local businesses, and that figure excludes a $7,000 project grant from a Houston foundation.

Local Council News Wanted

We are interested in what local councils are doing and would welcome reports of any successful efforts, new undertakings, or fresh ideas. We pick up some news of this kind at various meetings and through state council reports, but I am sure that other worthwhile endeavors go unnoticed. Since this newsletter goes to a lot of local council folks, it can serve as an idea exchange. Let us know what goes on in your council.

For Instance

Mr. J. E. Shelley of the Greater Jacksonville (Florida) Human Relations Council writes, "We are trying the protest resolution method where it may apply." He sent copies of two such resolutions, one objecting to the Duvall County Board of Public Instruction's use of tax funds in legal maneuvers to avoid school desegregation, the other protesting support of segregated social service agencies by the United Fund. He reports, "We've had success on both of the attached -- 50% on the school board and 100% on United Fund."

A Helpful Publication

Those interested in low-cost housing should know about Mission Through Housing--Guidelines/Case Studies/Resources. Designed primarily for use by church judicatories or congregations, it would be valuable to any group working on housing problems. Among other things, it includes a summary of appropriate sections of the National Housing Act and six case studies of low-cost housing projects. Among the appendices are "F.H.A. Evaluation of Nonprofit Sponsors," "Outline of Basic Procedural Steps in F.H.A. Multifamily Processing," a list of

Urban America Publications, a technical bibliography, and a general bibliography on housing, urban life, and city planning. Order at 50¢ per copy from Office of Church and Housing, Board of National Missions, The United Presbyterian Church in the U.S.A., Room 1151, 475 Riverside Drive, New York, N. Y. 10027. (Checks should be made payable to Board of National Missions, United Presbyterian Church, U.S.A.)

Welfare Myths

If you have my kind of luck, sometime in the next month or two you will hear somebody who should know better repeat one or more of several popular myths about welfare and welfare recipients. Maybe you would like to file away, in your head or your shirt drawer, this list of widespread myths and appropriate factual information. The list originated with the Council of Churches of Christ of Greater Cleveland.

Myth 1. Most people on relief could earn their living if they had more initiative. Fact: More than 90% of the people dependent on public assistance are unemployable, 60% are children under the working age.

Myth 2. A family can live comfortably on a welfare budget. Fact: For most clients the inadequacy in cash payments results in deficient diet, insufficient clothing and substandard housing. These payments average 73¢ a day per person, excluding rent. (Could you raise your child on 75¢ a day?)

Myth 3. Many people prefer welfare as an easy way of life without work. Fact: When low-skilled jobs are plentiful the number of employable welfare recipients goes all the way down. More than 30% of all ADC mothers in the U.S. go to work on low-paying jobs (full and part time) despite the fact that this income is deducted from their welfare checks.

Myth 4. Employable relief clients could find jobs if they really wanted to work. Fact: Department of Labor statistics indicate a steady decline in low skilled job opportunities. While the demand for professional and skilled labor cannot be filled, there are more unskilled job seekers than there are jobs available for them.

Myth 5. There are many people receiving public assistance who have other sources of income and therefore are guilty of fraud. Fact: The Department of HEW indicates that of 37,000 families on public assistance, 5% were ineligible and 95% were eligible. Fact: The majority of welfare clients nationally are not receiving the full dollar benefits to which they are legally entitled. In addition thousands of people who are entitled to public assistance do not know their rights. Fact: While studies estimate suspected fraud in welfare between 3% and 16%, compare this to Internal Revenue fraud as reported by independent economics researchers to Congress in 1959, where the percentage of unreported income ranged from 3% to 34%.

Myth 6. If relief payments are kept very low it will compel clients to seek jobs and other means of support. Fact: As noted earlier, over 90% of the people on relief are unemployable and have no other means of support. Rehabilitation, education, and job training become virtually impossible when people are kept at (or below) subsistence levels.

Myth 7. The majority of children on ADC are illegitimate. Fact: Over 75% of all children on ADC are not illegitimate children. Thus although illegitimate children are more likely to be needy, they do make up a minority of the children aided by this program.

Myth 8. Most of the illegitimate children born in the United States are supported by public assistance. Fact: Only 1 in 5 of all reported illegitimate children in the nation receives public assistance.

Myth 9. Welfare mothers bear illegitimate children to boost their welfare checks. Fact: Payments for additional children average about $15.00 a month. Thus other members of the family are even more deprived with addition of another family member.

Toward Better Human Relations

One of the best bits of advice about good human relations that I have heard of lately is reported by a member of the SRC staff to be on a plaque in the kitchen of an SRC Board member. Titled NOBODY IS PERFECT, it reads, "Each of us is a mixture of good qualities and some perhaps not-so-good qualities. In considering our fellow man we should remember his good qualities and realize that his faults only prove that he is, after all, a human being. We should refrain from making harsh judgment of a person just because he happens to be a dirty, rotten, no-good son-of-a-bitch!"

PAUL ANTHONY
EXECUTIVE DIRECTOR

A Council to attain the ideals and practices of equal opportunity for all peoples in the South

FIELD ACTIVITIES NEWSLETTER

November 22, 1967

SRC's Annual Meeting

The Annual Meeting of the Southern Regional Council was held at the Atlanta Biltmore Hotel on November 1, 2, and 3. Among important items on the agenda were:

Discussions of the Voter Education Project and of the state councils on human relations. It was proposed that the VEP concentrate relatively more on leadership development. Examples are workshops held recently for Negro state legislators and Negro city and county officials in the South. The report of a special committee on SRC-state councils relations called for increased program aid and decreasing support of general operations of state councils. It also called for greater coordination of SRC field programs with state council endeavors. The Executive Committee of the SRC will rule on these matters at a meeting early in December.

The "State Councils Dinner." The George Mitchell Award for outstanding membership increase was awarded to the Louisiana Council on Human Relations at a dinner on the evening of November 1. The award, consisting of a certificate and $1,000, was presented by James M. Dabbs and accepted by Mrs. Patricia Miller, Executive Director of the Louisiana Council.

The Annual Banquet. The outstanding feature of the meeting was an address by Dr. Kenneth B. Clark, a noted sociologist and director of the Metropolitan Applied Research Center in New York, at the annual banquet. It was a controversial speech and, no doubt, will be discussed for some time to come. You will want to read the text, soon to be published by the SRC. I shall only whet your appetite with a few quotations here.

Dr. Clark began by saying that "the destiny of the enslaved and disadvantaged Negro determines the destiny of the nation."

> The fundamental fact around which all questions of national survival pivot is the fact of inherent interrelatedness--or integration, if you please--in spite of the persistent demands and attempts to impose recial separatism. The problems of the American Negro are problems of America....The Negro need not yearn to be assimilated into American culture--he is and determines American culture.

White Americans, Dr. Clark suggested, have inferiority feelings--despite their affluence--growing out of the actually inferior position of their ancestors in Europe. "The gnawing doubts of white Americans as to their status and worth as human beings" lie behind both the racism and the democratic creed and ideals of Americans. That self-doubt is shared by black Americans, for obvious reasons. They have a tendency to share the racism and the democratic ideals, which "are not psychologically contradictory."

> A critical danger...is that whereas the promises of racial progress were reversed in the 19th century by the fanaticism, irrationality and cruel strength of white segregationists--the impending racial retrogression of today might come about largely through self-hatred leading to the fanaticism, dogmatism, rigidity and self-destructive cruelty of black separatists. If this comes about it will not be enough to excuse this monstrous perpetuation of the lie of racism and postponement of the goals of democracy and humanity by asserting that the frustrations and betterness of the victimized Negro account for his present irrationality and rigidity. A similar and equally valid psychological explanation could be offered to explain the racial cruelties of desperate and miserable poor whites of the past and present. Understanding is not acceptance.

In the first reconstruction rational whites were intimidated into silence in the face of the barbarities of white extremists. "A similar threat and dilemma face the rational, thoughtful Negro today, Dr. Clark said.

> "Black Power" is a bitter retreat from the possibility of the attainment of the goals of any serious racial integration in America...
>
> It is an attempt to make a verbal virtue of involuntary racial segregation...
>
> It is the sour grapes phenomenon on the American racial scene...
>
> "Black Power" is the contemporary form of the Booker T. Washington accommodation to white America's resistance to making democracy real for Negro Americans. While Booker T. made his adjustment to and acceptance of white racism under the guise of conserv-

atism, many if not all of the "Black Power" advocates are seeking to sell the same shoddy moral product disguised in the gaudy package of racial militance.

Rational people of both races must deal effectively, and together, with the problems of "criminally inefficient and racially segregated public schools," "dehumanizingly poor housing," employment discrimination, police practices, and slum filth, if they are not to be cowed once again into acceptance of separatism. Dr. Clark concluded:

> The present dilemma of the Negro is focused for the trained Negro intellectual. He must now choose sides. He must now clarify the nature of the enemy. He must dare to say that the enemy was never to be understood in terms of color...but in the more difficult and abstract terms of human irrationality, ignorance, superstition, rigidity and arbitrary cruelty.
>
> These are the common enemies which underly all forms of tyranny--racism, authoritarianism, McCarthyism...
>
> They are no less enemies when being sold or offered as truth or salvation by blacks, yellows, or whites...
>
> If Negroes and whites who understand this can make it clear, we can help to save America. We will use the power of disciplined intelligence combined with respect for moral values and humanity to save Negroes from the destructive possibilities of white and black dilemmas and thereby contribute to the survival of America... For America cannot survive if Negroes do not... And Negroes and no other group of human beings are likely to survive if America does not.

Speaking of Speeches...

I wonder if there is any basic disagreement between what Dr. Clark was saying and what Mr. Saul Friedman said at the eighth annual dinner meeting of the Houston Council on Human Relations. Mr. Friedman, formerly a reporter for one of the Houston papers (he was "eased out"), addressed some 450 people who attended. Speaking of white liberals in the struggle for human rights, he said, in part:

> As wild as it now seems to be, the drive for black consciousness and black power along with the established civil rights organizations, will sustain its effort to keep the leadership of the reform movement for some time to come. There is every possibility that this movement will border on the revolutionary and force us to face some very fundamental questions. In the process, white liberal leaders will lose their black constituencies, such as they are, and perhaps even their titular roles in the struggle for change. White liberals will thus

have to be satisfied to civilize their white brethern instead of their Negro brethren.

And Speaking of Books (Not That Anybody Was)

The above puts me in mind of a passage in The Autobiography of Malcolm X, which, I am chagrined to admit, I just recently got around to reading. Only shortly before he was assassinated, Malcolm X, too began to realize that America's racism was a symptom of something other than difference in color. He finally recognized that there were "sincere whites," and he had something to say to them:

> I have these very deep feelings that white people who want to join black organizations are really just taking the escapist way to salve their consciences. By visibly hovering near us, they are "proving" that they are "with us." But the hard truth is this isn't helping to solve America's racist problem. The Negroes aren't the racists. Where the really sincere white people have got to do their "proving" of themselves is not among the black victims, but out on the battle lines of where America's racism really is--and that's in their own home communities; America's racism is among their own fellow whites. That's where the sincere whites who really mean to accomplish something have got to work.

Incidentally, having at last read that book, like a reformed smoker I am now recommending the step to everyone. The man had a genius for telling expressions. For instance, "'Conservatism' in America's politics means 'Let's keep the niggers in their place.' And 'liberalism' means 'Let's keep the knee-grows in their place...'"

He was something of a prophet.

Notes on the State Councils

Paul Matthias and L. S. James of the South Carolina Council, along with former director Alice Spearman, are among a biracial group quietly working, with Governor McNair's blessing, to create state and local task forces "to study the racial situation with a view to prevention of violent racial outbreaks and promoting community uplift programs among the diverse social and economic classifications in the state."

"Of 7,700 books on the approved textbook and library list of the state of Georgia, only 24 are by or about Negroes." That's a fact gleaned from a conference on discrimination in school and library books, co-sponsored by the Georgia Council and the school of library science of Atlanta University on November 10 and 11. Historian John Hope Franklin gave the keynote address. The second day was given to hard-working sessions on criteria for judging materials, titles recommended, titles not recommended, and new types of materials needed.

It was an excellent conference, well attended by librarians, teachers and other educators.

Prep School Scholarships

A Better Chance/Independent School Talent Search (ABC/ISTS) is an organization which helps academically talented students from low income families gain admission to independent schools with scholarship aid. There are approximately 110 independent boarding schools in the ABC Program. Most of them are in the Northeastern part of the United States -- New England, New York, New Jersey, or Pennsylvania. The costs of attending these schools are very high. Full scholarships are available to a limited number of students. The scholarships cover the cost of tuition, room, meals, books, and transportation. The student's family is expected to help pay his personal expenses.

Those who are awarded a scholarship to an independent school must successfully complete an ABC Summer Program during the summer before enrollment. Held at several college campuses, the Summer Programs provide students with a sample of independent school life and offer intensive courses in English and Math. Most of the cost of this program, too, can be paid by the ABC/ISTS.

For further information, write to Independent School Talent Search, 376 Boylston Street, Boston, Massachusetts 02116.

Encounter at the Magnolia Ballroom

After John Hope Franklin's keynote address at the books conference mentioned above, I decided to drop by the Magnolia Ballroom here in Atlanta for a performance of "Back to Black," presented by SNCC. I was a little late and missed most of the play, but clearly it reminded the mostly-black audience of the rich heritage that it theirs and of the tremendous power of the world's black majority.

There was a social hour or two afterward. I bumped into a young black man. He noticed me and asked if I had a cigarette. I offered him one, and he was not even hypocritical enough to protest that it was my last one. As I lit it for him, he asked, "What do you do?"

"I work for the Southern Regional Council," I answered.

"Doing waht?"

"I'm Director of Field Activities," I said.

"Doing what?"

"I work with the state councils on human relations, mostly."

"But, doing what?" he persisted.

Rationalizing that he was just a wee bit tipsy, I decided not to go into the problems of trying to get some more of the people of the South to come to terms with reality. So I mumbled something about messing around with a variety of problems.

"Well...," said he. And with a that's-what-I-thought expression on his face, he thumbed in the direction of the just-darkened stage.

I'm just glad he wasn't stone sober!

PAUL ANTHONY
EXECUTIVE DIRECTOR

A Council to attain the ideals and practices of equal opportunity for all peoples in the South

FIELD ACTIVITIES NEWSLETTER

December 13, 1967

Actions of the SRC Executive Committee

On the first three days of December the Executive Committee of the Southern Regional Council held an extraordinary three-day meeting. Out of it came three actions which will be of particular interest to readers of this newsletter. One was a resolution acknowledging and calling attention to the connection of regional problems of racism and poverty to these same problems on national and world levels. The other two were statements of SRC policy with regard to its own function and its relations with state councils on human relations.

Statement of Concern. Pointing out that "our commitments to regional development and racial justice in the South become increasingly entwined with events of the nation, and indeed with problems of the world," the committee said that attitudes of the southern region help create explosions in northern cities. New attitudes of both Negroes and whites, which result from these explosions, are quickly reflected in the region. The committee went on:

> The contined existence and increasing awareness of racism in this country has the most profound importance in our dealings with the nations of the world. We recognize that the struggle of minorities in this country for equal opportunity is often equated with the struggles everywhere of peoples seeking independence and self expression. We recognize the grave significance of color in these struggles in this country and throughout the world.
>
> It is tragic that this richest of nations has not developed a society free of fear, hunger, and want. We recognize the impact of this failure on the billions of people in fear, hunger, and want throughout the world.
>
> We call on our nation to recognize these matters, to adopt programs compatible with both the need and the potential of this great country, to resolve honorably

and swiftly, with new and imaginative approaches, the international conflicts in which we are involved and to take the lead in achieving the greatness which is in man universal.

Statement on SRC's Function. The Executive Committee passed a resolution stating "that the proper role of the Southern Regional Council in the future, as it has been in the past, should lie primarily in the allied fields of research, interpretation and education." The resolution added:

> That the Southern Regional Council should lend aid and encouragement to direct programs consistent with its purposes whether operated by government or by independently controlled organizations. This aid and encouragement could extend to the formation of such organizations where necessary and feasible and to limited pilot projects. Except for purposes of demonstration or testing, SRC should leave to government or such independently controlled and operated groups direct frontal and massive ameliorative action.

The committee added that, in improving its program of research and education, "youth and young adults should receive early and accentuated attention."

Policy on SRC-State Council Relations. The Committee adopted the report and recommendations of a special committee on SRC-HRC relations as official policy. The new policy, which will go into effect in 1969, is the culmination of two years of planning and exploration of new modes of assistance to state councils, in view of increasing difficulty in securing foundation support of their general operations through SRC's grant-in-aid program. Major features of the six-page report may be summarized as follows:

(1) The SRC remains committed to assist the councils on human relations. It believes that biracial, voluntary associations, grappling with the problems of community at both state and local levels, are important to the South.

(2) It is recognized that "state councils fall into two categories, the mature and the developing." Mature councils are those which have attained sufficient strength of membership, leadership, and support to maintain their own general program and staff services. Developing councils are those which still require assistance to maintain their general operations.

(3) In the case of mature councils, "the pattern envisaged is that SRC can approach foundations which reject general support with proposals for projects in specific areas." These project proposals might originate either with the state councils or the SRC. If backing can be secured, SRC would delegate administration of the project

to cooperating state councils, funding for needed expenses and staff, together with some "overhead" for administrative services.

(4) In the case of developing councils, at their request the SRC would still seek funds to support a program of development and organization. In such cases, however, and provided such funds can be found, an organizer employed by the SRC and responsible to it would be sent into the state for a specified period of time to work with that council's board and membership toward a "mature" status.

(5) It is emphasized that a state council's classification would not be decided unilaterally. The transition to the new system of relations would involve full discussion and agreement on the status to be assumed by each council.

(6) Major project proposals, as well as requests for assistance in organizational development, will be evaluated by SRC staff and submitted to the Executive Committee for disposition.

(7) The SRC will continue its present role of field service to state councils, whether mature or developing, including consultation on staff, program and methods. A strong advisory committee on field activities will be set up. SRC will continue to sponsor meetings and workshops for officers and staffs of state councils. Every effort will be made to tighten coordination of SRC's own field projects.

New SRC Publication

Public Assistance: To What End? is the title of a Special Report published by the Southern Regional Council this month. The report examines in detail southern states' welfare programs and how these programs are (or, more exactly, are not) meeting the extreme need found in the poorest counties in these states. The counties are 97 of the 100 poorest in the nation, and they are located in 11 southern states. Among them, median family income ranges from $1,260 in Tunica County, Mississippi, to a high in Atkinson County, Georgia, of $1,956. The latter figure is $3,700 below the national median family income.

Each state, the report says, determines the level of income which it considers sufficient to provide the minimal needs of an individual or family. This becomes the standard up to which each state attempts to bring all of its residents through its welfare program. "Of great significance is that no state seen here has established $3,000 as the level of poverty -- the level set by the federal government -- and many have established it much lower."

For a family of four, a mother and three dependent children, these state-defined ideal standards of annual income range from $1,488 in Arkansas to $2,376 in Tennessee. North Carolina sets a standard of $1,728; Texas, $1,847; South Carolina, $1,870; Louisiana, $1,977; Alabama, $2,124; Kentucky, $2,268; Mississippi, $2,329; Virginia, $2,340; and Georgia, $2,371. And most public assistance

programs provide less, often far less, than these income levels the states themselves have recognized in setting their standards of need.

An obvious point is that even if public assistance in the South were administered in a non-discriminatory manner (which it is not), and even if it measured up to its own "ideal" (which it does not), it still would do nothing to help people out of poverty. The report concludes, "public assistance is lacking, in large part, because it is so structured as to be self-restricting, to expend exactly enough to soothe the consciences of those with comfortable standards of living and no more. This self-restricting nature of public welfare is not due to discriminatory administration which is widespread in many states. Discriminatory administration only redoubles the faults of an already impotent structure. What produced such a structure is a concept of welfare at once sentimental and condescending. The poor must be taken care of, that concept says, but they must never be allowed to forget that they are poor and that they exist entirely on public sufferance."

Copies may be ordered from SRC at 30¢ each. Bulk rates are available.

State Council Notes

The Annual Meeting of the South Carolina Council on Human Relations was held in Columbia on November 30. Dr. Dan W. Dodson, Director of the Center for Human Relations and Community Studies, New York University, gave the principal address. The Reverend Matthew D. McCollom was elected President of SCCHR, succeeding Dr. William H. Wesson. There were workshops on co-ops and credit unions, low-income housing, proposed reforms for crime and corrections, Negro history, and welfare. Former Executive Director Alice Spearman was honored and given a set of luggage and a check--with a stipulation that any ticket she buys with the money must be a round-trip ticket. The Reverend Paul Matthias, new Executive Director,was formally presented to the membership.

The Georgia Council held its Annual Meeting in Atlanta on December 8. The Reverend William Holmes Borders addressed the members at the annual dinner. Mrs. Frances Pauley was honored for her five years of service as Executive Director by a gift of cash and a plaque. She has been succeeded by Mr. John McCown.

About "The Art of Compromise"

Politicians are practitioners of "the art of compromise," they say. But do they have to be so hell-bent on proving their proficiency? On the front page of yesterday's paper, for example, were stories of two more very disturbing examples. I know you cannot go by what you read in the papers. But, in these cases, I would just bet that whatever the news means, beyond what appears on the surface, ain't good!

There was the story about how Dixie senators had agreed not to press their fight against the administration's school aid bill. The Secretary of Health, Education and Welfare had promised not to cut off funds to any school district during a given school year, unless the department has warned the district before the preceding March 1 that it has "evidence of non-compliance" with the Civil Rights Act of 1964 and has stated what local officials must do to comply. Further, they may not cut off funds during a school year unless the school district has been cited for a hearing before September 1.

This apparently means that a valid complaint of discrimination which surfaced in March or April of 1968, let us say, could not be effectively acted upon before the 1969-70 school year. Shucks. With that much time, the Atlanta School system can let a school pass from all-white to token-integrated to all-Negro. Not only can, but has. And I reckon that they are not the only ones.

Georgia's Senator Russell himself acknowledged that he was delighted with the "compromise," because he doubted that the stiffer amendment he was trying to attach to the bill would have passed. He wrote to other southern senators that the HEW compromise was more than he thought the Dixie bloc would get originally!

The other story was about passage of a two-year, $4.16-billion extension of the anti-poverty effort. This bill, which has now cleared both houses of Congress, carries a provision putting community action programs under the control of local public officials. Apparently the administration felt it has to make this compromise to get the act passed. "Sargent Shriver, the OEO director," the paper says, "has promised his agency will watch closely to see how city officials carry out their responsibilities."

Well, we can always hope that he will find that they have come to believe sincerely in "maximum feasible participation of the poor," that they are standing firm against segregationists in their communities who might be disposed to edge around the law of the land, that they will all be too high-principled to use public money for their own or their supporters' political or economic advantage, etc., etc. Who knows? Maybe the Millenium is upon us!

Quotation of the Month

I nominate as the most memorable obiter dictum of the month what Senator Russell said about the fact that most of the Department of HEW's school desegregation efforts, under the Civil Rights Act of 1964, have been concentrated in the South:

"Three years is entirely too long for one-fourth of this country to share second-class citizenship in administration of this law."

FIELD ACTIVITIES NEWSLETTER

March 19, 1968

New SRC Publications

The Present Dilemma of the Negro. At long last Kenneth B. Clark's address at the 1967 annual meeting of the Southern Regional Council has been printed. This was the thoughtful, provocative speech in which Dr. Clark said that all forms of tyranny -- racism, authoritarianism, McCarthyism -- are "no less enemies when being sold or offered as truth or salvation by blacks, yellows, or whites."

Black Youth in a Southern Metropolis. This study of socio-economic characteristics, attitudes, and values of Negro high school students in Atlanta was published in January. It was conducted and reported by Dr. James E. Conyers, Associate Professor of Sociology, Atlanta University, and William Farmar, Associate Director of SRC's Project on Administration of Justice. The publication gives results of a questionnaire answered by 688 Negro high school students in Atlanta.

Questions covered such things as how respondents felt about conditions and facilities in their neighborhoods (62% said recreational facilities were poor; 52% thought police protection was inadequate), how they rated aspects of life in Atlanta as a whole (73% rated Atlanta race relations as poor or only fair; 70% thought Atlanta housing poor), who they could identify among notable national and local personalities (546 could identify Lester Maddox; 531 recognized Ray Charles; Lou Rawls, 492; Martin L. King, 457; Thurgood Marshall, 84; and Walter Reuther, 28), and how they felt toward various civil rights organizations and approaches (75% approved the NAACP; SCLC, 72%; Urban League, 49% -- most of the others simply having no opinion; SNCC, 37%; bi-racial committees, 30%; and riots 12%).

Events at Orangeburg, by Pat Watters and Weldon Rougeau, chronicles events of the week of February 5-10, 1968, which resulted in the fatal shooting of three Negro students and wounding of 18 others. The account is very different from that given by most wire

service reports. The authors conclude that police over-reacted to a mistaken belief that they were under fire. They reflect that local and state defiance of laws regarding desegregation, along with weak federal enforcement, are erroding respect for law. "Black Power," they found, attracted very, very few black students on the two campuses at Orangeburg, but events there converted more Negroes in that city and elsewhere to "the kind of violent anger that white hysteria over Black Power envisions" than Black Power advocates could hope to gain on their own.

The Delta Prisons: Punishment for Profit, another publication of our Project on Administration of Justice, was written by William Farmar. "The public does not know what happens in its prisons," John O. Boone writes in a foreword. "This public indifference has made corrections a prime source of corruption and political intrigue."

The report concentrates on Arkansas, Louisiana, and Mississippi, which have state farm systems (in distinction from most southeastern states which have work camp oriented systems, which are bad enough). A major difficulty is the expectation that prison systems shall be self-supporting or, preferably, make a profit for the state, the report says. "Self-supporting prison systems must, in the end, become slave camps."

In Memphis: More Than A Garbage Strike, just off the press, chronicles the strike by Memphis sanitation workers which began February 12 and continues at this time. A unique feature of the situation is the alliance of the Negro community of Memphis with the union and striking workmen. (As this is written, it is reported that fifteen thousand -- 15,000 -- people attended a mass meeting last night in support of the strikers. Martin Luther King spoke. King and his colleagues will return to lead a huge march on Friday, March 22. A general strike by Memphis Negroes has been scheduled for that date.) The report details, as part of a recurring pattern, the failure of Memphis authorities, police, and press to comprehend the meaning of the boycott, the marches, the mass meetings their city is experiencing -- or the potentially tragic results of denial of dignity to forty per cent of the city's population.

All of these publications may be ordered from the Southern Regional Council. An updated publications list, giving titles, brief descriptions, and single copy and bulk prices, is also now available on request.

Conference on Human Relations and the Law

In what may be a "historic first," the University of Texas School of Law co-sponsored with the SRC and the National Association of Intergroup Relations Officials a conference on human relations and the law on March 7, 8, and 9. The meeting was held at the law school in Austin. More than 600 attended. Dr. Joseph Witherspoon,

Professor of Law and general chairman of the conference, set the tone in a statement of the purpose of the conference. He said it was important to recognize that law is of two kinds -- public and private. Public law consists of legislation, administrative regulations, and judicial policies. He continued:

> Private law consists of contracts, conveyances, insurance policies, company rules and practices, union regulations, private association charters and by-laws, customary rules and practices, and many other types of law created by private individuals and private organizations to govern their relations with others. If we are to solve our crisis in human relations, it is essential that we create private law that is just even as it is essential that we create public law that is just. Unless both private law and our public law are adjusted so as to meet the underlying causes of this crisis and to ameliorate the conditions produced by them, our nation will continue to reel and stumble in the face of the emergency in which it finds itself.

Speakers included Charles Evers, Mississippi NAACP field secretary; Ambassador Hector P. Garcia, delegate to the United Nations and a Corpus Christi physician; Sol Rabkin, legal director for the Anti-Defamation League; Edward Rutledge, executive director of the National Committee Against Discrimination in Housing; Louis Mason, Jr., member of the Pittsburgh city council and formerly executive director of the Pittsburgh Human Relations Commission; Dr. John T. King, president of Huston-Tillotson College of Austin; Paul Anthony, executive director of the SRC; Frederick Routh, executive director of NAIRO; and Charles Morgan, Jr., director of the Southeastern Regional Office of ACLU.

Erratum

In the newsletter dated February 7, it was erroneously reported that Moses C. Burt had been elected president of the North Carolina Council on Human Relations. Mr. Burt was elected president of the Durham Council. The president of the North Carolina Council is Mr. John R. Taylor, a Greensboro business man.

SRC-Randolph Institute Meeting

More than 200 persons attended the conferenc jointly sponsored by the Southern Regional Council and the A. Philip Randolph Institute in Atlanta on February 23-25. The conference attracted a number of business men and a notably large representation from organized labor.

At the conclusion of the conference a resolution was unanimously adopted. It read, in part:

We now fully realize that the South can only find its rightful place when we have eliminated injustice for all, eradicated poverty for all, and created a political system in which all are free to participate.

Only such a spirit and program of action can avoid the explosive injustice that rends the Northern ghettos. Only such a spirit and program of action can establish that atmosphere of order and social peace from which human progress springs.

We urge a deeper national commitment to continue and expand federal anti-poverty programs....

.....

To the support of these objectives we summon all Southerners, black and white -- civic leaders, students, religious leaders, intellectuals, leaders of political parties and of trade unions, people of all classes and walks of life, in the cities and in the rural areas.

We call all to the duty, the opportunity, and the challenge to participate in a common effort. The need is so great, the time left so short, that we must put aside divisive prejudices and find strength in unity. Let us replace past antagonisms with a common effort to eliminate poverty and to construct a social order based on justice and on shared commitment to one another.

In the Good Old Summer Time?

In case you missed it, an article in The New York Times for Saturday, March 2, headlined "Police Stockpile Weapons, Preparing for Riots," reports, "In city after city across America the police are stockpiling armored vehicles, helicopters, high-powered rifles."

It describes an awesome, 20-ton armored personnel carrier which, in a demonstration, crushed a barricade of abandoned cars. The machine carries 20 men in bullet-proof safety, a .30-caliber machine gun, tear-gas launchers, a smoke-screen device, chemical fire extinguishers and a siren that can disable men with its sound. The Los Angeles police were considering buying it, but might not meet the price of $30,000 without optional equipment.

Detroit had five armored cars during last summer's riot. Since then the Detroit police have secured 2,000 tear-gas grenades and 1,200 gas masks. They have asked for 25 special anti-sniper rifles, 500 carbines, 300 shotguns, and 150,000 rounds of ammunition, according to the Times report.

In Monroe County, Michigan, the sheriff has a $50,000 riot control fund. He is buying 15,000 rounds of ammunition, 500 tear-gas cannisters, a $13,500 armored truck, 15 walkie-talkies, 100 rifles, and a number of flak vests.

The Tampa, Florida, arsenal boasts 162 shotguns, 150 bayonets, 5 sniper rifles, 25 carbines and M-1 rifles, and 300 gas masks. Florida State Attorney General Paul Antineri has recommended that Tampa policemen "shoot to kill" persons observed committing, or about to commit, felonies during a riot. (Question: How do you tell when a person is "about to commit" a felony?)

Michigan Governor George Romney has asked the state legislature for one million dollars to finance police riot training and hopes to get five hundred thousand more from the federal government.

Other devices are "instant banana peel," a chemical that makes streets icy-slick; a foam which can submerge crowds; and tranquilizer darts. But Chief Reddin of Los Angeles warns, "Don't throw your guns away. Let us not be seduced by the naive philosophy that foam dispensers or slippery substances can summarily pacify rioters, looters and arsonists."

Somehow I felt that The New York Times would not mind my passing this information along to our readers -- as a public service.

It's Great To Be Among Friends...

...even if they are not your own. Bill Farmer, prolific author and frustrated poet of the SRC's Project on Administration of Justice (alias, "Crime and Corrections Project," nee "Project on Prison Reform and Criminal Rehabilitation") read a recent issue of this newsletter and was inspired by his Muse:

A disciple of Calvin named Ed
Was predestined to work, so he said,
For the good of the South.
Now he's down in the mouth,
For the movement, like God, seems quite dead.

Yes, Every Cloud Has A Lousy Silver Lining.

Charles Evers, speaking at that conference on human relations and the law in Austin, had a new twist on an old saying. Maybe it says something to all you gleeful revolutionaries.

He tells it that he and Medgar, when they worked with their father in the fields during their boyhood, would be delighted whenever a dark cloud appeared. "Oh, please rain," they would say, "so we can go back to the house." His father would always remind them, "Behind every cloud the sun is shining!"

IN MEMPHIS:
MIRROR TO AMERICA?

by J. Edwin Stanfield

Second Supplement to Special Report of March 22, 1968

April 28, 1968
Price .20 each

"So we are going to Washington on the urgent business of reform before it is too late. We must have a de-escalation of the war in Vietnam and a massive escalation of the war against poverty and racism. We must guarantee that in this richest society in history, the poor, too, can find comfort and security and decent jobs and respect. It is time to re-order our national priorities. All those who now speak of goodwill and who praise the work of such groups as the President's Commission now have the gravest responsibility to stand up and act for the social changes that are necessary to conquer racism in America. If we as a society fail, I fear that we will learn very shortly that racism is a sickness unto death."

-- Dr. Martin Luther King, Jr.,
Poor People's Campaign News Release
March 4, 1968

I N T R O D U C T I O N

In a special report issued March 22, 1968, and a supplement dated April 3, the Southern Regional Council described in detail the strike of sanitation workers in Memphis which began February 12. These reports explained that the strike had quickly become a struggle for assertion of manhood and dignity, supported overwhelmingly by the Negro community of Memphis, seeking an end to the paternalistic variety of racism which prevailed in white Memphis.

The first report warned of "tragedy waiting in the wings." Its supplement said that tragedy had come in an outbreak of violence (window breaking and a small amount of looting and arson by Negroes, clubbing and shooting by police) during and after a march led by Dr. Martin Luther King, Jr., on March 28. That incident resulted in the death of a sixteen-year-old Negro male by police gunfire and in injuries to sixty people, mostly Negroes. The supplementary report ended with this statement: "It is not the nonviolent movement that is on trial in Memphis, but -- once more -- American democracy. Not the leadership of some Negro ministers is threatened, but the nation itself."

It is a sad duty to offer now, in a different era inexorably begun, a continuation of our report of the confrontation in the microcosm that is Memphis -- and of its appalling denouement.

D A R K F O R E B O D I N G

After the march was destroyed on the 28th, top staff leaders of the Southern Christian Leadership Conference flew into Memphis and began intensive preparations for a new attempt at a march on Friday, April 5. At the suggestion of Bayard Rustin of the A. Philip Randolph Institute and Victor Gotbaum of the New York Council of the American Federation of State, County, and Municipal Employees, AFL-CIO, the date of the march was postponed to Monday. The two men promised a rally of labor and civil rights forces from across the nation.

Meanwhile, Federal District Court Judge Bailey Brown, at the request of city officials, had issued on Wednesday, April 3, a temporary restraining order which prohibited Dr. King and his aides and "all nonresidents acting in concert" with them from "organizing or engaging" in the massive parade. Dr. King promptly labeled the order a "basic denial of First Amendment privileges" and said that he planned to ignore it, if attorneys could not get it lifted.

That night Dr. King, addressing the 2,000 people who came to Mason Temple in the rain, was in a somber, reflective mood. He said:

> Well, I don't know what will happen now. We've got some difficult days ahead. But it really doesn't matter with me now. Because I've been to the mountaintop. I won't mind.

> Like anybody, I would like to live a long life. Longevity has its place. But I'm not concerned about that now. I just want to do God's Will.
>
> And He's allowed me to go up to the mountain. And I've looked over, and I've seen the promised land.
>
> I many not get there with you, but I want you to know tonight that we as a people will get to the promised land.
>
> So I'm happy tonight. I'm not worried about anything. I'm not fearing any man. Mine eyes have seen the glory of the coming of the Lord.

Baxton Bryant, Executive Director of the Tennessee Council on Human Relations, said shortly after the meeting ended that the civil rights leader "sounded as though he were giving his own eulogy." Others concurred.

That premonition was all too accurate, as the world now knows. It was the last speech of Dr. Martin Luther King. Twenty-one hours later, an assassin -- believed to be white -- shot Dr. King to death as he stood on the balcony of his hotel room.

SORROW, ANGER -- AND MORE FRUSTRATION

In the early hours of Friday morning, following the assassination, Baxton Bryant called for the resignation of Mayor Henry Loeb:

> We saw President Johnson this week place the interest of the country above his own self-interest and pride. Peace seems to be a little closer in Vietnam as a result.

> Mayor Loeb has nothing but trouble and turmoil ahead governing a city whose population is 40 per cent Negro. He is a man of principal but doesn't have the capacity or the background to understand or interpret the rising expectations and demand for decency in the black community.
>
> For the peace, justice, and tranquility of the entire community, and safety and peace for himself and his family, he should resign as mayor of Memphis.

The call for the mayor's resignation was taken up by the Memphis Central Labor Council, AFL-CIO.

It was Mayor Loeb's insistence that the strike was illegal, together with his avowal that he would "never" sign a contract with the union or agree to deduction of union dues from the men's paychecks, that had prolonged the strike and led to the invitation to Dr. King to come to Memphis. But Loeb was reflecting the sentiments of the majority of his constituency.

Later on that morning, nearly 150 ministers, about 30 of them Negroes, held a memorial service at St. Mary's Episcopal Cathedral, then walked silently seven blocks to the city hall for a confrontation with the mayor. The decision to take that walk had actually been made on Wednesday, April 3, the day before the murder. The inner-city ministers were in the majority and were for it, but suburban ministers were nervous about such action and the group was persuaded to

postpone it on the rationale that there should be a carefully prepared statement. Now, on Friday, there was no delay. After hearing and adopting a prepared statement, the group proceeded, spontaneously, to the mayor's office. They were accompanied by three police cruisers. Four officers in each car wore white helmets and some carried shotguns. They passed elements of the National Guard in battle gear stationed before public buildings and stores.

Mayor Loeb was waiting for them in his office. Their resolution was headed by a quotation of Jeremiah 8:13: "They have healed the wound of my people lightly, saying, 'Peace, peace,' when there is no peace."

> We, as ministers of God . . . mourn with deep sorrow and a sense of unspeakable loss the murder of our brother, Dr. Martin Luther King, eminent preacher of peace, advocate of the power of nonviolent love, promoter and practitioner of true manhood.
>
> We who are white confess our implication in this tragic event by our failure to speak and act, clearly and specifically, with conviction and courage, to the attitudes of prejudice and patterns of injustice which produced the society in which this act could occur . . .
>
> . . . The grave crisis which is upon us is caused primarily . . . by lack of private and public will to put into action, at whatever costs, the professions we have so long and so easily made with our lips -- to do unto others as we would have them do unto us and to love our neighbors as ourselves.
>
> . . . Let us together . . . work creatively and selflessly for a new community, in

> which equality and justice for all prevail and in which no man suffers the loss of his human rights because of racial prejudice or arrogant paternalism.
>
> . . . We implore our mayor and city council to address themselves with swift dispatch to the forging of a mutually acceptable solution including agreement upon union recognition and dues check-off . . . .

The statement was concluded with a quotation from the New Testament: "And when He (Jesus) drew near and saw the city he wept over it, saying, 'Would that even today you knew the things that make for peace.'" (Luke 19:41-42a)

After the reading, Rabbi James A. Wax, head of the predominantly white Memphis Ministers' Association, made an impassioned statement to the mayor. He spoke in a loud voice and did not conceal his wrath. "We come here with a great deal of sadness and . . . a great deal of anger," he said. He told Mayor Loeb that what had happened was the result of oppression, injustice, and inhumanity and that they were appealing to him for leadership. He adjured the mayor to stop hiding behind legal technicalities and obey "laws greater than the laws of Memphis and Tennessee . . . the laws of God."

The mayor responded, according to the New York Times, "Each of us is sincere. I know your sincerity and I hope you know mine. Although we disagree on some points, each of

us is trying to do what we think is right . . . I thank you for coming up."

Clearly he thought the interview ended. But Dr. Ralph Jackson, converted conservative Negro minister, whose fiery preaching had moved and delighted Negroes throughout the struggle, now showed a different side of his personality in a tearful, sorrowing plea to the mayor. "We plead with you. We beg you, do not send us away from here again without an affirmation," he cried. He urged the mayor to blame the ministers, if necessary, but by all means to modify his rigid stance. But the mayor's position remained unchanged.

His next visitors were nine Negro teachers. They had just come from the airport where Dr. King's staff had enplaned for return to Atlanta with his body. They complained that they had been kept from "our dear Dr. King's body" by National Guardsmen with bayonets. They also rebuked Mayor Loeb for neither going to the airport nor sending a representive of the city.

OTHER REACTION IN MEMPHIS

On Friday morning, the Memphis Commercial Appeal offered a reward of $25,000 for information leading to the arrest and conviction of the murderer or murderers. The Scripps-Howard

chain offered another $25,000. On Friday afternoon, the Memphis City Council underwrote another $50,000, the bulk of which, councilmen were told, would be raised by subscription of Memphis businesses.

An anonymous would-be benefactor offered to give the union $25,000 to pay union dues for all of the sanitation workers for six months, so that there could be a cooling-off period. This was rejected with some vehemence by the union, and labor leaders explained that the prospective donor did not understand the situation: what was at issue was not money but the dignity of collective bargaining by these laboring men.

That person, whoever he was, was not the only one with good intentions who missed a point. The two daily newspapers, whose news and editorial policies were high on the list of grievances of the Negro community, predictably pleaded for calm and reason. But the lead editorial in Friday's Press-Scimitar interlarded some noble expressions with insensitive chauvinism: " . . . Dr. King, evangelist of civil rights, was cut down -- and deplorably in Memphis, one of the cities which has been moving most steadily toward the goals he advocated -- by the force he preached against: the violence of extremism." Again: " . . . his (the assassin's) act was a frightful disservice to the country, and an especially

stunning blow to Memphis." And again: "He (the assassin) has stained the nation and our city in the eyes of much of the world . . . ."

Nor could the paper refrain from reiterating, even on that sorrowful day, an opinion well-formed and oft-repeated among white Memphians:

> While granting him complete sincerity as to nonviolent purpose, the Press-Scimitar has felt -- and warned many times -- that his methods tended to produce violence, both sympathetic and antagonistic. This was due to the highly emotional nature of his speeches. The record of his visits to many cities, and at last Memphis, all too starkly bore out this warning.

On Sunday morning, Memphis citizens on their way to church passed police cruisers with four officers in each. The men wore blue riot helmets with heavy plastic visors. On their radios citizens might have heard a recorded message, mindlessly played by a local station, in which Mayor Loeb urged citizens to contribute to the Arts Council Drive, because the arts and culture "are the things that make a city great."

In a fashionable white church, a minister led the congregation in a prayer of confession. It acknowledged their implication in the assassination by their "failure to speak out clearly and quickly." It also acknowledged that "we cannot wash blood from our hands by pouring water over ourselves."

There were about half-a-dozen Negroes in the congregation at that service. Asked about them, one of the ministers explained ruefully that they were not members or even regular attendants, but had been invited especially on that day by some members who had Negro friends. "You may have noticed," he remarked, "that they were well looked after."

In contrast, the pastor of a Negro church, meanwhile, was telling his congregation that he had received a multitude of reports of abuses of Negroes by police and National Guardsmen, especially the latter.

The minister asked his parishioners to wire the President to request trained army regulars instead of National Guardsmen from rural Tennessee.

MEMPHIS CARES - BUT NOT MUCH

The Memphis Ministers' Association had scheduled a memorial service for two o'clock on Sunday afternoon in Evergreen Presbyterian Church. A group led by a Memphis businessman and calling itself the "Memphis Does Care Committee" suggested that a larger "Memphis Cares" meeting be held instead, in E. H. Crump Stadium. The ministers acquiesced.

About 5,000 people attended the "Memphis Cares" meeting. The racial composition of the crowd was about the same as that of the city's half million population --

60 per cent white and 40 per cent Negro. Attendance at the meeting had been urged by virtually all ministers at their services that morning and on television by dignitaries, including Mayor Loeb, all day Saturday.

Those attending were handed a printed program as they entered the stadium. It carried the following statement:

> We live in Memphis. It has been a good city, but far from perfect -- much less perfect than many of us realized. Something happened here which laid bare a side of our common life to which all too many of us had been blind.
>
> We are brother Memphians in name. We can become so in fact as we have never been before. We will not leave this to someone else, but each of us will take the responsibility upon himself.
>
> Our goal is a city in which a man's honest and openly expressed opinion can be respected, without fear of punishment or retaliation, and differences resolved in the understanding that we are all human.
>
> We therefore solemnly, in the presence of God and of one another, pledge ourselves -- our time, our effort, our resources -- and if need be, our lives themselves -- to the building of a city where people can trust one another, respect one another, and respond to the needs of one another.
>
> Memphis cares.

On the back of the program was a small section in which were printed the two words "I Care." A line for a signature was beneath them. Memphians attending were asked to sign this two-word statement, tear off the section, and drop it into a receptacle before leaving.

The program itself was very simple. It consisted of

the national anthem, an invocation, a hymn ("O God, Our Help In Ages Past"), an introductory statement, statements by eight "Memphians Who Care," unison reading of the "Memphis Cares" statement, a singing of "God Bless America," and the benediction.

The first of the eight speakers said, "The time has come when you must stand and be counted . . . choose your ground and stand on it." He did not suggest what ground. (It was learned later that those who planned the program sought to exclude specific mention of (1) the garbage strike, or (2) Dr. Martin Luther King. This prohibition was ignored by at least three of the speakers.)

Tommy Powell, head of Memphis' Central Labor Council, AFL-CIO, was the fifth speaker. He drew applause when he affirmed a laboring man's right to a recognized union. ("Look!" said one Negro to his wife. "There are some white folks applauding.") The loudest applause of the afternoon came in response to Mr. Powell's call for news media to present fairly and impartially both sides of issues.

The sixth speaker was Judge Ben Hooks, a Negro. He said that Martin Luther King was much misunderstood because the news media "will not tell the truth." Again there was loud applause on that point.

During the fifth and sixth talks, a reporter noticed a large number of white people drifting out of the stands --

a hundred or more. There was no obvious reason for this, so during the seventh speech -- by a businessman named Tom O'Ryan -- the reporter began asking a few of these departing what they thought of the meeting.

"You see me leaving, don't you?" snorted one elderly gentleman. Asked if he would say what he disliked about the meeting, he grumped, "Not for quotation," and kept walking.

The question was asked of two young men next. "That Irish fellow told it like it was," one of them replied. "A dual effort. I'm a young man, and I've never done anything to oppress a nigra . . . They're not going to ravage through the streets and endanger my family . . . If they want to practice what they preach, okay with me, but it's going to have to be a fifty-fifty proposition."

Another elderly man on his way out volunteered good-naturedly, "This thing has turned into a nigger protest meeting, hasn't it?" He explained that he had thought it was to be a memorial service for Dr. King. He was glad so many whites had come to show that they cared, "regardless of what they hear . . . But I don't like these nigger preachers making all those rabble-rousing speeches."

Two middle-aged women were next. "I'm disappointed," one said. "I came to support the mayor and the city, not to honor King -- although I'm sorry . . . I do feel that it's

good that Negroes and whites can sit together like this. It certainly does no harm . . . I'm just sorry the mayor is not here. He's in a tough spot. He needs support."

By that time the meeting had ended. A Negro man was asked what he thought of it. "Nice meeting," he answered, "if they do what they say; not say one thing, then turn around and do something else."

A white man and his wife, with their son, were among the last to leave. The boy, about eight years old, was wearing a "Charlie Brown" sweatshirt which read, on the back, "HOW CAN WE LOSE WHEN WE'RE SO SINCERE?"

"That was about the right shirt to wear, wasn't it?" the father asked. He said he felt "sort of two ways" about the meeting. He too thought "the Irishman" had put it best -- that it is something for the whole community to work out, not just the whites. He was fatalistic. "It's been this way since time began. There's no reason to think this will change things very much for very long."

This wholesome-looking family had recently moved to Memphis from Houston, where they had lived when President Kennedy passed through en route to Dallas. The man said the atmosphere in Memphis before Dr. King arrived was much like it was in Houston before President Kennedy came through -- "people said they wished he were dead." "And since King was shot," he went on, "I have heard numerous

comments to the effect that they are not sorry he was shot -- just sorry it happened here."

A policeman directing traffic at the gate of the stadium motioned a Negro motorist toward a different lane, yelling, "Pull it on over here, boy!"

One reporter viewing the crowd had said before the meeting began, "Memphis cares -- but not much."

THE MASON TEMPLE MEETING

Far more than 5,000 people, all but a tiny fraction of them Negroes, gathered later that afternoon in the Mason Temple of the Church of God in Christ. The multitude rippled with the movement of life and vibrated with its sound.

They heard Jerry Wurf, International President of the striking union, tell them that "if it has to go on for a week or a month or a year, these men are prepared to go on!"

They heard Tommy Powell declare that he had been dissuaded, by some of "supposedly goodwill," from saying something he had wanted to say at the "Memphis Cares" meeting. They had admonished him that it would be "too political." "But I want to ask you here to join the Memphis Labor Council in calling for the resignation of Mayor Loeb!" In an instant the people were on their feet and cheering.

They heard and loved the inimitable Dr. Ralph Jackson:

"I'm sick and tired of white people trying to ease their consciences by calling in a few of us to talk to them . . . It's time for them to spit -- I said spit -- or get off the pot!"

He told the people that, if Dr. King could give up his life, they could give up a day's work to make the march the next day. "We want everybody on that march. We want everybody! We want everybody! Everybody! Everybody! Everybody! Get on the telephone and tell everybody! Tell everybody to tell everybody! Tell everybody to tell everybody to tell everybody!"

THE MEMORIAL MARCH

Federal Judge Bailey Brown had agreed on Friday, April 5, to lift the ban he had issued against a march on the following Monday. His cancellation of the restraining order was subject to an eight-point agreement:

(1) The march had to begin after nine a. m. and end by five p. m.

(2) Marchers had to walk no more than eight abreast.

(3) There had to be internal policing, by persons selected and trained as marshals by march leaders.

(4) Placards could be carried, but could not be

mounted on sticks.

(5) There would be no limit on the number of marchers.

(6) There would be no minimum age for marchers.

(7) Young people and older people had to be well mixed in the line of march.

(8) Arrangements had to be made for fast, high-level consultation with the court and police to take care of contingencies.

This agreement was negotiated by Bayard Rustin and his assistant, Norman Hill, both of whom accepted much of the responsibility for organizing the march, with the help of the few SCLC staffers who could be spared from funeral preparations in Atlanta.

Plans called for 500 marshals -- young militants among them -- 50 captains, and 20 chief marshals, There would be a public address system sufficient for a crowd of 40,000. Three principal messages were printed on hundreds of placards: "UNION JUSTICE NOW," "HONOR KING: END RACISM," and "I AM A MAN."

Monday was a cool, slate-grey day. A threatened rain never materialized. People started gathering at Clayborn Temple before eight o'clock, although the appointed hour

was ten o'clock -- the march to begin promptly at eleven.

Unionists arrived from all over the country. A very large delegation came from the New York United Federation of Teachers, AFL-CIO. Just a few of the others represented were the Texas AFL-CIO; the Maritime Union; the Councils of American Federation of State, County, and Municipal Employees from Michigan, Arkansas, New York, and Louisiana; and the "Cincinnati Labor Movement."

There were civil rights groups from Chicago, Milwaukee, Forest Park, and Peoria, Illinois. There were representatives of the New York School of Social Work and of the Negro Benevolent Society, Inc., Department of Sanitation, City of New York.

Mrs. King's plane had been delayed in leaving Atlanta because of weather conditions, but the march was begun at eleven-twenty anyway. Two huge trailers had been so placed on Hernando Street as to form a funnel through which only eight people could pass abreast, and the march started through that passage.

The Rev. Mr. James Lawson and Dr. Ralph Jackson led the way. The front rank also included Walter Reuther; T. O. Jones, president of the striking local; Jerry Wurf; and Dr. Benjamin Spock.

There were quite a few local white ministers in the march. There were members of the militant "INVADERS"

wearing yellow arm bands to indicate that they were marshals. Councilman Jerry Blanshard, the only white member of the city council to vote with the three Negro members throughout the dispute, marched near the front.

Silently the march passed battle-geared, helmeted Guardsmen stationed in front of a fire station, construction sites, and vulnerable store windows. Double ranks of Guardsmen sealed off all side streets. They stood at parade rest, the muxxles of their rifles thrust out before them at arm's length. Unsheathed bayonets pointed upward toward the line of march like the points of a listing picket fence. For the most part, the Guardsmen looked straight ahead, but could not keep their eyes from following a bearded young photographer with flowing locks who minced past them on sockless feet.

Guardsmen were visible on the roofs of tall buildings. A city policeman stood at the corner of Linden and Main with an automatic weapon at the ready. A motorcycled "special officer" with a bolt-action rifle slung on his back idled his rumbling machine alongside the silent marchers.

There was a delay of about ten minutes at Main and Beale. Then, at eleven-fifty-five, Mrs. King took position at the head of the march, along with the Reverend Messrs.

Abernathy, Young, and Williams of the SCLC staff, and Harry Belafonte.

One marcher wore a T-shirt lettered, "I Had A Dream -- 4-8-68." Another walked in striped prison trousers and carried a sign that read "Out With Loeb and His Butchers."

A man in the rank behind Councilman Blanshard carried a high frequency radio receiver tuned to the police band. Mr. Blanshard told another marcher he was mortified to hear the police dispatcher repeatedly give directions like "Large number of male niggers at Main and Union . . ." or "Two niggers spotted in window on north side of the hotel . . . ."

On the sidelines, some spectators had climbed into a display window out of which the glass had been broken during the March 28 "riot." A sign on the intact window of one shop read "Closed Monday in Memoriam to Dr. Martin Luther King." There was a floral spray on the door. The display compartments were bare -- just in case.

Two elderly Negro women stood weeping and wiping their eyes. One old Negro man said to another, "Well, we've lived to see some history."

There were many young Negroes in the march. A sizeable number of bitter-loooking, hard-eyed teenagers walked along behind spectators, occasionally stopping to watch. Four or

five of them stopped to talk in the entry of a vacant store. One idly stood on tiptoe and picked up a broken piece of heavy wooden molding from the top of a column. He hefted it a couple of times with his hand, then, grinning, replaced it.

As that group moved on down the sidewalk, another member of it grinned at his buddies and asked jokingly, "Ya'll ready now?"

Three tough-looking young white men stood on the curb monitoring police calls on a portable receiver and making comments. As a group from the Amalgamated Clothing Workers passed, carrying their identifying sign, one of this trio said, "Aglamated . . . algam . . . what's that?" And one of his friends replied, "Don't know. Must be some kind of sick nuts."

Another group of three or four whites were laughing on a corner. They kept glancing appreciatively at the National Guardsmen stationed there. "They better not start a riot," one remarked. "Yeah," his friend agreed with a smile and a nod toward the troops. "If they start a riot, there's gonna be a big funeral in Memphis."

The ceremonies were started in the plaza in front of city hall before even half of the marchers had filed in. They were still coming, four abreast, when the speech-making was more than half over.

There were brief remarks by Ossie Davis, Harry Belafonte, Mrs. King, Jerry Wurf, Dr. Spock, Dr. Ralph Jackson, and James Bevel. Congressman John Conyers of Michigan introduced Mrs. Rosa Parks and Congressman William F. Ryan of New York.

The principal address by the Rev. Ralph Abernathy was, in the main, an expression of determination. "We are on our way to Washington," he said. "It became necessary for us to detour by way of Memphis . . . We are going to Washington, but we are going to stay here in Memphis until this problem is solved."

After he had spoken, Don Slaiman of the AFL-CIO Civil Rights Division brought a message from George Meany, president of the organization. "The struggle of the sanitation workers here in Memphis is the struggle of all organized labor." He looked forward to black and white working together in a solid program, "starting today."

Walter Reuther announced a donation of $50,000 from the United Auto Workers strike fund to Memphis sanitation men. He added, "I want to say to the mayor that, if it takes more than this, there will be more coming." (On the same day that Dr. King was murdered, the AFL-CIO donated $20,000 to start off a nationwide appeal to unions for funds for the Memphis strike.)

BACK-THE-MAYOR CAMPAIGN

Determination seemed no less on the other side. A local newspaper the next day reported that the Jackson Avenue Lions Club had sent Mayor Loeb a telegram stating that the club was "standing 100 per cent behind you." The message had the approval of the Lions Club International, according to the article.

It was also reported that a letter and telegram campaign in support of the mayor was underway. Apparently it was organized very well indeed. As of that date, the mayor had received 1,809 telegrams backing his stand. Of 22 telegrams opposing,it, only seven were local. There were 307 letters favorable to the mayor. Of 56 unfavorable letters, only 14 were local. Fifteen letters of support had been received by special delivery before the regular mail delivery on that day. More than 1,000 signatures had been obtained on petitions of support for Mayor Loeb.

Mrs. Bee Clark, who heads the Western Union credit department in Memphis, said, "Everybody in town is sending telegrams. I've never seen anything like it. You would think it was the end of the world."

STRIKE SETTLEMENT

Shortly before the assassination Mayor Loeb had said,

"I'll never be known as the mayor who signed a contract with a Negro union." Until the tenth week of the strike and for 12 days after the assassination, he kept that vow.

Undersecretary of Labor James Reynolds arrived in Memphis the day after Dr. King's murder. He had orders from President Johnson to mediate in the labor dispute. There had been no attempt at federal intervention before, despite the outbreak of violence on March 28. The first Southern Regional Council report on Memphis noted the failure of "other agencies of government, state and federal, which might be expected to act toward mediation and reconciliation when a city did not." Only after murder did action come on this level, as in the Congress of the United States with passage of the 1968 Civil Rights Law, and in other matters which must have seemed to Negroes "too little, too late." Non-binding mediation had been initiated locally with the very capable help of Frank B. Miles, former labor leader and Department of Labor mediator, whose services were donated by the Memphis lumber company which presently employs him. Those negotiations had collapsed before the assassination.

Finally, on April 16, an agreement was reached. The union won recognition by resolution of the city council -- a better form than they had anticipated, as union negotiators

had previously suggested a mere exchange of letters as a face-saving device for the mayor. A contract included union dues check-off through the city employees' credit union, a good grievance procedure, and wage increases of ten cents per hour May 1 and another five cents in September. The period of the contract was 14 months. Members of Local 1733 approved the agreement unanimously. The city council vote was 12 to 1.

Memphis Negro ministers plan to continue the organization they formed to support the strike. (It was called Community on the Move for Equality, or C.O.M.E.) Mass meetings on a regular basis have been discontinued. The general boycott of downtown stores has been called off, but not the one against Memphis' two newspapers. Selective boycotts are planned, aimed at securing jobs for Negroes and business investment in the black community. A group of 1,000 Negro women is being organized to back these and other efforts.

MEMPHIS, A MICROCOSM

So, in Memphis, black people successfully asserted their manhood and dignity and won a point of justice -- but at a terrible cost. If that is the end of the matter, what will really have been proved is that in Memphis, in America, justice costs too dear -- and, perhaps, that liberty is less

likely than death. There can be little doubt that Mayor Loeb and the city fathers of Memphis were faithfully reflecting the temper of whites in their city. By many indications they were reflecting, as well, the mood of the nation.

Amid all of the racism still obvious in Memphis there were faint, hopeful signs of change. For one thing, as we have seen, some white clergymen at last were moved by the situation. For another, the Chamber of Commerce scheduled, one day after the settlement, a serious meeting of local businessmen with Negro and white ministers to talk about a large-scale program of employment and on-the-job training. Observers said that growing pressure from the business community was an important factor in moving the mayor and city council to settle the strike. In calling for the original boycott, Negro ministers had told their followers that "Loeb won't listen to you, but he will listen to the downtown merchants." In itself, the merchants' response to economic pressure may mean only the sort of tokenism which pragmatic businessmen in many southern cities have advocated, particularly on the issue of school desegregation, as the minimum change necessary to avoid economic loss. It remains to be seen, of course, whether the existing unity and determination of Negroes in Memphis

will continue, and whether political, industrial, and civic leaders have really learned anything about responding to protest or from the murder of one of America's greatest men.

The same is true of the nation. An article in the New York Times (April 14, 1968) reported that a new strategy for handling riots has been worked out by Attorney General Ramsey Clark and others, including Deputy Secretary of Defense Cyrus Vance. The method was tested in some cities during Negro outbreaks following the assassination. Both as a matter of tactical necessity ("the other side has guns") and for humane reasons, the new strategy calls for massing large numbers of law officers and troops, using tear gas extensively, but refraining from firing upon people -- even looters and arsonists. Proponents of the plan argue that this technique in fact minimizes property damage as well as deaths, although they frankly say that human life must be valued above property. It is perhaps significant that none of the disorders where the method was used developed into full-scale riots, thus saving property as well as lives.

At almost the same time, however, the mayor of Chicago insisted that arsonists are, in effect, murderers. He ordered Chicago law officers to "shoot to kill" anyone caught in the act of arson. He also ordered them to "shoot to maim or cripple" anyone looting. (New York's Mayor Lindsay

pointed out that many who were shot as "looters" in the 1967 riots were, in fact, innocent.)

It remains to be seen, therefore, in America as in Memphis, whether the ruling majority will insist on brutal measures of repression, easier in the short run, in response to minorities which protest grievances. It should be clear by now that Negroes and other minorities cannot allow present conditions to continue and, in the absence of redress of legitimate grievances, will use ever-stronger forms of protest. It should also be clear that a few, especially among the young, have despaired and, in frustration and anger, may resort to violence -- against property, if not against people.

A former mayor is fond of saying that Memphis is "always doing the right thing for the wrong reason" -- meaning that the city takes right action only when necessary to prevent a loss to its good image or economy.

It is to be hoped that Memphis has learned from its travail to respond to legitimate protest in a timely manner, to respond with dignity to citizens acting with dignity. The alternative is clear: unavoidable escalation of protest, bringing white violence against black protestors (the common southern pattern), and danger of the newer pattern of Negro violence against property, with indignity and tragedy for all.

The fundamental issues of quality education, housing, and jobs -- and the dignity of which they are part -- are not settled in Memphis or elsewhere in the nation. Memphis is America in microcosm. The sickness which led to the death of Dr. King can lead to the death of the United States. The only atonement for this murder, the only hope of national survival, is fast, full action to remedy the wrongs of racism.

Southern Regional Council, Inc.
5 FORSYTH STREET, N. W. ... A 30303

A Council to attain the ideals and practices of equal opportunity for all peoples in the South

FIELD ACTIVITIES NEWSLETTER
August 9, 1968

This is to say goodbye and, at the suggestion of Paul Anthony, to tell you a little about what the SRC is doing that involves my moving.

Before the end of August we Stanfields will be moving to Austin, Texas, where I am to be executive director of a new agency, the "Southwest Intergroup Relations Council." SIRC will be a counterpart in the Southwest to the Southern Regional Council. It will be multi-ethnic, its membership composed of Mexican-Americans and Indian-Americans, as well as Negroes and Anglos. It will work in an eight state region, including Texas, Oklahoma, New Mexico, Arizona, Colorado, Nevada, Utah, and California, -- roughly, those states having a large Mexican-American minority, a large Indian-American minority, or both.

The steering committee for the SIRC has made an arrangement with the SRC whereby I shall continue on the staff of the SRC for up to six months, but shall be assigned to the SIRC with an allowance for travel and related expenses. After that the SIRC will be "on its own" -- for better or for worse, for richer or for poorer, in sickness or in health.

The steering committee for the new agency envisions an eventual membership of about 300 and a Board of Directors of 50. Knowledge and experience in ethnic-group problems and intergroup relations, geographic representativeness, and ethnic representativeness will be important considerations in choosing members. Care will also be taken to assure that poor people, young people, and -- yes -- women will be well-represented in the membership and policy group. New members and Board members will be elected on nomination by a membership committee. The majority of that committee will be chosen by the existing membership on nomination by various ethnic-

group organizations. These organizations, community organizations, and institutions may join a "Cabinet of Organizations" on which the SIRC will rely for advice and consultation.

The new agency will be incorporated in the State of Texas and will locate its office in Austin, at least for an interim. (The steering committee left open the possibility of moving to a city more central to the region at a later date.)

Much of the credit for instigating this new agency must go to Professor Joseph P. Witherspoon of the University of Texas School of Law. Mr. Witherspoon is a distinguished legal scholar and teacher. He is also a community leader in Austin. Among other things, he has been instrumental in securing an effectively-structured Community Relations Commission in Austin and in getting reforms in the local police department. He has made himself an expert on civil rights law and its enforcement. It was Professor Witherspoon who convened an ad hoc committee, which in turn selected a steering committee, for a Southwest Intergroup Relations Council.

Other members of the steering committee are:

--Mario Obledo, recently selected as General Counsel for the new Mexican American Legal Defense Fund, San Antonio, and formerly Assistant Attorney General of Texas;

--The Reverend Henry J. Casso, San Antonio, Civil Rights Chairman, Texas League of United Latin American Citizens (LULAC);

--Mrs. Lorella M. Salazar, Bernalillo, New Mexico, an employee of the Sandia Corporation (industrial relations) and formerly head of the Albuquerque office of Senator Anderson of New Mexico;

--R. P. (Bob) Sanchez, McAllen, Texas, Labor and civil rights attorney, and leader in the American G. I. Forum;

--Clarence A. Laws, former executive secretary of the Texas NAACP, now Regional Director for Civil Rights, Department of Health, Education, and Welfare, Dallas;

--The Reverend C. William Black, San Antonio pastor;

--John B. White, President of the Oklahoma Equal Opportunity Association, Oklahoma City;

--T. D. Armstrong, Galveston, Texas, businessman;

--The Reverend Charles E. Sanders, Secretary of the Original Cherokee Community Organization, Stilwell, Oklahoma;

--Stuart Trapp, Legal Counsel, Original Cherokee Community Organization, Tahlequah, Oklahoma;

--Vine Deloria, past executive director of the National Congress of American Indians, and now a law student at the University of Colorado in Boulder.

--William Canby, Peace Corps Director in Uganda, 1964-66, and now Professor of Law and Director of the Office of Indian Law, Arizona State University, Tempe, Arizona;

--Robert A. Beer, president of Robert Beer and Company, Realtors, and Vice-President of the Dallas Real Estate Board.

While we leave Atlanta with reluctance and certainly will miss our associates here, I am excited, of course, about the possibilities of the SIRC.

Our home address, after August 26, will be 2801 Silverway Drive, Austin, Texas 78757.

--Edwin Stanfield

The Southern Regional Council, Inc.

--Prepared for presentation to the Atlanta Commission on Community Relations, February 23, 1967, by J. Edwin Stanfield, Director of Field Activities, Southern Regional Council.

Paul Anthony, Executive Director of the Southern Regional Council, has asked me to express first of all our good wishes to the Atlanta Community Relations Commission and our full support of it. We are pleased that the city council has provided the Commission, believe that the choice of its members bodes well its future, and stand ready to give any assistance we can to make its work successful.

We appreciate the opportunity to describe briefly the Southern Regional Council, its program, and the resources it can make available to the Commission. We appreciate, too, the invitation to offer suggestions about the work of the Commission. On the latter point, however, we are confident that the members and staff of the Commission are well aware of the problems and opportunities they face, and it would be presumptuous of us to attempt to enlighten the Commission about conditions and needs of which it is well-informed. Suffice it to say that we will be happy at any time to consult with the Commission or its staff about any particular concerns or problems in the city's intergroup relations.

The Southern Regional Council is a regional agency, its primary program consists of research and publication, and such action projects as we conduct (which I shall describe briefly)

are carried out largely through other agencies--including the state and local councils on human relations which are closely associated with the S.R.C. For these reasons it is necessary to point out that there are limitations on the extent to which we can devote our efforts and resources to any one city in the region. However, we are conscious of our citizenship in Atlanta and we want to be responsible citizens, not only from a sense of obligation, but also because we look hopefully to Atlanta as the hub of the South to fulfill its promise as an exemplar of good community relations for the whole region.

The Southern Regional Council has offices in Atlanta since it was chartered in 1944. Among the incorporators were Ralph McGill, then editor of the Atlanta Constitution, and Dr. Rufus Clement, who is still president of Atlanta University.

The foundation stones of our program are research and the publication of information. We consider our library and research staff chief bulwarks against easy answers and facile slogans. We are proud of our reputation for objectivity and as a reliable source of information. We are committed to a just society in a South in which people of all races and backgrounds may have equal opportunity and may live together in openness and dignity. To achieve this goal we rely heavily upon research and the persuasive force of education to inform our skills of community organization.

We innaugurated and work closely with councils on human relations in ten southern states and their local affiliates.

We serve as the secretariat for the Southern Interagency Conference, which links together for mutual counsel and coordination most of the agencies working in intergroup relations in the South. These range from the more militant civil rights groups through the service agencies of various church groups and the YWCA.

The Commission may be especially interested in five special projects which we are currently carrying out:

The Voter Education Project is a program of voter registration, citizenship education, and leadership development designed to enable minority group citizens to participate in the whole political process.

The Labor Project seeks to inform labor leaders about social change in the South and to help them relate to it constructively.

The Community Organization Project provides technical assistance to organizations of the poor and of Negroes to improve the conditions under which they live and includes such endeavors as credit unions, marketing cooperatives, purchasing cooperatives, cooperative business and industry, and neighborhood improvement organizations.

The Project in Crime and Corrections wrestles with problems of criminal rehabilitation, prision administration, and juvenile deliquency.

The Housing and Urban Planning Project seeks to get considerations of good human relations included in urban planning, works for

good housing and non-discrimination in housing opportunities, nieghborhood stabilization, and the like.

This outline is not exhaustive, but is indicative of our current program concerns. I can assure you that you will find us responsive to any call for assistance from our resources of knowledge and knowledgeable staff persons.

SOUTHERN REGIONAL COUNCIL, INC.
5 FORSYTH STREET, N.W., ATLANTA 3, GEORGIA

MEMORANDUM June 9, 1967

To: Pat Watters, Bob Anderson, Glenda Bartley, Jim Wood, Emory Via, Vernon Jordan and Marvin Wall, Ed Stanfield, John Boone, and Moreland Smith.

From: Paul Anthony

- : -

You may recall our meeting in early May at which it was agreed that you would prepare program reports for the first six months of the year. This would be a very brief report similar to the ones done last year; to be sent to the Members of the Council and a few others. These reports created a great deal of interest last year, and I think they will again this year.

I would appreciate having these reports as soon after July 1st as possible, and would hope to have them in the mail by July 15th.

Also, as we discussed, I would appreciate a second report from you with any comments you have at this time about:

(1) Major program and policy questions which staff should begin considering, and which should in time come before the Executive Committee;

(2) Any future needs in the way of staffing and money for your work in the future;

(3) Emphases which your departments should have in the future and if, indeed, your work should be continued after 1968.

We may have a major portion of the Annual Meeting in November devoted to a discussion on the future of SRC. If so, we shall need a very specific agenda incorporating the staff's opinions on questions, as well as answers.

We will definitely have a meeting of the Executive Committee to consider these matters sometime during the winter. At the moment, I hope this can be a special meeting of the Committee of two days duration -- perhaps somewhere away from the office.

The first of our evening dinner meetings will be at Moreland's home on Monday, June 19th. Cliff Campbell, and perhaps others of the Ford Foundation will be invited to attend. Incidentally, Campbell will be here on Monday and Tuesday, June 19th and 20th. I hope you will be available during that time.

URBAN PLANNING PROJECT

January-June, 1967

In the first six months of 1967, the Urban Planning Project has continued its contacts with the Department of Housing and Urban Development - Federal and Regional Office, as well as six local communities selected by the Department of Housing and Urban Development - Regional Office. From the six community's study of housing, planning and renewal programs, the following publications were produced:

1. Neighborhood Stabilization: A Program
2. A Home of Our Own
3. Mr. Mayor - Slum Ghettos in Your City
4. Neighborhoods Where Human Rights Begin
5. A Guide to Programs for Better Homes and Neighborhoods
6. Atlanta Residential Patterns: A Map
7. Blueprint for Segregation: A Survey of Atlanta Housing

The distribution and reception of these publications would indicate that their use is of value. As a matter of fact, we are forced to consider the possibilities of reprints.

Number 5, A Guide to Programs, was circulated to 2,000 individuals with the request that comments and suggestions be submitted to us anticipating a rewrite. This revision is in the process and we hope to have this published by September. From

the questions that come in from the field, and the indications of our field investigation, would indicate that this publication should be useful and effective. If this does not prove to be the case, we must find ways to implement it.

The Urban Planning Project has continued to serve as a resource on housing and urban problems to various organizations in about 16 communities. We have furnished consultants to Houston, New Orleans, and more particularly, to Atlanta. It is hoped that through this dialogue our cities will more forcefully approach their planning with greater attention to equal opportunity for all citizens.

The Urban Planning Project has furnished architectural consultation to the Crime and Corrections Project, and this work is covered in the report of that Project.

In addition to two trips, (Kentucky, and Washington, D.C.), taken in the interest of the Crime and Corrections Project, several trips have been undertaken to Washington, D. C., to council with the Department of Housing and Urban Development - National Office; several trips to Ft. Lauderdale and two trips to Houston continuing our advisory capacity to these cities. It was interesting to work with the Voter Education Project concerning Ft. Lauderdale; and although this did not come out the way either of us wished, we feel that the unity and awareness

developed will bear fruit in Ft. Lauderdale. It was revealing also as to the dedicated, committed opposition the Southern Regional Council is up against in trying to develop urban planning techniques for all citizens.

The Houston Council on Human Relations, has done some excellent work in producing a thorough study on housing in preparation for programmed work on neighborhood stabilization. It was in connection with neighborhood stabilization that the Urban Planning Project forwarded the outside consultant. Houston has a unique problem, in that, it is a large city with no zoning. However, this has not divided the Houston Council on Human Relations' very fine committee on housing to forge ahead in an excellent effort.

The Urban Planning Project is carrying on a continuing consultatation with the Georgia Mental Health Director, trying to effect better integration of Mental Health Services at the local level.

Several regional and national organizations have sought advice from the Urban Planning Project, and these contacts should prove mutually constructive.

For the future, we will continue to be consultants to communities and organizations, insofar as time will permit. It is

quite apparent that as necessary as "do it yourself" publications are they will not do the job alone. "Advocacy Planners" of things and doing for the disadvantaged neighborhoods are the missing element. The Southern Regional Council can be, and is trying to be of some help in this connection.

The Urban Planning Project is also continuing to forward a metropolitan master plan pilot study in the Southeast.

NOVEMBER 1968

PROFILE OF ROBERT A. THOMPSON
1850 Penelope Road, N. W.
Atlanta, Georgia

Born: Pocahontas, Virginia - July 14, 1910

Marital Status: Married, One Daughter

Education

Elementary and High School - Lynchburg, Virginia
Morgan State College, Baltimore, Maryland - B.S. Degree, 1932

PROPOSAL

FOR

A HOUSING

AND

REGIONAL DEVELOPMENT PLAN

FOR

ATLANTA

Submitted by
THE SOUTHERN REGIONAL COUNCIL, INC.

5 Forsyth Street, N. W.
Atlanta, Georgia 30303

CONTENTS

A Summary and Introduction

Section A: Proposed Immediate Steps on the Immediate Problem: Housing Discrimination and Low-Cost Housing Shortages

(This is a recommendation for a second Mayor's Conference on Housing; its advance preparations; its program; and its follow-through.)

Section B: Atlanta as a Potential American Pace-Setter in Multi-Dimensional Regional Planning: The Southern Regional Council-Doxiadis Associates Discussions

Part I. Proposal for a Southeastern Study. (This is a paper which was submitted by the Southern Regional Council to Doxiadis Associates, Inc., outlining the Council's thought on what an Atlanta-centered regional study should involve.)

Part II. Proposal to the Southern Regional Council. (This is a paper which Doxiadis Associates, Inc., submitted to the Southern Regional Council in response, defining proposed objectives and estimating the cost of the feasibility study at approximately $15,000.)

Part III. About Doxiadis Associates (Business Week cover story on Constantinos A. Doxiadis and his firm's work; news release on Dr. Doxiadis' receipt of the $30,000 Aspen Award in Humanities in 1966; biography of Dr. Doxiadis; excerpts from the Doxiadis book Architecture in Transition; other printed materials.)

Part IV. About the Southern Regional Council. (This is a statement of the role which the Council believes it should fill in the changing South of today; a suggestion of its resources; and the reasons for its interest in an Atlanta-centered regional plan.)

Section C: Atlanta Housing Study

(This report by the Southern Regional Council published early in 1967, in part parallels reports made for the Community Improvement Program and the National Committee Against Discrimination in Housing.

(Its additional dimension is important, however. It was written by a former newspaperman, a Negro whose research included many weeks of interviews and who has been the first Negro resident on one of Atlanta's all-white, middle-class streets. Its assessment of the how of housing discrimination in Atlanta is especially important in any consideration of how the city might end the practices of the past and present.)

Section D: Reports and Editorial Comments

(Wall Street Journal report on how anti-discrimination programs are working, and why many are not; initial Atlanta church interest in eliminating housing discrimination; Atlanta Journal and Constitution comments on the need for breaking up ghettos and stabilizing transitional neighborhoods; legal developments in the housing field.)

A Summary and Introduction

This report is founded upon a concept of Atlanta as a new kind of city, new in more than modernity.

It proposes first steps toward tying Atlanta more directly to its trading area, covering most of North and Middle Georgia, in a co-prosperity plan. This would entail extensive economic analysis and regional planning of a kind not previously undertaken. Preliminary discussions have been held with Doxiadis Associates, international planning firm, toward this end. (See Section B.)

This report also calls for a new phase in Atlanta's attack upon its immediate problems of housing, including a second Mayor's Conference on Housing. (See Section A.) We do not regard housing as Atlanta's only big problem, nor do we see it as an isolated problem. We see it as an immediate and critically serious obstacle to what Atlanta can be as a regional and international city.

Solution of the housing problem has become the "that without which" of Atlanta's forward movement. In Section A, we propose next steps for elimination of housing discrimination and shortages of low-cost housing, especially for Negroes.

It is essential that Atlanta begin to plan its future not just in terms of the present city area, or just in terms of its five-county metropolitan area. Even a hasty analysis of its housing problem leads immediately to questions about

the location of jobs, the route of transportation lines, the development of suburban concentrations that are actually more urban than suburban, the means of properly distributing community services -- questions of how a city may develop with maximum efficiency and maximum concern for human needs. These questions, in turn, lead to the conclusion that Atlanta's development must be coordinated with the development of a large surrounding area, substantially beyond its immediate five counties.

(Already the Forward Atlanta program is feeding benefits out to that broad area. Already the trends in those counties are having heavy, constant impact upon Atlanta itself.)

Where should Atlanta-region heavy industry be? Where should low-skill jobs be? Where should the housing for people in those jobs be? Where should new satellite cities of commuters be? Where should new schools, parks, feeder bus lines and sewers be? Where should new community colleges and technical schools be?

These are questions that cannot be separated from more urgent and potentially explosive questions about how Atlanta is to bring more of its ghetto poor into the mainstream, with adequate jobs and housing, and with dispersal throughout the metropolitan area.

For that reason, our proposal is in two parts. It might be called short-range and long-range; but those descriptions

would not be quite accurate, since we believe both parts must be undertaken now, and the two parts are not separable.

WHAT SRC'S ROLE WOULD BE

We outline suggestions in Section A for a second phase in the Mayor's attack upon housing problems. The Southern Regional Council could provide assistance with information and planning aspects, as indicated. We also could provide limited manpower and funding: for example, to enable the proper agency to employ two knowledgeable persons for three months, perhaps obtaining them through the U. S. Conference of Mayors; and funds for limited program needs in connection with the undertaking.

In Section B, we note that a regional plan feasibility study by Doxiadis Associates would cost approximately $15,000. We believe these funds should be found locally, and we would undertake to help with that in any way feasible.

The Council's staff also would be ready to provide limited services of a research, advisory and secretarial nature from time to time for the undertaking outlined in both Sections A and B.

The Council's concept of its own relationship to these basically local endeavors is further set forth in Section B.

SRC Staff

Profile of Leon S. Eplan

Born: Atlanta, Georgia

Marital Status: Married, three children

Education:

Elementary and public schools - Atlanta, Georgia

Graduate of Emory University - Atlanta, Georgia

Graduate Degrees in Sociology from the Universities of Tennessee and North Carolina, respectively

Advance studies at the University of London, School of Economics.

Employment:

Presently, Vice-president and partner of Eric Hill Associates, Inc. Community Planning Consultant of Atlanta and Winston-Salem, North Carolina.

He has prepared comprehensive plans, central business district studies, economic development analyses, urban renewal and housing reports, zoning and subdivision regulations, airport plans and related studies for public and private clients.

He participated in the preparation of the economic feasibility studies for the new Atlanta Stadium, investigating the housing requirements for the fast growing Orlando-Cape Kennedy Urban Complex, has worked on the problems of several depressed area communities, including work for the Appalachian Commission, and is engaged in the planning of Atlanta Rapid Transit System.

He is presently working on the Model Cities Program in Atlanta and Gainesville, Georgia

Professional and Political Affiliations

Served as President of the Georgia Section of the American Institute of Planners, and is currently vice-chairman of the Southeastern Chapter of the Institute.

Vice-chairman of the Fulton County Democratic Party.

Sits on the Southeastern Board of ADL, as well as the Alumni Council of Emory University.

UNFINISHED BUSINESS

BY ROBERT J. NASH, AIA
A member of the AIA Task Force addressing itself to Whitney Young's Portland convention speech, the author practices architecture in Washington, D.C.

A Black Architect Speaks Frankly

The black problem in this country is no longer a white problem. It is a black problem.

This is not to say that white assistance, both economic and political, is no longer relevant. White assistance is not the issue; the issue is the form and spirit in which that assistance is offered.

Whites can no longer be the paternalistic, stumbling, confused stepparents of blacks. Blacks, in turn, are now at the point where it is necessary for them to take a massive, collective, objective look at themselves. The first step toward the solution of the black problem must be an accurate definition of that problem—with black people doing the defining.

This is novel. And it is difficult, for whites have diluted the true definition of the problem to such a degree that it becomes impossible for blacks to maintain a black focus. White people do not understand that their simple presence at a meeting of Negroes can throw askew the very objectives of the meeting.

They have never had to understand the problem of being a black man in the United States of America. The problem, to be sure, traces back not to just the beginning of slavery here but to slavery abroad as well. White domination of blacks is not unique to this continent. England subjugated many classes and cultures in the name of British expansionism, better known as imperialism.

But if the American white man can claim credit for anything new it is certainly his invention of psychological slavery and its end-product, the American Negro.

The best way to keep the black race in slavery, the white man felt, was to add to the guns and chains a deliberate process that would make these once proud people believe they were—and the conditioning extends to this day—no better than slaves. The dehumanizing process began with the slaveowners' forcing of the blacks to identify with slavery as a way of life.

The results of this inculcation still linger in today's urban ghettos. Through a very long history, the black man sees himself not as a man but as a slave. Obviously, euphemisms becloud essences, and black people are now, nominally, "second class citizens," but it all suggests to me that "a rose by any other name smells just as sweet!"

The no-more-than-a-slave attitude has had a devastating impact on blacks in this country. The physical separation of black men from their wives and families was slavery's crowning cruelty. And slave children were prepared for this in the only possible way; they were indoctrinated in the system, a system which branded blacks as slaves whose own lives were clearly secondary to their owners' economic needs and comforts.

The owners were white, of course, which meant that if you were black, and you enjoyed some freedom from abuse, you were regarded as "white," or something akin to it, because whites took no abuse. They only dished it out.

And the dishing out and subjugation continued after slavery. Relentless in both application and form was the brainwashing. Some of it was pretty bald, like the Jim Crow segregation laws which in no uncertain terms let black people know they were Nature's undesirables. The voting system, on the other hand, was the ultimate in subtlety. But the product of the system was elemental mathematics: It took roughly five men to equal the vote of one white man.

Blacks survived, however, and developed a synthesized culture that intwined a faint African heritage with the "culture of slavery." They survived with what was left over, the second-hand articles Charlie could no longer profit from. Even soul food originated this way. We didn't invent chitterlings; they were made from one of the few parts of the hog that the "man" felt he couldn't eat.

Soul food was but one part of a subsumed culture that was influenced and coerced by a white noose ever present on the perimeter. But the mental enclosure that white people developed to keep us in our place was only the beginning. The next step was to augment the mental encampment with a physical one—the ghetto.

The black ghetto is white-circumscribed in more ways than one. "As whites quietly exit to the comfortable suburbs," Floyd McKissick has pointed out, "they do not relinquish the economic control of the ghetto; they maintain control of the city agencies and the political scene." White political and economic power is never released when whites flee to the suburbs; the "niggers" from whom they flee are not allowed to exercise *any* political or economic power over the very ghetto in which they live.

Many of the key political positions in the cities are still filled by white people who are not directly responsible to the ghetto blacks. And since the blacks cannot directly influence their own destinies, the result is deepened physical and mental entrapment in a predicament from which they know there is no escape. All that is flaunted in black faces are white exploitative merchants who form the constant reminder that everything black people have, or need, or want, *has* to come through Whitey.

Still, whites will find it difficult to understand and fully appreciate the ghetto problem. Trying to think as blacks won't help. They will achieve an appreciation only as whites thinking as whites and responding as human beings.

It's tough, and what may be tougher is that whites have to understand that *any* role they play in rebuilding and planning for black ghettos has to be defined by black people! Whites can participate, but no longer at the leadership or decision-making levels to which they are so accustomed.

We hear it said that whites cannot plan for blacks. It is a statement that has a basis in fact, the fact of white indifference to the culture and lifestyle of blacks.

Continued on page 94

There are many differences between the way urban blacks and urban whites live. Blacks don't need or want private psychiatrists, resorts, country club memberships, much less those pedestrian malls and parks that planners and architects always feel we should have.

Blacks don't need trips every summer, a winter and a summer house. We aren't hung up about tennis courts and golf courses planned into our neighborhoods; we don't live that way. You do!

Nor are we hung up about grand theaters, cinemas and operas. Not that anything is wrong with these, but because our communities should not have these things built in just because that's what Charlie does.

Black people want livable communities that have a decent core of housing, jobs and education. As a matter of fact, black people aspire to the American dream *more* than white people. Their only flicker of hope for survival is that out of these slums and decay must come *something* better.

White apathy toward the culture, lifestyle and the many and grim problems of blacks is due to a variety of causes, but there is one factor that sticks out above all others: White people have never had to understand black people because they had no reason to *fear* black people.

Whites woke up one morning and found their cities peopled with blacks—the realization of a nightmare! Now that we have become a real threat to the economic power of the "man," he feels he has to use the theory of inclusion on us. He would include us in the planning, rebuilding and development of *our* communities.

Has it ever occurred to him that we don't want to be included, that all we want is what every other ethnic group in this country has had: control—political, economic and cultural control. With control, we might talk of "including" him!

The architectural profession has much to understand about the black crisis and how we as a profession can respond to it. Again, certain causative factors bequeathed by history have to be acknowledged. We were trained in the credo that ego is more important than human commitment, and we have had a long record distinguished by self-expressionism rather than human accommodation.

But the direction the profession can move toward is more important than the distance to be traveled if architects are seriously intent upon being relevant to the problems of black people.

Architects must recognize certain political realities that exist in any community. Politics, people and architecture are, in fact, integral components, and their relationships must be understood by white architects. Design for a black culture or lifestyle is not *the* problem, not in the light of the inability of this country's planners and architects to satisfy the *fundamental human needs* of black people—good housing, decent jobs, adequate income, etc. Architectural design is a level of sophistication applicable to those who have already had their fundamental needs met.

The relationship white architects have to black communities ought to be a positive, redefined one in which white architects are hired (or volunteer) on black peoples' terms. I would recommend the following as essentials for white architects:

1. Understand thoroughly the politics of a community and its various planning agencies, educational systems, city hall, etc. It is impossible to recommend any positive positions to a black community unless you are aware of its political problems.

2. Make available your technical services to black community groups interested in improving their circumstances. Many black groups simply have no technicians to make drawings and give presentations.

3. Support financially those community groups which do have black technical help but need funds to retain them.

4. Lobby and do research as an architectural/political bodv to effect changes to those laws and regulations which exploit people in the black ghettos. The AIA could be extremely instrumental in this area. Existing housing laws, FHA regulations, zoning and building codes could undergo architect evaluation with a view toward modifications to make them more responsive to the ghettos.

The AIA is a vehicle for the collective activity of individual architects. Certainly the Institute, both nationally and locally, could become the main vehicle for channeling white architects into the urban ghettos while, at the same time, maintaining a national drive to change those laws and regulations that exploit urban blacks.

The question of white involvement in black ghettos is no longer one of automatic black acceptance. Black people are now beginning to demand responsiveness of white experts who seek to "prey" upon them. The white architect can convince apprehensive blacks of the sincerity of his commitment, however—but only after he has convinced himself of his sincerity.

As architects, we work with design criteria. In many cases, we have done a very good job, and it is because of this that there is reason to believe we can do a better job in serving the ghetto—provided that we have appropriate design criteria. In the past, this has not been so, but it had better be true soon lest the flames of "Burn Baby Burn" assume holocaust proportions.

At this very moment, blacks are establishing their own "design criteria," a good portion of which dictates who is to do what and when. Obviously, these standards will insist on maximum involvement of blacks, from layman through professional. This is but one element of the insurance policy against the distrust that has mounted over centuries.

The rebuilding of our urban ghettos is probably the largest architectural task to be faced by the 20th century. A multidisciplinary team will be required to do the job. We will need sociologists, psychologists, urbanologists, etc.

But these specialties are only adjuncts to the true core of the kind of planning team necessary—a core constituted of team members who have readily available data about the real problem; team members who have lived the lifestyle, tested past systems and approaches and identified the flaws; team members who are prepared to suggest solutions that are real and meaningful.

It is essential that these knowledgeable community residents be included from the start of planning, because it is from them that the criteria for "planning and building for people" will come.

"Community participation" has become an empty slogan in most poverty programs. Its meaning is vapid now because of the lack of sincerity on the part of its users.

We as architects must use the phrase genuinely for it is the demands of the community that truly form the "guts" of our design criteria. □

PROFILE OF JOHN ALBERT PARKER (JACK)

Durham, North Carolina

Formerly with F.H.A., now with LIHDC which is a "spin-off" of the North Carolina Fund, created to stimulate Low-Income Housing in North Carolina. LIHDC has carried on research in construction methods and evaluation; a rehabilitation study; new developments; various analyses; 3-city study; Handbook on Low Income Housing Development; Experimental Projects in Greensboro, Raleigh, Chapel Hill, Winston-Salem, Charlotte, Fayetteville, Tarboro, Lumberton, Rockyingham; Management Study; Rural Housing Study.

SECTION B - PART IV

ABOUT THE SOUTHERN REGIONAL COUNCIL

THE SOUTHERN REGIONAL COUNCIL, INC.

Since its founding in 1944, by a group of eminent Southerners, (including Ralph McGill, Benjamin Mays, Arthur Moore, Rufus Clement and Leonard Haas, of Atlanta, Georgia), the Southern Regional Council's fundamental interest has been racial relations. Its methods have been and basically continue to be research and information.

In its earliest phase, much of its work was simply emergency effort to maintain communications between the separate segments of Southern society and to try to eliminate immediate racial oppressions and adjust immediate racial conflicts. Even in the 1940s, however, a substantial part of its attention was addressed to underlying causes, especially the problems related to rural poverty (such as outdated agricultural economics and the degrading influences on human development of such practices as share-cropping.)

The Southern Regional Council still deals with many of these older problems (for example, recently, the problem of hunger and malnutrition in rural counties and the lack of full Negro participation in democratic processes through exercise of the ballot.)

The Southern Regional Council's focus, however, has necessarily changed as the South has changed and the nation has moved toward solutions of some of the most pressing problems of racial discrimination. Today, the

Council has a staff of forty-five persons in its offices at 5 Forsyth Street, Atlanta, and an annual budget of more than $1,000,000. A number of its staff members are authorities on particular problems: a former federal prisons official directs a project which encourages Southern states to improve their prisons; the Council employs psychiatrists, sociologists, economists, educators, physicians and others to work on a wide-range of Southern problems; and in 1966 it established an Urban Planning Project, headed by a former Alabama architect and planner, Moreland Griffith Smith.

It is no longer possible, if it ever was, to deal with the South's problems (which are increasingly the same as every other region's) as if they were one-dimensional "racial problems." Nor is it possible to deal effectively with problems of poverty solely by direct effort to relieve immediate symptoms (of poverty), or with problems of housing simply through encouraging more construction. The Southern Regional Council is intensely aware that it cannot fulfill its unique role in the South without full involvement in many "non-racial" problems that affect human lives. Today it is also apparent that rural and urban problems are inextricably intertwined. Neither can be solved by piecemeal approaches to housing alone, poverty alone or "racial relations" alone.

Since the Southern Regional Council's interests are regional in scope it has not usually attempted to concen-

trate on the interests of any one city or metropolitan area. In making the attached proposals for Atlanta the Council seeks an opportunity to help move the South's leading city forward to become a pace-setter in the solution of basic urban and suburban problems. In this way, concentration upon one metropolitan area may serve to help other cities meet their problems by emulation. The Council believes Atlanta has the kind of leadership which might break new ground for the whole nation.

Atlanta is "a new kind of city," planner Philip Hammer said almost two decades ago, and today those words are virtually a motto for the city. Atlanta can do what most older big cities cannot do, Frank Lloyd Wright has said to Southern Regional Council representatives, because it has less to "undo." For these and other reasons, Atlanta attracts the attention of such international urban planners as C. A. Doxiadis. They, too, see that Atlanta can be "a new kind of city," if it will be.

The Southern Regional Council sees its role in these proposed undertakings as supportive and catalytic. It could assist such local agencies as the Atlanta Chamber of Commerce, the Metropolitan Planning Commission, the Council of Metropolitan Governments and others. It would hope to continue throughout to play a substantial supportive, background role, rather than a primary role, because it believes Atlanta itself has more than enough good leader-

ship and community resources to truly make this "a new kind of city" and a city that attracts international attention because of pioneering with regional development grounded in basic human concerns.

May 31, 1972

M E M O R A N D U M

TO: SRC Staff

FROM: George Esser

1. I am enclosing (a) a tentative schedule for the staff retreat at Kanuga Conference Center for June 4-6, (b) directions for reaching Kanuga, (c) transportation arrangements to Kanuga.

2. It is important that all staff members leave Atlanta in time to be at Kanuga about 5:00 p.m. Dinner will be served promptly at 6:00 p.m.

3. Each staff member will have a single room in the Hotel section of the Inn.

4. These sessions have been set up for free discussion. Mr. Brown will lead off each of the first two sessions with a statement to form the basis for discussion. The chairmen for the remaining sessions will be expected to help keep the discussion moving as a moderator but with no responsibility for any substantive introductory statement.

5. Mr. Brown will be available throughout Monday as an observer and consultant. Professor Neely Gardner of the University of Southern California, who is serving as a consultant to me on staff organization, will be present throughout the retreat in the capacity of an observer.

Enclosures

SRC STAFF RETREAT - AGENDA

SUNDAY, JUNE 4

5:00 p.m. Register at the Kanuga Lake Inn.

6:00 p.m. Dinner

7:30 p.m. First Session.

Introduction - George Esser

The South in Transition - Ed Brown, former executive director of MACE, discussion leader.

The South today, the land and the people.

Problems, strengths, opportunities.

MONDAY, JUNE 5

8:00 a.m. Breakfast

9:00-12:00 Priorities for the region-Ed Brown, discussion leader.

Focus on what needs to be done to insure a better quality of life and equal opportunity for all southerners.

12:30 p.m. Lunch

2:00-3:30 p.m. Roles for a Southern Regional Council-Art Campbell, Chairman

Discussion of the ways in which SRC can help deal with regional problems and support regional priorities.

6:00 p.m. Dinner

7:30 p.m. Program priorities for the Southern Regional Council, Jim Wood, Chairman

More detailed analysis of the program areas in which SRC should concentrate with some emphasis on immediate priorities.

TUESDAY, JUNE 6

8:00 a.m.	Breakfast
9:00-10:30 a.m.	Criteria for SRC organization-George Harris, Chairman What sort of internal organization can best help SRC implement each of its roles.
10:45-12:00	Wrap-up session-George Esser, Chairman
12:30 p.m.	Lunch
1:00 p.m.	Depart for Atlanta

Note: Bob Anderson and Jay Brothers will cooperate in taking notes and producing the digest of each session.

DIRECTIONS FOR REACHING KANUGA LAKE INN

Go to Greenville, South Carolina on I-85. Turn north on U.S. 25 to Hendersonville, North Carolina. Follow U.S. 25 into down town Hendersonville. After passing a shopping center, you will climb a small hill. Turn left on Kanuga Street, several blocks before reaching the center of town. Kanuga Street runs into Kanuga Road; you will find the entrance to Kanuga Conferences about four (4) miles southwest of Hendersonville.

A transportation schedule worked out by Jim Wood is attached. Any modification should be cleared with Jim.

TRANSPORTATION SCHEDULE FOR COUNCIL

PEOPLE SAY OF SOUTHERN RURAL ACTION –

Housing

THE WHITE HOUSE

WASHINGTON

January 23, 1970

Dear Mr. Blackwell:

Your successful efforts to enrich the lives of needy families in your area have come to my attention and I want to commend you for your outstanding work. By offering on-the-job training in building construction, you have provided skills, jobs, and homes to a number of persons who had previously lacked them and have thus added pride and dignity to their lives.

I can think of no better kind of evidence than your work to support my belief that America possesses the inner strength to take up the challenges that lie ahead. It is a pleasure to congratulate you and wish you every success in the future.

With best wishes,

Sincerely,

Richard Nixon

January 7, 1970

Randy Blackwell
Southern Rural Action, Inc.
220 Sunset Avenue, N.W.
Atlanta, Georgia 30314

Dear Randy:

You electrified our young people with your speech but I think it is more important to say that you gave them pause for thoughtful consideration of the problems of rural America, black and white. Your personal dedication, charm and willingness to participate for several days, to be available to communicate informally throughout this period demonstrates the kind of leader that you are. I know that the success of the Chicago Seminar was vastly increased by your participation.

I hope that it will lead to some financial support for your recommendation of carefully selecting a few Congressional Districts to assist with projects. We will certainly do our part to encourage this while leaving the political side of this follow-up to you and men who follow you in the South, Randy. I hope you will keep me on your list when you come to Washington. I would love to have lunch with you and to have you meet with our staff and have you talk more definitively of your ideas at the Chicago seminar. Just let us know when you will be coming.

Sincerely, yours,

Leonard G. Wolf
Executive Director

Verdi HAND BAGS

330 FIFTH AVENUE
NEW YORK 1, N. Y.
PENNSYLVANIA 6-3766

January 24, 1970

Mr. Albert S. Lewy
c/o Southern Rural Action, Inc.
220 Sunset Avenue
Atlanta, Ga.

Dear Mr. Lewy:

Pursuant to the conversation held in our office, we write this letter to evidence our current thinking, and further, our intention to enter a binding written contract at a future date.

It is our understanding that your corporation intends to assist in the building and financing of a factory, to manufacture ladies' hand bags, in Montgomery Alabama. Further we understand that it is the intention to have facilities that will initially be able to produce 150 dozen per week, and eventually produce 600 dozen per week.

Additionally, it is understood that you plan to assist in the training of the employees and managers of the business eventually taking possession of the subject factory.

For our part, providing prices, quality, and costs are competitive, we stand ready to enter a binding agreement to supply the new facility with work as our subcontractor, for a trial period of one year, for the maximum production above described. Further, we will make a sincere effort to place original orders for ladies' hand bags on units demanding less skill, so our requirements will coincide with your training program.

To insure the success of the enterprise, we will cooperate and assist in teaching the technical matters and knowledge required to manufacture this particular product. Obviously, however, when a binding agreement is entered, the degree of commitment we can make to give assistance,

advice, etc. will depend largely on the new business's willingness to give us a right of first refusal to use its production for a period of time commensurate with our effort. Needless to say, an exclusive arrangement with us, for a reasonable period of time, might be the only feasible method by which we could agree to fully commit ourselves.

We thank you for your time and trouble and sincerely believe that a most mutually satisfactory arrangement can be worked out along the lines discussed. We look forward to hearing from you further, and remain,

Very truly yours,

CARLIN BROS. & FRIED, INC.

50 Whitehall Street
Atlanta, Georgia

Dear Randy:

I want to thank you, both personally and on behalf of OEO, for the truly admirable manner in which you stood by us and, almost single-handed, made the remarkable co-op affair at Selma possible. For all our efforts to hurdle the obstacles that arose, it was your steadfastness of purpose that formed the pivot on which the affair turned.

I want to add that I thoroughly enjoyed the entertainment -- both the talent and the spirit -- on Friday evening. I think it set the mood of solidarity that prevailed the next day.

I regard the whole Workshop as a signal success; and I did not want it to go by without acknowledging your signal part in making it happen.

Sincerely,

James D. Templeton, Director,
Office of Rural Affairs

50 Whitehall Street, S. W.
Atlanta, Georgia 30303

Dear Mr. Blackwell:

The enclosed items are probably old hat to you, but they may be of some interest.

Although the volume and variety of equipment which we can generate through STEP, which I wrote about to you on November 1, will be much greater when the basic UAW contracts are next opened and corporation contributions of machinery and materials can be made a bargaining demand, it is nevertheless possible to obtain such contributions on a more modest scale in the interim. For this reason, I would be most grateful to have from you at least a rough indication of the requirements which in your estimation have a presently high priority and toward obtaining which we can put STEP to work.

Very sincerely,

Guy Nunn

UNITED STATES DEPARTMENT OF AGRICULTURE
FARMERS HOME ADMINISTRATION
Room 717, Aronov Building
474 South Court Street
Montgomery, Alabama 36104

June 17, 1970

Mr. Mathew Colley, Director
Office of Economic Opportunity
501 Dexter Avenue
Montgomery, Alabama 36104

Dear Sir:

I understand that Southern Rural Action, Inc. is proposing a skill development program in the Wilcox-Clarke-Marengo area. It is my understanding that Mr. Frederick Stokes is doing a majority of the work on this project and will assume supervision of it if it is approved. I have known Mr. Stokes for some time and have found him to be a reliable developer and builder.

We are, of course, in accord with any type program that will assist families in rural areas to obtain better housing. The Farmers Home Administration program is being vastly expanded in the rural housing phase. Alabama made loans totaling approximately $35 million for rural homes during the past Fiscal Year and we understand, should our appropriation pass Congress, that this will be doubled during Fiscal 1971.

Our largest handicap to get houses in the blackbelt-prairie area of the state where the largest percentage of need is shown, is the difficulty in getting suitable contractors and carpenters to work on dwellings. In counties like Wilcox, Marengo, Lowndes, etc., you have few skilled carpenters, block layers, electricians, or plumbers. If some training program could be developed that would develop men in these fields and if these men would stay in these counties it would be a tremendous asset to them.

In Wilcox County last Fiscal Year we assisted 75 families in obtaining new dwellings. This is such a small percentage when you compare it to the tremendous need for housing in that county alone. Then, even with our interest credit loan where assistance is given to applicants in making their payments, we still are finding it difficult to construct a house that these families can make the payments on. Such a training program would permit us to assist these families in building houses that would cost much less than buying conventional contract if you could even obtain a contractor to build a house.

If such a program was instituted we would recommend that first consideration be given to elderly people, handicapped or those people largely on welfare where a small dwelling could be built for a very reasonable cost.

If administered properly, this program could be a tremendous asset to the area and we heartily recommend same.

Sincerely,

John A. Garrett

John A. Garrett
State Director

PS The Farmers Home Administration will be pleased to provide construction funds to any eligible applicant that desires to participate in building a house with the above group. Of course, based on the assumption that proper supervision will be provided. We also have a site development loan where funds can be advanced to a nonprofit group to buy land, develop it, divide into lots and repay the debt as lots are sold.

Andrew J. Young, *Executive Vice President*

January 29, 1970

Mr. Mitchell Sviridoff, Vice President
The Ford Foundation
477 Madison Avenue
New York, New York 10022

Dear Mr. Sviridoff:

I am writing to you today about the work of Southern Rural Action, Inc. Southern Rural Action, Inc., in my opinion, has done more in rural economic development than any other agency or organization in the South. Their projects and programs established by use of very small and infrequent contributions, are quite visible and concrete.

In a sense, Southern Rural Action is a research project in that it is in constant search for new approaches to the problems of rural poverty. In another sense, SRA is a leadership training program in that the people who become involved, learn or discover leadership skills and new community attitudes. And, in still another sense, Southern Rural Action is very practical in that positive social changes do take place as a direct result of what this agency does.

Southern Rural Action's three year history of "borrowing from Peter to pay Paul", is a story I know personally. The kind of dedication manifested by this group is deserving of real support. Too many times already has the SRA staff had to go without their anticipated salaries because of lack of budget.

This work and agency needs an annual budget of $185,500, none of which is promised for 1970. A detailed budget analysis and program description is available. I would like to request the opportunity of meeting with you for further discussion. Mr. Randolph T. Blackwell, Director of Southern Rural Action is of course available to participate.

In making this request, I have asked some of my friends who know Southern Rural Action and its Director to join with me. Their names are listed on the attached sheet.

I hope to hear from you soon.

Atlanta, Georgia

Dear Randy:

I want to thank you, both personally and on behalf of OEO, for the truly admirable manner in which you stood by us and, almost single-handed, made the remarkable co-op affair at Selma possible. For all our efforts to hurdle the obstacles that arose, it was your steadfastness of purpose that formed the pivot on which the affair turned.

I want to add that I thoroughly enjoyed the entertainment -- both the talent and the spirit -- on Friday evening. I think it set the mood of solidarity that prevailed the next day.

I regard the whole Workshop as a signal success; and I did not want it to go by without acknowledging your signal part in making it happen.

Sincerely,

James D. Templeton, Director,
Office of Rural Affairs

Mr. Randolph Blackwell
Southern Rural Action Project
50 Whitehall Street, S. W.
Atlanta, Georgia 30303

Dear Mr. Blackwell:

The enclosed items are probably old hat to you, but they may be of some interest.

Although the volume and variety of equipment which we can generate through STEP, which I wrote about to you on November 1, will be much greater when the basic UAW contracts are next opened and corporation contributions of machinery and materials can be made a bargaining demand, it is nevertheless possible to obtain such contributions on a more modest scale in the interim. For this reason, I would be most grateful to have from you at least a rough indication of the requirements which in your estimation have a presently high priority and toward obtaining which we can put STEP to work.

Very sincerely,

Guy Nunn

UNITED STATES DEPARTMENT OF AGRICULTURE
FARMERS HOME ADMINISTRATION
Room 717, Aronov Building
474 South Court Street
Montgomery, Alabama 36104

June 17, 1970

Mr. Mathew Colley, Director
Office of Economic Opportunity
501 Dexter Avenue
Montgomery, Alabama 36104

Dear Sir:

I understand that Southern Rural Action, Inc. is proposing a skill development program in the Wilcox-Clarke-Marengo area. It is my understanding that Mr. Frederick Stokes is doing a majority of the work on this project and will assume supervision of it if it is approved. I have known Mr. Stokes for some time and have found him to be a reliable developer and builder.

We are, of course, in accord with any type program that will assist families in rural areas to obtain better housing. The Farmers Home Administration program is being vastly expanded in the rural housing phase. Alabama made loans totaling approximately $35 million for rural homes during the past Fiscal Year and we understand, should our appropriation pass Congress, that this will be doubled during Fiscal 1971.

Our largest handicap to get houses in the blackbelt-prairie area of the state where the largest percentage of need is shown, is the difficulty in getting suitable contractors and carpenters to work on dwellings. In counties like Wilcox, Marengo, Lowndes, etc., you have few skilled carpenters, block layers, electricians, or plumbers. If some training program could be developed that would develop men in these fields and if these men would stay in these counties it would be a tremendous asset to them.

In Wilcox County last Fiscal Year we assisted 75 families in obtaining new dwellings. This is such a small percentage when you compare it to the tremendous need for housing in that county alone. Then, even with our interest credit loan where assistance is given to applicants in making their payments, we still are finding it difficult to construct a house that these families can make the payments on. Such a training program would permit us to assist these families in building houses that would cost much less than buying conventional contract if you could even obtain a contractor to build a house.

If such a program was instituted we would recommend that first consideration be given to elderly people, handicapped or those people largely on welfare where a small dwelling could be built for a very reasonable cost.

If administered properly, this program could be a tremendous asset to the area and we heartily recommend same.

Sincerely,

John A. Garrett

John A. Garrett
State Director

PS The Farmers Home Administration will be pleased to provide construction funds to any eligible applicant that desires to participate in building a house with the above group. Of course, based on the assumption that proper supervision will be provided. We also have a site development loan where funds can be advanced to a nonprofit group to buy land, develop it, divide into lots and repay the debt as lots are sold.

Mr. Mitchell Sviridoff, Vice President
The Ford Foundation
477 Madison Avenue
New York, New York 10022

Dear Mr. Sviridoff:

I am writing to you today about the work of Southern Rural Action, Inc. Southern Rural Action, Inc., in my opinion, has done more in rural economic development than any other agency or organization in the South. Their projects and programs established by use of very small and infrequent contributions, are quite visible and concrete.

In a sense, Southern Rural Action is a research project in that it is in constant search for new approaches to the problems of rural poverty. In another sense, SRA is a leadership training program in that the people who become involved, learn or discover leadership skills and new community attitudes. And, in still another sense, Southern Rural Action is very practical in that positive social changes do take place as a direct result of what this agency does.

Southern Rural Action's three year history of "borrowing from Peter to pay Paul", is a story I know personally. The kind of dedication manifested by this group is deserving of real support. Too many times already has the SRA staff had to go without their anticipated salaries because of lack of budget.

This work and agency needs an annual budget of $185,500, none of which is promised for 1970. A detailed budget analysis and program description is available. I would like to request the opportunity of meeting with you for further discussion. Mr. Randolph T. Blackwell, Director of Southern Rural Action is of course available to participate.

In making this request, I have asked some of my friends who know Southern Rural Action and its Director to join with me. Their names are listed on the attached sheet.

I hope to hear from you soon.

Yours truly,

Andrew Young

TO: Corporate Chief Executives

SUBJECT: Housing for the Semi-skilled and Unskilled Labor Market

INSTITUTE OF HUMAN RELATIONS
165 East 56th Street
New York, N.Y. 10022
PL 1-4000

1 How many people do you employ? _____
Give breakdown by place of employment.
Center City ____
Suburban ____

2 Do you expect your center city and suburban employment to increase or decrease during the next three to five years?

* Center City: Increase 27% Decrease 25%
No Change 33%
Suburban: Increase 58% Decrease 4%
No Change 20%

3 Can you break down your total employment by approximate percentage?
Skilled & Professional ____%
Semi-skilled ____%
Unskilled ____%

4 How important is the availability of unskilled and/or semi-skilled labor in determining your choice of plant or office location?

Most important factor	8%
One of the most important factors	35%
One of the many factors	35%
Unimportant	19%
** N.A.	3%

5 Does the cost and availability of housing in suburban areas affect your recruitment of unskilled and/or semi-skilled employees?

Affects recruitment?	36%
Does not affect recruitment	15%
Not a factor	42%
N.A.	7%

* Percentage to the nearest round number
** No Answer

6 Will the cost and availability of housing restrict your plans for expansion into suburban areas?

Will restrict	25%
Will not restrict	58%
N.A.	16%

7 Do you consider a suburb's willingness to provide for an adequate supply of housing for semi-skilled and unskilled workers to be a factor in reaching a decision on plant locations?

Yes	45%
No	39%
N.A.	16%

8 If you have a plant or office in suburban areas at this time, which price range of housing appears to be in short supply for your employees?

Rental Units	
Under $150/month	45%
$150/200	27%
Over $250	5%
None	13%
Houses for Sale	
Under $20,000	35%
$20,000/30,000	20%
Over $30,000	4%
None	12%
N.A.	17%

9 Do you believe that current zoning policies in suburban communities as they affect the supply of housing for semi-skilled and unskilled workers are:

Adequate	23%
Mildly restrictive	30%
Restrictive	31%
N.A.	16%

10 Do you believe that these current zoning policies make it more difficult for industry to meet its labor needs?

Yes	32%
No	23%
Don't Know	33%
N.A.	12%

11 Do you feel that some of your employees live so far away from their work as to increase their absenteeism?

Yes	35%
No	53%
N.A.	11%

12 Do you feel that some of your employees live so far away from their work as to increase your annual rate of labor turnover?

Yes	41%
No	47%
N.A.	12%

13 Do you believe that companies have a role to play in securing increased housing for their employees so that they can live within reasonable proximity to their place of work?

Yes	64%
No	29%
N.A.	8%

THE AMERICAN JEWISH COMMITTEE

POSITION STATEMENT ON

COMPENSATORY AND PREFERENTIAL TREATMENT IN EDUCATION AND EMPLOYMENT

Society is faced today, more than ever before, with increasingly insistent demands by disadvantaged minorities. They ask that members of groups deprived of equal opportunity be given special consideration and assistance. The American Jewish Committee reasserts its basic concurrence in these demands which are in accordance with the American tradition. This country has historically given special assistance to special categories of people on whom society has enforced hardship and injustice or who have had special needs that could not otherwise be met.

Every appropriate step must be taken to make up for years of discriminatory treatment in such fields as education and employment. The American Jewish Committee has for many years advocated specific programs, private and public, to accomplish these objectives. We are on record as supporting programs in education and employment which "expand the pie" for all to share. However, all that has been done to date has not as yet produced substantial results. Public and private programs were begun years too late and were without sufficient national commitment.

The American Jewish Committee, dedicated to the concept that society functions best when each person has the opportunity to reach his potential, advocates, among other measures, the following:

1. Quality schools for all children, with facilities for special assistance for disadvantaged children where needed.

2. Intensified efforts by private colleges and universities to seek out disadvantaged youth even though they may not fully meet conventional admission standards. Such efforts should be accompanied, when necessary, by remedial programs to make it possible for such students to meet existing requirements for graduation. Basic research is greatly needed to assess the criteria for admission to colleges, universities and other post high school educational institutions in the light of the needs of contemporary society

(over)

and the relationship of such criteria to minority cultures. At the same time, basic research is needed to determine the relevance of present academic standards to the contemporary needs of our society. This latter problem has been emphasized by student movements on the campuses.

3. Provision for public education beyond the high school for all who wish to attend and would benefit from attending, whether four or two year colleges, or post secondary specialized schools. Special assistance for those applicants or students who require it should be available so that existing standards of excellence of public institutions will be maintained.

4. Expanded apprenticeship and other training programs to utilize manpower from the disadvantaged groups. Elimination of discriminatory practices by labor unions and management, and promotion of affirmative action to insure equal employment in recruitment, hiring and upgrading in all levels of employment.

5. A review of existing job requirements to make sure of their continued validity. A system of hiring or promotion is not a "merit" system if the standards are anachronistic or otherwise unrelated to the real requirements of the job. Belonging to a particular disadvantaged group may be a relevant criterion in certain circumstances, and in such circumstances should be given appropriate weight among other qualifications. However, the American Jewish Committee rejects the concept that belonging to a particular group is an absolute qualification for any position.

The American Jewish Committee continues to oppose the creation of a system of quotas for any group including the disadvantaged in education, employment or any other area of American life.

In making these recommendations, we cannot ignore the growing concern on the part of many Jews and members of other ethnic groups that the burden of needed social changes may especially fall on them and limit their opportunities and possibilities for advancement. Care must be taken in

advancing compensatory and preferential treatment for disadvantaged minorities that our sense of outrage for what they have endured does not cause us to lose sight of the needs and aspirations of other groups. The American Jewish Committee urges all those working for necessary social change and progress to approach these problems with great sensitivity and care. Failure to do so will only further divide an already badly divided society and set back the cause of racial progress.

Our society is capable of providing ample educational and employment opportunities for all its people, thus eliminating the need for benefiting one group at the expense of another or resorting to short-cut and dangerous solutions like quotas.

Members of disadvantaged groups who have been severely discriminated against in the past cannot overcome the consequences of such discrimination by adherence to a pure concept of equality of opportunity unless accompanied by such specific measures as those indicated. Until such time as our society provides ample education and employment and an end of discrimination for all its people, such special measures will continue to be necessary and should be accepted by all Americans.

THE AMERICAN JEWISH COMMITTEE

A TEN POINT GUIDE FOR SCATTER-SITE PUBLIC HOUSING

Introduction

Jews are metropolitan dwellers and are directly affected by the polarization that results from metropolitan tensions. One of the high tension areas is housing. The shortage of housing and the scattering of public housing into middle-income communities has contributed in no small measure to intergroup confrontations by diverse ethnic, racial and religious groups. Scatter-site housing in particular requires more community relations efforts than any current housing program. The thesis underlying scatter-site housing is that by being dispersed into stable, middle-class communities, the poor will be helped to free themselves from the destructive bind which permeates so much of ghetto life. However, resistance from the middle-class communities throughout the country chosen for scatter-site public housing is fierce and unrelenting.

The American Jewish Committee has addressed itself to the conflicts that arise directly from our housing dilemma because of its concern for metropolitan Jewry in particular -- and all metropolitan dwellers in general -- and because it is a human relations agency that has, over the years, developed strategies and programs designed to depolarize and defuse divisive confrontations, and restructure them into more positive efforts.

As far back as 1949, AJC addressed itself to housing problems, and developed housing programs calculated to eliminate discrimination. At its 53rd Annual Meeting in 1960, AJC issued an urban-suburban Statement condemning restrictive zoning and housing segregation. In 1962, Irving Engel, Honorary President of AJC, testified before the Civil Rights Commission in Washington on housing discrimination in the District of Columbia and its suburbs. In 1966, AJC created the Department of Education and Urban Planning to deal with the desperate plight of the nation's cities. In a comprehensive policy statement (1967), AJC encouraged private and governmental efforts to promote housing integration, particularly as related to job opportunities which were beginning to open up in the suburbs. AJC testified before Congress on the Housing and Urban Development Act of 1968, urging that Congress stimulate the growth of balanced communities by offering meaningful incentives to both new and existing communities. In 1970, AJC created a National Housing Committee and charged it to deal directly with urban-suburban issues.

It is a matter of record that throughout the 60's, full and fair housing laws, as well as strong attacks by fair housing and civil rights groups against racial and economic housing discrimination, resulted in surprisingly little governmentally sponsored housing output. Housing shortages affect many of

(over)

the middle-class as well who are also in desperate need of governmental subsidies in order to buy into the housing market.

It is to get us back on the track of positive achievement that the Domestic Affairs Commission of the American Jewish Committee has adopted the following ten point guide for scatter-site public housing:

The Ten Points

1. Cities should plan scatter-site projects with middle-class communities in such a way as to alleviate their fears. The community should be assured that its own poor, young marrieds, elderly and returning veterans will receive first priority -- that the project will be open to all city residents and not just specific groups.

2. Essential services should be provided as needed and not after the project opens. Services should include adequate provisions for schools, police protection, sanitation, etc.

3. There should be outreach to all the major groups in these communities during the planning stages, and the expertise of civic and community relations groups be called upon and utilized.

4. The project should be within the density and size scale of the rest of the community. This may increase the cost, but the "social" benefits derived from this building-to-scale is well worth the price.

5. Consideration should be given to greatly expanding subsidized moderate income housing with a sizeable percentage of the units (20-25%) to be reserved for the poor. In general, moderate income housing enjoys much higher status than public housing.

6. Cities should adopt an admissions policy for scatter-site housing that will reassure the community. Psychologists, social workers and sociologists have been able to identify families with severe problems. Many of these families have made life untenable for their neighbors. Providing them with therapy services has, on the whole, not been considered a successful approach to their problems. Society must seek better solutions for these families -- housing by itself cannot provide the answer. Unfortunately, these families have contributed in no small measure to the destruction of public housing.

7. Cities should make strong provisions that when homes contiguous to the project go up for sale -- especially in the initial stage of project planning, building and occupancy -- they be neither "blockbuster" inspired nor "blockbuster" bought. This has happened often in the past. It is at this crucial time that the stability of the neighborhood may be in jeopardy.

8. Innovative home ownership co-op or condominium public housing should be explored. The Columbus, Ohio Housing Authority has successfully initiated high-rise home ownership. Home ownership appeals to the middle-class and would win much favor among them. It calls upon self-help principles inherent in our tradition and national character.

9. The concept of the Dayton, Ohio Plan in providing for scatter-site housing should be utilized. The political leadership in Dayton and its five surrounding counties each agreed to accept their share of the poor. The political leadership did an excellent educational job with respect to their constituencies. Community acceptance related to the fact that there was a plan. Most middle-class whites flee from the poor because they are convinced their neighborhood will quickly change and deteriorate. The Dayton Plan assured middle-class suburban communities they would only be asked to absorb a specific number of poor -- and no more.

10. All states should pass legislation that adopts the principle in recent Massachusetts legislation (Connecticut has an improved version), which allots a certain percentage of unused land in every jurisdiction for low and moderate income housing, thus sharing the responsibility on an equal community to community basis.

Conclusion

For scatter-site public housing to succeed, cities and communities must learn to work cooperatively, and this entails compromise. Hopefully, the above ten points will provide guidelines to what we all desire -- a decent place to live for all Americans.

THE AMERICAN JEWISH COMMITTEE

Busing -- The Wrong Issue

Seldom in our nation's history has the need for a reasoned approach to our many social, political and economic problems been more clearly felt. Yet, we permit ourselves to be confused and divided by issues that are magnified and distorted out of all relation to reality.

The matter of school busing to achieve integration is one such issue. Our ability to separate out the real problems from the contrived may well prove a supreme test of our ability to maintain a democratic, pluralist society.

The AJC reasserts its unequivocal commitment to an integrated society and to quality public education for all. Integrated public schools offering equal educational opportunity are a necessary component of that society.

We are unalterably opposed to a constitutional amendment against busing or any other executive or legislative technique which would undermine this commitment.

We make no attempt to ignore or minimize the many practical difficulties involved in integrating schools. Many Americans are resisting court-ordered busing because they honestly feel it would jeopardize the quality of their children's education. Many are concerned for their children's safety. Some support has also developed among our racial and ethnic minorities for a retention of separate schools as part of their political and social drives. These real problems have been exploited by cynical politicians who fan hysteria and offer simplistic solutions to complicated social issues.

The current emotional debate over busing loses sight of some of the important facts; a) 18 million school children -- 40 per cent of the total school population -- are normally bused to and from school for reasons that have nothing to do with racial balance; b) in Mississippi, South Carolina and Alabama there has been a 2-3 per cent decrease in the number of students bused since 1967-1968 in the process of desegregating previously segregated schools. The issue, therefore, is not "massive" or "forced" busing, but rather whether there should be new constitutional, legislative or executive prohibitions on the use of any busing in desegregation plans that are developed by local communities or directed by courts.

The American Jewish Committee believes that there should be no such prohibitions, and that a variety of school integration approaches must be used to achieve the twin goals of integration and quality education. We must not permit "the busing issue" to divert us from the complex of economic, social and political issues crying out for solution in order to improve the quality--and the equality--of life for all Americans.

Approved by the Board of Governors
March 14, 1972

SPEECH BY MR. CLAY COCHRAN ENTITLED "RURAL HOUSING PROBLEM"
STATE CONFERENCE ON RURAL HOUSING, THURSDAY, MAY 4, 1972

I can certainly endorse almost everything that Dr. Younts said and I am pleased to know that there is a kind of an emerging consensus on a lot of these things.

I have to back off a little from economic development because we decided several years ago , just take a simpleminded approach and say that people ought to have decent housing and water and sanitation facilities wherever they are and let the community decide what is to be done about these other things later. It is not that we don't recognize they are related except we get tired of sitting in on the Appalachian Commission boys on their growth centers and figuring that a lot of the poor people will be dead before they get around to deciding where they ought to be and where they can be housed.

If there is any single purpose the Rural Housing Alliance has had over the years it has been a deliberate purpose of attempting to raise the problem of rural housing to a high enough level in the public consciousness that something would have to be done, that is something more than we have been doing.

The cheering thing about this Conference in the ways its put together is that it is so clear a manifestation that this tide rising here somewhere or other that people are in increasing numbers taking cognizance of this problem and, as a result, something will be done. It may not be exactly what your eye would like to see done; it may be

only part of what we would like to see done, but something is going to be done about a problem which really wasn't even being talked about five years ago. All human societies have their mythologys and ours is not peculiar in that respect.

When you start to talk about the nature of a social problem or if you just go out and try to do something about it, this is one of the things you run into very quickly. If you set out to discuss any social problem on the presentation of the question immediately you may get along with people and as the conversation goes on there are always important reasons as to why this thing exists, why maybe it ought to exist, why maybe it will go on existing and then you begin to find out where the patterns of people's thinking fall. I will come back to that in a minute here on a discussion of metropoliana.

The root causes of bad housing, lack of sanitation and clean water is, of course, a maldistribution of income. This is given data. If good housing and sanitation and water can be bought like everything else and most people, if they had enough income would buy it, if not today, then tomorrow. The problem Dr. Younts referred to in raising people's expectations and getting them to give up some flexibility they have and very tight budgets in order to plunk for some middle class housing is a problem, but it is a short run problem. Where there is money enough, people improve their living so that a lot of the programs we talked about on housing may run to delivery systems and such things, but basically housing subsidies are a way of redistributing income

in community and making housing available to people who otherwise can't afford it.

Another very important factor is what I will refer to as American imperialism. Since the end of World War II we have spent about a trillion dollars on our own military establishment and holding up the hands of every little petty facist dictator in the world who wanted some arms mostly to hold his own people down. This has given us a system of national priorities which are just ridiculous. They just border on being insane. One of the illustrations of this which gets the fodder down where the calves can reach it, who would think of a trillion dollars? But when two years ago the military discovered that it had 5,000 brand new tanks stored in Western Europe that it had lost count of, it didn't know it had them until somebody someday scared up a receipt for 5,000 tanks. I checked up on that through Senator Metcalf and found out that was enough tanks to stretch 29 and a half miles down the road gun to gun. You can imagine what would happen if they discovered that Jim Neville of Farmers Home had enough houses stuck in a warehouse somewhere to stretch down the road 29 1/2 miles and had forgotten he had them, particularly if they cost $2.5 to $5 billion and he had lost the receipts. It would have just been hell to pay. As it was, in our curious mythology, in our priorities, this got a little spread in the Washington Post and disappeared from the press. There wasn't even a congressional inquiry about it except the one

that I put through the Senator's office. Everybody knows somewhere we are putting our money.

A third aspect of this is something that we ran into immediately when we began to work on it and which we still continue to run into which we have come to refer to just appointing a phrase for shorthand -- call it metropoliana. There is an implicit belief in the minds of the community in which we live that urbanization is inevitable and good and that is not so bad as a correlary assumption that if urbanization is good and inevitable, the more and the faster, the better. The result of this is a pattern of thinking that certainly runs back decades that the bigger the cities and the more sparsely settled the hinterland, the richer the nation economically and culturally.

This state of social hypnosis has been carried to the point where it is difficult for many people to even think about the problems of towns of 50,000 and under and those are the strictly rural areas, except to condemn or grieve about deficiencies there in humanitarian terms and to try to devise some means for getting that miserable peasantry into the central cities as fast as they can. If you gag a little at this now, you are gagging only as a result of what has been going on for the last five, six, seven or eight years when we begin to realize that the cities were not really Utopia and that a lot of people who were living there were miserable and unhappy and prepared to burn them down and a lot of the people who had been there had already gotten the hell out, somewhere into suburbia

so that this myth is being shaken, but it is there and it is implicit and it is strong. When you begin to talk to people about rural housing, over and over again you will run into it in one direction or another. Aren't we going to waste money building houses out there for people? Won't they abandon them and you will have to turn them into corn cribs? Our response, of course, who really cares and besides the very myth on which this is based is the one most likely to turn them into corn cribs because this country cannot indefinitely continue to pipe its people up in greater aggregations, in megalopolis, and remain vital and vigorous. In any case, if you have not already encountered it, you will.

And the fourth point of mentioning here on just these root causes is just discrimination in federal legislation particularly. We never have taken the trouble to sit down in any detail taking the ones that have been corrected and those we are still working on and just making a list of a long series of points at which the housing programs fail to serve small towns and rural areas. Most of this discrimination was not over intentionally -- it was not the city people ganging up on the people in small towns and rural areas. It was that as the Congress and the executive agencies influenced by metropoliana and, heavens knows what else, began to jiggle laws, to create them, to evolve them, they were just kind of led as by an unseen hand in directions that didn't serve rural people, a specific illustration of which more and more people have become aware in recent years.

That is the old HUD-FHA program; the insured FHA housing loan programs were not as some people thought designed to serve the poor. At best, they served modern income groups. They were set up primarily to create employment by taking the risk out of private lending and they were geared to private lending agencies and FHA could not function adequately only where there were already existing private lending agencies prepared to offer FHA a piece of paper saying this becomes a riskless and lend their money and where those agencies didn't exist, the program didn't function, but it took us 30 years to take cognizance of that, 25 years after the act was passed. It took up into the early 60's for us to realize it well enough that the Congress established on a very small scale in Farmer's Home a program which was an attempt to recognize that fact and get around it.

When you look at these factors against the background in recent years, there appeared an almost ruthless change in terms of uprooting people, particularly in rural areas, you get some indication as to why we find ourselves with 60 to 70 percent of the worst housing in the country in small towns and rural areas where only 30 percent of the people live. Those same changes including the price support programs which was one of the most uncalculatedly, ruthless uprooting of people in the history of the world left the rural areas full of old people and people poorly equipped to do anything except what they had been doing and a combination of the price support and crop restriction program coupled

with modern technology, it simply eroded their skills to zero. We have a whole series of housing programs in an attempt to deal with this, most of which are inadequate in one way or another in grappling with the problem.

I think there is some discussion on the program here of public housing and our publications have been full of the figures, but I'm sure most of you know that in 40 percent of the counties there isn't even a public housing authority and in a lot of counties where there is an authority, its functions are nearly nonfunctional. The causes of this run in part to kind of an advocation of the federal government saying if people are to be housed, that is up to the local government. It runs its system of priorities where we place very heavy burdens on the local community in terms of maintaining educational roads, etc., while we squandered our federal money on militarism. This lunatic system of priorities we have had has placed too heavy a burden on the state and local governments to carry on social and educational services and has left the federal government free and, of course, in recent years, since the small town and rural areas have begun to use public housing on a rising scale, they, mostly for the aged, I might say, were more charitable to the aged and children so as we begin to use more of it, what do we run into?

As of two or three months ago, there was a backlog of one-half billion dollars in request for annual contributions contracts for public housing in Washington and something

like $100 million that the President has in the deep freeze as part of his anti-inflation program. No real disposition in terms of this terrible need to either promote public housing as it should be promoted by, among other people, O.E.O., since it is the only housing program that serves the really poor. Another attempt to really promote it on the scale that it needs to be promoted and then when it promotes itself in spite of that too rapidly we not only don't meet the need with federal funds, we even bottle up some of them that are there.

The FHA-HUD programs, as most of you probably know, have functioned relatively poorly in rural areas which HUD admitted. As a matter of fact, they set up a task force with Farmers Home, put out a nice little report here several years ago and then adjourned. There really isn't too much they can do about it. The FHA program is not going to function except where you have private lending agencies and the figures we have indicate that they are not in the small towns and rural areas and they are not likely to be there.

Aside from public housing, the only housing program that is structured to function in rural areas is the Farmers Home Administration and it suffers from two basic defects. In the first place, it is administratively impoverished and it has been for years, and if Farmers Home Administration was staffed by people whose souls were as pure as mine and whose hearts were as warm as yours, the damn thing couldn't do the job because there are just so many days in a man's work week and the best Farmer's Home supervisor in the country cannot do anything like the job that he is confronted

with. The Congress continues to load programs on Farmers Home and gives them peanuts to operate with. And, for some reason, Farmers Home probably because it dealt mostly with sharecroppers and tenants and people like that, aside from a few country club loans before the housing program came along, never developed the political clock that the Extension Service and some of the price support programs and other agencies of the department did. It just never developed an effective lobby.

There have been years within recent years after this problem became apparent when there was no outside agency asking for more money for Farmers Home other than the farmers union and the rural housing coalition. Whenever we could slip it through before they tightened up the tax laws we used to do it. The single greatest defect in the Farmers Home ability to meet the housing needs of small towns and rural people is administrative money. They not only need it in terms of many years, but I say to you frankly they need an injection of some new blood because there is a kind of a senile spinsterism that prevails at certain levels in Farmers Home which can best be cured by an injection of some new blood in considerable quantities.

If you are going to use Farmers Home, if you look to it for help, if you anticipate that it is going to be a major ally in this fight, then you are going to have to go political some way or another in this in getting some, not some, but the administrative funds of Farmers Home ought to

be doubled this year and then increased as rapidly as they figure they can expand. And the fact that they have not got money is not attributable to their failure to ask for it because year after year they ask for far more money than either the department or the Bureau of the Budget or the Congress grants them. Howard Birch? used to say that as bad as the Chairman of the Appropriations Committee and the Congress were there were never as stingy as the White House. No President of the United States has ever really taken a look at this problem from the standpoint of adequately funding Farmers Home.

The other big defect in Farmers Home housing operation is the depth of its subsidy. Farmers Home cannot serve really poor people, but some of this is due to the fact that they have some bureaucratic rules that tie in with those insured loans and they try to protect themselves by not losing money and they have got a marvelous record, something like 2/10 of 1% losses and so forth which means that they have been very conservative and cautious people and they have had to be, but the main reason they don't reach down is because the biggest subsidy they have currently in the home ownership program is to lower interest payments to 1%. And that leaves an incalculable number of families who are simply below that level and never can be reached if Farmers Home had a supervisor standing on every street corner in town peddling loans. The best way to get around that, of course, would be something like the Norwegian program where you cannot not only subsidize interest down to zero, but if necessary, you can take a second trust on that.

(A sentence or two missing here)

It isn't just a matter of waiting all that time for old people whose lives are shortened and embittered by inconvenience and ill health or for the young ones whose lives are shortened and made less healthful and who are degraded by having to live where there isn't adequate water and in a home they are ashamed of, it runs in terms of what the denial of these things to small towns and rural areas do to the whole balance of social life in this country. It's more important, in a sense, than even the individuals reveal to us of trying to get something done about this obvious problem, which could be funded entirely out of a small interest rate on half the money we squandered on the military and space games in the last twenty years. And just set up an organization to go about, not to the exclusion of your agencies, but really as a kind of cockleburr under the saddle of all of them to coordinate, to give all the local people a voice in what's happening to their communities and in planning how we solve this housing problem, how we handle our community facilities, and set some kind of time limit on by the end of which we erase this problem. If not in its entirety, Mr. Yonts, enough so that you would have to hunt for those that are degrading. Thank you very much.

PROCEDURE FOR SUBCONTRACTING LOCAL PLANNING ASSISTANCE WORK TO PRIVATE CONSULTING FIRMS IN NORTH CAROLINA

1] The community contacts our Division, expressing an interest in local planning assistance and the grant assistance available through the 701 program.

2] Division Administrator and/or the appropriate Area Office Director meet with the local governing body and planning board to explain community planning and the 701 program.

3] If the community wishes to pursue the matter, the Area Office Director or a planner on his staff will work with the local people in the preparation of the following materials required by HUD in the application process:

(1) A Housing Element
(2) A Community Reconnaissance

From the above items, an appropriate work program for one year and an Overall Program Design for three years will be prepared and estimates of cost prepared. (Our Division is now limiting the maximum grant funds to any one community to $5,000 per year, on a one year funding basis.)

4] If at the time we and the community concur in the annual work program and overall program design, as well as the cost of the annual work program the community expresses an interest in having this work done by a private consultant, we will then contact a number of private consultants to see if they would like to undertake this work. Interviews would be held by our Division and the local people, in the community, with the interested consultants, and the best consultant for the job selected.

5] Our Division would then proceed with the application on behalf of the community, and once the grant funds were obtained we would enter into a contract with the community and a subcontract with the consultant.

Division of Community Planning, North Carolina Department of Local Affairs.

RALEIGH 27602

GEORGE J. MONAGHAN
ADMINISTRATOR
COMMUNITY PLANNING

April 6, 1970

THE "701" ADMINISTRATIVE PROCESS

The following describes the major steps which are usually taken in obtaining and carrying through a local planning program as administered by the Division of Community Planning.

I. ORIENTATION AND WORK PROGRAM PROPOSAL:

We receive a request from the community to tell them about our program. A staff planner or area office director meet with representatives of the interested community (usually the governing body) and discuss with them the following:

a] Information about the Division of Community Planning

b] What comprehensive planning is all about.

c] What "701" is about.

d] What the program is apt to cost.

e] What our procedures are for obtaining assistance.

f] The organization of a planning board.

II. PROGRAM PREPARATION:

After an initial meeting where some problems and prospects of the community are discussed, the planner or area office director will return to the community and, with local help, prepare a reconnaissance survey that identifies local problems and potentials that need the attention of the planning program. From this survey, a recommended one year work program, as well as a longer range three year work program is developed. The reconnaissance survey, work program and estimated cost is reviewed by the local governing body and by the Division of Community Planning Administrator in Raleigh.

III. ADOPTION OF RESOLUTION BY LOCAL GOVERNMENT:

When agreement is reached on program and cost, the local governing body adopts a resolution requesting the Division of Community Planning to apply to HUD for matching federal grant funds to undertake specified work. The resolution is sent to the Division of Community Planning.

IV. APPLICATION TO DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT:

The Division of Community Planning then proceeds to make an application to the Department of Housing and Urban Development for matching federal funds. As part of the package for application, the following items are necessary:

1] A signed resolution by the community; 2] a statement of the proposed one year work program; 3] a tentative three year work program; 4] a breakdown of federal and local shares of funding; 5] the reconnaissance survey, and, 6] an initial housing element. Both No. 5 and 6 are also endorsed by the local governing body prior to submission to HUD. There is no cost to the community for the preparation of #5 and 6 by DCP planners.

V. APPROVAL AND CONTRACT:

When the application is approved by HUD, normally within one month after application, the Division prepares and submits a proposed contract to the local governing body for execution. At that time the community is asked if they would prefer to use local planning staff, a private planning consultant, or staff of the Division of Community Planning to carry on its work program. If a private planning consultant is preferred, the Division Administrator and the local governing body interview a number of qualified consultants and select the one to do the work. If either local planning staff or a private planning consultant is used, the Division of Community Planning executes a subcontract with them for the work to be performed and supervises them in the execution of that work. If staff of the Division of Community Planning is chosen, the work is assigned to a staff planner by the Area Office Director and work is begun.

VI. LOCAL PAYMENT:

The local share of the cost is due thirty days after execution of the contract between the Division and the local governing body. In hardship situations, the Division can negotiate a different payment schedule with the local government, but the Division must have receipt of local funds before it can requisition matching Federal grant funds.

VII. BEGINNING OF THE PROGRAM:

The planner now undertakes the work as stated in the contract, working closely with the local planning board. He attends all local meetings related to the contract, and prepares the work in draft form for local and Division review and approval, prior to publication.

VIII. END OF PROJECT:

The project expires at the end of one year, but can be continued on a year to year basis if the local governing body requests it. Planning is of little value unless it is a continuing program that improves the quality of local government and private development decisions.

ELIGIBLE TYPES OF ASSISTANCE

A local planning program may consist of the preparation of specific maps, studies, plans, budgets, and/or ordinances or it may consist of the provision of advisory assistance with development problems and potentials. Priority for federal grant funding is given to local planning programs that give weight to:

a] Low income and minority opportunity. Planning directed toward ameliorating the housing, transportation, employment and other deficiencies of low-income and minority groups within the community;

b] Human resources development. Planning aimed at full utilization and development of the human resources within the community, including public manpower needs and resources and citizen participation;

c] Implementation of plans, including budget preparation, administrative reorganization and development project review; and

d] Intergovernmental coordination. Planning activities directed toward development undertaken at the most appropriate level of government and for coordinating development between local governments.

MAXIMUM GRANT AVAILABLE

In order to make North Carolina's allocation of matching Federal grant funds available to more communities, the Division of Community Planning limits the Federal grant funds for any one planning program to $5,000 a year. To utilize a $5,000 Federal grant, local matching funds of $2,500 would be required, as well as overhead funds of $750. Thus, the maximum local cost of a Federally assisted local planning program is $3,250 per year.

July 10, 1970

Mr. Arthur C. Campbell
Associate Director
Housing and Planning Program
Southern Regional Council, Inc.
5 Forsyth Street N.W.
Atlanta, Georgia 30303

Dear Mr. Campbell:

The following is in response to your letter of July 6, 1970, and corresponds to the number of questions asked.

1. The present programs and plans for towns up to 5,500 population entail the preparation of basic 701 planning studies with reliance on Federal funding assistance. Over 70% of the towns for which that type of assistance was used have populations less than 5,500 in number. The idea of the effectiveness of a "full" 701 program and plan, as well as its costs, for a town of less than 5,500 is worthy of debate.

2. Until recent months, staff from the University of Arkansas did provide 701 planning services. Emphasis this year is on providing initial staffing on a district level (of which there are eight in the State) to provide a planning assistance and services to small communities. Because of limited planning capabilities, use of consultants will continue to be heavily relied on, at least in the foreseeable future.

3. The State Planning Agency does not "directly" perform any planning for towns.

4. The block grant received from the Federal Government this fiscal year will provide for determining housing conditions in the State.

Commissioners: • Paul L. Giuffre, Fort Smith • R. A. Eilbott, Jr., Pine Bluff
Abbott F. Kinney, Dermott • Martin Borchert, Little Rock • Vance Scurlock, Jonesboro
Mauritz E. Friberg, Berryville • J. F. O'Kelley, Conway

5. Since no concensus exists as to the most pressing needs of most smaller towns, the answer could be mis-termed.

6. See number 3 above.

In general the resources of small communities do not suffice to meet their needs for planning. It seems that for the foreseeable future, continuance on Federal assistance will have to be maintained.

Do not hesitate to let us know if we can be further assistance.

Sincerely,

Armand De Laurell

Armand De Laurell, Consultant

Dear Mr. Campbell:

Thank you for your interest in the planning assistance which North Carolina is supplying its small communities and rural areas. Our State provides professional planning assistance through HUD's 701 Comprehensive Planning Assistance Program. This service is furnished by the Division of Community Planning of the Department of Local Affairs.

In reference to the six questions which you have asked in your letter, I feel that the enclosed information will answer all of these except question number four.

In regard to question four, both the State Planning Division in my department and the Governmental Relations Division of the Department of Local Affairs are involved in Operation BREAKTHROUGH. Our plan for BREAKTHROUGH was recently approved by HUD, and we are just getting underway in this endeavor. Please find a copy of this plan enclosed.

If you require further information, please feel free to contact one of the following people in Raleigh 27602.

Mr. Ronald F. Scott, AIP

MEMORANDUM

TO: Bill McInnis

FROM: Fred Bell

SUBJECT: Southern Regional Council Housing Survey

Following are my responses to each of the six questions set forth in Arthur Campbell's letter to you, dated July 6th:

1. I don't know that the State, or at least our agency, "sponsors" any programs for towns under 5,500. As you know, we do administer the 701 Program which is most significant in terms of generating and maintaining interest in local planning programs. If that can be defined as "sponsorship" then we do indeed "sponsor" a program. I don't think that's what they mean by the term "sponsor," though.

2. I am enclosing a copy of our Planning Manual which I think sufficiently answers this question.

3. The answer to this, of course, varies from year to year. At the present time, we have over 30 active planning programs underway. Of this number, approximately 24 of them are in municipalities of 25,000 or less. As you know, the vast majority of our cities and towns are under 25,000 so it is fair to say that a high percentage of our effort is devoted to communities of this category. The above figures do not, of course, reflect the many requests we have throughout a given year for initial, continuing, or specialized planning assistance.

4. This question really does not apply to us although I know of no "programs," as such, that exist at this time.

5. It's hard to generalize here. Our towns "need" most everything. Naturally, the Housing Element is a "need" since it is now a prerequisite for additional 701 funding. In fact, HUD comes very close to requiring that this be a basic part of any local planning program financed with 701 money nowadays. Generally, the need in terms of housing studies at the local level is quite broad in range. Most of our communities do not keep adequate records on permits, inspections, etc. There is a need here. Many of our communities have very little information documenting the nature and type of whatever housing problem they might have. The shortcomings here may range from available sites, housing availability and conditions, to needs by income level, past experience in housing construction, future prospects, housing market, available federal aid programs, financing, etc. When it comes to housing, you can almost name it and it's a cinch they will need it. One observation: there are some communities where the leadership has not yet recognized that they may have a housing problem.

6. Again, I think this is covered in our Planning Manual.

Mr. Arthur C. Campbell
Associate Director
Housing and Planning Program
Southern Regional Council, Inc.
5 Forsyth Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Campbell:

In reference to your letter of July 7, 1970, to Mr. T. Edward Temple concerning our planning and housing programs, let me attempt to answer your questions in the order in which you asked them.

1. Our Division of State Planning and Community Affairs has an extensive program through which we provide local planning assistance to small cities, towns, and the more rural counties. Our Comprehensive Community Planning staff of ten planners deal primarily with State financed planning assistance for such localities. Each planner normally works with about six communities at one time, for a period of around two years. The planning work normally includes the development or revision of a plan followed by the development or revision of zoning and subdivision regulations.

2. Urban counties or municipalities with population approaching 25,000 normally require more extensive services than can be provided by our staff without short-changing other localities awaiting services; therefore, we channel our limited 701 funds into these larger localities. Because of our Division's priority to regional planning district programs; however, the localities assisted through 701 are becoming fewer in number.

3. Including the short range planning assistance which we occasionally render to localities the number of jurisdictions receiving assistance would be around 75 per year.

4. Like most states, Virginia has not been active in housing programs in the past. We are just beginning to initiate work on our State housing element which is consistent with current HUD requirements.

5. We feel that the smaller towns in Virginia are generally receiving all of the preliminary study that they need; however, since the smaller towns come under our State financed assistance they need not go through the occasional academic exercises which HUD sometimes requires.

6. Our policy for contracts for studies for individual smaller towns is very informal. We require in each case a written request from the governing body and the planning commission. As soon as our workload allows, we assign a planner to work with the locality as his schedule permits. We have no formal contracts nor are there any direct charges.

Enclosed is a brochure describing our basic program. If you desire more detailed information on how our program works, please let us hear from you.

Very truly yours,

Williard L. Smith

Basic Program

Organization

A representative of the Division of State Planning & Community Affairs will meet with the local planning commission to: (a) help organize the commission; (b) prepare necessary bylaws; (c) discuss planning objectives and local planning problems; and (d) discuss in detail the services of the Division of State Planning & Community Affairs.

Legislation

Virginia's planning legislation will be studied with emphasis on planning commission responsibilities and the preparation of the comprehensive plan. Legislation relating to plan implementation will be studied in detail at a later time in connection with the development of regulations.

Mapping

If no maps suitable for planning studies are available, a base map of the planning area will be prepared at a desired scale from various existing maps, aerial photographs, and field surveys. The base map will be widely used throughout the planning program as a means of presenting information, analyzing findings, and expressing ideas in a graphic form.

Existing Land Use

An inventory and analysis of existing land use is of primary importance because a major end-product of the planning process will be a projection of amounts and locations of various land uses to a future date. Attention will be given to both quantity and location of residential, commercial, industrial, and other groupings of land uses. The relationships among the uses will be studied and problem areas will be delineated.

Land Capability

A general study of land capabilities will be made. Physical characteristics such as flood plain, steep slopes, watershed structure, soil types, and other natural geographic features will be analyzed in regard to their present and potential influence on development.

Economic Base

The health and vitality of the area economy will be examined, since it is a basic determinant of both population growth and development expansion. Areas of study will include retail and wholesale trade, services, manufacturing, agriculture, and employment with an emphasis on growth trends in each area.

Population

Population trends for the area will be studied to determine past rates of growth and probable future rates of growth so that land area requirements per person can be determined as a basis for future projections. Components of population change and population shifts will be

noted. Population characteristics will be analyzed in terms of age-sex groupings, ethnic groupings, density and spatial distribution.

Public Facilities

An inventory of public facilities will be made, with emphasis on planning implications. General studies of the transportation network, water and sewerage facilities, and school and recreation facilities will be conducted. The effect of the various public facilities on existing and future development will be determined.

Projections

After all the basic planning studies have been completed, they are of maximum use only if they are related to each other. At this point an appropriate planning period (usually approximately 20 years) will be selected. Projections of each land use need will be made, in view of projections of population and economy. Projected demands on public facilities will follow.

Comprehensive Plan

The comprehensive plan is a number of things, the most obvious form being a graphic presentation of the amount and location of future land uses. These projected land uses will be designed in an orderly and functional manner, their arrangement being closely related to proposed transportation facilities. The actual design of the proposed plan will reflect the findings of all the investigations described thus far and is the

end-product of all the previous steps.

The purpose of the comprehensive plan is to serve as a guide for all public and private decisions relating to land development. Unless the plan influences land development, it is of little value. In order to insure the effectiveness of the comprehensive plan, a process of implementation must be followed by the locality.

Implementation

Implementation methods include the following: zoning, subdivision regulation, capital improvements programming, official mapping, and urban renewal. A particular locality may not need or desire to use all these methods, but would by necessity use some combination of them. Zoning and subdivision ordinances which control the land use, height and setback of buildings, division of land, and provision of minimum improvements are most essential to any locality. Ordinances geared to regulating development and implementing the plan will be prepared for adoption by the locality.

Periodic Re-evaluation

The planning process is continuous and since the plan is a flexible document, it must be re-evaluated whenever a change occurs in the basic premise upon which it is based. For this reason, the law specifies that the plan be reviewed at least once every five years, to determine whether it is advisable to amend the plan. The Division is available for technical assistance in the review process.

Local Planning Assistance

Designed by: Tom Jones

Local planning assistance is a service the Division of Planning offers to interested counties, cities, and towns through the Local and Regional Planning Section. This service is based on the premise that localities should be encouraged to plan and regulate development for the benefit of their citizens and that Virginia, as a whole, will benefit from such planning.

In order to formally qualify for local planning assistance, three requirements must be met: (a) the local planning commission must adopt a resolution requesting the services of the Division in carrying out a comprehensive planning program; (b) the governing body must adopt a resolution endorsing the planning commission's request for services; and (c) copies of both resolutions must be sent to the Division of State Planning & Community Affairs, Local and Regional Planning Section, 1010 Madison Building, Richmond, Virginia 23219.

Upon qualifying for local planning assistance, the locality will be assigned a consulting planner from the Division, who will work with the local commission throughout the planning process. He will conduct the required technical studies and advise the local commission on all aspects of the program. A waiting period may be experienced before the actual assignment is made, depending on the work load of the Division. The program normally requires from 20 to 30 planning commission meetings for completion. Included is a basic outline of the local planning assistance program, which may vary slightly from locality to locality.

OFFICE OF THE GOVERNOR

BUREAU OF STATE PLANNING AND COMMUNITY AFFAIRS

270 WASHINGTON ST., S.W. / ATLANTA, GA. 30334 / 524-1521

H. OLIVER WELCH
State Planning and
Community Affairs
Officer

July 16, 1970

Mr. Arthur C. Campbell
Associate Director
Housing and Planning Program
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia

Dear Mr. Campbell:

In response to your letter dated July 6, 1970, the following general information is provided in the order of the questions you raised:

1. The Bureau of State Planning and Community Affairs administers and coordinates the following Federally assisted programs, which include towns with populations below 5,500 and which meet specified program requirements, located within the following areas:

   Statewide -
   Comprehensive Planning Assistance (701); Omnibus Crime and Juvenile Delinquency Acts; Federal Land and Water Conservation Funds.

   Regional Areas -
   Appalachian Regional Commission (ARC) (35 counties in Georgia); Coastal Plains Regional Commission (CPRC) (86 counties in Georgia); Economic Development Districts (EDD) as determined under the Economic Development Act of 1968 (12 APDC's in Georgia).

   Area Planning and Development Commissions -
   The Georgia General Assembly annually appropriates funds for the financial support of the 19 Area Planning and Development Commissions in Georgia. (See map enclosed - allocation of State grants based upon local government contributions to support of an APDC.)

2. The BSPCA does not prepare in-house, HUD funded 701 planning studies/reports for any towns/cities in Georgia. The Bureau contracts principally with the APDC's and to a minor extent with private planning consultants to accomplish the HUD approved annual planning work program studies for specified towns/counties of Georgia. The Bureau staff assists in formulation of annual planning work programs, applies certain priority evaluations to applications received from planning agencies (APDC's usually), and prepares the annual State application to HUD. Following approval of the annual application by HUD, the Bureau 701 staff prepares contracts, administers and manages the programs, providing technical assistance to our planning contractors. The current HUD Program, for the period June 1, 1970 to May 31, 1971, includes planning studies for 16 towns, 8 counties, and 7 non-metropolitan regions (APDC areawide). We are utilizing under contract 11 APDC's and two County Planning Department/Commissions and one private planning consultant to do this work.

3. None directly. (See paragraph 2 above.) Planning inputs into Statewide plans, Coastal Plain and Appalachian regional plans are usually developed by the appropriate APDC staffs.

4. The Bureau is providing staff support to the Governor's Committee on Housing, which is currently holding a series of 12 public hearings in major cities around the state. Additionally, the staff provides inputs/support to the legislative committees on housing when in session. Further, the development by the Bureau staff of a State Housing Goals report is in the formulative design stage. A technical manual for use by APDC's in aggregating the housing market for their respective areas has been developed by the Bureau staff (currently in draft). The capability for the Bureau staff to provide technical assistance and advice on statewide housing matters is being developed. Also the Bureau serves in a coordinative role with respect to the HUD sponsored Operation BREAKTHROUGH effort.

5. Initial Housing Elements (to meet HUD 701 requirements) have been prepared largely by the APDC staffs for their respective towns/counties involved in the 701 program. Presently five (5) of the seven (7) APDC's, with recently approved applications for 701 planning assistance funds, are preparing housing related studies for their areas, some of which studies include housing market analyses for their localities and on an areawide basis. Of the remaining 12 APDC's, Coosa Valley, North Georgia, Northeast Georgia, McIntosh Trail, Oconee, Southwest Georgia, and Georgia Southern have not yet prepared areawide initial housing elements but most have prepared such housing studies for certain selected communities within their planning jurisdiction.

6. Presently, it is Bureau policy to contract with the successful APDC applicants for non-metropolitan and local - HUD 701 planning assistance, to prepare the previously identified studies for the communities under their planning jurisdiction. However, some APDC's provide additional services by preparing certain studies for small towns, utilizing financial resources provided by such localities. The latter effort is determined as a matter of policy by each APDC Board of Directors.

In general, the Bureau is not directly involved in HUD 701 funded planning assistance for metropolitan (SMSA) planning, but is currently involved assisting certain towns and counties within the Atlanta Region Metropolitan Planning area. The amount of financial assistance available for 701 planning in Georgia is, of course, dependent upon the availability of Federal funds earmarked for Georgia. This past year, this Bureau received annual applications for areawide and local planning assistance from subordinate planning agencies throughout the state, amounting to $845,544 in Federal grants. HUD was only able to earmark $258,491 grant funds for this purpose.

Since January 1, 1968, there have been approximately 46 predominantly rural counties and 62 towns for whom 701 assisted planning studies have been undertaken and completed as of December 31, 1969. An additional 26 counties and 48 communities have had 701 assisted planning studies underway or prepared since January 1, this year, most of which were completed by June 1, 1970.

You are no doubt aware that there are certain other Federal assistance programs available to communities of under 5,500. The Farmers Home Administration, under the U. S. Department of Agriculture, provides rural area housing and water-sewer planning assistance. However, these programs/project proposals are not administered by this Bureau, except as relates to the Bureau's performing its role as the State Central Clearinghouse for applications for Federal assistance, under the terms of BOB Circular A-95.

Enclosed for your information is a copy of the Georgia Acts pertaining to this Bureau and a copy of the Georgia General Planning Enabling Act, updated through the 1970 session of the General Assembly. You may also find the enclosed 1970 State Investment Plan informative.

If you have any further questions concerning these items, please contact this office.

Sincerely,

Edwin C. Adams

July 28, 1970

Mr. James W. Mills
Regional Breakthrough Manager
Housing Assistance Office
Dept. of Housing & Urban Development
Peachtree Seventh Building
Room 645
Atlanta, Georgia 30323

Dear Mr. Mills:

This letter is a reply to your correspondence of July 9 in which you requested a short summary of current and future activities related to "Operation Breakthrough." The following narrative outlines what we in South Carolina consider to be the major actions that have been taken to improve housing conditions in the State. Appropriate documentation, such as minutes, memoranda, etc. is included to further amplify comments in this letter.

The leadership of State government in South Carolina has for some time been aware of and concerned about the State's poor housing situation. The State's leadership is also knowledgeable about "Operation Breakthrough" and has indicated that the State intends to fully participate in the program. The following narrative highlights South Carolina government's primary activities related to housing and "Operation Breakthrough."

Governor McNair, in an April, 1969 speech to the Carolinas' Council of Housing and Redevelopment Officials emphasized his concern for improving housing conditions in the State. Among other things, the Governor said, ". . . basic to the needs of everyone is a decent place to live." He continued by emphasizing that the State is ". . . looking at the total housing needs of our people, and how it must be coordinated with the growth planning of a community." As an expansion of this concept, the Governor said, ". . . we must provide our people with the type of social, educational and health environments which will permit every individual to achieve his fullest potential."

In his 1970 State of the State message in January, Governor McNair reiterated the State's commitment to improve the housing situation and recognized the possible role of "Operation Breakthrough." He said,

> The State must take a leadership role in making housing one of the priority needs of the seventies, and it must mobilize all public and private resources, including such new programs as Operation Breakthrough, in attacking this problem.

In the summer of 1969, Governor McNair appointed an Advisory Housing Committee chaired by Lt. Governor John C. West, who has taken a personal interest in the State's housing situation. The Committee is composed of citizens from local government, the financial and real estate trades, the academic community, the homebuilding industry and the minority community. This Committee has been charged with the responsibility for formulating policy and recommending legislation to the Governor. The full Committee has met four times since its appointment and there have been numerous subcommittee meetings. It has been fully apprised of important housing issues, available Federal funds for housing, Federal and State legislation pertaining to housing and "Operation Breakthrough" matters. (Enclosures 1 & 2)

The Educational Activities subcommittee of the Governor's Committee sponsored a State-wide Housing Symposium in March, 1970 attended by about 300 persons throughout the State. The purpose of the Symposium was to focus attention on housing, emphasize State government's concern about housing conditions and consider legislative proposals for improving and increasing the supply of housing. (Enclosures 3 & 4)

In an effort to stimulate housing activity, especially for the low and moderate-income families of the State, the Committee unanimously urged the adoption of the following four bills during the 1969-70 session of the General Assembly: (1) the repeal of laws preventing municipalities of less than 3,800 population from establishing housing authorities and developing housing for low-income families; (2) the alteration of legislation which prevents counties with less than 50,000 inhabitants from establishing housing authorities and developing housing for low-income families; (3) the authority to permit appropriate public bodies throughout the State to condemn property and undertake urban renewal and sell the cleared property for private as well as public reuse; and (4) the authorization to permit the erection of factory-built houses and housing sub-systems and components which meet the standards of the Department of Housing and Urban Development anywhere in the State. (Enclosure 5)

Two of the four above-described laws (1) and (4) advocated by the Advisory Committee were passed into law by the General Assembly during its past session. Each of the two is expected to have a significant and positive effect relative to the provision of sound housing for the State's low and moderate-income families.

Municipalities with less than 3,800 population are now legally permitted to establish housing authorities of their own and provide public housing for low-income families. (Enclosure 6) Previously, such municipalities were under the jurisdiction of one of the State's three regional housing authorities. Some of these housing authorities, established by State legislation in the 1930s, have not been very active, thus hindering local desires to provide housing for their needy citizens.

The most significant bill the General Assembly passed was that to permit the erection of those factory-built houses which meet construction standards of the Federal Housing Administration anywhere in the State, local building codes notwithstanding. (Enclosure 7) A great amount of time and attention was devoted to this bill by the Housing Committee, the State Planning and Grants Division, the State Director of Federal Housing Administration,

and HUD officials in Atlanta. It was drafted and supported as a direct result of the recommendations made by the Department of Housing and Urban Development in connection with "Operation Breakthrough." It would have been desirable for South Carolina to have taken an approach like that of California which has a department of housing and community development that formulates and administrates standards for factory-built housing. However, South Carolina does not presently have a comparable department or one that could properly undertake these responsibilities. In addition, the State does not envision such a department in the forseeable future. In light of the State's present situation, it was felt desirable to proceed now with Federal Housing Administration standards and localize the administration of the standards by requiring that the State Director of the Federal Housing Administration certify that the factory-built housing units meet established construction criteria.

Administrative arrangements to implement the housing legislation are currently being developed by the State's Housing Assistance Administrator, Mr. Clif Brown, State Director of the Federal Housing Administration, building inspectors throughout the State, the State municipal attorneys' association and myself. We do not envision any significant problems in the administration of this law after appropriate procedures are finalized. We feel that this procedure is a realistic approach that can be taken by less-populous States that do not have sufficiently large enough government operations to permit them to have a department of housing.

The Housing Committee is also keenly aware of the impact that Federal funds for housing can have on the construction of houses in the State. They are also aware that the low and moderate-income families of the State need additional Federal funds to assist them with their housing problems. Accordingly, the Committee requested that Governor McNair write Secretary Romney and request that additional housing funds be made available to the State. The Governor implemented their request. (Enclosure 8)

The State Planning and Grants Division, Office of the Governor, has been designated by the Governor to direct the State's technical activities in the areas of housing and "Operation Breakthrough" and to assist the State's multi-county district planning agencies with their commitments in these areas. As a result of this designation, the Division has directed and participated in numerous housing activities and has assigned appropriate personnel to this task.

In October, 1969 the Division submitted to the HUD Regional Office in Atlanta the report: Housing Program Design: an initial housing element. (Enclosure 9) The Division was notified on October 27, 1969 by Mr. A. Frederick Smith that the report had met all of the requirements of an acceptable initial housing element as specified by HUD.

In November, 1969 Division personnel first met with the Directors of all the staffed metropolitan and non-metropolitan district planning agencies in the State to distribute copies of the above-named housing report and disucss the roles and responsibilities of the various governmental levels involved in improving housing conditions in the State. Since that initial meeting, the Division and Directors have met almost monthly to determine and assign appropriate roles in the implementation of Breakthrough activities

in South Carolina. (Enclosures 10 & 11) In January, two memoranda to the District Directors explaining HUD's emphasis on and commitment to housing and suggesting an appropriate division of governmental responsibilities for the preparation of the Breakthrough Operations Plan were formulated. (Enclosures 12 & 13) The guidelines set forth in the January 21 memo are still generally being followed. The June memo to the Directors (Enclosure 14) is a further example of the Division's efforts to forward to the Districts information on housing and Breakthrough matters as it becomes available. The June memo concerns itself primarily with information obtained at the HUD sponsored Breakthrough meeting in Washington in May.

Personnel from the Division have also assisted Districts with Housing Symposiums. Two Districts have held Symposiums (Enclosure 15) which were widely attended by interested officials, developers and citizens from their area. These sessions have further helped spread the word about housing and "Operation Breakthrough."

The Division has attempted to play an essential and important liaison role in order to focus and stimulate attention on housing matters. Extensive cooperative arrangements have been developed with the Federal and State agencies involved in housing such as the Federal Housing Administration, Farmers Home Administration, Office of Economic Opportunity, Development Board, Clemson University and its extension services, the state-wide Electric Co-operative Association, the Districts, and local public officials and leaders. To strengthen this liaison role, Governor McNair in March, 1970 appointed me as the State's Housing Assistance Administrator within the Division. I have in the past been associated with home construction and real estate activities and, as a former Mayor of the City of Greenville, am fairly well known throughout the State. I am currently visiting municipalities and other interested groups throughout the State to assist them in understanding and utilizing Federal housing and related programs. To date, I have visited with about 45-50 communities throughout the State.

South Carolina State government is also currently engaged in other activities which will have a significant impact on improving housing conditions in the State. Most of these activities are being directed by the Housing Assistance Administrator. For example, negotiations have been initiated with the State Treasurer, Grady L. Patterson, Jr., to see if it would be possible to utilize State retirement, pension or other suitable funds to purchase South Carolina initiated residential mortgages insured by the Federal Housing Administration and Veterans Administration. Exact amounts have not yet been finalized, but it is hoped that as much as $3-4 million could be made available from State sources.

Extensive discussions and working sessions will continue to be held in the future with the Directors of the sub-State District Planning agencies. These will insure that there is coordination in the collection of information required in the Breakthrough Operations Plan.

Further activities related to housing are also being planned for the future by South Carolina State government. We hope to contact those housing producers selected in connection with "Operation Breakthrough" that are planning to manufacture housing structures compatible with the housing needs

of South Carolina citizens. We would like for them to counsel with us concerning our activities in housing and permit us to show them the opportunities for locating housing in South Carolina.

Currently in the thinking stages is a plan to have the State sponsor a prototype site for the erection of numerous types of housing units and the development of related facilities. Producers of housing and other related facilities would then have a place to "show their wares" to financiers, builders, realtors, and the general public. By having numerous types of housing on the same site it will facilitate visitation by the general public, simplify marketing procedures and increase competition. All of these factors would serve to permit the delivery of more and better houses for less cost to the South Carolina home buyer.

I have attempted to outline the major activities that have been taken and those envisioned by State government in South Carolina in the areas of housing and "Operation Breakthrough". We are confident that these activities will be of benefit to the citizens of this State as well as place South Carolina on a high priority for the implementation of housing and Breakthrough programs. Of necessity, however, this reply has not been all inclusive. We would like very much for you to come and visit with us in South Carolina and talk in more detail about how we might improve our efforts.

If we may provide additional information, please contact me.

Best regards,

David G. Traxler, Sr.

Atlanta, Georgia 30303

Dear Mr. Campbell:

Your recent letter to Secretary Richardson relating to the problems of our smaller communities is of great interest. We realize it is the smaller community that has the greatest need for outside assistance and will (at least in theory) benefit the most from programs of this Department.

More specifically, we offer the following comments in answer to your questions:

1. None

2. At this time roughly 75% is being done by private consultants and local agency staffs. Within a short time we anticipate that all such work will be carried on outside our office.

3. Thru the "701" program we assist approximately a dozen communities each year. We could help many others if DHUD would provide sufficient funds.

4. At this time the state does not administer any housing programs. As part of this years' state planning program we are embarking on some housing studies revolving primarily around "operation breakthrough". State housing programs are expected to evolve in the near future.

5. Initial housing element, housing market analysis, and basic inventory material such as base maps, land use maps, and community facilities.

6. The agency has no specific policy. At this time we are not doing any contract work with individual small towns.

We hope these answers will be useful.

Dear Mr. Campbell:

Your letter of July 26 to Bill McInnis has been forwarded to me for reply. A memorandum from Fred Bell answered, specifically, many of your questions and I am enclosing a copy of a letter recently sent to Jim Mills, HUD Atlanta, which explains our activities in the area of housing.

David G. Traxler Sr., Housing Assistance Administrator, and I spent a total of over two hours with Miss Bettieanne Childers discussing our housing activities.

Also enclosed is a copy of our Housing Program Design: an initial housing element.

I hope this has answered your questions, and if I may be of any further assistance, please feel free to contact me.

STATEWIDE PLANNING IN GEORGIA

PROMISES DEFERRED

Impressions of the Atlanta Model Cities Program

Summer Intern Report

by

William B. Hamilton

and

Janis Y. Coombs

The Urban Planning Project

Southern Regional Council

Summer, 1969

INTRODUCTION

This report is the result of a short period of time spent in two neighborhoods of the Atlanta Model Cities area. As summer interns at the Southern Regional Council, we were assigned to study the problem of citizen participation and we felt that the best way to do this would be to work with the Model Cities community organizers.

Part of this report is from a white point of view, and part of it from a black. However, we are together in our concern for the people of the six Model Cities neighborhoods, and for this reason, we are discouraged.

Originally, we had asked seven questions which we hoped to answer by the end of the summer. They were:

(1) What are the attitudes of those 16-25 towards their environment, their neighborhood, and the city of Atlant, etc.?

(2) What do young people want out of the Model Cities program, what do they see as its potentialities?

(3) What kind of role can/should young people play in Model Cities?

(4) How effective is the present system for youth involvement?

(5) Can young people work effectively within the system or must they be independent

of it? In other words, is cooperation between the Model Cities people and the area's youth doomed from the start unless these young people are allowed to set up, administer and control their own programs without the interference of the Model Cities authorities? Is such an arrangement feasible?

(6) What are the chances for improvement in youth involvement?

(7) What specific recommendations can be made to the Model Cities people in order to make both a qualitative and a quantitative improvement in youth involvement?

To some degree, we were naive in asking these questions. The answers to them should be evident in the following pages. This is not a scholarly report; we distributed no questionaires, and there is no bibliography nor are there any footnotes. Instead this is impressionistic and opionated. It remains for someone with more time and patience to do a detailed study of the Model Cities program. But it is our hope that the following pages will provoke some serious thinking about the Model Cities Program and what it reflects of this country's goals and priorities.

.....

PEOPLESTOWN AND THE AMERICAN IDEAL

America does not function according to love, equality, justice, morality or benevolence, but rather according to power. Since the birth of America, this power has been white power. It has been power used to the disadvantage of blacks. It is power that has controlled and determined the lives and destinies of generations of black people - power that caused and bred the poverty of the black ghetto- power that has exploited and oppressed and is still exploiting and oppressing black people - and power that keeps the black man begging for the handouts of the white master. It is the power that keeps the bureaucrat rich and black babies starving. This kind of power is the tool of the Federal Government and the Atlanta city government. The Model Cities program is an arm of this kind of power and perpetuates the idea that with the help of the white man, slum living can be brought up to middle class standards. Model Cities feels that the black man "working along with" the white man can make the slum a better place in which to live, to work and to raise children. I am leary of this ideal, for it has never worked before. It is the whole

American Ideal. Model Cities perpetuates this American concept -- a concept that to date has overlooked the existence, the abilities and the potential of black people living in America.

I went to Model Cities to "involve youth in the Model Cities program." Supposedly, "the program is intended to open up opportunities for the constructive involvement of citizens in the affected neighborhoods and the city as a whole in planning and carrying out of program activities."

I entered the Model Cities office extremely distrustful of what Model Cities was attempting to do. I had no faith in the program and I decided to make no attempt to influence young people to get involved in a program which I myself thought risky.

I was assigned to the Peoplestown Community - which Model Cities had artificially geographically designated as encompassing Atlanta Avenue and Ridge Avenue on the north and south extremes and Hill Street and Pryor Street on the east and west extremes. Peoplestown is the town of the people -- black people. It is an old community nestled a few blocks from the county courthouse, the Atlanta City Hall and the Georgia State Capitol. It is ironic that stately temples of power lie in such close proximity to powerless

masses.

Peoplestown is not very different from other black slum areas throughout southern cities. There are few property owners, many renters, and transients moving from rural areas to the city. There are multitudes of one-family dwellings that house one, two and three families. Some of the housing is completely dilapidated while others are badly in need of repair, and still others are extremely neat and well kept. According to the Peoplestown Planning Committee most people in Peoplestown feel that housing is either fair or poor. The houses sit very close together and very close to the street. The streets are generally in bad condition. They are very narrow and bumpy and when compared to streets in other parts of Atlanta are quite inferior. There is a preponderence of "one jump" barber shops, grocery stores, beauty parlors and joints. The Peoplestown residents have been deeply entrenched in the ways of the South -- its tradition, order, ritual and religion and as black folks who have for centuries been victims of the misuse of white power know full well the roles they are to play when dealing with "the man."

For an outsider -- even a black outsider -- to come into a community in which he is an unknown brought cold stares of

distrust and a silence that was broken only by the occassional "yes" or "no" response of a young person in answer to my questions. It is very difficult to work from the outside. For effective organization, it is mandatory that workers live within the communities in which they work. I arrived at Emmaus House, a community facility on the corner of Capital Avenue and Drew Street, looking bourgeois. This was my first mistake. I stepped from a white station wagon that had Model Cities in big bold lettering stamped all over it. I was introduced to Austin Ford, the director of the house, and the other workers as a staff member at Model Cities. They in turn introduced me to the few kids that frequented the house as a worker at Model Cities. Both young and old alike are distrustful of Model Cities and they were therefore distrustful of me. At first, I was given the cold shoulder by both young residents as well as the workers at the house. It should be mentioned that Emmaus House holds a peculiar position in Peoplestown. Emmaus House is white and Peoplestown is Black. It is run by white people and basically it is staffed by white workers although there are some few blacks who help out there. I cannot deny that Emmaus serves some useful purpose in Peoplestown for it helps residents with surplus food, keeps them in-

formed of their rights and is involved with the Tenants United for Fairness. However, here again we meet the seemingly inescapable problem of black people dealing with white people where the whites are in a position of giving and black are at their mercy. This does nothing to increase the building of a stronger black community, but keeps blacks at the mercy of the white man who enters his community loaded with the missionary spirit and manages to keep blacks clinging dependently to the great white father.

I was told about the general work of Emmaus House and that Emmaus House had no program for teenage youth and also that the best place to meet teenagers might be at the corner playlot on Crew Street. The playlot was no more than a graveled area with a portable pool, a couple of park benches, a makeshift table and some broken down basketball rings. In the evenings, I would sit there and talk to many of the young men who had nothing to do with their time but loaf around. After they found out that I was one of them, for example, that I too had been abused and used by our society, many of them warmed up and began talking with me about problems that existed within their community. Many of them could not pinpoint any particular problems and all were against any kind

of organized meeting. They had been "met" to death and Dennis - in whom they had complete trust (white, Emmaus House Worker) - had already outlined and was preparing a list of the recreational needs of Peoplestown. However, I was able to obtain from many of those who began to talk freely with me a list of their grievances about community recreation. Teenage Youth wanted:

(1) Expansion of the playlot on Crew Street into a full size block park. (after checking with Lou Oroz, Model Cities Physical Planning Coordinator, I learned that plans were in the making to expand the park. The Parks Department expects to have this land acquired by the Spring of 1970; development should be completed by next summer. I was told that the city was not able to acquire land faster than this schedule, and I passed this information along to Phil, who is working with Dennie from Emmaus House on the Recreational Facilities for this area).

(2) Remodeling an old house on Capital Avenue into a recreational hall. It is the youth's idea that the house would be open 24 hours a day. It would contain a jukebox, pool table, cards, T.V. and similar equipment that would help keep teens entertained. I should say here that the young people I was working with and those that frequented Emmaus House were from the west side of Captial Avenue. They do not consider themselves as real residents of Peoplestown, although Model Cities has designated them as such. They say they live over near Washington Street. There is a noticible split between the youth that live on the west and east sides of Capital Avenue. A gang rivalry has developed

and the boys from the west side do not break the invisible Capital Avenue barrier. The Stanton Park Recreation Center lies only four blocks away from these teens, but they refuse to go down to Stanton Park because they say that they are not wanted there, they would get into fights and most importantly, they would break the invisible barrier of going into a "badder" gangs territory. However silly this may sound, it is a problem and a very serious one. It is a problem that must be solved if youth are to develop meaningful ways of interracting with each other.

(3) Build a small gym on Crew Street playlot

(4) Plant trees to provide shade during the hot months on the playlot.

(5) Fence in present playlot

(6) Pave the basketball court on the playlot

(7) Put up regulation basketball rings on playlot.

These are the recreational wants and needs of youth on the west side of Peoplestown. Some form of organization of youth has been started by the workers at Emmaus House for this area. Emmaus cannot be expected to take the full responsibility for organizing youth, for those workers will always be on the outside because they are white. It is my hope that some internal organization can be formed by and for black youth for political action.

The situation in Stanton Park is somewhat different from that at Emmaus House. Stanton Park is also located in the

Peoplestown Community -- perhaps badly located. It is situated about four and one half blocks down Haygood Avenue, a street which runs off of Capital Avenue. The street is very narrow allowing for the passage of only one car at a time, and is dilapidated, bumpy, full of holes and in general need of repair. Stanton Park is stuck in a little corner at the dead end of Haygood. This is the only way in as well as out of Stanton Park, which makes it very unacessable.

I began my work in Stanton Park in the middle of a rather heated struggle for power. The issue was a very clear cut one. Stanton Park should never have been allowed to open its doors for public use in the condition it was in. How it ever passed park inspection is beyond my comprehension. As I approached the prison-like building, I was met by mounds and mounds of dirt that almost blocked the entrance to the recreation center. Kerry Holman, another Southern Regional Council Intern had begun work there before my arrival. He had aroused the interest of the young people and made them realize what a bad condition the park was actually in. Kerry is a dynamic political organizer. The young people that come to Stanton Park are extremely vibrant, alert and intelligent. They knew and understood the conditions of the park much better than I did,

but they didn't know what could be done to correct them.

Kerry had already taken them to City Hall where they had expressed thier dissatisfaction with the park. Another meeting had been scheduled for a few days after my arrival. The initial questions for the first meeting were "why isn't Stanton Park completed, and when would it be completed?" The follow-up meeting was held July 24th at 2:00 p.m. at Stanton Park. In attendance were Jack Delius the General Manager of the parks department, A.P. Brinley and Eddie McLamore from the Parks Department, Virginia Carmichael the Director of Recreation, Lyall Scott from Model Cities, Kerry Holman from the Voter Education Project and myself, plus the most important feature of all, about fifteen kids who were really anxious to see something done. So incensed were they, had not something been done to correct the situation, I am afraid to think what would have happened. They were well-versed on what could and should be done to upgrade the park and they let the Parks Department know in no uncertain terms what they wanted and that they wanted it now. It did me a lot of good to hear the call for "action now". The general tone of the meeting was one of "We (the Parks Department) are so sorry that this condition was allowed to exist." It is the same sob story

that black people have been hearing from whites since the beginning of the Civil Rights movement.

The meeting was called by the youth of Peoplestown. The purpose was to find out how soon action would be taken on their demands. The Parks Department seemed to be hedging major issues by not wanting to give any dates and explaining in technical detail all of the problems involved in such a major improvement of the park. The problem was a common one for black people, and, had no one complained, it is an excellent chance that everything would have remained the same. Whites thought that they could get away with putting a park of inferior quality into a Negro slum area to perpetuate that slum and everything would be "hunky dory" because no one was expected to say anything about prevailing conditions. The problems at Stanton Park are severe - not just the lack of equipment but poor design of the building and numerous construction errors. The following is a list of needs of Stanton Park as recognized by the youth who live in that community.

(1) Basketball rings inside the building are inferior quality or construction and need replacing.

(2) Tot play area is filled with building material waste, weeds and stagnant water.

(3) Gymnasium floor is extremely slippery and dangerous.

(4) Fan guards are breaking loose making it extremely dangerous for anyone walking under one of them or playing basketball or any game on the gym floor.

(5) Heaters in gym do not heat.

(6) Live electrical wire protruding out of light on concrete handrail leading to building

(7) Softball field is not usable because of large rocks, glass and dirt mounds on the field.

(8) Shelf and coat hanger inside recreation building have broken loose.

(9) Horseshoe courts are not usuable because of high weeds.

The following items were requested:

(1) Clock in Gym

(2) Scoreboard
(3) Water Cooler
(4) Games for younger children
(5) Padding on walls below basketball rings in the gym.
(6) Spectator seats in the gym.

The Parks Department promised to have as much of the equipment repaired and installed as quickly as possible. We were told that the floor was already a part of the 1970 proposals and that the heating system would be put in as soon

as money was available. Workers were taken from Piedmont and Grant Park to start work immediately on Stanton Park. The attitude of the older residents seemed to be that we were there causing trouble and stirring up the kids. So often had their promises gone unfulfilled that they thought no real action would come about and that they would be left with a lot of dissatisfied youth on their hands.

The Parks Department was evidently shaken, for less than two weeks later, most of the needs were taken care of. Men were outside working everyday planting grass, clearing the play area and softball field, removing the dirt from in front of the gym and in general making the gym a livable place. On the inside of the building the coat rack was repaired, the water fountain now runs cold water, basketball rings were put up in the gym and the fan guard was repaired. Every evening, the basketball team practices and they are proud that they had a hand in replacing those basketball rings. They have a sense of power. It is doubtful, however, just how long this kind of organization will last. Now that their demands have been met, they feel a sense of accomplishment and are satisfied. They now feel that they have nothing to rally around and business will proceed as usual. What is needed is a strong

political organizer who can spend long hours each day for long periods of time in guiding young people in the control of their own communities.

THE RECREATION COUNCIL

I mentioned to some of the teenagers that a recreational council meeting was to be held at Model Cities the following week. A couple of the guys consented to go because they wanted to do anything possible to help the park, and if anybody wanted to know what happened down there they would be glad to let them know. The boys attended that meeting but I am positive that they will never attend another one. In fact, I dare say it will be extremely difficult to get any youth from Peoplestown back at the Model Cities office. They were completely disgusted with the meeting, which dragged out almost three hours and which concerned itself unrealistically with long-range goals which were of no value to any of the teens present. The Youth had very little to say and got little out of the meeting.

I think it should be mentioned that Stanton Park Recreation Center is much more than a park, for many of the kids

arrive at the park before ten in the morning and stay all day long. Others come only to receive the milk that is passed to them in the morning or the orange juice they are given in the evenings. Sometimes, the little children would ask if they could have another carton of milk to take to mama or that mama had sent them to pick up a carton of milk for the smaller children who were unable to come. Kids of all ages visit and spend all day in Stanton Park. The Youngest I think was little Anthony who much too young to be outdoors with a five year old brother, spent a couple of hours every day or so on a crowded gym floor with kids running all over the place. Such was his home away from home.

The majority of the teens are easily motivated if they are able to see immediate goals. They only need some kind of strong leadership to give them direction. What they did at Stanton Park was their thing and they are proud of it. They do not think of their community as a slum; it is home. For short term fun and long-range equipment, the kids decided to give a dance. They wanted to have a really good party and they thought it would be a good idea to raise money for a scoreclock for the gym at the same time. Mr. White, the recreational director at the park had arranged with the Coca-Cola

Company to have a clock installed for $30.00. The installation of the coke machine would mean that a scoreclock could be purchased for the gym and that the profits coming from the coke machine would pay for the scoreboard. Everyone went into action to plan the dance. Paul Brown from the Coco-Cola Company donated six cases of cokes to sell at the dance. It was a waistline affair, which meant that everyone entering the dance had to pay the price according to his waist measurements. During the week, the dance was announced on Radio Station WIGO and WAOK -"the soul sounds in Atlanta." The day before the dance, the kids enjoyed sticking flyers in the windows of all of the nearby stores and throughout the neighborhood. The big day finally arrived, but to everyone's disappointment, the closer it got to 8:00 p.m., the more cloudy the sky became. That night it stormed! This did not break the spirit of the teens however, for they went right on and had the dance with about forty people and raised almost $25.00. With the coke that was left they were busy planning another dance to make more money for the gym. It is good to see such a community strength with everybody's cooperation to make it a success. But this was only a short range pleasure - filled way of organizing youth. What about community organizing

for long range projects for gaining power in Peoplestown?

POWER FOR PEOPLESTOWN

Black people can only escape oppression through power. This power must originate in our own communities. The organization that was started in Peoplestown is not, in my opinion, a very lasting one. What is to become of a community that is ruled from the outside, that has no inherent structure from within? I think that the young people hold the key to bettering their communities. They are not afraid to speak out against the racism of the American System and with proper Black training they can develope meaningful attitudes with which they can operate their own system in their own communities. I am sure if they accepted a program like Model Cities at all, they would never allow a person like Victor Lief, although he might be the epitome of human character, to serve on the National Advisory Council representing their communities. Mr. Lief, runs a grocery store in that community and Mr. Lief is white. This is a black community and all business should be carried on by black people. I would even suggest buying Mr. Lief out so residents can run businesses in the community and keep money flowing within the community rather than have white exploitation of blacks, and whites getting rich at the

expense of black people.

The people in the black community do not control the resources of that community, its political decisions, its housing standards, or the land. The purpose of internal organization is to build a power base.

One of the residents of Peoplestown told me that everytime she walked home from having washed clothes and taking care of white women's children all day and passed Atlanta's $18,000,000.00 stadium, she was reminded of the work of whites that displaced poor people. Every time one of the Model Cities staff approached her about her feelings about rehabilitating houses she tells them about her grandmother who went into a lot of debt in order to fix up her house so that she could stay in the community she loved, with her friends, relatives and loved ones. After all of this expense, she was displaced anyway and spent her dying days in a cramped government project. The woman said to me, "I ain't got no faith in Model Cities. I ain't got no faith. People want action, they are tired of meetings and planning talk. Model Cities has shown me little in the way of doing. It's just another one of them organizations. They promise us everything and all we get is promises, promises, promises."

And so the story goes on and on ... After eight short weeks of working in the Peoplestown community, I grew to love the people there. Their community is my community and their problems are my problems. It depresses me to think what will become of that community within the next five years unless some drastic measures are taken to insure power for Peoplestown.

. . . .

GRANT PARK

The Grant Park neighborhood of the Model Cities area presents a classic example of a community in transition. Situated in the easternmost part of the Model Cities area, what had once been a solidly white lower-middle class residential section with the cyclorama standing rather symbolically in its center is now giving way to an increasingly large.influx of blacks. The Cyclorama is still there, but it no longer symbolizes a neighborhood united by race. That common bond -- one that has led to an incredible sense of community in Adair Park, the only white neighborhood in the Model Cities area -- is now gone and has been replaced by the fear and suspicion common in such a situation of uncertainty.

Yet relations between the races are surprisingly good, considering the potentially volatile situation. White families seem to coexist with little open animosity with their new neighbors even though they are "niggers". But what makes Grant Park unique from the Roxburys and the Bedford Stuyvesant -- white neighborhoods that have made the transition to black ghettos in a very short period of time -- is the added presence of poor whites. In some ways in worse shape than their black

neighbors, these people are broken people and no longer even have the crutch of racial solidarity to support them, for they are isolated even from their fellow whites -- the ones who have made it.

The frightened middle class, the oppressed blacks and the fatalistic poor whites have together created a feeling of sullenness and despair that pervades the Grant Park area. Perhaps the most frightening aspect of the area is that it seems inescapable; there is no way out and most people don't even seem to be looking for one. Everywhere there seems to exist the same feeling of inevitability, the same passive acceptance of defeat. Walk down Grant Street just north of Georgia Avenue sometime and you become aware of the porches -- aware of them because no matter what time of day it is they are always full, full of the unemployed, the unemployable, the crippled -- and most of all, the suspicious. And they are always watching -- even the landing on the moon proved no distraction -- for there is nothing better to do.

For many of the older white residents, fear and an almost masochistic cultivation of it has become a way to relieve boredom. Early in July, a small boy was found murdered near the corner of Grant and Georgia, and there have been a number of

Saturday night fights in the same area. Most of the whites keep their doors locked continuously, and will open them, even during the day time, only with the greatest reluctance.

There is little existing community organization in the Grant Park area except for the Grant Park Community Club, which seems to operate mainly in the southern, black area of the neighborhood. In the Georgia Avenue -- Grant Street area -- which I worked in most of the time -- there are four churches, two Baptist one Presbyterian and one Methodist which provide in varying degrees some sort of organized structure for the community. One of these Baptist churches plans to relocate this coming October - which will make little difference to the community since its minister made no effort to involve himself in its affairs and since most of his congregation was from outside the area anyway. The Hill Street Baptist Church Mission and the Georgia Avenue Presbyterian Church on the other hand, both have made extensive efforts to become involved in their community with varying degrees of success. Both churches have had some sort of youth organization in the past, though the one at Georgia Ave. Church was discontinued because of trouble and the Baptist Group is not that active. The Georgia Avenue Church however, has sponsored the rent-a-kid program and in addition, holds cookouts once a month where a whole family can

eat for a dollar. I had no contact with any program that might have been sponsored by the Methodist Church.

There is very little in the Grant Park area for young people to do. Recreational facilities are next to non-existent, for despite the fact that Grant Park is one of the largest parks in the city, it is not designed with people in mind, but rather as a showcase, a museum, for people from outside the area. Its zoo and Cyclorama and wooden pavillions, while all very enjoyable, do not offer much in the way of play areas. There used to be a swimming pool in the park, but that closed and filled in, ostensibly because it was getting "dangerous" and being "misused," but in reality because it was being used more and more by black people. Besides the park, there are Slayton Elementary School and Hoke Smith High School -- neither of which offer anything more than the usual broken swings and slides (though Smith does have tennis courts). So there is very little for a teenager to do, since most don't have jobs. It is not a difficult task to keep track of the kids around Georgia and Grant Park; odds are they were sitting on their porches, or maybe playing basketball on the court behind the church.

Along with this lack of any facilities is a rigid family structure which would be alien to most middle-class teenagers.

Because of the Moynihan report, one associates poor people with broken homes and a loose family structure with little discipline. But on the contrary, there is far more authority and control in such a situation than in a middle-class suburb. Parents always demanded to know where their children were going, and many of the kids had to ask their parents whether or not they could go to any of our organizational meetings. For the fact remains that even if they haven't told their parents where they were going, there are few places to go, fewer ways of them getting there, and little desire to go anyway. The automobile - which has contributed so much to the mobility and freedom of middle class youth - is in most cases unavailable to youth in the area.

"Youth Involvement in Model Cities"

It is obvious to anyone who has attended any of the seemily endless "planning" meetings of the Model Cities Program that youth involvement is non-existent, and by youth involvement, you can include anyone from 13 to 45 years of age. This is rather ironic, since it is apparent from the current pace of the program that the people who helped plan it will not be around to see it finished. There are numerous reasons for the lack of involvement, including the very natural tendencey of younger

people to pursue activities more consistent with their ages, such as dating, sports, etc. Involvement would undoubtedly be a major problem in any community in America, but could more or less be remedied in other situation by making a program interesting and relevant to young people. A far more difficult problem however, is that of mistrust and apathy. Just why exactly should anybody -- particularly those who have not benefited from even the most basic services of society -- place their trust in a new program which comes in and makes a lot of wild promises about "changing the quality of life" -- promises that have gone unfulfilled all too often.

And then there is the matter of the generation gap, which if anything is more divisive among the poor than among the affluent. Older residents involved in the Model Cities planning - like their contemporaries in other areas of society -- harbor the same anxieties and resentments of younger people and their ideas. What negligible involvement in Model Cities there had been in the past, in fact, had been curtailed for precisely this reason - pressure from older people to conform. But in many ways it is easier for "an outsider" to gain the trust and friendship of younger people than of their mothers and fathers. But it is a difficult situation nontheless. It is first of all, absolutely necessary that the organizer live in the neighborhood

After about a week I was able to find a room with a white family in the neighborhood - after discovering that as a rule, the worse the conditions of apartments, the higher the rent.

The first thing we did with Lyall Scott of the Model Cities Community Affairs Division was try to determine what kind of issues would interest youth and at the same time would hold promise of bringing some kind of immediate action. It was more or less agreed that political action of a direct and specific nature was impossible at that point. Rather we hoped to develop a "politicalization" of the young people by making them more aware of the political process and the advantages of belonging to an organized group. We decided that recreation should be our primary issue, since it concerned nearly every young person in the area. We tentatively planned to close off one of the streets in the neighborhood and hold a street dance, with Crime Prevention units of the Atlanta Police Department providing records.

Also during that week, we heard from the rector of the Georgia Avenue Church that the owner of a vacant lot across the street from the church would be interested in leasing the land to the church if he thought it would do some good for the kids of the neighborhood. Reverend Rosenberger agreed that it would

be a good idea to try to put in some kind of playlot. We then contacted the City Parks Department to find out if they would be interested in clearing the lot and putting play equipment on it, as well as assuming the one year lease. Working through Eric Harkness, a recreation planner in the City Planning Department, we were able to meet with several people from the Parks Department and take them out and show them the lot.

They agreed that it was a nice piece of property, but said they would not be able to give us any definite word for several days on whether or not their department would be able to do anything about it. At the end of that time it came back to us that Jack Delius, general manager of the department, had said that there were no funds available for any kind of development of a lot. He might be able to give us a bulldozer for a day in order to clear the lot, but we would have to give him two weeks notice on it.

Meanwhile, a landscape engineer attending a Recreation Council meeting had volunteered his services to anyone who needed him. We told him about the Grant Street lot, and he agreed to help us out anyway he could, but said that he would be busy for two weeks, and could probably do nothing until after them. He did come out and take a look at the lot however, and said that it was a good size one with a lot of possibilities.

He especially liked the hills and gullies on the lot, and thought that we should not level them, since they would make a far more interesting lot than a flat piece of land. He also said that the lot was so overgrown with weeds and covered with broken glass and tin cans that it would be necessary to have some sort of preliminary clean-up of the lot simply in order to get a better idea of what could be done with it.

Our idea in getting the services of a landscape architect was not to have him plan a play area <u>for</u> the neighborhood, but rather to work with the neighborhood - and especially the youth - in determining what kind of area they wanted, Our purpose in doing this was threefold: (1) we hoped to fulfill an immediate physical need of the neighborhood, for example, a play area that would keep some of the smaller children from playing in the streets; (2) We hoped to develop an imaginative play area that would not simply be attractive, but far more importantly, enjoyable to play on. The only way to plan such an area is to actually involve kids in the planning by finding out and putting in what <u>they</u> wanted; (3) Through this planning process, we hoped to cultivate some sort of cooperative spirit and and sense of community among the kids by showing them how much could be accomplished through a little bit of organization.

As we were to find out, this is easier said than done.

As far as the playlot was concerned, it was decided that we should go ahead without the city's help and try to get it done by ourselves. The Georgia Avenue Church agreed to sign a lease with the owner for a dollar a year, and we started looking for someone to donate the use of a bulldozer.

Meanwhile, however, we had not had too much contact with the kids of the neighborhood. Initially, I had tried to work with what youth organizations there were at the Presbyterian and Baptist Churches, but I was able to arouse little interest in the few teenagers that did go to these churches. Both Lyall and I had been working with a 21 year-old who lived next door to the lot and who had been active in starting a cub scout troup in the neighborhood. Bobbie is in many ways symbolic of the seeming hopelessness of the poor white's position. Together with his eleven or twelve brother and sisters -- I was never sure how many there were at one time -- Bobbie lives in the downstairs of an old two story frame house on Grant Street, near the corner of Georgia Avenue. Bobbie is lucky! He has his own bed to sleep in, but some of his smaller brothers and sisters sleep three in a bed. It is difficult to tell what Bobbie does all day, for he dropped out of school before he got to high school, and he works only part-time. He has had some trouble

with the police before, and Rev. Rosenberger had to ask him to take his cub scout troup out of his church. Though he isn't much respected by older kids, he has an incredible way with younger children, and knows the name of practically every boy in the neighborhood. He first became involved in Model Cities when he came to a recreation council meeting and was elected temporary chairman when one of the other members of the committee thought she was nominating someone else, and all the other committee members were too embarrassed to do anything about it. It was, I suppose, our first victory for youth participation.

Bobbie at this point, then, was our only contact with any of the teenagers in the neighborhood. I had met some of his brothers and sisters and some kind of organizational meeting to try to get as many people involved as we could in planning the street dance and the play lot. Looking back on it, our attempts to get people to come to this meeting were rather naive and ineffectual, but there was probably no alternative. The night before the meeting, which was to be held at the Georgia Avenue Church, Bobbie and I went through the neighborhood for about two hours, knocking on doors and talking with as many teenagers as we could find. I gave them what came to be a standardized pitch about how it was time to get some sort of teenage organization going in the Grant Park area; how there were a lot of

things the neighborhood needed but never had; how we were planning a street dance with a LIVE band and also wanted to clear that lot vacant lot up on Grant Street and put in a playground and I was wondering if you could help us. We're having a meeting tomorrow at the Georgia Avenue Baptist Church and I was hoping you could come and see what you think.

We must have talked to about thirty kids that night, about half of whom said they were interested and would come to the meeting. The next day, Bobbie and I went down to Hoke Smith High School which had a summer session going on, and talked to everybody we saw down there. We also put some signs up there and also at local drug stores and soda fountains. All in all we talked to about fifty or sixty people, and I was hoping for ten or fifteen to show up.

The meeting was supposed to start at 2:00, but by 2:15 it was obvious that the most we were going to get was four or five rather embarassed looking kids. Also, at the meeting were Eric Harkness of the City Planning Department, Rev. Rosenberger and Rev. Ernest Orr of the Hill Street Baptist Church. We went ahead with the meeting, and I tried to explain what we were trying to do. At that point we weren't sure what day we could have the street dance because we had heard no definite word on the band. After a half hour during which I felt I was

talking down rather than with the kids, the meeting ended, and we agreed to meet two days later, with everyone promising to bring more people.

The next meeting went much better. About nine people showed up -- including some of the kids from the house next door who had absolutely refused to come to the last meeting. We had finally gotten definite word from the band that they could play the following Friday night, so we were ready to get things going. In our effort to have the kids plan the dance, and not us, we appointed nearly everyone at the meeting, the chairman or co-chairman of some committee or another. We had the food committee -- for hot dogs and cokes we were going to sell at the dance -- ; and the publicity committee -- for posters and flyers for the dance -- ; and the clean-up committee -- for after the dance and for the clean-up of the lot the next day. We also voted to give ourselves the name of the Grant Park Youth Council, so people would know who was sponsoring the dance.

We had another meeting the following Monday night at which we finalized the plans for the dance and for the food we were going to sell to raise money for playlot equipment. I had meanwhile, gotten the Southern Regional Council to donate fifty dollars for the dance, and had been able to raise another

twelve dollars from Model Cities staff people. Also, we were able to get special prices on cokes, hot dogs, ice, cups, and rolls so that the 62 dollars was more than enough money to buy food for the four hundred people we hoped would attend.

Looking back on the planning meetings we had, I am surprised in a way that anyone came to them. Here was someone from the outside coming in and promising all these things, without absolutely any proof that he could or would deliver on them. I remember the day of the dance when the girl who was in charge of the food came down to the house where we were going to cook the hot dogs. I saw her coming down the street with some friends she had recruited to help us, and laughing, shouted to her that it was all a joke, that there wasn't going to be a dance. It wasn't a very good joke, though, because she believed it, and I had to spend five minutes trying to reassure her.

STREET DANCE AND PEOPLE'S PARK

The dance was a great success; about four hundred people came to it and over a hundred dollars was made selling hot dogs and cokes. Most of the people who came were black, but a lot of whites were pulled off their porches for the first time in a long while. There was little contact between the races, as many whites looked warily on from a distance before

getting enough resolve to come closer. The race riot that had been predicted by some of the erstwhile parishioners of the Presbyterian Church never materialized, and everybody seemed to have a good time.

Perhaps the most amazing thing about the dance was to see the enthusiasm of the kids once they saw that this promise was not going to go unfulfilled. There was never any question of not having enough help the night of the dance, and if anything, there were too many wanting to help.

The clean-up of the vacant lot the next day went just as well. By this time we had developed a hard core of about ten or twelve people, who had helped plan the dance and then helped with the lot. In addition to them, there were another ten or fifteen, mostly smaller kids. Together, in four hours we managed to clear all the weeds and large underbrush off the lot, as well as remove the broken glass bottles and one dead cat. Except for Rev. Orr - who stopped for a little while, no adults helped us doing this, even though the usual number were sitting on their porches nearby and probably knew what was going on.

Since the clean-up and the dance, I think there has been a noticeable change in the attitude of at least some of the teenagers who live in the Grant Street area. Several I didn't

know have asked me when the next dance is going to be and I think some of the others are noticeably more friendly and less suspicious. Where we go from here, is a difficult, and of course critical question. A bank account has been opened for the hundred dollars or so we made from the dance in the name of the model cities community relations assistant for the Grant Park area. The Monday following the clean-up dance, we took as many kids as we could to the Model Cities Recreation Council meeting on Capital Avenue. Not unexpectedly, the meeting proved to be boring, and a number of people left while it was still in progress.

Another meeting was held the next week at the vacant lot, this time with several recreation planners and two men from the community development department of the C & S Bank. We talked about what kind of play equipment could be used for the lot, and then went out to Sandy Springs to look at a very innovative playground that had been put in by the Fulton County Planning Department.

WHAT HAPPENS NOW?

The worst part of this job is having to leave in the middle of it. Though I think a lot of progress has been made, the groundwork is still a little rough to expect a permanent and effective grass roots youth organization to function automati-

cally. Though there are two advisors and a bank account, there are no officers and a very small and loose membership. Up to now, the Youth Council has been too much my organization and not enough of theirs. Perhaps this is the inevitable outcome of having an outsider come in and organize; too often he will subtly, albeit unconciously force his own views and attitudes on a group and then call it meaningful community action. A certain amount of this is unavoidable in the initial stages of organizing, but must be avoided as the organization matures.

There remains a lot to be done. The two most immediate priorities should be:

(1) Planning the Grant Street Peoples Park should be the number one priority. Meetings should continue with the planners and it should be made clear that he should do what they want. The money in the bank should be used for playground equipment, as was originally intended.

(2) A chairman and a treasurer should be elected. This will be difficult since it is still impossible to tell who or how many will show up at a meeting. Elections should be delayed until the beginning of the school year, at which point it might be possible to work with the Student Council at Smith High School to interest them and get them to help in recruiting more people.

It is only with action and with results that a community organization can expect to attract additional membership and support. In our case, the street dance was perhaps the most important thing because it showed that something could be done. It is doubtful that we could have gotten anyone to help us clean up the lot if we hadn't had that dance, because we had to first prove that we really meant what we were saying. Progress on the playlot must come as quickly as possible; or the impetus and enthusiasm gained that one weekend will be lost. It is extremely important that the youth of the neighborhood be made to feel that the Grant Street People's Park is what the name implies -- their park, cleared and planned not by the city or Model Cities, or even the adults of the neighborhood, but by themselves.

Perhaps the most educational thing about working on the dance and playlot projects was becoming aware of the great many people and organizations who are willing to help out any way they can if they are asked to. Just for the dance alone, we got special prices from Coca-Cola, a meat company and an ice distributor. In addition, a rock band that normally charges about three hundred dollars to play was willing to do it for nothing. For the playlot, besides having the help of two

volunteer landscapers, C & S Bank has become interested in developing and perhaps even purchasing the lot to hold in trust until the city is able to purchase it, and a machinery company is willing to let us use a bulldozer to clear the lot. It is evident, I think, that volunteers remain the greatest untapped resource in any effort to bring about meaningful social change. The fact that these volunteers in most cases operate much more quickly and efficiently than any governmental organization is an added attraction. In most instances, however, people from the community would not be aware of the channels that could be traveled to obtain these services, and it is here, I think, that an outsider can render the most help in organizing.

Only the most basic groundwork has been laid in Grant Park towards achieving the goal of not so much youth involvement in Model Cities -- which considering the present conditions, I think is next to impossible -- but involvement in serving their own interests through banding together. The Grant Park Youth Council at this point exists mainly in name and in the bank account it has at C&S. A lot of work will be required to turn this skeleton into an active, living organization with the support of the youth of Grant Park. It is incredible to think however, that more was accomplished in one month with that

small group of teenagers, than the Model Cities Agency has been able to accomplish in two years of promises and excuses. This is a sad commentary of the effectiveness of the Model Cities Program, but nonetheless leaves room for at least some hope that radical social change can be brought about. If that change is going to come, it must come from within and not from without; nothing will improve when outsiders are brought in to force their solutions, but only when the consciousness of the ghetto resident is raised to such a point that he is willing and ready to start acting for himself. To talk about youth involvement in Model Cities is in the final analysis, irrelevant. What is first needed is group consciousness and a realizat on that the individual's future is bound inextricably to his neighbor's. Out of this awareness must come a willingness and a desire for action and involvement. Participation in the Model Cities program is but one phase of this involvement, and it cannot be the sole end of a community organizer, but rather the means toward the ultimate end of power and control over one's destiny. Hopefully, something can be learned about this process through our experiences in Grant Park.

The Model Cities Program: A Question of Commitment

It is difficult to pinpoint exactly, but there is an atmosphere about the whole Model Cities Program which is disturbing. Perhaps the trouble lies in the extensive publicity the program has received from both the press and the city government. Hailed "as the nation's first," it has become, like the stadium and Peachtree Center, a standard part of the Chamber of Commerce's line for selling Atlanta. When a Program is clearly being used to improve a city's image, rather than improving people's lives, then it is time to question the depth of commitment of everyone connected with the program.

It is this kind of feeling that one gets at the Model Cities office on Capitol Avenue, which in its own way is symbolic of the reversed priorities that seem to permeate every aspect of the project. Housed in what are supposedly "temporary" facilities which resemble, as one resident put it, "a bunch of chicken coops", Model Cities is but part of a complex of government agencies for which nearly 280 thousand dollars has been appropriated. Granted, the program has to have a headquarters -- and it is at least located in the area -- but is it significant that these buildings are being built before one single unit of new housing is ready for occupancy in the area, before any

schools are built and before any sizable number of jobs have been created. Meanwhile, the only other accomplishment of the Model Cities Program is the Model Cities buses, which for a dime, furnish transportation east and west, across the Model Cities area from neighborhood to neighborhood. But Atlanta Transit had to be paid several hundred thousand dollars to furnish a service it should have provided anyway but didn't because it was not profitable. For example, it didn't run to the suburbs.

Of course it is what goes on inside the building that is most important, but here again one is struck by the lack of urgency on the part of the staff. The business of planning, with its charts and guidelines and standard operating procedures, goes on in a leisurely manner, disturbed only now and again by the protests of a resident or a group such as Project Cornerstone that the views of the residents are being ignored. Reaction to one such accusation by Cornerstone was typical; members of the staff acted as if they had been betrayed. Dumfounded that anyone could disagree, they became determined to "win" in the end.

Much has been made of the citizen participation in the planning of the Model Cities Program. However, out of the areas total population of about fifty thousand people, probably

no more than six or seven hundred have ever gone to a meeting of one of the sixty or seventy committees supposedly operating in the program. If you went to one of these meetings, you would know why. The private consultants hired by the Atlanta Housing Authority to conduct land use surveys in each of the six neighborhoods, consistently talk down to the people, and present them with a plan they have drawn up and ask for the neighborhood's approval. There is very little a resident can do to counter the elaborate charts, diagrams, slides and photographs the planner uses to sell his plan. Participation and involvement in this sense seem to mean rubberstamping the plans of the "experts."

A natural goal of Model Cities would be to improve the percentage of citizen participation. But considering the present situation, I think a significant increase would be next to impossible to bring about. One of the main attractions of the Model Cities Program of the Demonstrations Cities Act was that it was to be innovative and provide new approaches to urban problems. That all sounds very nice, but the structure that is used in order to accomplish this is the same old structure, the same old city agencies. The after-taste of urban renewal is still bitter, especially in an area which saw 18 million dollars spent on a new stadium which displaced thousands of

people. Why should anyone expect anymore of the Model Cities Program when it entails basically the same housing authority, the same police force, the same sanitation department, the same board of education that has never provided even a minimum of services for the poor of the city?

It would be nice to be able to make a list of recommendations that would change all this, that would make the Model Cities program into an effective instrument for social change. But I am afraid that is impossible. For the problem at this point is one of attitude and outlook which seem to offer little hope for improvement.

Perhaps it is true what conservatives have been saying ever since the days of the New Deal; perhaps the Federal Government really isn't capable of coping with the great problems of this country. The Model Cities program, with its delegation of authority to Federal and local governments, as well as to the residents of the area, represent an ideal approach to urban problems to a Republican Administration which has adopted it, expanded it -- and cut back on its budget. But there seems to be little real understanding of the problem either on the part of HUD officials in Washington -- who seem to delight in sending long, complex and irrelevant "guidelines" -- or on most of the

officials here in Atlanta. The only alternative to the bureaucracy and paternalism of government lies in the people of the ghetto areas. They must no longer remain dormant, but organize themselves, and this can only come from within. There is a place for outsiders here, for they can provide much needed technical assistance, but the impetus must come from groups such as the National Welfare Rights Organization. Top priority should be given to community development projects both in the economics and the social and political spheres. Power must come to the people -- power to combat an unresponsive system and uncommitted government.

What Role Can SRC Play?

Concern over the future of urban American is for the most part a recent phenomonen. Both because of neglect and also because of even more basic injustices and violations of Civil Rights, little study was given to the problems facing the cities of this country. Recently, however, with the attainment of at least some minimum guarantees of legal rights and with the realization that the urban renewal program had benefited only those who least needed it, the academic-foundation complex has shifted its focus to urban affairs. While the Southern Regional Council has attempted to deal with a wide

spectrum of southern problems, it should begin to place more emphasis on those of the city.

This could be done, we feel, by becoming more involved with the programs and organizations now operating here in Atlanta. Extensive research into the problems of community planning and development could be accompanied by the actual sponsorship of local programs that could serve as laboratories for testing out new approaches to old problems. More thorough investigation of the programs such as Model Cities and Economic Opportunity Atlanta could lead to specific recommendations for improvement. Added emphasis on community development and organization should not be limited to rural communities, but should be extended to urban areas as well. Program for developing skills in community organizing and leadership could be initiated as well as a special fund for financing grass roots efforts.

The proposal for the creation of a center for Resources Development approved by the Executive Committee last March certainly goes a long way toward meeting some of the above objectives. However, more emphasis should be put on urban affairs, particularly in the community organization project. Every effort should be made to become more action-oriented, with SRC initiating its own programs and providing both financial

and technical assistance to those who request it.

Some recommendations for Model Cities

As was stated earlier, we believe that the principal problem with the Model Cities Program is one of attitude, that can be remedied only in most instances by a change of personnel and priorities on the part of those involved in planning and administering the program. Nevertheless, our assignment was to study youth involvement in the program, and it is in fulfillment of this objective that we wish to offer the following recommendations to the Model Cities staff.

(1) We feel that any effort to involve youth in the existing planning process will be futile. The meetings are too many and too dull; the objectives too nebulous and far away; and the planners too insistent on having their own way to lead one to believe that a young person would become interested and involved.

(2) We therefore feel that it would be impossible for young people to work within the existing Model Cities structure. At the same time, we wish to emphasize the necessity of making them aware of themselves and their community. Youth councils such as the one being set up in Grant Park would be one solution to this problem. Receiving funds from ac-

tivities of these groups could be: (a) operating community recreation centers that could be created by either purchasing or leasing houses in the neighborhood. This could be done relatively cheaply and also immediately. These centers could be equipped with games, ping-pong tables, etc. and could also include tutoring and arts and crafts lessons. (b) organize street dances, fairs, etc. (c) sponsor baseball and basketball games. (d) serve as the recreational council for the area (see below, # 3), (e) generally organize to see that the needs of the community are voiced and acted upon. Specifically this would mean political action such as what was done at Stanton Park this summer.

(3) In regards to # 2, we feel that the one existing Model Cities Committee that is of vital interest to the youth of the area is the recreation council. We feel that since recreation is almost exclusively of concern to young people that they should have the responsibility of planning for it. Youth Councils of the six neighborhoods could take this responsibility with the possible assistance of one of the neighborhood adults. These councils should hold meetings to determine the needs of their areas, and then possibly elect a representative to an area-wide committee.

(4) To help with these youth councils, we would recommend the hiring of six youth assistants, one for each neighborhood. These youths should live in the area and since the job would only be part-time, might have to be college students. Some arrangement with the college might be worked out so that they would receive credit for the work they did.

(5) Unemployment continues to be the biggest problem facing the young people of the Model Cities area. We don't pretend to have a complete answer to this problem, but we do think that there should be a stipulation in all contracts awarded by Model Cities to hire and train a certain number of young people in the area. An example of this would be in the construction or rehabilitating of houses, young people could be taught by the professionals certain skills basic to their trade. In this way, a significant number of youths could be trained as skilled workers.

Community Affairs

We would like to make these recommendations to the Community Affairs Department of Model Cities:

(1) Community Affairs' role must be redefined so that it does not simply become the apologist and propagandist for the rest of Model Cities. It must instead represent and fight for the views of the residents.

(2) Community Affairs personnel should be required to live in the Model Cities area. Every Model Cities staff member should be required to participate in the Cornerstone Project or some other program that would open their eyes to the people they all too often ignore. So also should the outside consultants.

(3) The Community Relations Assistants hired from the community must be used properly. They should be younger than they are now, preferably between the ages of 25 and 40

and the job should be part-time. They should be given specific duties. One of which should be to assist in the operation of the youth council and recreation center. They need not necessarily be females.

. . . .

RECOMMENDATIONS AND SUMMARY OF INFORMATION

ON RURAL HOUSING OBTAINED THROUGH INTERVIEWS AND RESEARCH

Submitted to:

By

Bettieanne Childers

Summer Intern

Programs operating in the rural South to help solve the housing crisis are primarily sponsored by three groups: FmHA, OEO, and the Non-Profit Housing Corporation. The Farmers' Home Administration is by far the dominant agency serving areas with populations under 5,500 and focusing on direct home-ownership loans. The OEO Housing Programs are spin-offs from CAP agencies concerned about low-income housing. Many of the OEO sponsored programs are self-help housing efforts benefitting mainly migrant workers. Non-profit housing groups are few in number, the concept filtering rather slowly to rural areas. They are composed of community people, who are usually unsophiscated about the housing field who band together for the betterment of the community. Most are handicapped by inadequate finance, limited scope, obstacles of bureaucratic red tape, and inadequate programs.

Efforts to increase the effectiveness of these groups should focus on alleviating difficulties by (1) expanding the group served by the agency; (2) developing fund sources and increasing allocation for such groups; and (3) revising current programs. Approaches to addressing these needs may be made from

economic, political and educational standpoints. An economic approach may entail influencing money interest to invest in housing programs, utilizing approaches like the Citizens and Southern Bank, the Community Development Corporation and stressing incentives like the tax write-off for "seed money." Using the political approach, one may try to specialize legislation directed at the state and local housing crisis or attempt to make public officials view low-income housing as a priority. It means sensitizing public officials, contractors, planners, etc., to the urgent need for low-income rental housing. This approach also includes organizing the electorate into pressure groups to act as a catalyst for local officials and agencies to begin to address themselves to the housing need.

Aside from informing public officials and the general public, the educational process involves increasing the number of housing specialists with interest in rural housing and developing concepts in the field. Most technical assistants in the field are self-taught and courses are essentially urban-oriented. Some housing specialists like Lewis Douglas of Non-Profit Housing, Inc. realize that planning for rural housing may involve many different considerations and problems from urban

planning. The current emphasis in education on community involvement and "relevancy" is an appropriate climate to formulate rural planning curricula.

Housing Programs

Loan programs and housing construction programs operating in the rural South are generally inadequate. Most focus on home-ownership, thereby leaving out most low-income people who can not meet conventional loan requirement Innovative programs which may benefit tenants and designed to stimulate construction by private developers are not publicized, and generally, not utilized. Local housing authorities may be slow to build public housing for varied reasons such as the lack of funds, absence of a workable program, or fear of open housing requirements.

State and local governments have been slow to pass housing legislation, enforce strong housing codes or participate in progressive national programs like "Operation Breakthrough" for some of the same reasons that local housing authorities have failed to act and for other political reasons. The state of South Carolina should be an interesting case to observe since its governor has identified the housing crisis as a point on which to focus and the legislature in its recent assembly made

significant revisions in their housing provisions. It also is taking part in "Operation Breakthrough." In contrast, last year, Lester Maddox vetoed an act for housing which was based on his housing commission's report. However, southern states are at least beginning to talk about housing and their housing needs.

Non-profit development corporations, private groups who pool resources to apply for construction loans are few in number. There are few sources from which they can receive financial aid to fund an office or cover "seed money" requirements needed to hire architects, lawyers, packagers, and other consultants to plan a project. Statewide Home Foundation, Inc. in South Carolina is one such group. In some states, funds allocated for loans to be used for these groups go unused since few such groups exist. They usually are in need of technical assistance from housing specialists, and managerial consultants because of their limited knowledge and experience. Lack of funds inhibits their ability to employ consultants. Groups lending this technical assistance - Rural Housing Alliance, OEO, Southern Rural Project, the National Council of Negro Women, and the Southern Rural Action Projects rely on grants and government contracts to fund their agency; both sources have had bad budget cuts recently necessitating the cutting of programs as well as the technical assistance grant

program expanded by FHA. These groups also have to be organized. Since the concept is relatively new in the South, citizens need to be made aware of this mechanism and stimulated to organize.

SRC's HOUSING AND PLANNING PROGRAM

The Council's Housing and Planning Program can be very important as a catalyst for stimulating interest and sensitizing elements of the South to the total housing situation. It is providing a valuable service as an information source and in rendering limited technical assistance. However, it could become more aggressive in seeking out groups or even organizing people to work for low-income housing developments both on a local, state and national level or in initiating forums whereby various interest groups -- planners, investors, redevelopment officials, local housing authorities and the FmHA, to discuss and develop strategies for working with the problem. Other means may be used to attack the problems utilizing economic and political approaches. Such action may make the Council more visible to concerned individuals and groups and open avenues for more projects.

Research which the Council may undertake or underwrite

will also provide ammunition for pressure groups to stimulate a response from inert housing officials or validate arguments for revision and initiation of certain programs.

Members of the Council who have some affiliation with the Rural Housing Alliance and Non-Profit Housing Center, Inc. may also work to influence those groups to establish regional offices in the Southeast. This would make them more accessible to people in this region.

The issue of open housing is a relevant one although little mention has been made of it in talking about the rural housing situation. This is because the problem of low-income housing transcends color boundaries. A middle-income person with the assets to purchase or buy a home may opt to build in a middle-class black neighborhood. The low-income black has no choice since decent low-rental housing is simply in short supply in both black and white neighborhoods and a black termed "high-risk" may be denied a loan to build in even the bleakest neighborhoods. The same is true of very low-income whites although their chances may be slightly better. Some research into the question of "how much better?" may be revealing. Issues like dispersal housing point to the complexity of the situation for low-income housing and open housing are crucial concerns. The Red Oak Housing study was pertinent; however, it also revealed a relation-

ship between low-income housing and open-housing. The subtlety by which the community rejected public housing and gained skeptical support from liberals using the lack of citizen's participation as grounds to camouflage their racial and class prejudices is justification for a continued fight for open housing. However, it is also an indication of a need for increased sensitivity to and awareness of a poor person's need for good housing, regardless of race and more education about innovative housing programs like Turnkey which are designed to do more than just provide shelter. The challenge created by this task requires a broader definition to "fair housing" or "open housing" as well as a broad definition of the housing crisis.

A greater emphasis on rural planning and housing development is also justified. The lack of low-income housing is both an urban and rural need. However, there are many groups and resources working in urban areas and few in rural areas. The fact that small towns are still in the majority in the South and provincial in character, but still feed into the surrounding cities and control state legislatures also justifies greater emphasis on working in this area.

OUTLINE OF PROBLEMS IN RURAL HOUSING

I. Problems in rural housing and community development

A. Inadequate supply of low-income housing

1. Few housing developments built by local housing authorities

a. Workable program requirement

b. Fear of open housing regulations

2. No use of innovative programs like leased housing, rent supplements or rental co-ops and little co-operation with private developers.

3. Absence of housing authorities in many communities.

4. Few non-profit sponsors.

B. Inadequate housing and community development programs

1. Home ownership loans are most numerous; and do not reach low-income groups.

a. Downpayment requirements restrict

b. Credit reference, income levels, collateral requirements cannot be met.

c. Conservative administrators wary of high-risk applicants.

2. Farm labor housing and self-help housing efforts reach only limited number of tenants other than migratory workers.

a. Little technical assistance available for organizing and overseeing self-help groups.

b. Programs depend largely upon such kind-hearted, concerned employers such as farmers, plantation owners, etc.

c. Porgrams not encouraged in non-migratory areas and are not generally encouraged by FmHA offices.

d. Knowledge of programs and technical assistance grants is limited.

3. Community development loans must be administered by public agencies which may not be sensitive to needs of low-income people.

II. Weaknesses of groups working with low-income housing in the South.

A. Regional groups like RHA, SRA and SRP must depend upon contracts or grants to finance staff members and programs. OEO, the principal source for funds had a serious budget cut.

B. Regional groups lack finance and time to do adequate planning and studies on local communities; also can't follow-through on extensive time-consuming efforts.

C. Groups are unknown to most rural communities.

III. Needs of technical assistance groups

A. Additional manpower

B. Funds for operating

C. Means of extending services beyond OEO agencies

IV. Needs of local communities

A. Catalyst for organizing housing groups.

B. Long term fulltime technical assistants for local groups including housing specialists, planners, business managers.

C. Revolving loan-fund source

V. Roles for SRC

A. Help increase supply of housing specialists

1. Stimulate colleges to set-up housing courses

2. Stimulate student interest in field though intern programs, seminars, etc.

3. Organize housing workshops for local community leaders and organizers.

B. Stimulate private developers, architects, planners, etc., to get involved inlow-income housing efforts. (Refer to NCNW, Inc., Model and Statewide Homes.)

C. Introduce SRC contacts in local communities to program available, non-profit organizational concepts, technical assistance sources.

D. Encourage financial backers to invest in revolving-loan fund and community development grants.

E. Use influence (publications) to sensitize and educate public officials to housing needs of low-income.

F. Encourage and do research to draw attention to irregularities in administration of programs and to provide a basis for strengthening, revising, and creating means to develop low-income housing.

A PROPOSAL

SUBURBAN ACTION:

AN INSTITUTE FOR SUBURBAN RESEARCH AND ACTION

Paul Davidoff and
Neil N. Gold

April, 1969

7

This is a proposal to establish Suburban Action, a non-profit Center for Suburban Research and Action in the New York Metropolitan Region. Suburban Action will work to redress the imbalance in current policy dealing with the nature and location of programs for eliminating urban poverty, unemployment, and discrimination.

BACKGROUND

A major weakness in present efforts to solve the "urban crisis" is their tendency to restrict solutions to inner-city ghetto areas. Ghetto and poverty areas have been the locus of nearly all the research and action programs undertaken by both public agencies and private nonprofit groups as part of the war on urban poverty and discrimination. Job programs have concentrated on finding employment opportunities within declining areas for ghetto youth. Industrial development programs have concentrated on bringing industry into the ghettos. Housing programs have tried to rehabilitate obsolete slum apartments, or to "renew" neighborhoods in the heart of the ghettos. The Model Cities program, while aimed at improving the lives of the residents of Model Cities areas, has tended to restrict chances for such improvements unnecessarily to Model Cities areas.

What these programs have in common is an underlying strategy which is based on a rather questionable assumption: the assumption that because the problems of race and poverty are found in

the ghettos of urban America, the solutions to these problems must also be found there.

These ghetto-oriented programs tend to ignore the geographic distribution of resources throughout metropolitan regions. Resources needed to solve the urban poverty problem--land, money and jobs--are presently in scarce supply in the inner cities. They exist in substantial supply in suburban areas but are not being utilized in solving inner-city problems and poverty and discrimination. Ghetto-oriented programs, by their exclusive concern with solving problems within inner cities, are not taking advantage of these resources. As a result, ghetto residents are denied the income gains and improvements in housing quality that would result from freer access to suburban jobs and land.

The cities must create new opportunities in the ghettos; and they must create decent environments in the areas that are now slums and ghettos. But these goals cannot be effectively met until there is effective utilization of all of the resources of metropolitan regions.

In the New York region, for example, 99.9% of the vacant land is located in suburban areas. The suburbs have been the locus of virtually all of the region's post-1950 growth in employment. Suburbia is the overwhelmingly preferred residential choice. It is our contention, therefore, that the major resources needed to confront urban poverty and discrimination exist primarily within areas surrounding central cities, rather than exclusively in the central cities. We are concerned that the

proferred ghetto solutions may in effect constitute another and more subtle form of racism, which allows the black man to find possibilities for decent housing, income, job, and educational opportunities only in a limited geographical area that is already, or is destined to become, an all-black enclave.

In recent months we have seen a growing awareness on the part of public and private groups of the negative consequences of exclusive concern with the ghettos as the place for ending poverty. For example, three Presidential commissions have reported on the need to fashion metropolitan area-wide solutions to urban poverty and blight.

In its December, 1968 report, the President's Committee on Urban Housing (Kaiser Commission) concluded that

> The location of one's place of residence determines the accessibility and quality of many everyday advantages taken for granted by the mainstream of American society. Among these commonplace advantages are public educational facilities for a family's children, adequate police and fire protection, and a decent surrounding environment.... In any case, a family should have the choice of living as close as economically possible to the breadwinner's place of employment.
>
> It makes little sense for Federally subsidized housing to be concentrated in and around the central cities' slums where social and environmental disadvantages can negate the uplifting qualities of decent housing. (p. 13)

The 1968 Report of the National Advisory Commission on Civil Disorders (Kerner Commission) presented the nation with three choices:

> * We can maintain present policies, continuing both the proportion of the nation's resources now allocated to programs for the unemployed and the

disadvantaged and the inadequate and failing effort to achieve an integrated society.

* We can adopt a policy of "enrichment" aimed at improving dramatically the quality of ghetto life while abandoning integration as a goal.

* We can pursue integration by combining ghetto "enrichment" with policies which will encourage Negro movement out of central city areas....

To continue present policies is to make permanent the division of our country into two societies: one, largely Negro and poor, located in the central cities; the other, predominantly white and affluent, located in the suburbs and in outlying areas.

The second choice, ghetto enrichment coupled with abandonment of integration, is also unacceptable. It is another way of choosing a permanently divided country. Moreover, equality cannot be achieved under conditions of nearly complete separation. In a country where the economy, and particularly the resources of employment, are predominantly white, a policy of separation can only relegate Negroes to a permanently inferior economic status.

We believe that the only possible choice for America is the third--a policy which combines ghetto enrichment with programs designed to encourage integration of substantial numbers of Negroes into the society outside the ghetto. (p. 22)

The December, 1968 report of the National Commission on Urban Problems (Douglas Commission) stressed the costs of maintaining large inner-city ghettos, both in terms of actual costs to governments of providing services to the ghetto populations, and in terms of the socially explosive character of the ghettos. In discussing the employment problems of ghetto residents, the Commission noted that

Available employment of the type for which slum adults might qualify is generally not available in the slum. In a recent year, 63 per cent of all construction permits for industrial buildings were

> issued for locations outside central cities. On the other hand, 73 per cent of office building construction permits were issued inside central cities. Central cities increasingly are becoming white-collar employment centers while the suburbs are becoming the job employment areas for new blue-collar workers. This is ironical in view of the fact that low-paid blue-collar workers, especially if they are Negroes, live in the central cities while the white-collar workers are increasingly living in the suburbs. Traveling to work becomes increasingly difficult for both. (p. 3)

Edward Logue, President of the New York State Urban Development Corporation, writing in Look Magazine April 1, said that

> As the inner-city housing crisis worsens, we persist in the notion that the central city by itself must provide for the housing needs of ill-housed low-income families. We cling to this fallacy despite the reality that the central cities no longer have significant amounts of vacant land and no large supply of decent, available, low-cost relocation housing. We have, in short, adopted an approach to the city-housing problem that is guaranteed to fail. But there are answers.
>
> There is an ample supply of vacant land suitable for housing low-income families in a ten-mile-wide belt around just about every one of our cities, except possibly New York and Los Angeles, where it may be necessary to go 20 miles or farther. Yet access to this land... has been denied to low-income families. (p. 70) (Italics in original.)

The Center for Community Change in Washington, directed by former IUD director Jack Conway, is discussing the possibility of suburban development of housing opportunities in the Detroit area. The Regional Plan Association and National Committee Against Discrimination in Housing are studying the job and housing opportunities in the New York suburbs. Other research programs are beginning to study the implications of the Kerner Commission's challenge to create "one society," rather than to

perpetuate the walls between the ghetto and the society at large.

As yet, however, programs to implement this concern have not moved from study to action. We still do not have viable strategies for implementing proposals which look toward expanding the role of the suburbs in developing solutions to problems of race and poverty.

The authors of this porposal have played active roles in seeking to shift emphasis on solutions to urban problems from a ghetto orientation toward a program to use the suburbs as a major resource for solving urban problems. We have presented our views to the White House, in a study of the relationship between zoning and housing costs in metropolitan areas, written for the Douglas Commission and in a study of the supply and availability of land for low- and moderate- cost housing in urban areas, written for the Kaiser Commission. We have also presented our views to a suburban electorate in Mr. Davidoff's recent campaign for Congress in the 26th District of New York.

In addition, we have conducted studies and have written articles that have had wide circulation, both privately and publicly, among members of the planning profession and the public. Some of these articles are:

A Housing Program for New York State, 1968.

"Advocacy and Pluralism in Planning," Journal of the American Institute of Planners, xxi, No. 4, November 1965.

"A Rebuilt Ghetto Does Not A Model City Make," Planning 1967, American Society of Planning Officials, Chicago, 1968.

Race, Jobs, and Housing in Metropolitan Areas, to be published by Random House, Spring, 1969.

"An Analysis of the Feasibility of Establishing a System of Educational Parks in a Metropolitan Region," United States Commission on Civil Rights consultant report, November, 1966.

"The National Bureau of Standards Move to Gaithersburg, Maryland: Effects on Minority and Low-Income Housing," Consultant Report to United States Commission on Civil Rights, May 1968.

Our previous efforts have been, to a large extent, voluntary. We think that with sufficient resources with which to establish a research and action center we may be able to play a more effective role in persuading the public to adopt some necessary alternatives for solving the urban crisis.

In establishing Suburban Action, we want to create a special and new role for ourselves as white advocate planners concerned with problems of racial and economic injustice. Our theme is that the concerned white must now take a more active role in persuading his fellow whites of the need to overcome the practices that the Kerner Commission identified with "white racism." We believe we can attract support from active and concerned youth frustrated by values in the suburbs they cannot accept. We think that many suburbanites, out of a sense of enlightened self-interest, are prepared to meet their responsibilities in this area, but that they are not sure what specific action they should take. Finally, we think that many institutions and groups in suburbia would welcome the presence of minority families as contributing to the solution of suburban

problems--for example, plant owners concerned with the shortage of labor; builders and mortgage bankers concerned with the decline in housing production; teachers and parents concerned with the effects of racially isolated schools and recreational facilities on the minds of the young white children of the suburbs. All of these groups are potential allies in organizing to open suburban land to low- and moderate- income and minority families and to create new employment and housing opportunities outside the city for the poor and for minorities.

For these reasons, we think that a Center for Suburban Research and Action in the New York region may successfully focus attention on the role of the white suburbs in creating solutions to central city and metropolitan-wide problems of race and poverty.

OBJECTIVES

The objectives of Suburban Action are:

1. To open suburban land to low- and moderate- income and minority families by eliminating restrictive zoning, subdivision regulation, and housing and building codes.

2. To stimulate the construction of low- and moderate-cost housing units in suburban areas.

3. To create new opportunities for linking suburban jobs and ghetto residents.

4. To prevent the enlargement of suburban ghettos and create adequate housing and job opportunities for residents of

these ghettos.

To accomplish these objectives, we will use the techniques of advocacy, legal challenge, public information, and research.

PROGRAM

Suburban Action's program will be carried out in four general areas:

1. Housing programs. These programs will attack the restrictive practices that close suburban housing markets to low- and middle- income and minority families; and will provide for construction of new moderately-priced units.

Suburban Action will form a Committee for Rational Zoning, allied with similar groups around the nation, to fight exclusionary zoning practices. The Committee would bring together civil rights, antipoverty, and real estate construction groups who have common cause in this battle.

Suburban Action will develop legal suits against restrictive zoning, subdivision regulations, and building codes. It will sponsor conferences and research projects into the restrictive effects of such zoning. Its first conference, co-sponsored by Urban America, will be held in May of this year. It will carry out an advertising and public-relations program to demonstrate the harmful impact of restrictive devices on local tax bases, on the housing choices of local municipal employees, and on racial and economic justice.

We will co-sponsor or provide technical assistance to

groups wishing to sponsor nonprofit, moderate-cost housing, and will press for the widespread use of rent supplements for use in both new and existing housing.

We will press for passage of laws permitting county governments to build public housing, to operate leased houses as public-housing units, and to administer rent-subsidy programs. We will urge support for laws to permit central-city housing authorities to buy or lease suburban units as needed to house central-city clients.

Research activity of the Center will include a survey and analysis of the attitudes of housing market participants about local housing and land use policies and practices, including participants' estimates of the capabilities of both the private and public sectors of the area's housing market to satisfy anticipated needs. Separate questionnaires will be designed for representative sample populations of the area's households, real estate professionals, builders and developers, lending and mortgage bankers, public agencies, welfare agencies, and large employers. Analysis of the responses to these questionnaires will provide insight into the dynamics of the housing market, and provide us with a base for attacking the exclusionary features of the market.

2. Employment programs. Suburban Action will develop ways to bring jobless and underemployed workers in the central city to employment opportunities now available in suburban parts of the region.

These programs would involve monitoring the location of new industrial growth in the region in terms of the employment needs of low-income and minority-group workers. It would involve arranging for contact between job-seeking groups in New York City and Newark and employers in suburban areas. We would press for legislation to require large firms to take part in on-the-job training programs, which would reach out for clients to unemployed persons registered with New York City branches of the State Employment Service. Suburban Action would establish, as a demonstration project, a job-finding service whose employee clients would come from New York City and Newark and whose employer clients would be located in the suburbs.

We will also look beyond the matching of jobs and workers to the creation of opportunities for black and Puerto Rican businessmen to invest their resources in the affluent suburbs, as a necessary corrective to current programs which confine opportunities available to black businessmen solely to declining ghetto areas.

Research activities associated with the employment programs of Suburban Action would include surveys of:

a. The needs of suburban firms for manpower, based on interviews with managers.

b. Available manpower within commuting distance of the suburban plants.

c. The characteristics of the unemployed and underemployed labor force in New York City; how this force could be brought

into the suburban job market through improved communications about available jobs, subsidized commutation, improved mass-transit facilities, and improved access to suburban housing.

3. Land use planning programs. Suburban Action would act as an advocate planning group to create plans for suburban development that would reflect its concern for ending poverty and discrimination in a decentralizing region. It would prepare a critique of existing land use and transportation plans for the region in the light of its concerns, and would make proposals for change in the plans adopted by county and municipal planning agencies.

Our planning proposals would include housing development plans related to industrial employment, including low- and moderate- income employment. Transportation proposals would recommend changes in emphasis from highway construction to mass transit, with routes oriented to the low-income worker living both in the suburbs and in the central city.

4. Taxation programs would attack the problems of exclusion created by the present system of local real property taxes. Studies would be undertaken to document the causal relationship between the size of the local tax base and the efforts of communities to exclude low- and moderate- income groups from their housing markets.

Political pressure for change in the tax system is being generated by steeply rising costs to moderate-income families, particularly for educational expenses. Suburban Action would

work to channel this discontent into attacks on the tax system and proposals for a broadly-based income tax.

5. Research projects. In addition to the research activities indicated under each of the broad program areas above, Suburban Action will undertake a research program dealing with basic issues underlying the organization of the New York metropolitan region. These research projects would include continuing studies of class and race in the suburbs, with emphasis on the nature and growth of the suburban ghetto.

ADVISORY BOARD

During its first year, Suburban Action will recruit an Advisory Board, drawn from suburban business groups, citizen groups, builders and housing officials, and government agencies in New York City. Manhattan Borough President Percy Sutton and Westchester Congressman Ogden Reid have indicated that they will serve on the Board.

The Board's function will be to gain wider knowledge and acceptance of Center policies and to advise the staff on its research and action program.

RELATION TO EXISTING GROUPS

Suburban Action will work with existing groups both in New York City and in the suburban counties. It will work with the Regional Plan Association to recommend specific policies to bring the suburbs into active participation in solving inner-city and regional problems. The Center will try to persuade the

Urban League, the NAACP, and other suburban civil rights and social agencies to reorient their approach to include concern not just for the poor and blacks who now live in suburbia, but also for those who live in New York City but who might live in suburbia under an enlightened program of regional development.

Suburban Action will urge the Urban Coalition to recognize the regional implications of its work. The Coalition should be asked to consider tying its program of bringing industry into ghettos with a program to bring ghetto residents to work in new job concentrations in the suburbs.

We will urge New York City agencies, action groups, and social research organizations to recognize that the fight for equality must be carried out in the suburbs as well as in the slums.

We will work with suburban colleges to sponsor colloquia and study projects on regional problems of poverty.

We will lobby for improved antidiscrimination laws, and for increased housing subsidy and building programs with federal, state, and local governments.

LOCATION

We will work in three areas of New York's suburbs: Westchester and Rockland Counties in New York, Nassau and Suffolk Counties on Long Island, and Bergen, Passaic, and Essex Counties in New Jersey. As a beginning, we propose to establish an office in White Plains to operate primarily in Westchester and

SUBURBAN DEVELOPMENT: NEW STRATEGIES FOR THE URBAN POOR

An Address By

Manhattan Borough President Percy E. Sutton

October 10, 1969
Chicago

Conference on "Suburbia: The Next Frontier of the Civil Rights Movement?"

Sponsored by the NAACP and Suburban Action

* *

IT IS A GREAT PLEASURE FOR ME TO BE HERE TONIGHT AT THIS NAACP-SUBURBAN ACTION CONFERENCE. IT IS ALSO A GREAT PLEASURE TO SHARE THE SPEAKER'S PLATFORM WITH MR. ANTHONY DOWNS. AS MANY OF YOU KNOW, MR. DOWNS IS THE AUTHOR OF ONE OF THE MOST IMPORTANT BOOKS ABOUT BUREAUCRACY THAT HAS APPEARED IN THE UNITED STATES IN RECENT DECADES. HIS BOOK PLAYED A CRUCIAL ROLE IN REDEFINING CITIZEN PARTICIPATION AND CITIZEN INVOLVEMENT AS THE ESSENCE OF A FREE AND OPEN SOCIETY.

MR. DOWNS ALSO PLAYED A MAJOR ROLE IN THE WRITING OF THE KERNER COMMISSION REPORT, AND IN THE DOUGLAS COMMISSION REPORT AS WELL. IN BOTH OF THESE DOCUMENTS, HE AND HIS COLLEAGUES SET FORTH IDEAS AND POLICY ALTERNATIVES WHICH MAY WELL COME TO DOMINATE THE POLITICS OF THE 1970's. AT THE BASIS OF BOTH OF THESE DOCUMENTS IS THE BELIEF, MOST CLEARLY STATED IN CHAPTER XVI OF THE KERNER COMMISSION REPORT, THAT PUBLIC ACTIONS SHOULD AIM AT CREATING OPPORTUNITIES FOR CHOICE FOR ALL GROUPS AND FOR ALL PERSONS TO LIVE DECENTLY WHEREVER THEY CHOOSE, WHETHER IN CITIES OR IN SUBURBS OR IN RURAL AREAS. A SOCIETY THAT DOES NOT PROVIDE THE CITIZEN WITH OPPORTUNITY FOR CHOICE, AND WITH THE CAPACITY TO MAKE SUCH CHOICES EFFECTIVE, IS THAT MUCH LESS FREE AND MUCH LESS OPEN.

UNLESS WE CAN INSTITUTIONALIZE THE OPPORTUNITY FOR CHOICE, THESE DOCUMENTS POINT OUT, PRESENT POLICIES ARE LIKELY TO PREVAIL AND WE SHALL HAVE PERPETUATED TWO SEPARATE SOCIETIES IN THE UNITED STATES, "ONE LARGELY NEGRO AND POOR, LOCATED IN THE CENTRAL CITIES; THE OTHER, PREDOMINATELY WHITE AND AFFLUENT, LOCATED IN THE SUBURBS AND IN OUTLYING AREAS."

WE ARE HERE TONIGHT TO TALK ABOUT URBAN PROBLEMS AND SUBURBAN OPPORTUNITIES, AND ABOUT THE FUTURE OF OUR CITIES AND SUBURBS. YET ALL OF US KNOW THAT JUST AS MAN CANNOT SERVE TWO MASTERS, SO A NATION CANNOT SERVE TWO IDEOLOGIES: A NATION THAT

(more)

IS SPENDING ITS BLOOD AND ITS TREASURE ON AN ILL-CONCEIVED AND UNJUST WAR IN VIETNAM CANNOT SUMMON THE MORAL ENERGIES AND THE SENSE OF INJUSTICE WHICH ARE NECESSARY TO OVERCOME POVERTY AND DISCRIMINATION OR TO REVERSE THE DRIFT TOWARD RACIAL POLARIZATION HERE AT HOME. IT SEEMS ALL TOO CLEAR THAT THE AMERICAN PEOPLE WILL NOT COME TO GRIPS WITH THE URBAN CRISIS UNTIL THE AMERICAN GOVERNMENT COMMITS ITSELF FIRST TO A RAPID WITHDRAWAL FROM VIETNAM.

THEREFORE, LET ME SUGGEST THAT A FIRST STEP IN ACHIEVING THE GOAL THAT WE SEEK HERE TONIGHT WOULD BE FOR THIS CONFERENCE TO PLEDGE ITS SUPPORT TO THE OCTOBER 15th MORATORIUM, AND TO ISSUE A CALL FOR AMERICAN WITHDRAWAL FROM VIETNAM.

WE CAN TALK ALL WE WANT TO ABOUT HOW TO SOLVE THE PROBLEMS OF OUR CITIES, BUT UNTIL WE BEGIN TO USE THE RESOURCES NOW APPLIED TO DESTRUCTION AND WAR FOR CONSTRUCTION AND PEACE, THERE IS LITTLE WE CAN DO EXCEPT TALK. FOR EXAMPLE, IN MY OWN BOROUGH OF MANHATTAN AND IN MY OWN CITY OF NEW YORK, EVERY HOUR OF EVERY DAY MORE MONEY GOES TO VIETNAM THROUGH TAXES THAN IT TAKES TO RUN A HIGH SCHOOL FOR A YEAR AND EVERY MONTH ENOUGH MONEY GOES TO VIETNAM TO BUILD NEW HOUSING FOR 12,000 LOW AND MIDDLE INCOME FAMILIES.

I HAVE COME TO CHICAGO TO ADD MY VOICE TO THE CRUCIALLY IMPORTANT THEME OF THIS CONFERENCE. THE CO-SPONSORS OF THIS MEETING ARE RIGHT ON TARGET IN THEIR ASSESSMENT OF WHERE URBAN DEVELOPMENT POLICY HAS FAILED, AND HOW IT MUST BE CHANGED TO REFLECT THE CHANGING DISTRIBUTION OF RESOURCES AND OPPORTUNITIES IN OUR METROPOLITAN AREAS.

URBAN DEVELOPMENT POLICY ESPECIALLY AS IT AFFECTS THE CITIES AND THE POOR HAS FAILED IN PART BECAUSE IT IS BASED ON THE ASSUMPTION THAT SINCE URBAN PROBLEMS ARE CONCENTRATED IN

(more)

GHETTOES AND IN CENTRAL CITIES, THE SOLUTIONS TO THESE PROBLEMS MUST ALSO BE CONCENTRATED IN GHETTOES AND IN CENTRAL CITIES. IT HAS FAILED BECAUSE IT ASSUMES THAT POOR PEOPLE WOULD BE SATISFIED WITH HAND-ME-DOWN HOUSING, WITH SECOND RATE SCHOOLS AND WITH TRAINING PROGRAMS WHICH DO NOT LEAD TO EMPLOYMENT.

IT HAS FAILED BECAUSE IT ASSUMES THAT THOSE WHO ARE POOR DO NOT WANT WHAT THOSE WHO ARE MIDDLE CLASS WANT -- THE OPPORTUNITY TO GET A DECENT JOB THAT PAYS A LIVING WAGE; THE OPPORTUNITY TO RAISE ONE'S CHILDREN IN A DECENT AND HEALTHFUL ENVIRONMENT; THE OPPORTUNITY TO LEARN ABOUT AND PARTICIPATE IN EXPANDING HORIZONS; THE OPPORTUNITY TO BE MOBILE IN A MOBILE SOCIETY -- TO MOVE ABOUT FREELY IN WHAT OUR FOREFATHERS CALLED "THE PURSUIT OF HAPPINESS."

FINALLY, URBAN DEVELOPMENT POLICY IN THE UNITED STATES HAS FAILED BECAUSE IT HAS ASSUMED THAT THE POOR WOULD BE SATISFIED WITH TAKING OVER POLITICAL CONTROL OF DECLINING CENTRAL CITIES, LEAVING THE BURGEONING SUBURBS IN THE HANDS OF THE MIDDLE CLASS AND THE AFFLUENT.

OUR PRESENCE HERE TONIGHT IS TESTIMONY TO OUR BELIEF THAT THESE ASSUMPTIONS WHICH HAVE GOVERNED URBAN POLICY SINCE WORLD WAR II ARE FALSE AND WITHOUT FOUNDATION.

PROBABLY THE MOST CRUCIALTEST THAT SHOULD BE APPLIED TO ANY PUBLIC POLICY IS THE TEST OF SUCCESS: DOES THE POLICY WORK? BY THIS TEST, URBAN DEVELOPMENT POLICY IN THE UNITED STATES HAS BEEN A DREADFUL FAILURE. IN MY OWN CITY OF NEW YORK, FOR EXAMPLE, WE HAD 560,000 SUBSTANDARD HOUSING UNITS IN 1960. BY 1970, THE NUMBER OF SUCH SUBSTANDARD UNITS WILL HAVE RISEN TO NEARLY 900,000. IN 1960, WE BUILT 35,000 HOUSING UNITS;

(more)

IN 1969, WE WILL HAVE BUILT LESS THAN 20,000 UNITS.

IN 1960, WE HAD 150,000 MORE MANUFACTURING PRODUCTION JOBS IN NEW YORK CITY THAN WE WILL HAVE IN 1970.

IN 1960, WE SPENT $332,000,000 ON WELFARE; BY 1970 WE WILL BE SPENDING MORE THAN $2 BILLION PER YEAR ON WELFARE, OF WHICH $400 MILLION WILL BE USED FOR RENT PAYMENT TO WELFARE RECEIPTS -- THE OVERWHELMING AMOUNT OF THAT $400 MILLION GOING AS SUBSIDIES TO SLUM LANDLORDS.

EVEN MORE SHOCKING FOR WHAT IT SAYS ABOUT OPPORTUNITY AND MOBILITY IN OUR SOCIETY IS THE FACT THAT MORE THAN ONE MILLION RESIDENTS OF NEW YORK CITY -- ONE OUT OF EIGHT PERSONS-- ARE RECEIVING WELFARE BENEFITS AT A TIME WHEN THE NATION'S OVERALL PROSPERITY IS AT AN ALL TIME HIGH.

WHEN WE TURN TO THE AREA OF PUBLIC FINANCE, THE PATTERN IS MUCH THE SAME. SINCE 1960, THE CITY'S BUDGET HAS MORE THAN TRIPLED FROM $2.3 BILLION TO NEARLY $7 BILLION.

TO FINANCE THIS INCREASE IN EXPENDITURES, WE HAVE RAISED OUR SALES TAXES, INSTITUTED A PROGRESSIVE CITY INCOME TAX AND GREATLY INCREASED OUR REAL PROPERTY TAXES. YET WE ARE STILL UNABLE TO OFFER OUR CITIZENS THE KIND OF SERVICES WHICH THEY NEED TO SURVIVE.

IF ANYTHING MAY BE SAID TO BE CLEAR, IT IS THAT NEW YORK CITY CANNOT SOLVE ITS PROBLEMS WITHIN THE CITY BOUNDARIES, OR THROUGH USE OF CITY RESOURCES. THERE IS SIMPLY NOT ENOUGH LAND, NOT ENOUGH HOUSING, NOT ENOUGH JOBS AND NOT ENOUGH MONEY IN THE CITY TO SOLVE NEW YORK CITY'S PROBLEMS WITHIN THE CITY.

THIS EXTREME SITUATION HAS OCCURRED IN SPITE OF THE FACT THAT THE INNER CITIES HAVE BEEN THE LOCUS OF NEARLY ALL OF THE

(more)

RESEARCH AND ACTION PROGRAMS THAT HAVE BEEN UNDERTAKEN AS PART OF THE WAR ON POVERTY, AND IN SPITE OF THE FACT THAT THE INNER CITIES HAVE BEEN THE TARGET OF A MASSIVE URBAN RENEWAL EFFORT.

IT IS PATENTLY CLEAR THAT URBAN RENEWAL HAS FAILED. IT HAS FAILED BECAUSE IT COULD NOT PROVIDE DECENT DWELLINGS AND SUITABLE LIVING ENVIRONMENTS FOR THOSE WHO NEEDED THEM MOST. IT FAILED BECAUSE THE RELOCATION PROGRAM PROVIDED FOR POSITIVE OPPORTUNITIES BUT OPERATED SO INHUMANELY THAT RENEWAL DEVELOPED INTO ONE OF THE MOST SAVAGE PUBLIC PROGRAMS EVER INFLICTED UPON THE POOR AND THE BLACK. URBAN RENEWAL RELOCATION FAILED PRECISELY BECAUSE THE OFFICIALS DID NOT THINK OF THE RELOCATEE AS A BENEFICIARY OF THE PROGRAM. RATHER, HE WAS VIEWED AS AN OBSTRUCTION THAT HAD TO BE PUSHED ASIDE.

WHILE THE PROBLEMS OF THE INNER CITY HAVE BEEN GROWING STEADILY GREATER, ALL THE INDICES THAT I HAVE LOOKED AT SAY THAT THE RESOURCES NEEDED TO SOLVE THESE PROBLEMS ARE NO LONGER LOCATED IN THE CITIES, BUT ARE INCREASINGLY TO BE FOUND IN SURROUNDING SUBURBS.

-- FOR EXAMPLE, MORE THAN 80% OF ALL THE NEW JOBS THAT ARE CREATED IN LARGE METROPOLITAN AREAS ARE LOCATED IN THESE SUBURBS.

-- VIRTUALLY ALL THE NEW BLUE COLLAR MANUFACTURING JOBS CREATED EACH YEAR IN OUR LARGE METROPOLITAN AREAS ARE LOCATED IN THE SUBURBS.

-- THE SUBURBS ARE THE PLACE WHERE 70-80% OF THE NEW METROPOLITAN AREA HOUSING UNITS ARE BUILT EACH YEAR.

-- THE SUBURBS CONSTITUTE THE MAJOR VACANT LAND RESOURCE OF METROPOLITAN AREAS. INDEED, 98% OF ALL VACANT LAND IN METROPOLITAN AREAS AVAILABLE FOR RESIDENTIAL

(more)

DEVELOPMENT IS FOUND OUTSIDE CENTRAL CITIES.

-- FINALLY, THE SUBURBS HAVE BEEN THE CENTER OF A VAST POPULATION SHIFT IN WHICH MILLIONS OF MIDDLE CLASS WHITE AMERICANS WALKED OUT OF THE DECAYING NEIGHBORHOODS OF CENTRAL CITIES AND INTO NEW NEIGHBORHOODS IN THE SUBURBS.

THE IMPLICATIONS OF THESE STATISTICS ARE ABSOLUTELY SHATTERING FOR THOSE WHO HAVE BEEN LED TO BELIEVE THAT THE CITIES CAN BE REBUILT AT THE SAME OR AT EVEN LOWER DENSITY.

FOR EXAMPLE, IF ONE HALF OF THE NUMBER OF SUBSTANDARD UNITS THAT WILL EXIST IN NEW YORK CITY IN 1970 (900,000 UNITS) WERE TO BE REHABILITATED, AND THE OTHER HALF WERE TO BE REPLACED BY NEW STRUCTURES ON VACANT LAND AT A DENSITY OF 40 UNITS TO THE NET ACRE, SUCH A PROCESS WOULD REQUIRE 10,220 ACRES OF LAND, YET THE FACT IS THAT NEW YORK CITY DOES NOT EVEN HAVE 6,000 ACRES OF VACANT LAND ZONED FOR RESIDENCE. THESE FIGURES SHOULD BE COMPARED TO THE NEARLY 3,000 SQUARE MILES OF VACANT LAND IN THE 31 COUNTY NEW YORK METROPOLITAN AREA.

THE REPORT OF THE PRESIDENT'S COMMITTEE ON URBAN HOUSING CALCULATED HOW MUCH LAND WOULD BE REQUIRED HERE IN CHICAGO TO PROVIDE 215,000 SUBSIDIZED LOW AND MODERATE COST HOUSING UNITS TO REPLACE THOSE UNITS FOUND TO BE SUBSTANDARD IN 1960. IF ANY ONE HALF OF THESE 215,000 UNITS WERE TO BE REPLACED BY NEW UNITS ON VACANT LAND, AT THE MODERATE DENSITY OF 20 UNITS TO THE NET ACRE, IT WOULD REQUIRE 5,375 ACRES OF LAND. THIS FIGURE DOES NOT INCLUDE THE LAND REQUIRED TO PROVIDE PRIVATELY FINANCED HOUSING OR FOR RELATED NON-RESIDENTIAL USES IN CHICAGO.

SET AGAINST THIS FIGURE IS THE FACT THAT IN 1963, CHICAGO'S PLANNING COMMISSION FOUND A TOTAL OF 9,110 ACRES OF

(more)

VACANT LAND IN THE ENTIRE CITY, OF WHICH MORE THAN 6,100 ACRES WERE IN MANUFACTURING DISTRICTS AND LESS THAN 2,284 WERE IN RESIDENTIAL DISTRICTS. MOREOVER, 60% OF THIS 2,284 ACRES OF RESIDENTIALLY ZONED LAND IS ZONED FOR A MAXIMUM OF EIGHT UNITS TO THE ACRE!

THIS MUST BE COMPARED WITH THE EXISTENCE OF MORE THAN 300,000 ACRES OF VACANT LAND IN THE CHICAGO AREA SUBURBS.

IN SUM, THE UNAVAILABILITY OF LARGE AMOUNTS OF VACANT LAND WITHIN CENTRAL CITIES MAKES IT ALMOST INEVITABLE THAT THE BULK OF FUTURE DEVELOPMENT IN URBAN AREAS WILL TAKE PLACE OUTSIDE OF THESE CITIES. AND IT IS THIS FACT THAT HAS BECOME SO CRITICALFOR THE POOR WHO ARE TRAPPED IN OUR LARGE CITIES.

UNLIKE OTHER GROUPS, THE POOR HAVE NOT BEEN ABLE TO LEAVE THE CITIES, OR TO OVERCOME THE TREMENDOUS DISTANCES THAT SEPARATE THEM FROM AVAILABLE EMPLOYMENT OPPORTUNITIES. WHEN THE POOR MIGRATE TO THE BIG CITIES, THEY FIND THE JOBS THAT THEY HAVE COME FOR HAVE BEEN RELOCATED OUT OF THE CITY TO THE SUBURBS. AND THEY SOON FIND THAT BECAUSE OF LOCAL ZONING AND HOUSING POLICIES, THEY ARE UNABLE TO FOLLOW THESE JOBS TO THE SUBURBS.

AS A RESULT, WE SEE IN EVERY CITY IN THE LAND THOUSANDS OF BLACK PEOPLE, MEXICAN AMERICANS, PUERTO RICANS AND POOR WHITES PILING UP IN THE CENTRAL CITIES WITHOUT JOBS, WITHOUT INFORMATION ABOUT EMPLOYMENT OPPORTUNITIES, WITHOUT DECENT HOUSING AND WITHOUT ANY PROSPECT OF IMPROVING THEIR SITUATION BY FURTHER MIGRATION.

AT THE SAME TIME, AS IF TO MOCK THE POLICIES WHICH HAVE BROUGHT US TO OUR PRESENT CRISIS, SUBURBAN JOB OPPORTUNITIES

(more)

REMAIN UNFILLED FOR LACK OF ADEQUATE MANPOWER.

DECENT PAYING JOBS ARE AVAILABLE. THE MAJOR QUESTION IS, CAN THE POOR GAIN ACCESS TO THEM? ONE WAY IS TO IMPROVE THE MEANS OF TRANSPORTATION FROM PLACE OF RESIDENCE TO PLACE OF WORK. SOME ATTENTION IS NOW BEING PAID TO THIS ISSUE. CONSIDERABLY MORE ATTENTION WILL BE REQUIRED.

HOUSING NEAR JOBS IS, OF COURSE, A MOST DESIRABLE WAY OF MAKING THESE JOBS MORE ACCESSIBLE. BUT, FOR A HOST OF WELL-KNOWN REASONS, THE HOUSING IS NOT NOW AVAILABLE. NEW SUBURBAN HOUSING, I WOULD ARGUE, MUST NOW BE DEMANDED BY LOW INCOME PERSONS WHO WISH TO LIVE IN THE SUBURBS NEAR NEW JOB OPPORTUNITIES.

ASIDE FROM THE JOB ISSUE, WE MUST NOW MAKE A MAJOR EFFORT TO OPEN THE SUBURBAN LAND BASE FOR LARGE AMOUNTS OF LOW AND MODERATE COST HOUSING. AS WE HAVE SEEN, THERE IS SIMPLY NOT ENOUGH VACANT LAND IN THE CITIES TO PERMIT AN ADEQUATE RELOCATION JOB TO BE DONE. IN ORDER TO REBUILD THE CITIES, WE MUST HAVE AMPLE ROOM FOR RELOCATING RESIDENTS OF AREAS THAT DESPERATELY NEED REBUILDING. WE MUST PRESS FOR ACCESS TO SUBURBAN LAND.

BUT THAT LAND WILL NEVER BELONG TO US, UNLESS THE DISCRIMINATORY ZONING LAWS AND OTHER BUILDING REGULATIONS ARE DECLARED ILLEGAL. WE MUST CONFRONT THESE PRACTICES WITH THE SAME DETERMINATION THAT THE NAACP TOOK ON THE BATTLE AGAINST SEGREGATED EDUCATION. THESE ZONING LAWS ARE ABUSIVE. AND, IT IS IMPORTANT TO POINT OUT, THEY DO NOT JUST DISCRIMINATE AGAINST BLACKS. THEY DISCRIMINATE AGAINST THE OVERWHELMING MAJORITY OF AMERICAN CITIZENS.

SUBURBAN ZONING LAWS HAVE THE EFFECT OF KEEPING 80%

(more)

OF THE POPULATION FROM BEING ABLE TO MOVE INTO SUBURBAN COMMUNITIES. I MUST PARTICULARIZE. I AM SPEAKING ABOUT ZONING REQUIREMENTS CALLING FOR A HOUSE TO BE CONSTRUCTED ON AN ACRE OR MORE. I AM SPEAKING ABOUT ZONING LAWS WHICH PROHIBIT CONSTRUCTION OF MULTI-FAMILY HOUSING AND SO DISALLOW THE CONSTRUCTION OF UNITS WHICH CAN BE BUILT AT REASONABLE COSTS.

THESE LAWS NOT ONLY EXCLUDE THE MAJORITY OF CITIZENS FROM FINDING NEW DECENT HOUSING, THEY SERIOUSLY UNDERMINE LOCAL ECONOMIES. IN THE NEW YORK REGION, THE CONSTRUCTION INDUSTRY COULD BE BUILDING AT LEAST TWICE AS MANY HOMES EACH YEAR IN ORDER TO MEET THE DEMAND. WHAT WOULD IT MEAN TO EMPLOYMENT POSSIBILITIES FOR BLACKS IF THE CONSTRUCTION INDUSTRY DOUBLED ITS NUMBER OF EMPLOYEES? WHAT WOULD IT MEAN TO THE OVER-ALL ECONOMY IF TWICE THE FUNDS NOW INVESTED IN CONSTRUCTION WERE INVESTED?

THESE ZONING LAWS ARE CREATING AN INTEGRATED NOOSE STRANGLING OPPORTUNITIES FOR BLACK AND WHITE FAMILIES NEEDING HOUSING, DESTROYING POSSIBILITIES OF EMPLOYEES LIVING NEAR PLACES OF NEW EMPLOYMENT, AND SERIOUSLY WEAKENING THE ECONOMY OF LOCALAREAS. A HANDFUL OF THE POPULATION OF THE METROPOLITAN REGION IS RESPONSIBLE FOR THESE REGULATIONS. THEIR POWER TO CONTROL OPPORTUNITIES MUST BE LIMITED BY STATE AND FEDERAL ACTION.

RECENTLY, THERE HAS BEEN STRONG INDICATION OF SIGNIFICANT CHANGES IN URBAN DEVELOPMENT POLICY WITH RESPECT TO THE ROLE OF THE SUBURBS.

FIRST, THE NEW YORK STATE URBAN DEVELOPMENT CORPORATION COULD BE AN INSTRUMENTALITY FOR OVERCOMING LOCAL PAROCHIALISM.

(more)

I APPLAUD THE INITIATIVE OF THE URBAN DEVELOPMENT CORPORATION AND OF ITS PRESIDENT, MR. EDWARD J. LOGUE, IN RECENTLY DEVELOPING PROPOSALS FOR TWO "NEW TOWNS" IN UPSTATE NEW YORK TO ASSIST IN SOLVING THE PROBLEMS OF THE OVERCROWDED CITIES OF THAT REGION.

BUT I MUST EXPRESS MY PROFOUND REGRET THAT THE URBAN DEVELOPMENT CORPORATION DID NOT SEE FIT TO USE ITS BROAD POWERS TO OVERRIDE THE PRESENT DISCRIMINATORY ZONING AND HOUSING ORDINANCES IN THE NEW YORK CITY AREA SUBURBS.

ANOTHER ADVANCE IS ROBERT MEYNER'S STATEMENT THAT HE WILL PRESS FOR ZONING CHANGES TO REQUIRE NEW HOUSING FOR EMPLOYEES OF PLANTS THAT ARE BUILT IN SUBURBAN COMMUNITIES. IF ROBERT MEYNER IS ELECTED GOVERNOR OF NEW JERSY, THIS WILL MEAN THAT THE GOVERNOR OF A MAJOR STATE HAS PUT HIS FORCE BEHIND A REVOLUTION IN ZONING PATTERNS THAT WILL ENABLE LOW, MODERATE AND MIDDLE INCOME FAMILIES TO GAIN ACCESS TO JOBS.

THE NEXT IMPORTANT RECENT CONTRIBUTION TO CHANGING THE PATTERNS OF ZONING IS THE NEW LEGISLATION ENACTED TWO MONTHS AGO BY THE STATE OF MASSACHUSETTS REQUIRING THAT EVERY COMMUNITY IN THE STATE PROVIDE 0.3% OF ITS VACANT LAND OVER THE NEXT FIVE YEARS FOR LOW AND MODERATE INCOME HOUSING.

ALTHOUGH THIS IS A SMALL AMOUNT OF LAND, IT IS OF MONUMENTAL IMPORTANCE, FOR IT ESTABLISHES THE OBLIGATION OF LOCALITIES TO CONTRIBUTE TO THE SOLUTION OF REGIONAL HOUSING PROBLEMS.

I WOULD ALSO LIKE TO POINT OUT THE POSSIBILITY OF PRIVATE ACTION TO OPEN THE SUBURBS TO ALL ECONOMIC AND SOCIAL CLASSES.

(more)

FOR EXAMPLE, THE NAACP MIGHT OPENLY SEEK CONTRIBUTIONS OF LAND FROM PRIVATE GROUPS. ON THAT LAND, NEW COMMUNITIES COULD BE PLANNED BY THE NAACP AT REASONABLY MODERATE COST BY BUILDING HOUSING OF MANY TYPES -- SINGLE FAMILY HOUSES, ROW HOUSES, GARDEN APARTMENTS AND EVEN HIGH-RISE APARTMENTS. WHERE ZONING RESTRICTIONS PROHIBIT SUCH CONSTRUCTION, THE NAACP WILL BE IN A POSITION TO CHALLENGE THE LOCAL EXCLUSIVE ZONING LAWS. EVEN IF THE NAACP SHOULD LOSE ITS CASE IN COURT, IT COULD STILL BUILD RELATIVELY MODERATE COST HOUSING UNDER EXISTING ZONING REGULATIONS SINCE THERE WOULD BE NO LAND COSTS INVOLVED IN DEVELOPMENT.

STATE AND FEDERAL GOVERNMENTS HAVE A MAJOR ROLE TO PLAY IN KNOCKING DOWN EXCLUSIONARY ZONING RESTRICTIONS. IN MOST SUBURBAN COMMUNITIES THROUGHOUT THE NATION, FEDERAL AND STATE GOVERNMENTS ARE INVESTING LARGE AMOUNTS OF MONEY IN NEW PUBLIC FACILITIES. IT IS THE RESPONSIBILITY OF THE PUBLIC TO SEE THAT WHERE THE GOVERNMENT CREATES NEW JOB OPPORTUNITIES, IT SIMULTANEOUSLY PROVIDES ADDITIONAL HOUSING OPPORTUNITIES FOR LOW AND MODERATE INCOME INDIVIDUALS WORKING FOR THE PUBLIC IN THESE PUBLIC FACILITIES.

THE FEDERAL AND STATE GOVERNMENTS HAVE MISSED THOUSANDS OF OPPORTUNITIES TO ALTER SEGREGATION PATTERNS THAT HAVE DEVELOPED IN SUBURBAN AREAS. A RECENT CIVIL RIGHTS COMMISSION REPORT DEMONSTRATED THIS FAILURE. WHEN THE NATIONAL BUREAU OF STANDARDS MOVED FROM WASHINGTON, D.C. TO SUBURBAN MARYLAND, THE WHITE EMPLOYEES OF THE AGENCY WERE ABLE TO MOVE NEAR THE NEW LOCATION. BLACK EMPLOYEES HAD TO COMMUTE ONE TO ONE AND A HALF HOURS IF THEY WISHED TO REMAIN EMPLOYED, FOR NO HOUSING WAS AVAILABLE TO THEM IN THE AREA.

SIMILARLY, WHERE THE GOVERNMENT ESTABLISHES CONTRACTS

(more)

WITH PRIVATE INDUSTRY, THE CONTRACT SHOULD STIPULATE THAT THE INDUSTRY MAKE AVAILABLE HOUSING FOR MODERATE AND LOW INCOME EMPLOYEES.

IN THE PAST FEW MINUTES, I HAVE DISCUSSED ONLY A FEW OF THE MANY POTENTIAL STRATEGIES FOR ACTION ON THE LOCAL, STATE AND FEDERAL LEVELS TO PROMOTE EQUAL ACCESS TO LAND, TO REDUCE THE CONCENTRATION OF POPULATION IN URBAN AREAS, AND TO BEGIN OPENING UP OUR SUBURBAN AREAS TO HOUSING AND JOB OPPORTUNITIES.

ALL OF YOU IN YOUR MEETINGS THIS WEEKEND WILL DEBATE AND DISCUSS THESE STRATEGIES AND HOPEFULLY IN YOUR BRAINSTORMING WILL DEVELOP SOME EXCITING NEW APPROACHES.

THE HUMAN RIGHTS MOVEMENT IS AT MIDPOINT IN ITS HISTORY, HAVING WON A NUMBER OF IMPORTANT VICTORIES OVER THE YEARS -- BUT HAVING MANY LONG YEARS OF STRUGGLE AHEAD. THE MOVEMENT TO OPEN UP THE SUBURBS IS WHERE THE CIVIL RIGHTS MOVEMENT WAS 60 YEARS AGO -- AT THE POINT OF BEGINNING.

BUT IN THIS ERA OF RAPID SOCIAL CHANGE -- OF A GENERATION GAP WHICH WORKS IN OUR FAVOR AS YOUNG PEOPLE MOVE INTO POSITIONS OF POWER -- OF INCREASING MILITANCE BY ALL PEOPLES IN STRIVING FOR BETTER LIVES, IN THIS ERA WE CAN HOPE THAT THE KINDS OF STRIDES WHICH TOOK DECADES TO ACHIEVE IN THE PAST CAN NOW BE ACHIEVED IN YEARS.

AND WE CAN WORK -- WE CAN SPEAK OUT -- WE CAN ORGANIZE -- WE CAN FIGHT SO THAT THE OPEN SOCIETY WHICH IS TODAY'S DREAM CAN BE NEXT YEAR'S REALITY.

(end)

FUROR OVER A DRIVE TO INTEGRATE THE SUBURBS

Suburban housing—that's the "new frontier" of civil rights. As on most frontiers, the going isn't easy. The case of Warren, Mich., shows the difficulties.

WARREN, Mich.

The suburbs are now becoming battlegrounds in the latest federal drive against racial segregation.

One skirmish has just been fought here in this almost all-white suburb near Detroit. What happened in Warren showed a fear that has been growing in many such suburbs across the country.

The fear is that billions of federal dollars—voted to finance housing and urban renewal—are now going to be used as weapons to force the integration of white suburbs.

Denial—and warning. George Romney, Secretary of Housing and Urban Development, came here July 27 to try to quiet such fears. He told a meeting of 40 suburban mayors:

"There's been a lot of loose talk about a HUD policy of 'forced integration' of the suburbs. There is no such policy.

"The Department does encourage integration through voluntary action. And we have a statutory mandate to enforce a national policy of fair housing. But our role is not to prescribe quotas of numerical standards which a community must meet."

Then, however, the Secretary added a warning which described the HUD strategy and explained what the uproar in suburbs is all about. He said:

"For any community to receive our HUD grants, they must take affirmative action to prevent discrimination in the choice of a house or a community in which to live."

Commented Orville Hubbard, mayor of almost entirely white Dearborn, Mich.:

"It's still evident that if you don't comply fully with the HUD requirements, you don't get the money."

High stakes, high emotions. The money stake is high. HUD has about 3 billion dollars in housing and urban-renewal grants to distribute among scores of cities and suburbs.

Warren's case showed what some suburbs might be required to do in order to get such money.

It also showed the emotions—and the resistance—such demands can arouse.

Secretary Romney was bombarded with critical questions in his meeting with suburban mayors. And he was booed by a crowd of some 300 whites who gathered outside the meeting hall.

Warren is typical of many suburbs in these times when people, industry—and jobs—are moving out from big cities to surrounding communities.

About 30 per cent of Warren's work force—mainly in auto-related plants—is black. But those black workers do not live here. A recent count showed only 28 black families among Warren's 180,000 people.

Some Warren residents have made it clear that they do not welcome Negroes as neighbors. Three years ago police had to protect a mixed couple who moved into an all-white Warren subdivision.

Then Warren applied for a 2.8-million-dollar grant for urban renewal.

HUD laid down 11 conditions for approving the loan. Among the things that Warren was asked to do were these:

- Appoint a fair-housing council.
- Develop low-income housing units.
- Help Negroes in locating, buying or building homes in the city.
- "Document" police efforts to protect civil rights of minorities—"especially in housing."

A "starting point"? "The Detroit News" published a series of articles which began by saying:

"The Federal Government intends to use its vast power to force integration of America's white suburbs—and it is using the Detroit suburbs as a key starting point."

"The News" quoted a HUD memorandum which described the Detroit suburbs as "an unparalleled opportunity for the application of a fair-housing strategy" with the aim of loosening "the

(continued on next page)

Secretary Romney met sharp questioning as he explained HUD integration policies to suburban mayors. Then, outside the meeting, he was booed by protesters.

—UPI Photo

INTEGRATING SUBURBS

[continued from preceding page]

'white noose' surrounding the central city" of Detroit.

Secretary Romney denied that Warren or any other Detroit suburb was being singled out as a target. He reached a compromise with Warren which attached only two strings to the HUD grant: that Warren pass an open-housing ordinance and that it establish a fair-housing board. The city council agreed to those terms—by a 5-to-4 vote—and the grant was approved formally on July 28.

After the settlement, Warren's Mayor Ted Bates said, "If in the future I detect any attempt by HUD to reverse its present policy—any attempt to bring forced integration to Warren—I will not hesitate to kill urban renewal."

Some observers interpreted the outcome of the Warren case as a setback for Government officials who hope to use urban-renewal funds as a means of pressing for desegregation in suburbs.

Resistance to federal programs has been encountered in some other cities. In at least one case, the resistance came from Negroes. That happened in Manhasset, N. Y., where Negro home owners blocked a federally aided program to build low-cost homes in a well-to-do black neighborhood. Two Negro organizations expressed concern that the neighborhood would deteriorate.

Mr. Romney, however, made clear to the suburban mayors that he will continue to require that communities getting HUD aid be open to all races.

How the law reads. The 1968 Fair Housing Act orders that the HUD Secretary "shall administer programs and activities relating to housing and urban development in a manner affirmatively to further the policies" of that Act. And Mr. Romney told the suburban mayors:

"This means a policy of nondiscrimination in housing, and that is what this Department will enforce."

The question still to be answered is just how far the Government will go in pressing for suburban integration.

A key official of the Nixon Administration said that present laws are "not explicit" on this subject, and that no firm policy has yet been adopted.

This official revealed that the White House was disturbed about Mr. Romney's confrontation with the mayors in Warren, and wished he had checked with the White House before his trip.

"New frontier." Warren is not the first city to feel HUD pressure for integration. Funds have been held up until assurances of an "open community" were obtained in such places as Stoughton, Mass., Waterloo, Ia., and Fairborn, Ohio.

Mr. Romney has asked Congress to authorize the overriding of local zoning or building codes that discriminate against federally subsidized housing.

Senator Abraham Ribicoff (Dem.), of Connecticut, is preparing legislation to both encourage and require integration of housing and schools in metropolitan areas throughout the country.

Suburbs are becoming known as "the new frontier" of civil rights.

MERGING CITY AND SUBURBAN SCHOOLS: THE RICHMOND STORY

RICHMOND, Va.

A merger of city and suburban school districts is proposed here in Richmond as a way of integrating schools. And it's stirring up a storm.

If adopted, it will be the first test anywhere of this controversial idea. It could lead to similar mergers in other metropolitan areas—in the North as well as in the South.

Goal: a balance. The idea is to combine the heavily black school population of the city with the preponderantly white population of the suburbs as a means of creating a racial balance in the schools of both areas.

A hope of the plan's backers is that it also would stem the flight of white families from cities to suburbs by making suburbs no longer a haven from racially mixed schools.

One of the big problems, however, is how to bring about such a merger, even if it should be ordered by a federal court.

Here, the city of Richmond is an entirely separate political entity. It is not even a part of any county. Equally separate and independent are the two counties that surround Richmond—Chesterfield County and Henrico County.

—Foster Photo

Judge Merhige suggested a city-suburban merger.

Action by State? Some action by the State government almost surely would be required to effect the school merger, even if the suburbs should consent—and initial reaction to the proposal indicated neither the suburbs nor the State would be likely to go along with the idea.

Henrico County Supervisor L. Ray Shadwell said that "for the federal court to merge the services of the municipalities would amount to the destruction of all local government within the United States."

Citizens have begun organizing to combat the proposed merger.

The merger idea came from a U. S. district judge, Robert R. Merhige, Jr., on July 6.

After he had rejected as inadequate a school-board plan for increasing the amount of racial mixing in Richmond schools, the judge suggested that the city school board discuss the "feasibility" of consolidation with officials of neighboring counties as a possible answer to the integration problems.

Hearings scheduled. The city board, on July 22, took up the judge's suggestion and asked him to order it into effect. Now the judge is scheduled to hold hearings and rule on his own suggestion.

Unless the suburban school districts are brought into the city school system, the board warned, no lasting integration of city schools can be achieved because "the exodus of whites creates a condition resulting in resegregation" of the city schools.

Such resegregation has occurred in several cities—notably in Washington, D. C. There, 16 years after Negroes were admitted to previously all-white schools, the enrollment is now more than 93 per cent black, with white enrollment declining year by year.

In Richmond, the school population is 60 per cent black, while in the adjoining counties only about 8 per cent of the pupils are black.

Because of housing patterns, school officials say they would have to bus pupils shorter distances to mix city Negroes with suburban whites than to mix the white and black children inside the city.

CITIES

The golden days are gone in suburbia

The worsening problems of the cities have spread beyond their borders

The traditional vision of suburbia has almost entirely faded. That vision once promised attractive homes in bucolic settings, good schools, quaint downtowns, and a leisurely life style free from overtaxed and racially troubled central cities. Millions of white middle-class Americans reached for that dream following World War II, and thousands of businesses followed them. It now is only an illusion.

Instead, many suburban communities are in deep trouble. U. S. Census Bureau figures this year reveal that more people now live just outside central cities than in them or in rural areas. "The worsening conditions of the cities have only speeded the outward movement [of people]," maintains a Committee for Economic Development study released earlier this year, "and the result has been that many problems of the cities have spread beyond their borders."

Suburban physical plants—the housing stock, schools, sewers, streets—are still not so antiquated as those of the cities. Pollution is not so widespread, crime not so rampant, fiscal solvency not so tenuous. But as urban expatriates continue their quest for the golden fleece in suburbia, ominous signs are cropping up. Among them:

- Heavy reliance on the property tax to finance essential services has boosted rates to levels often higher than those in the central city. The suburban taxpayers' revolt is not fiction: Voters in burgeoning Orange County, Calif., have turned thumbs down on more school bond issues than they have passed over the last five years.
- A growing body of court cases, carried by alliances of civil rights groups, social theorists, and the federal government, is threatening suburban zoning practices, especially in housing. The result: Many suburban communities have grown even more defensive in their land-use policies.
- Suburban black belts, thin mini-ghettos that stretch across several adjacent communities, usually older ones closest to the central city, are expanding. In such suburbs, a cycle of urban renewal is beginning. At the same time, the increasing cost of social services for their poor has helped push suburban county budgets out of shape.
- A plethora of overlapping jurisdictions augments tax burdens and often impedes both rational land-use planning and the responsiveness of local government so highly valued by suburbanites. In the Chicago metropolitan area, there are 1,113 local governments, or 186 per county. Most suburban residents are served by at least four: a county, municipality, school district, and one or more taxing districts whose functions range from garbage collection to mosquito control.

"The suburbs no longer exist in a separate world even though they do exist in a relatively privileged part of the world," says S. J. Schulman, a planner who oversees a new joint venture arrangement between Westchester County and New York State Urban Development Corp. But he and other urbanists believe that most suburbanites hold change, any change, highly suspect, and that this attitude may prove the biggest stumbling block in coping with the maladies of large metropolitan centers.

Explains William Shore of New York's Regional Plan Assn., a tri-state (New York-Connecticut-New Jersey) independent planning agency: "Suburbs naturally are afraid of life becoming worse instead of better. This can mean the loss of green space, a sense of crowding, a fear of crime. Suburbanites may not be happy with what they have, but they are afraid that change will be negative."

Zoning power. Perhaps the biggest challenge for change in the suburbs and in their relationships with central cities focuses on zoning, one of the trinity of sovereign powers—the others are taxation and eminent domain—that states have willed their localities. Zoning is the power. It can dictate the caliber of municipal services (box, page 39), determine the character of the community, control residential growth, shun or solicit industry, exclude minority groups. It is the tool that suburban officials can wield to foster the homogeneity many "urbophiles" decry.

Suburban governments contend that their zoning practices are only monuments to fiscal reality. Industry, commercial shopping centers, and expensive homes zoned on large lots yield more tax revenues and eat up less in high-cost services, especially schools, which account for half of every tax dollar in some communities.

In the tri-state New York metropolitan region, for example, 48% of the vacant land zoned for residential use, excluding the city itself, requires single-family homes on one acre or more. In prestigious Westchester, only 14 of 44 cities, villages, and towns have built or planned for middle-income housing. New homes there generally start at $45,000. And, across the Hudson River, half of Bergen County's 70 municipalities ban any apartment construction. Few multifamily dwellings pay their own way. Many suburbs that do allow them insist only on luxury, one-bedroom apartments, a device planners call architectural birth control.

Such zoning tactics can produce fantastic results for a suburb. Ten years ago, for example, Highland Heights, Ohio, just east of Cleveland, was a growing upper-middle-class community of 3,000—with no industrial tax base. "We were getting caught in a financial bind," recalls Mayor William J. Brennan. "When we wanted a traffic light, we didn't have the money to pay for it. We had no police patrol cars at night. Rubbish collection was once a month." Now, thanks to two small industrial parks, Brennan can point to new air-conditioned police cars for his 11-man force and to weekly garbage collections. "Our problems are much less acute now," he says.

> 'Local zoning restrictions merely determine the character of the town'

Highland Heights has doubled in size since 1960 but its property tax base has zoomed 314% to $30-million. And with its new industry, the community still can cling to its single-family residential zoning pattern.

"It [zoning] is designed for the very purpose of trying to avoid the costs implied in residential growth and its effect on public school growth," explains Sidney L. Willis, director of the State & Regional Planning Div. for New Jersey's Community Affairs Dept. Willis believes that municipal zoning is primarily a defensive tactic, but most local officials would agree with the assessment by Nelson G. Gross, a former chieftain in Bergen County and now Republican candidate for the U. S. Senate: "Local zoning restrictions keep no one out. They merely determine the character of the town."

Challenge. Despite such disclaimers, several groups are challenging zoning practices—variously labeled exclusionary, restrictive, large-lot, or fiscal—on the basis that suburbs have abrogated their power to zone by not pro-

Race and taxes were controversial issues at Teaneck (N. J.) town meeting.

Downtown Teaneck, once uncluttered, now is jammed with traffic

'Suburbs want to control their own destinies'

moting the general welfare. At the same time, urban planners argue that such zoning creates suburban land-use patterns that are unrealistic, even destructive, in the face of a skyrocketing metropolitan population.

Local insistence on large-lot zoning also produces a cruel mismatch between expanding industrial jobs in the suburbs on the one hand and housing for workers to fill them on the other. Says Ernest Erber, research director for the National Committee Against Discrimination in Housing, whose attorneys have challenged zoning practices in courts from Montclair, N. J., to Union City, Calif.: "Companies have leverage while scouting prospective suburban locations, but few use it. It's essential, for both employee and employer, that companies think of employment and housing as linked."

Take one community in northwestern Bergen County. Mahwah has a population of 10,700 living within its 26 sq. mi.; 10% of its land still remains vacant. But the community also contains two elements that work at cross purposes: Ford Motor Co.'s mammoth assembly plant and a mere smattering of apartments. Only 20% of the auto maker's 5,000 employees, 40% of them black, can afford to live in Bergen, much less Mahwah itself. For Ford, these facts contribute to a 5% rate of absenteeism and an annual turnover of about 20%. "To find suburban municipalities with a 5% to 10% minority population is to come upon islands of democratic living," a recently released NCDH report comments sardonically.

State action. Only a few state legislatures have tampered with politically explosive local zoning ordinances. Massachusetts, for one, has a new law that allows builders to appeal large-lot zoning impediments to a state panel for review. New York has taken the boldest step, however, with the creation two years ago of its Urban Development Corp.

With the power, as yet unexercised, to overturn local zoning restrictions, UDC signed agreements earlier this year with Westchester and Suffolk counties for housing and development programs. Top priority will be given to low- and middle-income housing, but UDC is treading carefully. In Westchester, for instance, it will concentrate its first projects in older suburbs—New Rochelle, Mt. Vernon, Yonkers, White Plains—which already bear the scars of urban blight.

Such poverty pockets stick out like sore thumbs in Westchester, Bergen in New Jersey, Cook County around Chicago, and other suburban locales where affluence is the norm. Says John W. McMahan, president of Development Research Associates, a Los Angeles-based economic consultant active in suburban work: "Too often, suburbs have considered themselves immune to decay. And ironically the problems of blight are all the more pronounced because suburbs have not recognized them. From now on, suburbs are going to have to spend more and more on repairing their physical plants."

Roadblocks. That job will be complicated by two decades of mindless land-use planning. From Los Angeles to New York, transportation arteries in many suburban counties are barely distinguishable from those of their central cities: a garish tangle of automobiles, billboards, strip developments, and other signs of creeping urbanization and population explosion.

In Dekalb County, Ga., just north of Atlanta, main roads bulge with fast-food franchises, service stations, and apartment complexes, despite efforts of subdivision associations to guard against encroachment by commercial developments. But nowhere is the problem more dramatically illustrated than in Orange County, Calif., a living example of the horror of nonplanning.

"It is 10 years too late in coming," bemoans County Supervisor David L. Baker of Orange's first master plan, adopted earlier this year. "There was a reaction to growth here rather than a plan for it." With no center of its own, Los Angeles sprawled south into Orange County during the 1950s and reached breakneck speed in the 1960s when population doubled to 1.4-million, making it the largest all-suburban county in the nation. During one period in the late 1950s, schools were built at a rate of one every 17 days. But with an almost total absence of coordination among residential, industrial, and commercial elements, Orange's 25 municipalities hardly considered interior roads or open space. Instead, they scrambled to annex every piece of land in sight. What has emerged is a traffic-choked, crazy-quilt pattern of municipal boundaries that gives fits to residents, companies, and local officials.

Orange County's explosive growth has influenced the delivery of services as well. Laments Baker: "We're faced with a need to provide higher education, mass transit, airports. There is a solid waste problem. The sewage lines are underdeveloped and overloaded." The morass of taxing units is awesome: 133 self-governing districts covering such things as cemeteries, flood control, and water. Many of them clash directly with municipal services.

What is needed. This fragmentation of governmental services in Orange and many other suburban counties arises out

The growth of the suburbs nationally...

...is reflected in major metropolitan areas

Data: Census Bureau and BW estimates

for a more rational approach. In Bergen County, for example, each of 70 localities maintains its own police force, hears cases in its own municipal court, usually operates its own school district, appoints its own planning board, building inspectors, health officers, and assessors, and elects its own governing body. Since the property tax pays for almost all of them and more, the strain on local budgets is tremendous.

That strain may make regional approaches to metropolitan problems more palatable to many suburbanites. Says Robert C. Wheeler, community development group manager for Evanston, Ill., a large suburb just north of Chicago: "I don't think Evanston by itself can solve its problems. Each problem needs more resources than the city can produce to solve it. Most of our hope is for cooperation between governments." But because of a substantial number of poor, Evanston differs from most suburbs. Until they are convinced that intergovernmental cooperation will more than compensate for their loss of autonomy, most suburban communities will continue to resist superagency solutions.

Explains one Orange County official: "We are a county of stable Jeffersonian Democrats and Republicans who feel regional agencies, not close to the problem, would be passing judgment on matters of life and death to the community. A supergovernment is contrary to thought in America."

Successful experiences in metro government do exist, of course, in Jacksonville, Nashville, and Indianapolis, where city and county were consolidated. Each city now can achieve certain economies of scale—in purchasing, for instance—and can avoid unnecessary duplication of services in such areas as public safety. However, unusual conditions spurred these consolidations—official corruption in Jacksonville, a new, exciting, and Republican mayor in Indianapolis. Even in metropolitan areas where a large urban center dominates, as opposed to a totally suburban county, both suburbanites and inner-city blacks resist regional agencies.

"Suburbs want to control their own destinies," emphasizes Allen Fonoroff, a planner and chairman of a program in urban and environmental studies at Case Western Reserve University in Cleveland, the focal point of Cuyahoga County. "They don't want to share the problems of the central city. What reason does Shaker Heights have to give up its autonomy? It can provide the services its residents need."

Inner-city blacks, for their part, fear dilution of their growing power, especially in older Midwestern and Northeastern urban centers. In 1959, for example, an ambitious "Metro Plan" for

Utopia in suburbia

Cuyahoga Heights, a 52-year-old suburb that borders Cleveland, has a population of just 960 and, at $2.59 per $100 of assessed valuation, maintains the lowest property tax in its county. Yet the middle-class community maintains full-time 15-man police and 26-man fire departments, spends $1,000 for each pupil in its school system, picks up garbage regularly twice a week, elects a mayor who makes $14,200 and seven councilmen who make $2,700, and has two parks, a municipal pool, and a playground supervisor.

"If it were not for industry, we would have a part-time mayor, a volunteer fire department, and two policemen, just like a lot of other suburbs our size and bigger," says Mayor Stanley W. Klima. Indeed, Cuyahoga Heights developed for industry when its founding fathers seceded from another village reluctant to accept big business. It now houses within its borders plants of Republic Steel Corp., Harris-Intertype Corp., Ford Motor Co., American Steel & Wire Co., and others, which provide 90% of its tax base. Its residents willingly suffer the dislocations big industry brings—for example, traffic jams caused by the 30,000 people who work in town—because their services rank among the best in the country. It is a living example of one way suburbs can lick their fiscal problems.

Envy. Naturally enough, other suburban communities in the Cleveland area often complain bitterly about Cuyahoga Heights's low tax structure and its zealously guarded services. Klima rejects any suggestion that his town share its wealth in some system of cooperative regional government: "Our low taxes are part of our compensation for having the industry, three landfills, and the sewage plant." The sewage plant serves Cleveland, and for providing a site, Cuyahoga Heights treats and disposes of its liquid wastes free.

In an age when the gulf between local government and the people is growing, Cuyahoga Heights provides highly personalized service. Special garbage pickups are frequent. Streets are sprinkled regularly during hot summers and plowed quickly during snowy winters. The community even runs an employment service. And it probably has the only town hall in the nation with bowling alleys in the basement.

Dreams can turn real

Kids today, leaders tomorrow. They'll have an easier time dealing with the problems of racial and cultural misunderstanding because they'll know a lot more about other peoples, thanks to books, movies, TV and increased chances for personal contacts.

The Sumitomo "Fairy Tales of the World" pavilion at Expo '70 is dedicated to this understanding between children, just as Sumitomo Shoji activities in every corner of the globe do the same for their parents.

International business organizers with contacts and friends literally everywhere, handling every aspect of foreign trade and technical exchange, Sumitomo Shoji makes short work of political and cultural barriers to find the best product, technique, investment opportunity, joint venture or market possibility in any country—then smooths the way from start to finish.

One answer is tax reform and better distribution of present tax revenues

Cuyahoga County was narrowly defeated. The suburbs gave it 48% support, but blacks in Cleveland's ghettos rejected it 2-to-1.

Recommendations. Many metro government advocates believe that voluntary Councils of Governments (COGs) may be one way to convince city and suburb that a regional approach to many problems can pay off for both of them. But with no statutory authority and despite a push from Washington, COGs can only encourage, advise, and cajole their member localities to cooperate in the delivery of services. Most have stuck to such services as health, sewage, water, and public safety, and have steered clear of the more substantive questions—zoning and public education, for instance.

The Committee for Economic Development offered one recommendation in its report released earlier this year. It advocates a two-tiered system of government modeled after Toronto's successful experience, now 17 years old. A senior, areawide level would be given responsibility for the solution of truly regional problems, such as transportation and planning. Community districts would be assigned more routine tasks. The touchy zoning function would be shared. Says the CED: "In general, the metropolitan-wide level should specify broad areas of industrial, commercial, and residential activity which the local communities could zone into subareas."

Harried officials in most suburban communities, however, have been so concerned with attracting big tax revenue producers to service their burgeoning populations that they have had little time or inclination to dwell on broad land-use policies. Their efforts to introduce social heterogeneity have had to take a back seat to the need for schools, paved streets, police and fire departments.

One answer to such money woes, short of metropolitan government, is tax reform and better distribution of present tax revenues. In its "Agenda for the '70s," for instance, the Advisory Commission on Intergovernmental Relations recommends that states ease the burden on local property taxes by allowing municipalities greater flexibility for income and sales levies.

"Tax reform also is the simplest way to improve the planning mechanism," claims Shore of New York's Regional Plan Assn. "With relief from the property tax, people could concern themselves much more with the kind of community they want, not with balancing the tax roles with big ratables." ■

SUBURBS AND CITIES: THE ROLE OF SUBURBAN ACTION

(A descriptive brochure for Suburban Action, 180 East Post Road, White Plains, New York, 10601. A nonprofit corporation for research and action in the suburbs.) For further information write or telephone Paul Davidoff or Neil Gold at Suburban Action, 914 - 949-3326.

Suburban Action has been established to explore new courses of action for private citizens, local, state, and federal government officials and agencies, and for business groups, in pursuing the national goals of expanding job and housing opportunities, reducing poverty, and eliminating racial discrimination and inequality. These courses of action are based on the proposition that suburban resources of jobs and vacant land should be brought to bear in providing opportunities for people now deprived of decent jobs and housing.

BACKGROUND

The Suburbs as The New America

One of the most striking aspects of American economic growth over the last two decades is the fact that 80% of the new jobs created in the nation's large metropolitan areas have been located in their suburban rings. The central cities of these metropolitan areas have not only failed to win a significant share of new urban employment, but, in some cases, they have been experiencing a net outflow of jobs.

In the tri-state New York area, for example, the central city gained only 111,000 new jobs in the years 1952-1966, compared with a gain of 888,000 jobs for the region as a whole. In the St. Louis area, employment in the central city actually declined in this period--by 50,000--compared with an employment increase of 193,500 in the St. Louis suburbs.

In Philadelphia, central city employment also declined in this period; from 773,622 jobs in 1952 to 758,925 jobs in 1966. The Philadelphia suburbs, on the other hand, gained a total of 249,433 new jobs in these years.

In San Francisco, to take a final example, the central city gained nearly 25,000 new jobs in this fifteen year period, roughly one-eighth of the employment increase that took place in the San Francisco suburbs (202,000).

In the face of the concentration of public attention on the urban crisis, it is important that policymakers understand that this remarkable shift in the location of urban growth has taken place, and that the process of industrial and commercial decentralization has had a transforming impact on the distribution of opportunities and rewards within urban areas.

More well known than the shift in the location of new metropolitan employment is the shift in the location of population growth within metropolitan areas. Here, too, the results are striking, and fateful, in their implications for urban policy. Between 1950 and 1966 the population of the nation's central cities increased by 7,400,000. In the same period, the population of their suburban rings increased by 36,500,000. By 1966, more Americans lived outside of central cities in our urban configurations, than inside central cities.

Not only have central cities been on the short end of urban population growth, but their share of future growth is destined to decline still further. According to the most reliable estimates of the distribution of future population growth, nearly all of the one hundred million additional persons who will live in the United States by the year 2,000 will live in suburban areas. There will be little if any growth in central city (or rural) population in this period. In some central cities, in fact, the prognosis is for sustained population outflow to the suburban rings, depending upon the availability of sufficient housing opportunities.

The nation's suburbs, then, have been the locus of the bulk of new jobs that have been created in metropolitan areas, and the locus, also, of new population growth. Not surprisingly, suburban areas have experienced the greatest share of all new housing starts in urban areas. In fact, the suburban share of such new housing starts has been increasing in recent years: from 60% in the 1950's to 70% and above in the 1960's. In some of the largest metropolitan areas such as St. Louis, Philadelphia, Detroit, the District of Columbia, Cleveland, Boston, Baltimore, nearly 80% of new residential construction is taking place outside the central city.

Underlying the movement of jobs, housing and population from central cities to their surrounding suburbs is the availability of a vast supply of vacant land outside of central cities, compared with a death of such vacant land within most central cities. Indeed: ninety-nine percent of the vacant land in the nation's 20 largest urban areas lies outside of core cities of these urban areas. The unavailability of vacant land within central cities necessarily sets reasonably firm limitations on the employment and population capacities of these areas. Conversely, the existence of a limitless supply of

vacant land on the urban periphery practically insures that future urban growth will take place in these fringe areas.

In sum, the suburbs of the United States have become the New America of the late 20th century: the growth area of the private economy, the locus of most of the nation's new jobs, housing and population.

How the Suburbs can Contribute to the Solution of Urban Problems

The suburbs of America have not played a significant role in assisting the nation's effort to solve problems of race and poverty. Along with the rest of the nation, suburban communities have not been made aware of the fact that opportunities for solving the national need for decent housing and jobs for all Americans are concentrated in large measure in the suburban rings of metropolitan areas.

This is not to suggest that the suburbs should or could deal with the entire poverty issue: clearly, the suburbs cannot do it alone. But the land at the fringe of metropolitan areas and the expanding industrial development in the suburbs combine to afford the possibility that the nation's suburbs may assist mightily in providing decent jobs and housing for all Americans.

Solutions to the nation's urban problems call for continued attention to the task of rebuilding cities, and for building new cities on the nation's non-metropolitan land supply. In addition to these programs, however, the need now is to focus public attention and action on the opportunities immediately available in suburban areas for jobs, and for the development of housing at cost and rental levels affordable by the disadvantaged groups of urban America. It is here that the private secter can make a lasting contribution to the solution of the nation's urban crisis.

Before considering the elements of a program of affirmative action in the nation's suburbs, we should look briefly at some of the negative consequences that have resulted from the decentralization of American economic life.

First, movement out of central cities to their surrounding suburbs has not taken place, to any significant extent, among blacks and other minority groups. It has been the white population that has benefited from the availability of job and housing opportunities outside of central cities. By 1966, as a result of the suburbanization of the white population, only

42% of urban whites remained in central cities. Among non-whites, on the other hand, more than 82% lived in central cities in 1966--a higher proportion than in 1950.

Still more significant, as an indication of recent demographic trends, is the fact that between 1960 and 1966, 100% of the urban white population gain of 10,152,000 took place in the suburbs. The central cities actually lost white population in these years. Conversely, 90% of the non-white population gain of 2,757,000 in the same period took place in central cities.

These remarkable population shifts have resulted in severely imbalanced population distribution in our metropolitan areas. The cities of the United States are rapidly becoming ghettoes of the poor and the black, while the suburbs appear likely to remain affluent and white. We are well on our way to becoming the two nations: "one black, one white--separate and unequal", described in the Kerner Commission report.

This growing separation of white and black in the nation's metropolitan areas is a direct result of the nation's acknowledged failure to insure that all social and racial groups are able to gain access to the suburban land base.

A second, and equally baleful, consequence of the decentralization of American economic life and the outward movement of population from central cities, is the maldistribution of jobs and workers in our urban areas. For nearly two decades, rural refugees, mainly black, Mexican-American, and Puerto Rican, have been arriving in the great cities of the nation to find that the jobs they were looking for have been disappearing - in part, because they have been relocated out of the cities to the suburbs. The suburban communities to which these jobs have been moved, while welcoming new tax-paying industrial and commercial facilities, are unwilling to permit their vacant land to be used for housing for the employees who work in the new facilities. In effect, blacks and other minorities have been and are unable to follow their jobs to the suburbs. These rural migrants have been piling up in the overcrowded central cities, without jobs, without access to jobs, without access to information about suburban job opportunities, without decent housing, and without any prospect of overcoming their condition by further migration. At the same time, as if to mock the policies that have created our present crisis, suburban job opportunities remain unfilled for lack of adequate manpower.

The number of unfilled jobs in suburban areas has variously been estimated at from 250,000 to 750,000. Most of these unfilled jobs are blue collar, unskilled and semiskilled, occupations. Even if we accept the lower figure, the fact remains that these 250,000 jobs could provide income and employment for

a significant percentage of the unemployed and underemployed workers of our central cities. For this reason--and in light of the fact that 80% of new urban employment growth in the large metropolitan areas is taking place in the suburbs--appropriate linkages between the central city labor force and areas of expanding job opportunities must be created.

In lieu of action by government to enable central city workers to compete for job openings in the suburbs, the private sector, in its own interest, prevailed upon the Federal Government to create the urban mass transit demonstration program to experiment with methods of aiding workers to get to suburban plant sites. In so doing, the private sector, particularly that portion in durable goods manufacturing, acknowledged that the present distribution of jobs and workers in urban areas constituted a significant drain on the nation's productive capacity, and on its human resources.

Regretably, interim results from the various urban mass transit demonstrations strongly suggest that transportation linkages are insufficient to overcome the emotional and physical barriers that separate the unemployed in central cities from suburban job areas. It seems clear that more substantial linkages must be created if the suburbs are to enter fully into the mainstream of American life.

Preeminent among these connections is the creation of a supply of widely dispersed moderate cost housing for working class families reasonably close to suburban job sites. This is the challenge now confronting both government agencies and the organized sector.

Restrictive zoning and land use controls in suburban areas constitute the principal barrier preventing development of job-linked moderate cost housing in the suburbs. Among the specific devices which have been brought to bear by suburban governments to prevent construction of such housing in their communities are minimum lot size requirements, minimum house size requirements, restrictive subdivision regulations and unduly expensive building standards. In addition to devices, many suburban communities have adopted zoning ordinances which prohibit the development of all forms of multifamily housing within their jurisdictions. Taken together, these restrictive zoning and land use controls have been remarkably effective in preventing low and moderate income families from penetrating suburban housing and land markets, in preventing the matching of jobs and workers in urban areas, and in raising the cost of new housing in the suburbs to all homeseeking families. If this nation is to provide for the housing and job needs of its minority citizens, the power of government must be used to break the land-use barriers erected by suburban communities. This may soon be recognized as the new frontier of the civil rights movement.

Elements of a Program to Expand Housing and Job Opportunities in Suburban Areas for Residents of Central Cities

Policy Issues

A basic policy issue must be decided before the nation will embark upon a program of affirmative action in the suburbs. The issue is whether the expenditure of billions of dollars of public funds to rehabilitate the substandard housing stock of central cities, to encourage industry to locate within central cities, and more particularly, within the slums and ghettoes of central cities, is justified in the face of the overwhelming trend toward decentralization of American economic life.

A corollary issue is whether problems and solutions in urban areas are place-limited; that is, whether the fact that the urban crisis is concentrated in the central city slums and ghettoes requires that solutions to the urban crisis be limited in their geographic focus to these same slums and ghettoes.

Decentralization and Public Policy

In our view, the decentralizing forces of American economic life are not reversible. The absence of vacant land within central cities, coupled with the existence of an enormous supply of vacant land on the urban periphery, will not permit a major expansion of the employment capacity of central cities. Seen in this light, public programs which seek only to rebuild the central city housing stock, and to encourage industry to locate within central cities and within ghettoes, run counter to the movement of the private economy.

While isolated examples of in-city plant location will occur, as in the case of the IBM plant in Bedford-Stuyvesant, the private sector will continue to locate the bulk of its new plant and equipment outside of central cities. In the same year in which IBM created 300 jobs in Bedford-Stuyvesant, the company created 3,000 jobs in the New York region as a whole. The blacks of Bedford-Stuyvesant did not have access to these 3,000 jobs.

The bulk of the central city substandard housing stock is found in areas considered ripe for urban renewal. These areas contain most of the non-white population of central cities. Increasingly, they are the locus of central city unemployment and under-employment. Land prices in central city urban renewal areas have been rising even more rapidly than have suburban land prices. This is occuring in spite of the fact that the level of land prices in suburban areas is markedly lower than the level of land prices in central city urban renewal areas.

The convergence of these factors gives some indication of the added cost involved in building low and moderate cost housing on developed land, in areas characterized by a declining blue collar job market. They suggest that substantial housing cost savings can be achieved by locating the bulk of the new low- and moderate-cost housing stock outside of central cities.

The "Urban Crisis" and Public Policy

The second major public policy decision is whether the "urban crisis" is in fact an "urban" crisis at all, or a crisis of class and race in the nation as a whole. Public policy has tended to see the problems of slums and ghettos as problems of "renewal areas," "project areas," and "model city neighborhoods." It is our view that the problems to be found in these areas are not problems of areas, but problems of the allocation of resources, both public and private; and that their remedy is to be found in the reallocation of resources. Public policy to aid ghetto and slum residents should be tested in terms of its ability to enlarge opportunities for blacks and for the poor. This recasting of policy does not imply ending planned improvement of urban spatial and structural conditions. Rather, it makes these conditions the means for serving human needs, and not the reverse. If neighborhoods are to be rebuilt in central city ghetto areas, it will be necessary in many cases for the population density in these areas to be reduced; rebuilding at present densities raises impossible problems of cost and residential amenity. To renew the neighborhoods, we must open opportunities for outmigration to new, decent housing outside the ghetto. Once densities have been reduced in this way, clearance of dilapidated structures can take place without creating impossible problems of relocation or temporary relocation while reconstruction goes forward.

Rural Housing

RECOMMENDATIONS AND SUMMARY OF INFORMATION

ON RURAL HOUSING OBTAINED THROUGH INTERVIEWS AND RESEARCH

Submitted to:

Arthur C. Campbell
Moreland Griffith Smith, FAIA
Emory Via
Horace Barker

August 21, 1970

By

Bettieanne Childers

Summer Intern

Programs operating in the rural South to help solve the housing crisis are primarily sponsored by three groups: FmHA, OEO, and the Non-Profit Housing Corporations. The Farmers' Home Administration is by far the dominant agency serving areas with populations under 5,500 and focusing on direct home-ownership loans. The OEO Housing Programs are spin-offs from CAP agencies concerned about low-income housing. Many of the OEO sponsored programs are self-help housing efforts benefitting mainly migrant workers. Non-profit housing groups are few in number, the concept filtering rather slowly to rural areas. They are composed of community people, who are usually unsophiscated about the housing field who band together for the betterment of the community. Most are handicapped by inadequate finance, limited scope, obstacles of bureaucratic red tape, and inadequate programs.

Efforts to increase the effectiveness of these groups should focus on alleviating difficulties by (1) expanding the group served by the agency; (2) developing fund sources and increasing allocation for such groups; and (3) revising current programs. Approaches to addressing these needs may be made from

Programs

1. self-help

economic, political and educational standpoints. An economic approach may entail influencing money interest to invest in housing programs, utilizing approaches like the Citizens and Southern Bank, the Community Development Corporation and stressing incentives like the tax write-off for "seed money." Using the political approach, one may try to specialize legislation directed at the state and local housing crisis or attempt to make public officials view low-income housing as a priority. It means sensitizing public officials, contractors, planners, etc., to the urgent need for low-income rental housing. This approach also includes organizing the electorate into pressure groups to act as a catalyst for local officials and agencies to begin to address themselves to the housing need.

Aside from informing public officials and the general public, the educational process involves increasing the number of housing specialists with interest in rural housing and developing concepts in the field. Most technical assistants in the field are self-taught and courses are essentially urban-oriented. Some housing specialists like Lewis Douglas of Non-Profit Housing, Inc. realize that planning for rural housing may involve many different considerations and problems from urban

planning. The current emphasis in education on community involvement and "relevancy" is an appropriate climate to formulate rural planning curricula.

Housing Programs

Loan programs and housing construction programs operating in the rural South are generally inadequate. Most focus on home-ownership, thereby leaving out most low-income people who can not meet conventional loan requirement Innovative programs which may benefit tenants and designed to stimulate construction by private developers are not publicized, and generally, not utilized. Local housing authorities may be slow to build public housing for varied reasons such as the lack of funds, absence of a workable program, or fear of open housing requirements.

State and local governments have been slow to pass housing legislation, enforce strong housing codes or participate in progressive national programs like "Operation Breakthrough" for some of the same reasons that local housing authorities have failed to act and for other political reasons. The state of South Carolina should be an interesting case to observe since its governor has identified the housing crisis as a point on which to focus and the legislature in its recent assembly made

significant revisions in their housing provisions. It also is taking part in "Operation Breakthrough." In contrast, last year, Lester Maddox vetoed an act for housing which was based on his housing commission's report. However, southern states are at least beginning to talk about housing and their housing needs.

Non-profit development corporations, private groups who pool resources to apply for construction loans are few in number. There are few sources from which they can receive financial aid to fund an office or cover "seed money" requirements needed to hire architects, lawyers, packagers, and other consultants to plan a project. Statewide Home Foundation, Inc. in South Carolina is one such group. In some states, funds allocated for loans to be used for these groups go unused since few such groups exist. They usually are in need of technical assistance from housing specialists, and managerial consultants because of their limited knowledge and experience. Lack of funds inhibits their ability to employ consultants. Groups lending this technical assistance - Rural Housing Alliance, OEO, Southern Rural Project, the National Council of Negro Women, and the Southern Rural Action Projects rely on grants and government contracts to fund their agency; both sources have had bad budget cuts recently necessitating the cutting of programs as well as the technical assistance grant

program expanded by FHA. These groups also have to be organized. Since the concept is relatively new in the South, citizens need to be made aware of this mechanism and stimulated to organize.

SRC's HOUSING AND PLANNING PROGRAM

The Council's Housing and Planning Program can be very important as a catalyst for stimulating interest and sensitizing elements of the South to the total housing situation. It is providing a valuable service as an information source and in rendering limited technical assistance. However, it could become more aggressive in seeking out groups or even organizing people to work for low-income housing developments both on a local, state and national level or in initiating forums whereby various interest groups -- planners, investors, redevelopment officials, local housing authorities and the FmHA, to discuss and develop strategies for working with the problem. Other means may be used to attack the problems utilizing economic and political approaches. Such action may make the Council more visible to concerned individuals and groups and open avenues for more projects.

Research which the Council may undertake or underwrite

will also provide ammunition for pressure groups to stimulate a response from inert housing officials or validate arguments for revision and initiation of certain programs.

Members of the Council who have some affiliation with the Rural Housing Alliance and Non-Profit Housing Center, Inc. may also work to influence those groups to establish regional offices in the Southeast. This would make them more accessible to people in this region.

The issue of open housing is a relevant one although little mention has been made of it in talking about the rural housing situation. This is because the problem of low-income housing transcends color boundaries. A middle-income person with the assets to purchase or buy a home may opt to build in a middle-class black neighborhood. The low-income black has no choice since decent low-rental housing is simply in short supply in both black and white neighborhoods and a black termed "high-risk" may be denied a loan to build in even the bleakest neighborhoods. The same is true of very low-income whites although their chances may be slightly better. Some research into the question of "how much better?" may be revealing. Issues like dispersal housing point to the complexity of the situation for low-income housing and open housing are crucial concerns. The Red Oak Housing study was pertinent; however, it also revealed a relation-

ship between low-income housing and open-housing. The subtlety by which the community rejected public housing and gained skeptical support from liberals using the lack of citizen's participation as gounds to camouflage their racial and class prejudices is justification for a continued fight for open housing. However, it is also an indication of a need for increased sensitivity to and awareness of a poor person's need for good housing, regardless of race and more education about innovative housing programs like Turnkey which are designed to do more than just provide shelter. The challenge created by this task requires a broader definition to "fair housing" or "open housing" as well as a broad definition of the housing crisis.

A greater emphasis on rural planning and housing development is also justified. The lack of low-income housing is both an urban and rural need. However, there are many groups and resources working in urban areas and few in rural areas. The fact that small towns are still in the majority in the South and provincial in character, but still feed into the surrounding cities and control state legislatures also justifies greater emphasis on working in this area.

OUTLINE OF PROBLEMS IN RURAL HOUSING

I. Problems in rural housing and community development

A. Inadequate supply of low-income housing

1. Few housing developments built by local housing authorities

a. Workable program requirement

b. Fear of open housing regulations

2. No use of innovative programs like leased housing, rent supplements or rental co-ops and little co-operation with private developers.

County Hsg. Authorities?

3. Absence of housing authorities in many communities.

4. Few non-profit sponsors.

B. Inadequate housing and community development programs

1. Home ownership loans are most numerous; and do not reach low-income groups.

To what extent do these elements cause rejection of applicants for FmHA programs

a. Downpayment requirements restrict

b. Credit reference, income levels, collateral requirements cannot be met.

c. Conservative administrators wary of high-risk applicants.

2. Farm labor housing and self-help housing efforts reach only limited number of tenants other than migratory workers.

a. Little technical assistance available for organizing and overseeing self-help groups.

b. Programs depend largely upon such kind-hearted, concerned employers such as farmers, plantation owners, etc.

c. Porgrams not encouraged in non-migratory areas and are not generally encouraged by FmHA offices.

d. Knowledge of programs and technical assistance grants is limited.

3. Community development loans must be administered by public agencies which may not be sensitive to needs of low-income people.

II. Weaknesses of groups working with low-income housing in the South.

A. Regional groups like RHA, SRA and SRP must depend upon contracts or grants to finance staff members and programs. OEO, the principal source for funds had a serious budget cut.

B. Regional groups lack finance and time to do adequate planning and studies on local communities; also can't follow-through on extensive time-consuming efforts.

C. Groups are unknown to most rural communities.

III. Needs of technical assistance groups

A. Additional manpower

B. Funds for operating

C. Means of extending services beyond OEO agencies

IV. Needs of local communities

A. Catalyst for organizing housing groups.

B. Long term fulltime technical assistants for local groups including housing specialists, planners, business managers.

C. Revolving loan-fund source

Outline of problems in rural housing - page 3.

V. Roles for SRC

A. Help increase supply of housing specialists

1. Stimulate colleges to set-up housing courses

2. Stimulate student interest in field though intern programs, seminars, etc.

3. Organize housing workshops for local community leaders and organizers.

B. Stimulate private developers, architects, planners, etc., to get involved inlow-income housing efforts. (Refer to NCNW, Inc., Model and Statewide Homes.)

C. Introduce SRC contacts in local communities to program available, non-profit organizational concepts, technical assistance sources.

D. Encourage financial backers to invest in revolving-loan fund and community development grants.

E. Use influence (publications) to sensitize and educate public officials to housing needs of low-income.

F. Encourage and do research to draw attention to irregularities in administration of programs and to provide a basis for strengthening, revising, and creating means to develop low-income housing.

Dear Art:

Pursuant to our conversation, I am forwarding the following suggested names for your Task Force on Housing Discrimination:

Bruce B. Gruber - National Urban League
Edgar M. Grider - United Training Organization
Alphonso McGhee - Regional Council, OEO
Percy L. Harden - Administrative Coordinator, Office of the Mayor
Hilliard Lee - City Planning Department
Mrs. Gloria Borders - League of Women Voters
Mrs. Fran Rossman - " "
Mr. Grady Norris - HUD

These people should represent a diverse group of interests and knowledge. Should there be others, I will forward those to you also.

Sincerely,

Fred J. Thompson

Fred J. Thompson

United Appeal Member Agency

Copies of this letter sent to: Mr. Harold Dawson
Mr. Grady Norris

August 17, 1971

Mr. Leon Eplan
Eric Hill & Associates
75 Eighth Street, N. E.
Atlanta, Georgia 30303

Dear Leon:

We would like to have you participate in a small meeting (approximately a dozen persons) of individuals who are knowledgeable about various facets of housing discrimination to discuss the issue with a view toward suggesting one aspect that an SRC task force might focus on.

Tentatively, this meeting is scheduled for September 16 (with September 23 as an alternate date) in Atlanta. It would last from 10:00 a.m. to 3:00 p.m. (lunch inclusive).

Over the past five years, the Southern Regional Council has produced several reports which addressed the issue of discrimination in housing. Its most recent such publication dealt with government and citizen action to alleviate discrimination - primarily in the South. That report talked about the possibilities of halting the development of segregated housing patterns and thereby avoiding to some degree, ghettorization northern style. Achievement of this goal is projected as one of the great challenges of the 70's.

Now, SRC intends to take carefully chosen actions to effect some improvements in a selected problem area of housing discrimination. We would be greatly indebted to you for your help in making this decision.

This letter will be followed by a telephone call to ascertain your willingness to participate.

Sincerely yours,

Arthur C. Campbell
Co-Director
Housing and Planning Program

ACC:mv

Meeting of Consultants on Housing Discrimination

It is proposed that the individuals whose names appear below be convened in ATLANTA on Aug 26 to consult with Housing and Planning staffers on discrimination in housing. Specifically, the purpose of this meeting is to have selected housing experts discuss the issue of discrimination in housing with a view toward suggesting one aspect of it that an SRC task force might focus on.

The proposed individuals are knowledgeable in various aspects of discrimination in housing:

→ 8 PARTICIPANTS → August 26 Sept. 16

Participants

873-3315 - - - - LEON EPLAN, Urban Planner. Vice President of Eric Hill Associates, Inc., an Atlanta-based planning consultant firm. Good understanding of the impact of local and national policies on discrimination in housing.

(914) 949-3326 - - - - PAUL DAVIDOFF, Co-Director, Surburban Action Institute - A White Plains, New York-based Institute for Surburban Research and Action. Was first to develop the concept of advocacy planning. An attorney and a planner. Probably understands as well as anyone in the country, the practice of exclusionary zoning. Now putting his ideas into practice in Westchester County, New York.
Vacation until ~~SEPT.~~ 7th

(216) 295-1600 - - - JOSEPH BATTLE, President, National Neighbors/Real Estate Agent in Cleveland, Ohio. Has thorough understanding of blockbusting and neighborhood stabilization.
OR
out until August 23rd

- - - - BOB NEWMAN, Attorney with ~~Emory~~ Legal Aid. Attorney for the plaintiff in Red Oak Case in Atlanta. Sensitive to problems of concentration of public housing and wants to use the law to force local authorities to adopt dispersal policies.

- - - - JOHN INGLE, Field Representative of NCDH, also Director of Housing Opportunities Made Equal, Inc. in Raleigh, N. C. Has experience in working with private groups in the South.

- - - - GRADY NORRIS, HUD Atlanta. Has understanding of individual complaint process potential of Title VIII.

- - - - WAYNE C. THOMPSON, Owner of local Real Estate Firm. Should know practices and policies of real estate industry.

(A) Harold DAWSON — EMPIRE REAL ESTATE BOARD, PRES.
& Assoc. 659-3724 →
691-4357 → 3589 GORDON Rd SW
30331

- - - - Representatives from Kentucky Open Housing Operation.

- - - - Larry Pearl (Samuel Simmons office) Office of Equal Opportunity, knowledgeable about HUD's Guidelines for 235 & 236.

- - - - — Dawson, EMPIRE REAL ESTATE BOARD (instead of Thompson)

— GRUBER, Regional Urban League

— BOWENS, Interfaith

— CIVIL Rights Comm. Housing Staff

Dear Mr. Norris:

Thanks for agreeing to participate in our meeting on housing discrimination. To give you additional insight into the work of the Southern Regional Council, I am enclosing several of our publications and a brochure which describes the structure and scope of the organization. Also for your information, I am enclosing a list of prospective participants.

Pending further notice, the meeting will be held at our office here on 5 Forsyth Street, N. W., starting at 10:00 a.m. on September 16.

Thanks again, and I look forward to seeing you.

Sincerely yours,

Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Mr. Campbell:

Thank you very much for your letter of August 18.

I'll be delighted to participate in the meeting you propose. Also, I'll be delighted to accept travel expenses as I'm sort of between funding periods and I'm not sure whether or not I have any travel money.

The proposed date and the alternate date are both o.k. with me.

I think your recent report Equal Housing Opportunities is very good. I received a letter from Bob Chandler of The Ford Foundation a few days ago in which he described your report as "unusually perceptive and realistic". I was surprised and pleased to read the name John Wesley Jackson in the first sentence of the report as the Jackson case was one of mine. If you would be so kind as to send me a couple of extra copies, I'd appreciate it.

Enclosed for your information is a narrative report and a proposal. These two papers will give a pretty good idea of most of the things we've done and propose to do.

Since our telephone conversation my proposal has been approved by Ford. There were some changes: For example, my money won't be channeled through NCDH any longer, which is good.

Sincerely,

John J. Ingle, Jr.

Dear Mr. Campbell:

Your letter of August 17th arrived while I was away on vacation. I would be happy to attend the meeting in Atlanta - would you please let me know as soon as possible which date has been selected, Sept. 16th or the 23rd.

I look forward to hearing from you.

Sincerely,

Paul Davidoff

Re: Meeting on Housing Discrimination

Date: September 13, 1971

The Southern Regional Council-sponsored meeting on Housing Discrimination will be convened as scheduled at 10:00 a.m. on Thursday, September 16, 1971 at SRC's office at 5 Forsyth Street, N. W.

We are glad you are able to participate in what we hope will be a fruitful session.

Looking forward to seeing you on Thursday.

Agenda

Housing Discrimination Meeting

1. Introduction of Participants — A.C.

2. Background and Perspective of SRC — P.A.

3. Statement of Activities in area of Housing Discrimination from each participant.

4. Group Discussion:

Proposition: Given your experiences in area relative to Housing Dis., SRC's historical role, the status quo, what specific housing discrimination problem might SRC have the greatest impact on through a task force and what might the nature of the task force's program be?

AGENDA for Sept. 16th Meeting of HOUSING SPECIALIST

- ① Brief Background SRC — New Trust vis-a-vis Task Force
  Paul Anthony → (methods, programs, goals, funding)

- ② Program Structure (Org.) ➡ Resources Development Center
  EMORY VIA

- ③ Brief Description of GOALS/OBJECTIVES Housing & Planning Program ➡ A. CAMPBELL
  A. PURPOSE OF MEETING

- ① INTRODUCTION OF PARTICIPANTS — A. CAM.

- ④ EA Participant GIVE SHORT STATEMENT OF HIS ACTIVITIES in the field.

- Major portion of Meeting: Debate on SRC's Role in Discrimination in Housing

PROPOSITION:

Given your experiences in this area, SRC's HISTORICAL PERSPECTIVES, status quo, what aspect of H.O. might SRC have impact on thru task force and what might the nature of such a program be. ↓ would be most susceptible to SRC methods.

TASK FORCE

ON URBAN PROBLEMS

VOL. I–No. 1 November, 1968

The Need Is Critical – The Hour Is Late

MS

Behind distressing statistics on the dimensions of Poverty and Racial Discrimination in the United States, there stand human individuals and families in need. It is a critical need, and we speak accurately when we use the term "Crisis" in referring to the areas of Race and Poverty. The problems are not new; in fact their present dimensions are only possible because America has learned to live with them over such long periods of time, chiefly by way of ignoring them or somehow believing they are inevitable and therefore little can be done about them. The new elements are their accumulated weight and the almost universal awareness Americans now possess of their existence. The misery of the many has been explosively dramatized by the disorders of the few. TV Shows, pamphlets, books, movies, demonstrations, parades have brought home *THE REALITIES:*

In a prosperous America, an unemployment rate in the ghettoes far worse than that of the Great Depression of the 30's;

In an America proud of extensive health facilities, a considerably shortened life-span and disproportionate amount of disease and disability among the neglected poor;

In an America founded on freedom and equal opportunity, widespread housing and job discrimination on the basis of race or color;

In an America where education and progress are co-extensive, inadequate schools, substitute teachers, double sessions are almost the rule in our Inner-Cities. No wonder there is hopelessness, frustration and bitterness abroad in our cities.

Alongside the problems and the humans they afflict, there are the human and material resources needed to solve them. The tragedy is that, *even now,* the plans and the commitment are lacking to match the two. There is, then, a national need we all share–a moral imperative *which the Church must use its full powers to meet*–for all segments of our society, government, private enterprise, labor, religion–to unite to create a social order in which everyone has a chance to live a life in dignity and with respect.

The Church's Role

As a powerful voice of conscience and motivation to the entire American Community, the Catholic Church has special obligations to use and offer her resources in the service of the needy. The TASK FORCE ON URBAN PROBLEMS represents one answer to the awareness of this special responsibility.

Nadine Felton
Editor

The New Careers Development Center will send out periodic reports on developments in the new careers movement. Please let us know about your reactions and any relevant information we may include in the Newsletter.

NEW CAREERS MOVEMENT

I. Organization of Non-Professionals

The National Education Association has initiated a new national organization of auxilliary school personnel (teacher aides) to be given interim status as a NEA department and whose members will hold associate membership in the NEA.

Organizations of non-professionals are being formed in Washington, D.C., Pittsburgh, and Virginia (state-wide).

Citizens Crusade Against Poverty has announced a major program effort to serve as a coordinator and catalyst on the national level for the growing efforts in the New Careers Movement. This will include production of materials and a newsletter, technical assistance to groups seeking to organize new careers movements, and serving as a catalyst for the design of model demonstration programs of a new careers employment and training. A small advisory group has been organized to serve as a strategy planning committee. A major emphasis of the program will be to include unions in the new careers movement.

In considering theory and strategy of a new careers organization, the following groups are possible constituents to be included in the organization:

1. Primary Groups
   - non-professionals currently employed,
   - professionals active in organizing and operating new careers programs.

2. Secondary Groups
   - professionals and administrators in public and private human service agencies who see the new careers movement as a way to reorganize agency administration and structure and to improve its services,
   - poor to be employed as a result of expanded career opportunities.

3. Tertiary Groups
   - organizations, political groups, civil rights and religious groups, unions, etc. New careers is a predicted vested interest for their organization,
   - poor and others who will benefit from expansion and improvement of services.

NEW CAREERS MOVEMENT

II. Conferences - The Local Scene

Major new careers conferences directed towards establishing a new careers movement have taken place in San Francisco and Los Angeles and are being planned for Pittsburgh and New York. These conferences involve public and private agencies, elected officials, grass roots groups, professionals and non-professionals in planning a coordinated approach to manpower programs in their cities.

Los Angeles: A county-wide conference sponsored by the Los Angeles County Board of Supervisors in cooperation with a wide cross-section of public and private agencies and local organizations was held on March 30-April 1. The purpose of the conference was to coordinate manpower and education programs to provide effective new careers projects for the poor in the Greater Los Angeles area.

III. Upcoming National Conferences

The National Committee on the Employment of Youth (New York, NY.) has invited decision makers and specialists in fields of employment and training of sub-professionals to a three day conference in June. The conference proceedings will be published to serve as guidelines and models for new training techniques and strategies for operating sub-professional employment and training programs.

GOVERNMENT WORK GROUP

The Department of Health, Education and Welfare is developing an intra-agency work group to discuss coordination of the different manpower and training legislation administered by its divisions. A major emphasis of the work group is to ensure that career ladders are built into the programs and to improve methods of funding and implementation. The work group will invite consultants to advise them on these considerations.

NEW CAREERS - HEALTH

Under the Medicare and Medicaid programs, a great number of non-professionals will be employed to help carry out the objectives of these programs. Other Acts under consideration or passed providing for employment and career opportunities are:

Allied Health Professions Personnel Act of 1966 signed into Law by the President on November 3, 1966, provides grants to train new types of health technologists and technicians. The Surgeon General and the Public Health Service administer this Act.

1967 amendments to the Social Security Act now being reviewed by the House Ways and Means Committee (HR 5710) would authorize the Federal Government to pay States 75% of the cost of employing and training additional child welfare personnel, and the costs of other pilot projects to find and test improved methods of meeting the health needs of children.

CAREER ORIENTED TRAINING FOR LARGE NUMBERS OF NON-PROFESSIONALS

As a result of recent Federal legislation large numbers of non-professionals are employed in the Human service field who require immediate and effective training. In order to accomplish this and eliminate the high ratio of trainer to trainee prevalent in current programs, the following pattern should be incorporated into all new work training projects:

1. A four week task-oriented training program at which time trainees will learn to perform simple entry level tasks.
2. Advanced training following job placement where one-fifth (8 hours) of the work week is set aside for the trainee to attend systematic in-service college credit courses. It is important that these courses be site-based because the disadvantaged person who has had negative educational experiences needs this transitional stage to assist him back into the educational system. The site-based method would permit the trainee to take 60-80 college credits in the field during his one day off the job. The remaining courses can be taken during the summer or in evening classes at the college campus allowing the trainee to complete his college degree in 5-6 years while working full-time. The trainees acquisition of a degree can be further accelerated by giving college credit for some of his on-the-job experience.

In order to develop on-site courses, a group of experts testifying at New York University before the House Subcommittee on Higher Education (Chairman - Cong. Edith Green, D. Ore.) recommended that funds be allotted from the Higher Education Act of 1965 to institutions of higher education for this purpose, including monies to pay trainees' tuition and fees. Because of the Committee's interest in this idea and at its suggestion, cost estimates for this program will be submitted to the Committee.

NEW CAREERS LEGISLATION - EDUCATION

Amendments to three crucial acts, now under review by appropriate committees, if adopted could provide for major innovations in career opportunities for non-professionals.

1967 Amendments to the Elementary & Secondary Education Act of 1965: At least 116,000 aides are currently employed as a result of this Act. In order to ensure career opportunities for these aides, the House Education and Labor Committee has adopted Cong. James Scheuer's (D.-N.Y.) amendments to Title I calling for the employing agencies to develop training plans for aides and their professional supervisors, and to ensure employment of aides on a permanent basis. These amendments will be submitted to Congress in the near future for its approval.

Currently under review by the Senate Committee on Labor & Public Welfare is the Teacher Aide Program Support Act of 1967 (Sen. Gaylord Nelson, D.-Wis.) which will appropriate $50 million to encourage development of teacher aide programs in the nation.

1967 Amendments to the Vocational Education Act of 1963: Amendments to this Act are being introduced and testimony is currently being heard by the General Education Committee of the House Committee on Education and Labor (Chairman - Roman Pucinski, D.-Ill.) on expanding the provisions of this Act to ensure career development and training for non-professionals in the public service fields.

NEW CAREERS LEGISLATION - EDUCATION

FUNDED PROJECTS - under this Act, HEW, Office of Education, Division of Adult and Vocational Research has funded such new careers projects as:

YMCA of Metropolitan Chicago - to identify new subprofessional entry level jobs in the public service field; Division of Welfare, Hillsborough County, Fla. - to recruit and train adult poor as public assistance technicians in career ladder positions. DAVR has also funded research programs to examine new careers for non-professionals in the nuclear medical field, municipal government, correctional system (School of Criminology, University of California at Berkeley).

NEW CAREERS LEGISLATION - CORRECTIONAL SYSTEM

In keeping with the recommendations in the Report from the President's Commission on Law Enforcement and the Administration of Justice that non-professionals be utilized in the correctional system, the following bills have been introduced which have new careers provisions:

Safe Streets and Crime Control Act of 1967 (HR 5037 - Cong. E. Celler - D.-N.Y.; S-917 - Sen. McClellan - D.-Ark.) are now under review by appropriate Judiciary Committees.

Juvenile Delinquency Act of 1967.

National Institute of Criminal Justice Act of 1967 (Sen. E. Kennedy - D.-Mass.; Cong. J. Scheuer - D.-N.Y.) would authorize ten million dollars for FY '68 for research and demonstration programs into ways to solve problems of crime and to rehabilitate offenders including development of career opportunities in these fields.

NEW CAREERS - SCHEUER AMENDMENT PROGRAM

The deadline for applications for Scheuer Amendment programs for FY '67 is now set at April 30th. Three proposals from the Greater New York area have been submitted for final approval from the Bureau of Work Programs, U.S. Dept. of Labor.

NEW YORK CITY: The Manpower and Career Development Agency of the Human Resources Administration has submitted a four million dollar proposal to employ 1400 unemployed and underemployed adults (including 840 welfare recipients) in entry level positions in the N.Y. Dept. of Welfare and Health Services Administration. MCDA will administer the training component and those aides, successfully completing the 9-12 month training period, will be employed by the two agencies at entry level salaries of $4,000-4,500 per annum.

NEWARK, N.J.: The City of Newark is developing a New Careers program creating jobs for 200 unemployed adults in police, housing, health and welfare agencies in the city. Remediation courses, counseling, supportive services and training for career ladder jobs will be provided to the trainees.

SUFFOLK COUNTY: According to a 1966 study by the New York Port Authority, there will be an increase in 65,400 government-service industry jobs in the County by 1985. In order to begin training new personnel to fill these positions, the

NEW CAREERS - SCHEUER AMENDMENT PROGRAM

Suffolk County Economic Opportunity Commission has developed a career employment program for 136 unemployed poor. Placements will be made only in those public and private service agencies where there will be an opportunity for permanent employment and career advancement through continued education and training. Entry level salaries range from $3,500 to $5,000. Depending on a trainee's desire and ability, he will receive tuition payments for high school equivalency courses, college study towards an Associate or Baccalaureate degree. Arrangements have been made with a local community college to develop a work-education program including credit for a trainee's on-the-job experience.

CIVIL SERVICE - SEN. TYDING'S BILL

Congressman James Scheuer announced recently that there are 500,000 unfilled Civil Service positions in the U. S. today. One way to deal with this problem is contained in a bill introduced in March, 1967, by Sen. Joseph Tydings (D.-Md.). The bill would allocate a quarter of a million dollars for short-term training programs for positions such as typists, file and supply clerks, hospital orderlies, where regular Civil Service procedures failed to recruit enough workers. Trainees who successfully complete the courses would automatically qualify for a job. This would eliminate the usual Civil Service intelligence and aptitude exams which previously have prevented the unemployed from obtaining these jobs. Another section of the bill calls for a 500,000 dollar appropriation to conduct surveys to determine what currently unfilled government jobs could be handled by properly trained unemployed. The Civil Service Commission is already developing similar programs, such as MUST (Maximum Utilization of Skills & Training) where highly skilled jobs are redesigned to "spin-off" routine tasks and create new jobs for the less skilled. The Commission is also experimenting with unwritten exams for certain low-skilled jobs allowing applicants to cite previous experience as a qualification, and is revising current exams which will reflect more accurately those skills needed to perform the jobs.

Another bill, Public Service Employment Opportunity Act (Sen. A. Ribicoff - D.-Conn. - S-585) would authorize $2 billion to provide meaningful public service employment opportunities to the unemployed.

NEW CAREERS DEVELOPMENT CENTER

New York University has set up a New Careers Development Center which will provide information exchange and technical assistance to agencies that are attempting to reorganize their structures in order to employ and upgrade non-professionals in the health, education and welfare fields. New York University has also received a grant from O.E.O. to set up a Training Center to train the trainers of non-professionals employed in the above fields. The purpose of the project is to develop training capability within agencies that will enable them to train thousands of non-professionals. The Center will also assist agencies in recruiting and selecting training staff and in developing appropriate curriculum materials and training designs.

A DESIGN FOR LARGE SCALE TRAINING OF SUBPROFESSIONALS

Training Laboratory
of the
New Careers Development Center

May, 1967

At least 116,000 teacher and school aides are being employed currently through Title I of the Elementary and Secondary Education Act. A new amendment to Title I calls for the training of these aides.

With the Scheuer Work Training Program and the Concentrated Employment Program (CEP) beginning in over 20 cities throughout the United States, there is further evidence of the growing need for massive training. San Francisco alone has developed a proposal for careers and training for 3,000 people.

The prospect of large numbers of health aides being trained through medicare underscores the need for large, new training designs. No longer will small demonstration training projects suffice, although much can be learned from the ones that have already been fielded. We do not have a sufficient number of trainers to permit a high ratio of trainers to trainees. Thus we will need to multiply our training capability very rapidly. This requires simple designs built on the assumption of limited initial knowledge on the part of the trainer. It further requires the development of training materials that can easily be applied on a wide scale. Programmed materials, such as are being developed by Scientific Resources, Inc. to train nurses' aides to become licensed practical nurses, are particularly relevant for large scale training. (This project has been initiated by the State, County, and Municipal Employees Union, District 37, AFL-CIO, New York City.)

Large scale training designs must also include the following: involvement of the various agencies in which the nonprofessionals will be employed in developing training plans and job specifications for the new nonprofessional workers; the recruitment or

liaison personnel and training personnel from these agencies where possible; the recruitment of a large number of full-time assistant trainers, a smaller number of senior trainers and the selective use of "moonlighter" part-time trainers and consultants for special tasks (e.g. literacy training); back-up and trouble-shooting support from large training laboratories (such as the New Jersey Community Training Center and the NYC New Careers Development Center Training Laboratory).

It should be noted that it is possible to develop training designs, without necessarily knowing the specific tasks to which the aides will be trained. This is particularly true in the human services where certain generic training is relevant. However, the goals of the training, particularly in relation to the Scheuer Sub Professional Career Act, are very pertinent to consider in developing training plans. For example, a major goal is to develop the possibility for the trainee to become a permanent part of the agency and to move up within the agency system. This requires that the trainee understand the agency structure, its norms and traditions, and the ways in which he will be contributing to and <u>changing</u> some of the patterns of service delivery. But, he is an agent of change of a special type, functioning within the system and toward his own career development. He must win himself into the agency and win the agency to the idea of new careers. This makes it mandatory

that he not come in attempting to show the inadequacy of the agency, representing himself as the sole repository of information on how to work with the poor. Nevertheless, he is concerned with developing many changes in the agency, including greater participation of nonprofessionals, better developed teams of non-professionals and professionals and his training should help him to acquire appropriate attitudes and skills to achieve these ends.

A Design for Five Hundred Aides

The following model represents a proposal for training five hundred nonprofessionals to be employed in four agencies under the Scheuer Work Training Amendment to the Economic Opportunity Act. The nonprofessionals are to be employed for a period of up to two years in four departments: police, health and welfare, inspections, housing and relocation.

The aim of the program is to prepare the trainee within these two years, to be eligible for the entry level civil service positions in these areas, e.g. social worker assistant. (The trainee may, prior to the two years, complete the requisite training to become eligible for these positions.) It is further intended that the training and education that the trainee receives enable him to qualify for a great variety of jobs, both in the public and private sectors. The objective, therefore, is to provide certain core skills in communication, record keeping, human relations, system know-how, etc.

PHASED TRAINING

Phase One: Four Week Pre-Job Period

In Phase One, the trainees are to be trained in a short per pre-service period of four weeks in order to be able to perform certain elementary tasks, on the job, on day one.* Two or three such tasks are to be selected after careful consultation with the agency in which the trainee is to be placed. The trainees will be trained largely through role playing and job simulation to master these entry tasks. The aim is to insure that the trainee be able to perform certain functions directly useful to the agency on the first day on which he appears on the job. Thus, he will be immediately valuable to the agency and his own feelings of competency will be enhanced.

The remainder of this brief pre-service period is directed toward aiding the trainee to learn the necessary administrative matters related to his job, and helping him to acquire a broad picture of the agency, its traditions, rules and structure.

The trainee should also be assisted to understand that in order to win his way into the agency he must be helpful to his supervisors, and show that he is not coming there as a critic of the system with a chip on his shoulder. It can be indicated, however, that in the long run, his involvement with the agency will help to improve the character and pattern of service and that he is playing an important change-agent role, although

*During the selection phase, the trainee will be acquainted with the job possibilities in the four agencies and will be assisted in making a choice of agencies. However, he may change his decision at a later point (see below).

initially he has to get his foot in the door, so to speak.

During the selection phase,

Phase Two: A Short Transition

A short transition period is recommended during which the trainee will work on the job for one half day every day for four more weeks. In the half day in which he is not working, careful discussion of his on-the-job experiences and problems can take place.

Phase Three: The Training Day

It is proposed that the trainee in addition to receiving daily supervision on the job, receive special training for one fifth of the week, or up to two years. It is in this period that he will be assisted to improve his initial skills,* and to acquire the necessary core skills required for his upgrading: literacy, record-keeping, organizational procedures, agency knowledge and know-how, etc. He may also acquire his high school equivalency.

Advanced educational training is to be provided, in part, on the job site by having instructors from junior colleges and community colleges teach courses in the eight hours off the job. A plan will be developed with the colleges to provide course credit for this on-the-job training. (See the college proficiency examination program established by the New York State Board of Regents to determine credit allocation for off-campusor out of course learning.) This new OJT approach will allow for genuine

*It is during this period that the trainee may decide that he wishes to shift to a different job offered in one of the other agencies. He can use his "training day" to acquire the entry skills for the new position and make arrangements for the shift if openings are available.

career development for the trainee while employed on a full time basis at a salary of no less than $3600 per year.

Training the Trainers

There is to be a Training Director for the entire project, an Associate Director, four Senior Trainers, one each to be recruited from the agencies in which the nonprofessionals will be employed and four to eight Assistant Trainers recruited from outside of the agencies.

Since most of the training will take place in the one day off for training during the on-the-job period, it is possible to divide the group of five hundred into one hundred per day, and thus use the basic training staff of eight to twelve members for each one hundred trainees, or two or three trainers per each unit of twenty-five trainees. In order to follow this design, however, the pre-service period must be phased in so that all five hundred trainees are not hired simultaneously. If they were to be hired simultaneously, the pre-temporary service period would either require an additional training staff complement (temporary moonlighting) or a much higher ratio of trainer to trainee.

A good deal of the training of the trainers can take place simultaneously with the training of the nonprofessional, on the job itself, but a portion of it may be offered at special training laboratories.*

*The NYU New Careers Development Center Training Laboratory will provide a Master Trainer and an Assistant Trainer to furnish in-the-field assistance and demonstration training for the five hundred trainees and their trainers. It will also offer specialized training for the trainers at the Training Laboratory.

The trainers' pre-job training should consist of the following -- knowledge of the tasks to be performed by the nonprofessionals, and in particular, their phasing; some knowledge about the learning styles or ways of learning of low-income populations who have not had adequate schooling; knowledge of the agency structure and traditions in which the nonprofessional is to be employed; some knowledge of training methodology and the training design to be utilized (part of this can be contributed by the training staff itself); knowledge of how to utilize the support and backup from an advanced training laboratory.

Attention should be given to preparing trainers to deal with specific nonprofessional issues such as:-

The ways in which the nonprofessional perceives the professional --
- competitively
- as a foreman
- distant from the poor
- possessed of magical powers
- over-identification with professional

The nonprofessional's uneven development.
Deficiencies in the areas of...
- record keeping
- literacy
- "system" know-how
- in other areas he may possess excellent understanding

The significance of the buffer role (the Assistant Trainer standing midway between the nonprofessional and the Trainer or other professional).

The ways in which the professional can learn from the nonprofessional (cross-socialization).

The role of the nonprofessional as a change agent in the system.

The marginality and ambiguity of the nonprofessional role.

It is going to be necessary to use training designs which allow for the confrontation of the nonprofessional and the professional with full open discussion of the difficulties they have with each other or anticipate having with each other. Trainers need to be prepared to handle these potential cleavages and issues in order to work toward the full development of the nonprofessional-professional team.

Summary

A three-phase training design for the rapid training of a large number of nonprofessionals has been presented. It is suggested that much of the training of the training staff can overlap the training of the nonprofessionals. The major recommendations are: the design must be simple and task oriented; a basic staff composed of a high proportion of Assistant Trainers should be utilized for continuity rather than many moonlighting Senior Trainers; supportive backup of an advanced Training Laboratory should be sought; close liaison with the agencies employing the nonprofessionals should be developed; core training is continuous in the third phase (on the Training Day), rather than being introduced in the short first phase preceeding the job itself.

New Careers

NEWSLETTER

August, 1967

TRENDS TO NOTE:

1. Rapid increase in employment of nonprofessionals. A recent report from the OEO announces that by the end of this year 131,909 nonprofessionals will be employed in the Community Action Program.

2. Consideration of the New Careers concept by private industry is increasing as a possible solution to high turnover and shortage of skilled manpower.

3. More colleges are involved in developing credited courses, curricula and on-site educational programs to provide nonprofessional Aides with the skills and learning necessary for advancement toward professional standing.

4. Unions are becoming involved in working out New Career opportunities for the employed poor.

5. Civil rights groups are interested in developing New Careers concepts to open up real opportunities for minorities.

6. Law enforcement agencies are turning to nonprofessionals as a link to improve their relations with the communities they serve and to ease tension.

NEW CAREERS LINKED TO WELFARE SERVICE REORGANIZATION

By Patricia Elston, Research Consultant

New York City - The Dept. of Welfare and the Social Service Employees Union agreed to include in their new contract two innovative job classifications: Social Service Assistant, a subprofessional (with 800 openings), and Senior Social Service Worker (with 800 openings).

The two new positions represent a potential step in the strategy for implementing the New Careers concept. While negotiations have been underway, both the Departmentand the Union have worked independently to design career ladders which would provide escalated opportunities for advancement at each level of employment, from Aide to Professional.

The career ladder has implications for the entire welfare system. The Department's model links a career ladder to a major system reorganization

Published by New Careers Development Center, New York University, Washington Square, New York, N.Y. 10003, Area 212 777-5768

Editors: Nadine Felton, Lita Paniagua

involving not only new jobs, new kinds of relationships among personnel, and new opportunities for career advancement, but also new policies. The New career approach is coordinated with proposals to change the whole character of welfare delivered; provide new, integrated, and expanded services and make possible a more resourceful use of personnel.

The Department plan is to hire and train nonprofessionals under the Scheuer Program as Neighborhood, Case and Administrative Aides to work in teams with the professional staffs at local Neighborhood Service Centers. As the Aides gain education and expertise, they will become eligible for upgrading to Social Service Assistant with full Civil Service status.

The Department is discussing high school equivalency preparation and a curriculum toward an AA degree with the City University of New York. Educational arrangements for progressing from the AA to the BA degree have yet to be explored.

The model below is an adaptation of designs under consideration by the Union and the Department. Movement up the ladder would depend on fulfillment of the qualifications indicated alongside the arrows.

UNION, INDUSTRY & GOVT.
JOIN IN
NEW CAREER EFFORT

New York City - The Retail, Wholesale & Department Store Union Local 67 is training 500 unemployed youths and 650 low-skilled workers under a $693,000 grant from the city's Human Resources Administration. Fourteen private companies have guaranteed to hire the trainees. The unemployed young men with no skills will earn $40 weekly while preparing for jobs which will pay starting salaries of between $70 and $80. A group of 500 workers will be upgraded to high skill positions, and another group of 150 will train for high-paying sales, administrative, technical and supervisory careers.

UNION ADOPTS NEW CAREERS

Charleston, W. Va. - West Virginia Labor Federation, AFL-CIO has adopted new careers as a part of its program. President Miles Stanley stated in a June 29th speech that "New training programs are needed to assist blue collar workers and the present poor to assimilate into the professions. We must consider developing industrial and professional partnerships in some kind of organization for effective training of all employees within an institution."

NEW CAREERS AND THE EMPLOYED POOR

Washington - Better opportunities for the employed poor were called for by Victor H. Gotbaum, Executive Director of District Council 37, AFSCME in his testimony on New Careers before the House Committee on Education & Labor. He said, "There is a widely held assumption that the major cause of poverty is unemployment. Yet ... a majority of the poor in this country are employed. Their poverty arises from their being employed at a low level of skill, without the opportunity to move to better jobs or even to qualify for them." Career incentive programs, he said, would benefit the entire work force by creating opportunities for advancement at all levels, from the trainee to the professional. Such career programs, Gotbaum explained, should be developed jointly by labor and management and become "an integral part of the labor-management relationship."

In line with this position District Council 37, whose membership includes 16,500 hospital aides , and the New York City municipal hospital system agreed on a program to train 450 nurses aides to become licensed practical nurses. Retaining their full salary rights during training, the aides will work half time and study 25 hours per week. On passing the State licensing exam, they will be employed by the City. Response to this opportunity for training to begin in October has been very positive, Gotbaum said, with more than 1600 applications received from among the 8000 nurses aides in the city.

A similar plan is possible for helping LPNs to prepare for RN positions. (The National League of Nursing estimates a deficit of 344,000 Registered Nurses by 1970).

The "bumping up" strategy for the employed poor advocated by Gotbaum signifies gains for the multiple groups involved. Such a program would provide New Careers for workers all along the personnel structures of the human service agencies.

LOCAL 372 ISSUES LEAFLET ON
NEW CAREER OPPORTUNITIES FOR
ITS MEMBERS

The leaflet reproduced below was issued by Local 372 of AFSCME to its members, announcing an agreement with the Board of Education to provide career upgrading:

To All Members Of Local 372--

Your Union Brings To You--For The First Time...

REAL Career Opportunities

For School Aides & School Lunch Workers

If you are interested in a real program--This is what can be done:

Your Union and the Board of Education have agreed that new training and promotional opportunities should be provided for present employees of the Board.

To make this work, we must have information from you about the things you are interested in, as well as your educational background. Therefore, please fill in the form attached, and mail it to the Union as soon as possible.

These new opportunities will make it possible for School Aides to qualify for positions as Teacher Aide or Teacher Assistant, depending on the level of educational achievement.

Those who do not have the necessary education will be given help in getting it, including high school equivalency and college credits.

In addition, we plan to work out a system that will enable School Lunch workers to apply for a transfer to School Aide, so that they can take their place on the new career ladder.

These new programs will be made possible by Federal funds, as well as new funds in the regular budget of the Board. You will be hearing more from the Union as the plans develop.

Be sure to watch your Union bulletins during the month of September.

Please fill out the attached form completely. THE ATTACHED QUESTIONNAIRE MUST BE RETURNED WITHIN ONE WEEK!

*Field work comes so late students often don't discover whether they like teaching or have competence until last year.
This diagram shows the process of New Career development. The actual career "stages" with the specific tasks for each would be defined by the employing institution.

CIVIL RIGHTS

Call for Unity

Washington, D.C. - "Black and white poor and New Careerists must unite and develop thousands of indigenous advocate groups to move the nation's policy makers into accepting New Careers", testified Wilbert Ussery, National Chariman of CORE, before the House Committee on Education and Labor (July 17). He went on to say that these groups should organize around specific issues, using their combined political and local strength to demand quality education and ensure improvements in other human services. He recommended also the creation of a National New Careers Planning Board to advise the Committee on ways to develop new careers in all social agencies and to involve the disadvantaged in all programs.

Youth Corpsmen Praised

Neighborhood Youth Corpsmen won high praise from Newark and Detroit officials for their work during the recent disturbances. Newark Police Director Dominick A. Spina said of them, "They were magnificent." Corpsmen manned telephones, freed regular officers for duty, and helped keep the communication channels open between the police and the community.

Positive Action

New York City - The deployment of Youth Corps workers to help community youth translate their grievances into positive action is a new project announced by Robert Schrank, head of the Neighborhood Youth Corps of this city. The New Careers Development Center proposes that a similar program be set up to involve adults in contributing their experience and wisdom to the solution of their communities problems.

Earn & Learn Centers

Washington - An Urban Coalition panel of urban leaders which discussed ways of solving the problems of civil unrest called for an Emergency Work and Reconstruction Program which would include the prompt creation of "Earn and Learn" centers to provide job training programs and placement for the unemployed. Such a program would be a major opportunity for massive-scale application of the New Careers approach.

Police Partners

New Rochelle - The local Police Department has a program to train civilians as working "partners" of its police officers. Richmond, Calif., Phoenix Ariz., and New York City also have police cadet-aide programs in which trainees serve to bridge the communications gap between the police force and the community.

Workers "Cool" Capital

Washington, D.C. - The Community Alert Project of the Washington Urban League employs Negro youths as field workers in police precincts here to rush emergency mediation assistance to foci of unrest. The workers, who earn $500 monthly under a grant from the Labor and Justice Depts., can be called to a telephone from the group's headquarters via an electronic device carried in the pocket.

Eases Tension

Grand Rapids, Mich. - Human Resources Consultant, Jim Knox (a former delinquent now employed by Scientific Resources, Inc.), played a decisive role in bringing together the Mayor and a group of people involved in the recent turmoil for a highly successful direct confrontation which helped alleviate tension.

Urban League Task Force

New York City - Whitney M. Young, Jr., executive director, National Urban League, discussed with the New Careers Development Center staff the creation of a task force to develop New Careers programs for the League's projects.

PRIVATE INDUSTRY

Private Industry-New Careers Study Projected

Durham, N.C. - The North Carolina Manpower Corp. received a $100,000 grant from OEO to study how New Careers for low income people can be developed in private industry. The project will involve joint planning and coordination between the No. Carolina Fund, private industry, local agencies and CAP's. One component will set up a New Careers demonstration program involving an agency and business.

Legislative Proposals Considered

Washington, D.C. - Legislative proposals that would apply the Scheuer public service employment concept to private industry are now under consideration. Private employers willing to set up career lines would receive support to hire and train unemployed persons for apprentice positions. This would fill jobs now vacant due to the skilled manpower shortage and cut down high turnover. The supermarket industry, which has a high turnover rate, might be particularly receptive to such a program.

Banker Presents Paper

Cleveland - Addison Cutler, Asst. V.P. of the Federal Reserve Bank of Cleveland, presented a paper on the New Careers approach to private industry at the Fisk University Institute of Race Relations, held June 26 - July 8.

INTERNATIONAL

New Careers in Developing Countries

The applicability of New Careers training and job upgrading techniques to the problems of developing nations is receiving attention. The strategy is seen as a means for quickly preparing large numbers of workers to fill highly skilled positions. On July 27 a group of family planning specialists from Indonesia discussed with a member of the New Careers Development Center staff how the New Careers approach can be useful to their projects.

The Center staff has also met with representatives from AID who, along with other US government international experts are looking into innovative training methods.

Congressman James Scheuer is travelling to the Middle East to confer with Arabian and Israeli officials about possible development of New Careers programs there.

MOVEMENT

Task Forces in California

Sacramento - The California State Dept. of Public Health and the State OEO have developed Task Forces made up of representatives from their agencies and other community groups to explain the New Careers Program to the public. The groups' activities include evaluating current programs, establishing guidelines, and organizing conferences to inform the community about New Careers. One such county-wide conference was held in Los Angeles, March 30-April 1. The Proceedings are now available from the Los Angeles County Bd. of Supervisors, Dept. of Community Services.

Teacher Aides to be NEA Affiliates

Washington - The utilization of nonprofessional Aides is making an impact on organizations formerly limited to professional membership. One such major organization, the National Education Assn., has budgeted funds to develop a national affiliate association of Teacher Aides.

Dr. Donald Davies, director of NCTEPS (Natl. Commission on Teacher Education & Professional Standards), says: "We see this organization as a positive way to involve teachers and Aides as teams in designing educational programs for the disadvantaged".

Six regional conferences coordinated by NCTEPS to initiate the new association are under consideration. Teacher auxiliaries will help plan the conferences which will aim at involving as many Aides as possible to design the strategy and goals of the Association. The Assn. of Classroom Teachers (92% of NEA membership) will play a major role in helping to develop the new association.

Career Lines for NYC Teachers

New York, N. Y. - Career lines for New York City school teachers are being developed by the Board of Education in cooperation with five agencies: Human Resources Admin., City University of N.Y., New York University, District Council 37 of AFSCME, and the United Federation of Teachers. With a program of advanced training and education, entry-level Teacher Aides will be able to advance to Assistant Teacher, Teacher Intern and Certified Teacher, with more responsibilities and higher salaries at each level.

New Careers and Model Cities

New York, N.Y.- Representatives from Federal agencies and more than 50 cities attended a conference on Manpower Programs in Model Cities sponsored by the New Careers Development Center on June 15. The primary purpose of the meeting was to familiarize participants with new approaches to employment programs for possible incorporation into their Model Cities projects. Dr. Sidney Fine of Upjohn Institute for Employment Research made a presentation on job design and analysis. As a result of the Conference, the Center has proposed a five-step career ladder in urban planning: "An Illustration of the Functional Approach in Designing Jobs and Careers" by Wretha Wiley.

Conference Planned

Lincoln Hospital Mental Health Services and the New Careers Development Center will sponsor a conference of nonprofessionals on December 14-15 at the Carnegie Endowment International Center, New York. Nonprofessionals will help plan the meeting at which they will present their ideas on New Careers, based on their work experience. Professionals will be invited to attend, listen and participate.

EMPLOYMENT AND TRAINING

Job Coaches Reduce Turnover

Chicago - The utilization of nonprofessionals as coaches to help reduce employee turnover is a new technique of this city's Jobs Now Program which trains "hardcore" youngsters and places them in private industry. The program is administered by the Chicago YMCA under a grant from the U.S. Employment Service.

The coach accompanies the job candidate to the new job, meets periodically with both the employer and employee at the work site, maintains after-hours contact with the employee, and reports to Jobs Now on his progress. A six-month study showed that turnover for employees with coaches was 18%, as compared to 72% for employees without coaches.

Samuel Burt, Special Assistant to the Director, USES, says: "The use of neighborhood people as coaches is a major step forward in building permanent jobs and careers for disadvantaged youngsters. The coach smooths over that often rough period of adjustment for both employer and employee."

USES is exploring possibilities for incorporating the coach position into its job structure and upgrading the coaches via a career ladder from entry level Employment Service Aide to professional standing as Employment Relations Representative or Employment Interviewer.

Job Corps

Clearfield, Utah - The Advanced Corpsmen's Institute of this locality is a unique project for preparing Job Corps members as Teacher, Counselor and Recreation Aides. A six-month intensive on-the-job training program qualifies Corpsmen for entry-level positions. The first group of 50 Corpsmen were graduated this June and placed on jobs. With additional training cycles, 400 more youths will be graduated yearly.

This new resource of trained personnel will be available for placement throughout the nation with the help of the Office of Education and O.E.O. Agencies interested in hiring Corpsmen may contact: Donald Morse, Supervisor, Advanced Corpsmen's Institute, Clearfield Job Corps, Clearfield, Utah.

Health Careers Program Funded

New York - Albert Einstein College of Medicine - Lincoln Hospital Health Careers Program received a grant from the Commonwealth Fund to train health aides for careers in the medical and nursing fields.

6,000 New Careerists in Health

Washington, D.C. - Six thousand non-professionals in public health will be trained in 20 U.S. cities via projects to be developed by the Social Development Corp. with a $2 million dollar grant from the Dept. of Labor, Bureau of Apprenticeship & Training. New job classifications and career upgrading systems will be set up in cooperation with the hospital administrators and unions of the cities involved. Three thousand trainees will be prepared for entry-level positions in 36 occupations, and 3000 persons will be upgraded to such jobs as Obstretrics, X-Ray, Dental and Medical Records Technicians.

COMMUNITY ACTION

More Training Urged by O.E.O.

Washington, D.C. - A recent report by O.E.O. points out the need for pre-training and in-service training of personnel in its community action programs. The report says that as of Sept. 30, 1966, of the 131,909 non-professional positions authorized for CAPs, 25,401 had not been filled; while of the 112,202 professional positions, 25,854 remained unfilled.

In order to provide training, O.E.O. will allocate in FY'68 $8million to expand and continue the operation of 10 Multi-Purpose Training Centers and 6 Urban Training Centers; $3 million for training CAP boards; and one million to train the trainers of non-professional and professional personnel.

Scheuer Programs Funded

Scheuer (New Careers) programs have been approved by O.E.O. for 2,936 low income adults in 19 states.

Atlanta, Ga. - 550 of the 2,500 persons enrolled in the $4.5 million Concentrated Employment Program (U.S. Dept. of Labor grant) will be New Careerists.

New York City - 2,000 South Bronx residents will take part in the $3.6 million CEP program there.

Technical Assistance for Scheuer and CEP

The Center for the Study of Unemployed Youth of New York University, Graduate School of Social Work has received two technical assistance grants: one from the Dept. of Labor to help community action agencies develop new careers (Scheuer) programs; one from O.E.O. to assist the CAAs with the Concentrated Employment Program (CEP).

Debate

Alinsky vs. New Careers - Saul Alinsky, Director of the Industrial Areas Foundation, will contend with Frank Riessman, Director, New Careers Development Center, at a debate sponsored by the League for Industrial Democracy in New York on November 17th.

FUNDS AVAILABLE FOR NEW CAREERS

Limited funding support for innovative research and experimental New Careers projects in education, health, welfare, and related fields is available from U.S. Office of Education, Bureau of Research, Div. of Comprehensive & Vocational Education Research, 400 Maryland Ave., S.W., Washington, D.C. If interested, write to Dr. Bernard Yabroff, Director, Career Opportunities Branch, at above address, outlining briefly the objectives of the proposed research and its significance for general educational improvement.

Legislation - Washington, D.C.

The Senate Committee on Labor & Public Welfare will begin hearings on Sen. Gaylord Nelson's Teacher Aide Bill. The Committee is now reviewing the 1967 Amendments To ESEA, authorizing $3.4 billion for FY '69, and calling for training of Aides and their supervisors, which passed the House.

HIGHER EDUCATION

College for Human Services

New York City - 120 women are being trained for human service jobs by the Women's Talent Corps (funded by O.E.O.) The first group of 50, many of whom had previously been welfare recipients, were graduated this June and placed as Teacher and Guidance Assistants.

"The Corps proposes to set up a College for Human Services for the many women who want and have the potential to achieve professional standing," says Mrs. Audrey Cohen, director of the program. The college will offer a core curriculum based on the needs of the profession and the population to be served. The students will receive an Associate of Arts degree and will be able to transfer to a 4-year college for further education.

Mental Health

Chicago - The YMCA Community College and the Illinois Dept. of Mental Health are developing a 2-year college program for Mental Health personnel, which includes time off from work so that the trainees can spend two half days per week in class at the campus. One half of class time will focus on academic subjects, with the rest spent on issues related to work experience.

Other College Programs

George Warren Brown School of Social Work, St. Louis, offers a one-year certificate to aides in community development. Essex Community College, Baltimore, Md., awards an Associate of Arts degree to aides completing its 2-year program for social service assistants.

Urban Service

Washington, D.C. - Georgetown University is setting up a one-year program, Institute for Urban Service Aides under Title I of the Higher Education Act. Aides will study four hours a week at the Institute to broaden their understanding of service work and to increase their effectiveness on the job. An aim of the program is to demonstrate inter-agency and university cooperation and to increase the agencies' awareness of the valuable contribution non-professionals can make. Contact: Mrs. Sara Kestenbaum, Coordinator of the Institute for information.

On-Site College Programs

Scheuer Programs: Newark, N.J. - The Scheuer project to train 250 human service aides has contracted with Farleigh Dickinson University for college courses taught at the job site, on job time, which will give credit toward a degree at the University.

New York City - A similar arrangement is being made between the Human Resources Administration, running the $3.8 million Public Service Career Project, and the City University of New York to provide advanced education for many of the 1000 trainees in health and welfare.

The NEW CAREERS TRAINING LABORATORY, New York University, located at 184 Fifth Avenue, N.Y., will train the Scheuer staff and trainers for both the New York and Newark programs.

Teacher Aides: Oakland, Calif. - San Francisco Community College in cooperation with this city's Board of Education offers a work-study program for Teacher Aides, which includes two credits per semester for night courses at the college and three credits per semester for work experience. The program will be expanded to include Teacher Aides employed under a combined ESEA and Scheuer program at a local junior high school. The College is working with the Board to develop a career line from Teacher Aide to Assistant Teacher with an Associate of Arts degree. Also, the College is discussing with a local 4-year institution a program to enable Teacher Assistants to continue studying for a B.A. and certification as teachers.

Head Start Aides: New Jersey - Farleigh Dickinson University in its Early Childhood program for Operation Head Start aides permitted aides to take as many as 15 credits per term. College courses were taught at the job site and credit was given to aides' on-the-job training and work experience.

Aides Teach Graduate Students: Berkeley, Calif. - Field training aides are teaching students at the University of Calif. Graduate School of Social Welfare about disadvantaged communities. The aides participate in graduate seminars and field training. Career lines are being developed for the aides to become professionals in field training or in community research, and the University is working to incorporate these new job categories into its training grants from the Bureau of Child Welfare (HEW) and the National Institute of Mental Health.

CIVIL SERVICE

Entry Level Classification

San Francisco - This city's Civil Service Commission has created new entry-level classifications for employees in health, libraries, parks and recreation. In addition, aides will be hired by the State Parole Office as community relations workers, also a Civil Service classification. Under the $2.1 million New Careers program, combining Scheuer and Neighborhood Youth Corps funds for 147 adults and 126 youths, those aides employed at the above agencies will be on the Civil Service payroll while training and will have Civil Service status.

Staff Attendant Position Created

Boston - A new position of staff attendant for all state human service agencies is being developed by the Mass. Civil Service Commission in cooperation with the State Dept. of Mental Health, the State Dept. of Personnel, and Self-Help, Inc., an anti-poverty agency of Brockton, which over the last 10 months has trained 40 low-income residents to qualify for the new position. Staff attendants will earn $100 weekly in their category which is four levels above the entry aide position and two levels below professional social worker (B.A.).

The training method followed at Self Help for staff attendant positions is a significant innovation. Aides who receive core training in human services may now qualify for all social service departments in state agencies, as the core course opens up a greater range of career choices and inter-agency mobility. Training efficiency is increased because personnel of different agencies can be trained as a group.

PAPERS AVAILABLE FROM THE NEW CAREERS DEVELOPMENT CENTER

1. "Civil Service and the Poor: Some New Developments", Judith G. Benjamin;
2. "New Careers and Model Cities", Lisa Liebert;
3. "Career Oriented Training: The Next Logical Step Beyond Job-Oriented Training", Adele Brody;

7. "New Careers in the Welfare System", Patricia Elston;
8. "An Illustration of the Functional Approach in Designing Jobs and Careers", Wretha Wiley.

CONTROVERSY MAILBOX

We welcome your observations, opinions, and criticims on any aspect of New Careers and its implications. Following are some questions raised by Prof. Marvin Bloom, of the University of Buffalo School of Social Work, in a recent letter to us:

> "I suspect that the kinds of things you are calling a 'career' may be a euphemism for the dull, boring and at times dirty job. Is, for example, tying shoes, tucking in pants, etc. really work, and if so, how would you provide job satisfaction at entry level?
>
> "Might not one argue that..with the normal economic growth anticipated, our economy will provide jobs and/or income for almost all, in any case without getting into a questionable conceptual design regarding a 'career'?
>
> "Can one assume that any activity producing revenue for the one doing it will have the psychological impact you impute to it?
>
> "Is Poverty primarily related to the matter of work? Is it nor related, rather, to the question of distribution of wealth and power, or ultimately how society determines to allocate its resrouces, neither of which may necessarily be affected by full employment, even if we achieve it?"

.....

Other questions readers have raised:

1. Are true career possibilities being developed, or is there merely an increase of subprofessional jobs without a link to professional upgrading?

2. Does New Careers signify a co-opting vehicle for low-income people?

3. Does New Careers necessarily change the human service structure and improve services offered?

4. Is there a need for a New Careers movement? If so, what should its purpose be, and what are the dangers if there is no such movement?

5. How is New Careers related to fundamental social change?

6. How can the effectiveness of the New Careers nonprofessional be measured in cost benefit terms?

SECY. WIRTZ CALLS FOR NEW CAREERS

Washington, D.C. - "The Administration's intent is to expand the New Careers concept under the Community Employment and Training Program", Labor Secy. W. Willard Wirtz told the House Committee on Education and Labor, testifying on the Economic Opportunity Amendments of 1967. Answering questions by Congressman James Scheuer, Wirtz said:

"An additional $12 million is being requested especially for New Careers, and the principle of building career ladders in social service for the unemployed will be extended to rural areas as well, and will include persons between 16 and 22 years of age and adults."

"The concept will also be applied to private, non-profit concerns", the Secretary added.

Career Ladders & Training

"Efforts will be made to restructure jobs within public and private organizations, design career ladders, and develop training and remedial education to supplement the work experience", he continued.

He explained that within such career ladder programs, persons would start work as Technical, Medical, Social Service, or Nurses Aides, for example; then progress to such jobs as Medical Laboratory Assistants, Medical Assistants, Social Work Technicians and Senior Nurses Aides.

17 More Projects to be Funded

"It is expected that 17 more projects will be funded under CEP with approximately 4,500 - 5,000 New Career opportunities. In addition, 30 independent New Careers projects are being developed by the Bureau of Work Programs, which are expected to involve another 3,000 - 4,000 New Careers positions," Wirtz said.

Successful Project

An example of a successful New Careers Project under OEO, according to Wirtz, is Operation Head Start which is developing positions at intermediate and supervisory levels for about one-third of Head Start aides in an eight-state region. Head Start will attempt to initiate a 2-year Associate of Arts degree program to certify the subprofessionals.

The Dept. of Labor is also planning to provide grants for research to evaluate the effectiveness of New Careers programs.

HOUSING INTERN PROGRAM

1012 FOURTEENTH STREET, N.W.
WASHINGTON, D.C. 20005
TELEPHONE (202) 737-3411

E. S. Sessions, Executive Director

3 June 1969

Mr. Moreland G. Smith
Urban Planning Project
Southern Regional Council
5 Forsyth Street, N.W.
Atlanta, Georgia

Dear Mr. Smith:

I have the honor to announce that the Housing Intern Program, sponsored by the Foundation for Cooperative Housing and Urban America, Inc., under a Ford Foundation grant, is enjoying continuing success. Under this program, as you may know, a select group of twenty-three men and four women, with an average education level of four years of college, are being trained in the development and management of low and moderate-income housing in cooperative, nonprofit sales or nonprofit rental projects. The interns--thirteen of whom are black, ten white, and four of Spanish/Mexican American orientation--have completed a seven-week resident seminar and are placed for a nine-month, on-the-job training experience with selected housing corporations in fifteen states and Puerto Rico. A brief biographical sketch of each intern is provided at inclosure 1. The current program is scheduled to be completed with a four-week resident summary phase to be held in Washington, D.C., from July 7 to August 1. A follow-on program has been funded by Ford Foundation and will train up to three times as many housing specialists, using a modified system.

The interns will have completed a total of twelve weeks of intensive classroom training by the terminal date of the pilot program in early August. The wide range of subject fields to which they have been exposed is listed in inclosure 2. In addition, each of them has been given an opportunity to develop expertise in two or more of the four subject fields of project development, sales and marketing techniques, management and maintenance, and community development as related to housing.

The participants in the Housing Intern Program represent the initial increment of a cadre of housing specialists whose technical education has been carefully designed to provide a professional foundation for full career development. An appropriate certification as a Housing Development and Management Specialist will be made to them upon their graduation on August 1, 1969.

Your organization earlier had expressed an interest in employing a graduating specialist. The interns will be available for interviews in Washington, D.C., on July 11, 1969. If you wish to discuss employment offerings with individuals or with the interns

FOUNDATION FOR COOPERATIVE HOUSING
Wallace J. Campbell, President
C. Franklin Daniels, Executive Vice President

URBAN AMERICA, INC.
William L. Slayton, Executive Vice President
James P. Twomey, Director, Nonprofit Housing Center

as a group, may I suggest that you communicate your interests to me and I will coordinate the times and places. You are, of course, invited to communicate directly with individual interns to resolve inquiries.

Thank you for your interest in the Housing Intern Program.

Cordially yours,

E. S. Sessions

RESOURCE DEVELOPMENT PROJECT

INTERNSHIPS

PROGRESS REPORT

SEPTEMBER 1969

SOUTHERN REGIONAL EDUCATION BOARD
130 Sixth Street, N.W.
Atlanta, Georgia 30313

SOUTHERN REGIONAL EDUCATION BOARD
Resource Development Internships

PROGRESS REPORT
September 1969

Introduction

This is an interim report recording activities through September 15, 1969 of the Resource Development Internship Programs of SREB. Now in the fourth year of operation, the Resource Development Internship Project administered or arranged 500 internships during the summer of 1969. Interns served in each of the 15 member states of SREB, involving 216 local, state and regional agencies and 123 colleges and universities.

Each internship, regardless of sponsoring agency or local assignment peculiarities, conforms generally to the basic SREB internship pattern. Internship assignments are fundamentally concerned with resource development (the development of the region's human and environmental resources) and service-learning (an integration of the accomplishment of a needed task with educational growth). Each intern is assigned a task identified by a host agency; relates to a project committee consisting of a host agency representative, a university faculty counselor and a technical advisor; is responsible for independent initiative on his project; participates in educational seminars; and prepares a final report for the host agency.

Multiple objectives of the Resource Development Project's internships effort are:

1. To give immediate manpower assistance through the work of students to economic and social development agencies.

2. To provide constructive service opportunities for students seeking to participate in the solution of social and economic problems.

3. To encourage young people to consider careers and citizen leadership roles in programs of development and to provide a pool of trained personnel for recruitment by sponsoring agencies.

4. To give students in social sciences and related studies a more relevant and meaningful education and training in the complexities of social and economic development.

5. To provide additional avenues of communication between institutions of higher learning and programs of social and economic development, in order to make the resources of the universities and colleges more accessible to the community and to relate university curriculum, teaching and research to society's needs.

Financial Support

Financial support for internships is provided primarily from federal grants supplemented by a variety of cost-sharing arrangements with local, state and regional agencies. Federal support comes from:

Coastal Plains Regional Commission
Economic Development Administration
  Office of Economic Research
  Office of Technical Assistance
Office of Economic Opportunity
  Community Action Programs
Tennessee Valley Authority
  Office of Tributary Area Development
U.S. Department of Labor
  Office of Special Manpower Programs

This year a successful effort was made to increase the number of internships through cost participation by organizations to which interns were assigned, cooperating colleges and other agencies. Funds available under federal grants were supplemented to the extent that 500 internships resulted compared to 150 in the summer of 1968 with roughly the same amount of federal grant funds. Some examples of cost-sharing are:

Mars Hill College secured funds from the local community and a foundation to expand their effort from four interns to forty.

All 17 Georgia Area Planning and Development Commissions utilized services of interns on a cost-sharing basis.

Numerous Economic Development Districts and Community Action Agencies agreed to print intern reports, pay intern travel and, in some cases, pay a portion of other direct costs.

In the City of Atlanta, extensive use was made of College Work Study Program funds supplemented by funds from the city, community service organizations and private business.

Lynchburg College developed two internship allotments into 17 actual internships by using SREB funds as seed money with most support coming from community agencies and the college.

A number of colleges provided faculty counselors at reduced cost or no cost.

Institutional Impact Focus

Concentrated programs have been initiated in the states of North Carolina and Georgia, and in the City of Atlanta in an effort to build models for coordinated internships on a statewide and metropolitan area basis. These models allow for expanded internship programs utilizing greater local

resources and building a capacity to operate large numbers of internships through a decentralized system.

North Carolina - The North Carolina Department of Administration, with SREB assistance, has established a Resource Development Office as a demonstration effort within state government. Miss Janis Somerville was appointed director of this office in April, 1969. One hundred internships have been arranged, involving 52 agencies and 21 colleges and universities. Special areas of concentrated development are:

a. Mars Hill College - An educational institution model that has successfully developed service-learning as an integral part of the academic process through a Community Development Institute. SREB assisted with supportive funds. 40 interns appointed--seven worked with economic development problems, 19 with community action efforts, 2 with ARC districts and 11 with other community organizations.

b. Charlotte - Twenty students involved in variety of public agency internships enrolled in an urban development educational seminar for academic credit through the University of North Carolina at Charlotte.

c. Appalachian Region - Seven interns supported through direct grants from ARC to assist in research projects in ARC districts.

d. Minority Planners - Twenty students are to be involved in a HUD and state government financed program to involve minority students in planning and to open this profession to them as a career area for their continued education and participation.

Georgia (excluding Atlanta) - The multi-county planning and development districts in Georgia were used as the basic administrative unit for all interns regardless of the organizations in which they were placed.

Each Area Planning and Development Commission in Georgia was assigned at least one intern. Four Community Action Agencies hosted interns. Several cities and counties sponsored interns. Two TVA interns and four each supported by the Appalachian Regional Commission and Public Health Service were included in Georgia program. The total number of interns in Georgia outside of Atlanta was 79.

Atlanta - In Atlanta, SREB is cooperating with the City of Atlanta, area colleges, Atlanta businesses, community organizations, VISTA and foundations in developing an Atlanta Urban Corps. 220 students served with 15 city departments and 35 non-profit developmental-service organizations during the summer. About half of the Urban Corps' interns were funded in part through the College Work Study Program. Students participated in special seminars on community development and urban problems.

The Atlanta Service-Learning Conference was organized in June to explore the implications of the service-learning concept for both education and community. It seeks to define the elements necessary for a successful program, and to assist in the development of a program in the Atlanta area to serve as a model for similar programs in other urban centers. SREB, along with the City of Atlanta, the Atlanta Urban Corps, Economic Opportunity Atlanta, the colleges and universities of Atlanta, DHEW Regional Office, VISTA and the Regional Peace Corps office, is providing a sponsorship base for the Conference. Meetings have been held in July and September with others planned for October, November and December. U.S. Commissioner of Education, James E. Allen, Jr., highlighted the first Conference session.

Minority Emphasis

Twenty-eight percent of the summer 1969 internship appointees are minority group members. Students eligible for College Work Study Funds were appointed in Virginia, West Virginia, North Carolina and Georgia. The majority of Atlanta Urban Corps participants were funded through the College Work Study Program, insuring a strong involvement of economically disadvantaged students in the total program.

Seminars

Orientation seminars for interns and project committee members were conducted by SREB staff during May and June in the following cities: Jackson, Mississippi; Blackburg, Virginia; Lynchburg, Virginia; Columbia, South Carolina; Richmond, Virginia; Baltimore, Maryland; Little Rock, Arkansas; Alexandria, Louisiana; Mars Hill, North Carolina; Athens, Georgia; Valdosta, Georgia; Carrollton, Georgia; Atlanta, Georgia; and Lexington, Kentucky.

Educational seminars for interns were conducted by SREB in July and August in Atlanta (July 13-14), Savannah (July 20-21), New Orleans (July 25-26), Washington (August 3-5) and Nashville (August 8-9). These seminars provided interns opportunities to explore major developmental and educational issues. Each seminar included a representative group of 20-25 interns in terms of project subject, agency sponsorship, student background and academic major field.

In the program impact areas, educational seminars were also arranged. Regional seminars were conducted by the North Carolina Resource Development Project staff at Western Carolina University and East Carolina University. Regional seminars were developed by faculty representatives and SREB staff at the University of Georgia, Valdosta State College and West Georgia College. A series of educational seminars were conducted with the Atlanta Urban Corps interns by the six member educational staff of the Urban Corps. Lynchburg College and the University of North Carolina at Charlotte conducted a regularly scheduled seminar program for academic credit for interns in their areas.

Staff Resources

To augment the three member Resource Development Project staff of SREB, field staff arrangements were negotiated with five students and five individuals to assist with program development, operation and evaluation. They are:

Dave Booher, graduate student, Tulane - Field work in Miss. and La.
Russ Caldwell, student, Ga. State University - Field work in Georgia
Don Eberly, National Service Secretariat - Atlanta, West Va., and Md.
Katherine Griggs, Research Consultant - South Carolina
Anders Kaufmann, Clemson University professor - Housing Specialist
Jim Irwin, Ga. Municipal Assoc. - Field work in Georgia
Tom Manley, Harvard Law School - Field staff in North Carolina
Tim Ryles, Ga. State University professor - DOL student manpower project
Margaret Smith, Research Consultant - DOL student manpower project
Sam Williams, Ga. Institute of Technology and Harvard Business School - Atlanta Urban Corps Director

Evaluation

Evaluation activities are currently being carried out, with interns and all committee participants submitting evaluation reports.

Separate evaluation studies are being conducted by the North Carolina Resource Development Project, the Atlanta Urban Corps and the Lynchburg College Program.

Attachments

Attached is a compendium listing all 1969 summer interns by state and agency sponsorship. Project location and title, university participation and project committee members for internships administered directly by SREB are also included.

GEORGIA/SREB INTERNSHIP PROGRAM

ATLANTA URBAN CORPS-Summer 1969

The Atlanta Urban Corps appointed 220 students to full-time internships during the summer with 15 city and 35 private non-profit organizations in Atlanta. Most Urban Corps members are funded on the basis of 80% from the federal College Work-Study Program and 20% from the employing agency. SREB under grants from the Economic Development Administration, Office of Economic Opportunity and Department of Labor is providing support along with the City of Atlanta, Atlanta businessmen, VISTA and foundations to cover administrative costs and stipends for interns not eligible for the Work-Study Program. The Atlanta Urban Corps will continue on a part-time basis during the academic school year.

NORTH CAROLINA/SREB INTERNSHIP PROGRAM

SUMMER 1969

In March of 1969, the North Carolina Department of Administration and the Southern Regional Education Board agreed to cooperate in the continuing and expanding internships in resource development in North Carolina. One hundred interns from 20 colleges and universities have been appointed to work with 52 agencies concerned with resource development. Forty counselors from 19 colleges and universities have been appointed.

October, 1969

1968/1969 HOUSING INTERN PROGRAM

Subject Areas Covered in Phases I & III

Phase I Resident Seminar (September 16 - October 31, 1968)

Slum Conditions and Its Causes in America
Status of Urban Housing Today
Sociological Aspects of Sub-standard Housing
Housing Patterns in Greater Washington
Problems of Housing Minority Groups
Housing Crisis: Washington, D.C.
The Problems of Being Poor
Federal Housing Legislation: Its History and Current Programs
Changing Motivation Behind Federal Programs
Housing and Urban Development
Model Cities
Urban Renewal
National Goals in Housing
Introduction of the FHA System
New Legislation
FHA Multifamily Processing
Legal Requirements, Loan Closings
Project Construction
Project Operation and Management
Special Programs and Considerations
Cooperative and Condominium Housing
Rehabilitation Problems
Nonprofit Sponsors
Housing and Evolution of PHA
PHA Today - Its Leasing Program
Builders View the Housing Needs
Mortgagee's Role
Elements of Housing Development
Nonprofit Sponsor - Rental
Nonprofit Sponsor - Cooperatives
Introduction of 2013 - Application for Mortgage Insurance
Elements of Site Selection

Site Planning and Community Facilities
Physical Design for Rehabilitation
The Builder's Role in Developing the FHA Submission
Consultant Services for Nonprofit Sponsors
Legal Organization and Marketing for Cooperatives
Financing
Calculator Training and FHA Form 2013 Practical Exercise
Estimate of Annual Expenses
Income Computation
Moving Toward Initial Closing
Preparation for Final Closing
Final Closings as They Relate to Rentals
Marketing: Cooperatives and Rental
Sales and Rentals

Membership Sales and the Organization of a Cooperative
The Owner and His Responsibilities
The Builder and the Owner
Introduction to Management
Accounting
Appalachian Revolving Fund Program
New Towns - Housing the Indigent

Phase III Resident Seminar (July 7 - August 1, 1969)

Evaluation of Housing Intern Program
Mortgage Finance - Single Family
Mortgage Finance - Multi-family
Systems Management
Finance - Interest Rates
Farmers' Home Administration
Public Housing
FNMA; GNMA; Secondary Mortgage Market
Real Estate
New Techniques in Housing
Bureau of the Budget - Appropriations System
HUD Act of 1968
Building, Construction, Materials
Future of Housing under Nixon Administration
Processing
Funding
Public Relations
Selling Techniques
Model Cities
Role of Interns within "the System"

1969 HOUSING SPECIALIST PROGRAM

HOUSING SPECIALIST PROGRAM. Sponsored by Foundation for Cooperative Housing and Urban America, Inc.

PURPOSE: To train specialists in the development and management of low- and moderate-income housing in cooperative, nonprofit sales or nonprofit rental projects.

PERIOD: Two six-month courses are offered. Course 1 will begin in September 1969, and Course 2 in January 1970. Each program will consist of an eight-week intensive seminar held in Washington, D.C., followed by a four-month on-the-job training experience with selected housing development and management organizations.

QUALIFICATIONS: Bachelor's degree or equivalent practical experience in the fields of housing, urban planning, architecture, engineering or in the disciplines related to planning, public administration, urban development or community services.

FUNDING: The courses will be funded in part by tuition and by a Ford Foundation grant. Tuition for interns under private sponsorship will be $700, plus living expenses. A limited number of fellowships of $2,500 will be awarded to outstanding applicants who are not employed with a sponsoring institution. Such funded interns may expect to earn an additional salary of $400 per month plus travel expenses incident to their on-the-job training phase.

ON-THE-JOB TRAINING: Approximately four months in two or more of the following fields:

project development: Developing cooperative and/or nonprofit sales and rental housing programs including market analysis, site selection, site planning, architectural and engineering design, selection of construction techniques, cost analysis, financing, and processing of necessary data with municipal, state, and federal agencies such as FHA.

organization and marketing: Organizing and marketing a large cooperative project under development — including cooperative principles and procedures — and organizing a nonprofit mortgagor corporation and tenant or home-owner groups. Interns will attend membership meetings, sponsor board meetings and at least one mortgage closing and will participate in move-ins and member organization and education.

management and maintenance: Care and maintenance of properties, budgeting, buying, and bookkeeping required for nonprofit housing operation, and the community programs of cooperatives or tenant, or home owner associations. Interns will make reports to boards of directors of cooperative and/or nonprofit mortgagor corporations.

community facilities and community development: Planning and providing for adequate community facilities in housing developments, and creating adequate machinery within the community for use and expansion of community facilities for fuller living experience of all participating families.

CERTIFICATION: Graduating interns will be accorded certification as Housing Development and Management Specialists.

FUTURE EMPLOYMENT: During the training period the Director will have consultations with each intern regarding placement opportunities.

Further information and application forms may be secured from the Executive Director, Housing Specialist Program, 1012 14th Street, N.W., Washington, D.C., 20005. Telephone (202) 737-3411

BRIEF DESCRIPTION OF HOUSING PROGRAMS

CITED IN OJT TRAINING EMPHASIS

221d3 Rental housing for low or moderate income families. Three possible programs, one utilizing market rate interest, second market rate interest with rent supplement and third below market rate interest program.

221h Rehabilitation for resale of deteriorating or substandard housing by nonprofit sponsor to low income home purchaser under below market interest rate mortgage.

235 Home ownership for low income families with aid of mortgage assistance payments.

236 Rental housing for lower income families with the aid of "interest reduction payments."

Cooperative housing - A form of ownership under which the corporation or association made up of the occupants owns the property and leases individual units back to the member-cooperators who through the corporation or association arrange for maintenance, payment of taxes and payment of any mortgage.

Public housing - Housing brought about by a public agency to house low income families. Typically it is publicly owned and operated but under recent innovations it can be privately constructed, privately owned and privately managed. Under such circumstances the public aspect is controlled by a lease or agreement specifying the terms under which the low income family is being or is to be housed.

Rent Supplement - A means of enabling persons of low income to be housed in housing financed under certain FHA or state programs which they would otherwise not be able to afford. It entails an agreement under which HUD will supplement payments of 25 percent of the family's income to meet the economic rent of the particular dwelling unit.

Turnkey - The name given to the procedure of obtaining low income housing completed and ready for use by a local public housing authority which contracts with a private builder to deliver the premises (land and building) complete with the key in the door for a set price. Turnkey proposals involve various combinations by which the private sponsor can build, and manage the property or arrange to create cooperative or condominium ownership.

Urban Plan W-S-W 5/27/70 — copy to file

By Henry Elliot Weinstein

SAN FRANCISCO—The Yerba Buena redevelopment project here would demolish a 12-block section containing 43 run-down residential hotels, 92 other residential structures, cheap restaurants, pawnshops and seedy bars—replacing them with what local businessmen have viewed as "San Francisco's Rockefeller Center."

These plans have been brought to an abrupt halt, though, by the objections of the area's present residents, the same objections so often ignored in past urban renewal projects. George Woolfe, an 80-year-old former longshoreman, says "We who are living our last years in the places that have been our homes for over a decade have asked only that we be treated fairly. We have asked that, if our homes are to be destroyed, that new places be built for us to live."

U.S. District Judge Stanley Weigel recently agreed, halting all work on Yerba Buena pending guarantees of low cost housing elsewhere for present residents—serving notice on the city's redevelopment agency and the U.S. Department of Housing and Urban Development (HUD) that he won't allow the Government to uproot people without far greater provision for their welfare. The Redevelopment Authority sought to have the order considerably revised, and on Monday a Federal court appointed former Governor Edmund G. (Pat) Brown a special master to seek an agreement resolving the conflict.

The $200 million Yerba Buena center is one of the nation's largest urban renewal projects. Uncle Sam is committed to the tune of $31 million in capital grants and $49 million in temporary loans to it. It is the largest commercial urban renewal project to be halted by judicial decree. The ruling in favor of residents here could mark a significant turning point for the much-criticized Federal program to renovate blighted city areas.

The court injunction has demoralized local businessmen who saw Yerba Buena as a key element in maintaining the city's appeal as a tourist and convention center. M. Justin Herman, executive director of the San Francisco Redevelopment Agency, refers to the complex as a potential "Lotus land." Located southwest of the present business district, about a 10-minute walk from the new 52-story Bank of America building, it would include a convention center, a sports arena, a high-rise luxury hotel, an Italian cultural center, six office towers, an airline terminal and garage space for 4,000 cars.

But Judge Weigel sees the project as a classic example of "urban removal." His stinging opinion suggests that urban renewal hasn't yet escaped what HUD Secretary George Romney once conceded were the sins of "its early history." Mr. Romney said urban renewal "was literally a way of bulldozing poor people out of their homes and then using the land to build commercial structures, or luxury or middle-income housing."

Only 276 Housing Replacements

In all, the Yerba Buena project would destroy over 4,000 existing housing units now inhabited by mostly single, elderly pensioners and minority families. To replace them, it contemplates building only 276 new, low-cost housing units.

Judge Weigel's ruling was issued on behalf of Tenants and Owners in Opposition to Redevelopment (TOOR), a group of project area residents, and was based on his finding of two fundamental violations of Federal law.

The first is the redevelopment agency's failure to demonstrate the availability of adequate relocation housing for persons still to be displaced from the project area. The other is the redevelopment agency's failure to comply with the HUD regulation calling for consultation with minority group leaders in renewal areas.

The decision, which is being appealed, states that unless the redevelopment agency can demonstrate by July 1 that it will provide decent, safe and sanitary housing for each person who lives in the project area, further Federal funds for Yerba Buena will be cut off. In the interim, the injunction provides that those persons must be "completely secure in the peaceful use and occupancy of the places in which they live." The redevelopment agency is also prohibited from demolishing or condemning any residential structures in the project area, or raising rents of any residents living in buildings it owns.

Since San Francisco is currently plagued by an acute housing shortage, the redevelopment agency may have a difficult time complying. In December the City Planning Department said the city's overall vacancy rate was 2.3% for all apartments at all rent levels. There are almost no vacancies at rents below $100 a month. In addition, the city is way behind its quota of low-cost public housing construction. Many individuals have been on the waiting list for such housing for as long as five years.

Sidney Wolinsky, who represented the tenants as director of litigation for the San Francisco Neighborhood Legal Assistance Foundation, a Federally funded anti-poverty agency, says the decision "in effect, means the city will have to provide firm guarantees that new low-cost housing will be built in order for the injunction to be lifted."

It seems ironic that such a decision has landed on Mr. Herman's door; he has talked in terms suggesting an alteration in the normal dreary pattern of urban renewal. Just last year, Mr. Herman remarked "the natives say San Francisco is so beautiful that we don't need to push redevelopment. They don't see, for one thing, the desperate need for low-to-moderate cost housing and, for another, the potential for more cultural and social amenities." He has often said "there is a benefit of being in redevelopment. You can go to bed each night knowing you have helped the people in the slums."

When it comes to low-cost housing, though, the image and the reality are poles apart in San Francisco. A July 1969 report of the City Planning Department revealed that approximately 6,000 housing units have been destroyed in redevelopment areas here, but only 662 units of housing have been built in renewal areas thus far.

Last December, a group called "The Citizens Emergency Task Force for a Workable Housing Policy" issued an angry report on the city's housing problems and the failure of the redevelopment agency, the Board of Supervisors, and Mayor Joseph Alioto to deal with these problems. William McCabe, an attorney who chaired the task force, said "The city seems to have adopted a course of action making it very difficult to meet low-income housing needs . . . and one that seems aimed toward forcing poor people out of the city."

Mr. Herman staunchly defends his agency's programs to find suitable housing for those displaced by redevelopment. At the lawsuit's first hearing last December, the redevelopment agency claimed it had already "successfully relocated 825 individuals and 150 families."

By the agency's own figures, though, 66% of the people who have been moved are paying higher rents. The agency asserts that these individuals are now living in "better accommodations" and boasts that they are being assisted with rent supplements. Judge Weigel's opinion points out, however, that "the rent supplements can only be used to make up the deficiency in low-rent vacancies during the first two years after a resident's relocation. After that time the rent supplements disappear and the displaced resident is left with a rent which he cannot afford."

Another issue in the dispute concerns the boundaries of the redevelopment area. The legal brief for the tenants' group asserts, "The boundaries are irregular because the project area has been 'gerrymandered' for no other reason than to maximize the benefits of the plan to wealthy and influential sectors and corporations owning contiguous property."

Gerrymandering or not, it's clear that the redevelopment agency considerably broadened the meaning of the designation "blight" in order to achieve the current boundaries. Ironically, the project now bears a remarkable resemblance to a plan first suggested in 1954 by Benjamin Swig, prominent Democrat and owner of the prestigious Fairmont Hotel on Nob Hill. However, Mr. Swig's "San Francisco Prosperity Plan" was rejected by the redevelopment and planning agency in 1956 on the grounds that it "perverted" the basic reason for redeveloping the area.

A Long-Sought Goal

Mayor Alioto, a good friend of Mr. Swig, and then chairman of the redevelopment agency, lobbied vigorously for the 1956 proposal. Since that time he has been an ardent champion of what San Francisco Business, the official organ of the Chamber of Commerce, calls the "long-sought San Francisco goal" of "large-scale commercial, tourist, and sports development" in precisely the area where Yerba Buena is located.

The San Francisco media, similarly, have been whole-hearted in their support of Yerba Buena. (The two leading dailies, the Chronicle and the Examiner, own property adjacent to the project area which may appreciate in value upon completion of the complex.)

In addition, the labor movement has been united with the commercial interests here in a coalition that has been instrumental in seeing to it that the project has come this far. Labor's interest is clear. According to the redevelopment agency, the Yerba Buena project will create $385 million in construction work and 9,400 construction jobs, including related work on nearby areas. Commenting on the project, John Hogg of the Building and Trades Council said "We are in favor of building with no respect to where it is and how it is."

Jack Morrison, a member of the Board of Supervisors from 1961-1969 who consistently opposed the project, asserts "The whole process of approving Yerba Buena has been disgraceful. This city has just bowed down to business and commercial interests who want to exploit that property." As for the labor support, Mr. Morrison adds "some of those building guys would pave the bay if the city would agree."

Local vested interests are hardly the only ones on the defensive in the drama here, though. Before a local public agency's renewal plan can be granted Federal funding, its plans must be approved by HUD. Judge Weigel's opinion leaves little doubt that HUD's review procedures in this case were negligent and sloppy. The evidence "is overwhelming in establishing that the secretary of HUD was not presented with any proof at all in regard to several vital matters requisite to his approval," he noted.

Kenneth Phillips, director of the National Housing and Development Law Center, an OEO foundation in Berkeley, notes a key problem in regard to the HUD investigative procedures. In the few cases where HUD checks relocation complaints he says "its investigation is usually conducted by the same officials who worked with the city to prepare the challenged plan and have reviewed and approved it." Such a procedure clearly does not lead to the sort of independent, objective analysis that is needed if the interests of project area residents are to be fairly represented, Mr. Phillips concludes.

Shortly, after issuing his decision Weigel left on vacation. Just last Fri Redevelopment Agency went before Judge George Harris, in an attempt the injunction so that some buildings project area could be demolished, relocated, and construction could on buildings to be erected in the Yerba complex by Crocker Citizens National Pacific Telephone & Telegraph C Monte Corp., and Taylor Woodrow Pr Ltd. of London. The tenants' group ar ly objected.

Special Master's Powers

A compromise was reached with pointment of former Gov. Brown, now torney in Los Angeles. As a special m he will serve as an arbitrator under sion of the court, with power to conv veys, hearings and conferences relating vision of relocation plans and alleged v ards in some of the older structures standing in the project area.

Mr. Brown said he is anxious to project under way, but he made it clear bound by Judge Weigel's original find fact and conclusions of law. He will a hearings immediately and says he h have an agreement formulated befo July 1 deadline Judge Weigel set for fied relocation plan.

In appointing Mr. Brown, Judge commented on the "complicated, p problems" that may be more easily re by a special master than through co court hearings. Perhaps Mr. Brown p able to devise a practical solution imp ing Judge Weigel's opinion concluding vation on the Federal urban rene "The statute makes it abundantly clear Congress intended residents of blight to be the beneficiaries, not victims of renewal."

Shortly after issuing his decision, Judge Weigel left on vacation. Just last Friday, the Redevelopment Agency went before Federal Judge George Harris, in an attempt to modify the injunction so that some buildings in the project area could be demolished, residents relocated, and construction could commence on buildings to be erected in the Yerba Buena complex by Crocker Citizens National Bank, Pacific Telephone & Telegraph Co., Del Monte Corp., and Taylor Woodrow Properties Ltd. of London. The tenants' group strenuously objected.

Special Master's Powers

A compromise was reached with the appointment of former Gov. Brown, now an attorney in Los Angeles. As a special master, he will serve as an arbitrator under supervision of the court, with power to conduct surveys, hearings and conferences relating to revision of relocation plans and alleged fire hazards in some of the older structures still standing in the project area.

Mr. Brown said he is anxious to get the project under way, but he made it clear he is bound by Judge Weigel's original findings of fact and conclusions of law. He will start his hearings immediately and says he hopes to have an agreement formulated before the July 1 deadline Judge Weigel set for a modified relocation plan.

In appointing Mr. Brown, Judge Harris commented on the "complicated, practical problems" that may be more easily resolved by a special master than through ordinary court hearings. Perhaps Mr. Brown may be able to devise a practical solution implementing Judge Weigel's opinion concluding observation on the Federal urban renewal law: "The statute makes it abundantly clear that Congress intended residents of blighted areas to be the beneficiaries, not victims of urban renewal."

AC

Mass Transit: A Little Late Arriving

W-S.J 7-24-70

By ALBERT R. KARR

WASHINGTON—"Urban mass transportation in the United States is in the early stages of a vast transformation, a transformation that will rival the rags-to-riches change visited upon a fairy tale Cinderella."

That's the optimistic assessment of Thomas E. Lisco, chief economist for the Chicago Area Transportation Study, a planning group for highway and mass transit agencies in the Chicago region. And there are some good reasons for seeing things Mr. Lisco's way.

More and more drivers seem to be convinced that mass transit is the only rational alternative to mounting highway congestion. The Nixon Administration wants to spend more for transit; Congress wants to spend more; some states and many cities want to spend more. Mass transit, then, appears to be one of those ideas whose time has come.

Except . . .

Except that voters in some cities have rejected transit bond issues lately. Except that highway supporters are still very powerful in Congress, the highway bureaucracy is big and entrenched and the highway program itself has generated a momentum of its own. Except, in short, that the problems of transforming transit into a modern, popular mode of travel from a decrepit, fading mode remain immense.

A Dramatic Transformation

If the transformation that Mr. Lisco and others expect actually materializes, it would be dramatic. For patronage of most transit systems has plunged over the years. (Public transportation now accounts for only 4% of all individual trips in the Minneapolis-St. Paul area, for example.) Few large cities have rail transit systems, and smaller cities' bus companies regularly fold. Even where transit service is available, its quality and quantity are often declining.

Mr. Lisco and other transit supporters list a variety of reasons why transit should soon be making a dramatic turnabout. Their main argument: Transit will succeed because it has to succeed. Declares Mr. Lisco: "Because mass transportation performs a vital function, not only for the individuals who use it, but also for the very form and efficiency of the city, it *must* be made to succeed."

It now seems clear to most city officials—if not necessarily to a majority of city voters—that heavy reliance upon the car and the highway has meant air pollution, disruption of homes and jobs, and roads that often detract from business growth, rather than enhance it. Even in car-conscious Los Angeles—whose voters rejected a $2.5 billion rapid-transit bond system in 1968—Mayor Sam Yorty declares: "Our need still exists and becomes more urgent as congestion mounts." Cleveland Mayor Carl B. Stokes calls the transit need an "overwhelming problem." Alderman Richard T. Curtin talks of Minneapolis freeways filled to capacity at peak hours. "Obviously," he says, "we have only one alternative, and that is to develop mass transit systems. . . ."

There are many signs that this development is on its way. Some rail commuter lines, as they become the only outlet for congested roads, have begun to show an increase in passengers. New transit systems in Cleveland and New Jersey have attracted generous patronage. The new 75-mile Bay Area Rapid Transit district (BART) system in San Francisco, scheduled for operation in 1972, raises the hopes of transitmen for a showcase to spur other major projects.

Everyone agrees the Federal Government is the only source of the kind of money public transportation requires. And in Washington, support is building for increased spending, both to improve old systems and build new ones.

The Senate already has approved, in a smashing 84-4 vote, an Administration proposal to make available $3.1 billion for new transit equipment over the next five years; the House seems well on its way to increasing this to $5 billion. Either sum would be a dramatic increase over past levels. Since the Government started doling out money for transit assistance in 1962, it has spent an average of only $104 million annually.

One sign of growing fervor for transit was the ability of Rep. Edward Koch (D., N.Y.) to line up more than 100 House co-sponsors for his bill proposing to spend $10 billion in four years. The bill called for a transit trust fund, fueled by existing auto excise taxes—a proposition that foundered (because it was viewed as fiscally and politically unwise) when separately proposed to the White House by Transportation Secretary John Volpe. Rep. Koch's bill wasn't enacted, but it did generate support outside Congress. David I. Margolis, president of Colt Industries, a diversified New York concern, wrote executives of 600 large corporations, seeking support for the bill; 225 executives replied, and most of these favored it.

An impressive lobbying effort for transit has been mounted by the Transportation Department, the National League of Cities, State and Local Officials, other transit-interested groups, and some members of Congress like Mr. Koch. Transit operators, union officials, industry men from transit equipment-makers to road builders, and others are bending the ears of Senators and Congressmen.

"This is the first time we've ever encountered one force moving in one direction," says a House transit expert. "It even had conservative Republicans who never thought much of mass transit before scratching their heads and saying there must be something to this."

The urban transportation program, says Donald E. Weeden, chairman of Weeden & Co., New York investment bankers, is "visible and noncontroversial." He says bankers around the country, for example, are concerned that deterioration of transit systems threatens "the life blood of the urban economy."

Use the Trust Fund?

Highway advocates in Congress, long given to fighting transit proposals as a possible threat to road funds, are now proposing that the mammoth highway trust fund be used in part to help bus transit programs. The House Public Works Committee even wants to take over jurisdiction of bus transit from the House Banking Committee, which handles all transit matters now.

Rep. Joe D. Waggoner Jr. (D., La.), a leader of Southern conservatives in the House, says he favors the transit legislation partly out of recognition of transit-company needs in cities like his district's Shreveport. He adds that if small-city people back transit aid, they may be able to count on a quid pro quo for small-town highways from "(big) city boys."

Mr. Volpe and others at the Federal level are beginning to suggest a broad transportation trust fund that would make some money, earmarked so far only for highways, available for transit systems. More states are urging that Federal highway funds be cut loose for transit or other purposes, as the states see fit.

Meanwhile, Maryland, Virginia and Illinois have authorized use of some state highway user taxes to support transit, and similar moves are being considered by Massachusetts, California, Colorado, Hawaii and Ohio. In May, holders of New York's Triborough Bridge and Tunnel Authority approved use of surplus bridge and tunnel tolls for subsidizing the city transit authority, clearing the way for payment of the first check for $74 million.

But despite all these favorable signs, it's still a long haul for transit. Powerful highway supporters adamantly oppose giving up much of their trust fund monies. Rail transit, at least, ought to find its own support, they say. Even $1 billion a year in Federal money would be paltry against the $5 billion annual Federal outlay for roads (buttressed by earmarked gas-taxes). The Government finances 90% of the interstate highway program, while it pays for only two-thirds of transit equipment. The

billion rapid-transit industry men from transit equipment-makers

be paltry against the $5 billion annual Federal outlay for roads (buttressed by earmarked gas-taxes). The Government finances 90% of the interstate highway program, while it pays for only two-thirds of transit equipment. The Federal Highway Administration employs more than 5,000; the Urban Mass Transportation Administration 55.

Because of the lucrative Federal aid for interstate roads, cities and states have been lured—if not forced—into emphasizing highways over transit. Availability of "90-10" money "has led many states to a complete loss of perspective in the development and preservation of our cities," says Michael S. Dukakis, Massachusetts state representative.

Too, the Nixon measure falls far short of the needs of cities over the next decade, transit advocates insist. They estimate those requirements at $20 billion to $35 billion. Many transit operators say Federal financing of new equipment isn't enough—that eventually the Government will have to subsidize transit operating costs, too, because local authorities can't afford to do so.

Despite the unhappiness of the populace over choked roads and poor transit, voters generally have been unwilling to help pay for better transit—at least without a sizable Federal funding program. Transit bond issues have been rejected in recent elections in Atlanta, Los Angeles, Kansas City and Seattle—a second turndown coming in Seattle just a few weeks ago.

Congress Holding Back

To some extent Congress is holding back until it sees how imminent projects work out. If the BART system falls well short of predicted patronage, revenues and earnings, as some pessimists fear it might, the commitment of Congress to mass transit will undoubtedly shrink, some transit promoters say. And they worry that the still-undernourished transit operation suffers from lack of good management—from local companies and public authorities to, some members of Congress say, the Federal Government's mass transit program itself.

Nevertheless, transit backers are still convinced that things are looking up. Mr. Lisco of the Chicago-area study says that commuters can be enticed from their cars by well-managed transit operations. Transit riding is usually cheaper than driving, he says, and it can offer the commuter more comfort and more speed as well.

Opportunities for promoting and improving mass transit are substantial. In Montreal and Toronto—and already in San Francisco—the potential of the transit line as a focus for revenue-producing residential and commercial complexes has become obvious. Automatic operation of rail transit vehicles is a little-developed field, automation of ticket sales and

Masonite Plans Entry Into Modular Housing Through Acquisitions

Preliminary Talks Under Way; Estimate of Gain in Profit For Fiscal 1970 Is Lowered

7-24-70

By a WALL STREET JOURNAL *Staff Reporter*

CHICAGO—Masonite Corp. hopes to enter the modular housing field with the acquisition of one or two modular-home builders "before the end of the calendar year," Samuel S. Greeley, president, said in an interview.

It is the first time the hardboard producer and building supplies concern has disclosed that its housing diversification plans would emphasize the modular housing concept. "It appears it will be a good market over the next five years and longer," Mr. Greeley said.

The Federal Government and the housing industry both have indicated that factory-built sectional homes (modules) will play a significant role in meeting the nation's housing needs in the future.

Mr. Greeley emphasized that Masonite still is in the preliminary discussion stage with acquisition candidates but that the first move would probably come with the purchase of an Eastern housing concern. "We're leaning toward the conventional single-family home area," he said.

Formation of a real-estate development subsidiary is still planned for the near future, Mr. Greeley said. But, he added, an executive to head the division hasn't been selected yet. Real Estate Research Corp., a Chicago consulting concern, has completed an overall study of the company's real estate potential and is coordinating the selection of an executive to head the subsidiary.

The division is expected to develop company properties initially in Pennsylvania and California for residential and recreational uses. Mr. Greeley said the company already has begun selling some of its substantial land holdings—"1,200 acres or so"—for such purposes.

Dilution of Earnings

Earnings for the fiscal year ending Aug. 31 probably will be diluted, Mr. Greeley said, "by three or four cents" a share with the restatement for recent acquisitions of Hood Industries Inc., a lumber and building products supplier, and Molalla Forest Products Inc., a lumber plant operator. The acquisitions will add seven cents to restated fiscal 1969 results, to $2.08 a share, but lower earnings contributions this year will affect Masonite's fiscal 1970 earnings, he said.

Mr. Greeley said he still expects profit for fiscal 1970 to increase 6% from a year earlier, although the company earlier had projected an increase of "10% or more." "Depending on August results and year-end adjustments, we ought to hit 60 cents a share in the fourth period (up from a restated 50

fiscal 1970 to increase 6% from a year earlier, although the company earlier had projected an increase of "10% or more." "Depending on August results and year-end adjustments, we ought to hit 60 cents a share in the fourth period (up from a restated 59 cents in the 1969 period). That will push fiscal 1970 results to $2.20 a share or more," he said.

Orders are "well ahead of a year ago," and for the last four months have been 10% ahead, he said.

Alan B. Cook, vice president, sales, for Masonite's building products division, cited several reasons for the company's earnings growth this year during a period when most building-related concerns have been hurt substantially. The division accounts for about 55% of company sales. A lower-priced wood panel, reorganization of the division, and improved benefits for the division's 200 salesmen, have helped, he said. "The improvements have come in a number of areas—from no longer limiting the sales incentive program, to improving maternity benefits and placing air-conditioners in salesmen's cars," he said. "We're stressing progressive dissatisfaction."

Low-Price Paneling

The company's low-price paneling introduced last fall is generating one-third of the paneling sales volume, Mr. Cook said. The low-priced panel sells for $5, compared with $7 to $9 for other Masonite paneling. "It has opened up new markets for us where previously the price hindered our selling to some outlets," Mr. Cook said.

Masonite's capital spending this fiscal year will total about $15 million, up from $10.5 million last year, Mr. Greeley said. He expects such expenditures probably "will be a little more next year," but he noted that construction of a new $10 million to $12 million particleboard plant in Spring Hope, N.C., has been deferred for "a couple of months."

The company's substantial saw-mill lumber operations, which now rank 12th in size in the country, should move to the "first half dozen in size within a year and a half," Mr. Greeley said. Timber sales will contribute more than $6 million this year, up from $4.5 million in fiscal 1969.

Company sales in fiscal 1970 should be between $180 million and $185 million, compared with a restated $180 million last year, he indicated.

Mr. Greeley said he doubts whether housing will have the "huge, sharp increase" in 1971 that some housing officials are forecasting. "Things look promising but I'd expect a nice steady increase," he said. Masonite researchers are estimating that housing starts for fiscal 1971 will be 1,550,000 units, up considerably from the 1,325,000 annual rate projected for the current fiscal year.

Policy Committee Studies Offer From Dominion

TORONTO, Ont.—At the Record's presstime, the bargaining committee, which has been negotiating with representatives of the giant Dominion Stores for a new contract, has submitted a company offer to the union's policy committee for consideration.

Should the policy committee approve the terms of the Dominion offer, it will be put before the approximately 7,000 members who are covered by the negotiations. It will then be up to the Dominion workers to ratify or reject the proposals as submitted.

The RWDSU agreement with Dominion Stores expired April 30, except for those contracts covering employees in Northern Ontario and Quebec, which have other expiration dates. Talks began weeks before the major agreement expired.

Principal union negotiators are Int'l Reps. Don Collins, George Barron, George Spaxman and Cecil Dahmer. Also Local 414 Bus. Agents Roy Higson, Don Tait and Pete Kolbaska.

Mr. Smith:

I called Mrs. George Lewis (Mrs. Clifton Lewis) in Tallahassee to confirm May 10th and 11th as dates you would be in Tallahassee. There is a meeting scheduled on the 10th at 9:00 a.m. that you will need to attend. She suggests that you either try to get a late flight out Sunday night or a early morning flight out on Monday morning. After you have made your reservations, we should call ~~you~~ her back so she can go ahead and make hotel reservations for you. She will meet you at the airport when your flight arrives.

I checked on flight into Tallahassee for Sunday night and Monday morning. I'am listing them below:

Sunday night

Eastern airlines only has one flight in the evening going into Tallahassee. 7:45 p.m. and arrive in Tallahassee at 8:36 p.m.

Monday Morning

Early bird flight which leaves Atlanta at 6:15 a.m. and arrive in Tallahassee at 7:03 a.m.

Return 11th from Tallahassee - aft.
around 4:00 p.m.

19 July 1968

Mr. Moreland G. Smith, FAIA
Director, Urban Planning Project
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Mr. Smith:

I have enclosed a beief survey of the major points concerning the housing situation in Tuscaloosa at the present time. I hope this will be helpful to you.

We would like to arrange a meeting with you or with someone whom you might recommend, as soon as possible. In fact, we would prefer to set this meeting as early as next week, if possible on Tuesday, July 30, Wednesday July 31, or Friday August 2. If none of these is feasible, then Tuesday or Thursday of the following week (August 6 or 8) would be desirable.

We plan on having a meeting in the late morning or early afternoon with representatives of various civic groups interested in studying the housing situation in Tuscaloosa, and another in the late afternoon or evening to which members of the Housing Commission, local realtors, landlords and other interested persons would be invited.

If there is any other information or clarifications that you may need, please call me at 205-758-7306.

Sincerely yours,

Emmett Parker

Emmett Parker, Housing Chairman
Tuscaloosa Council on Human Relations

A Brief Survey of Housing Conditions Among the Poor in the City of Tuscaloosa

1. Of approximately 20,000 dwellings in the city:

   a) 4,500 are listed as sub-standard

   b) 3,600 of this 4,500 are occupied by negroes; 3,000 of them are occupied by rentors; the additional 600 are owned by their occupants.

   (These figures are those of the Tuscaloosa Housing Authority; we think they are somewhat conservative, but until we can arrive at more precise statistics of our own, we have to accept these.)

2. As far as we can tell, the Housing Code of the City of Tuscaloosa closely follows Federal guidelines; however, we are told that it is largely unenforced for the following reasons:

   a) the city employs one housing inspector whereas it is estimated that at least three to five full-time inspectors are needed.

   b) there appears to be considerable reluctance on the part of the City Commission to enforce the code. In fact, the city itself owns and rents to Negroes a substantial number of sub-standard houses. These houses are in an area designated to become an industrial park; the city refuses to make meaningful improvements intthese houses.

3. There is not, at present, enough publicly or privately owned low-cost, standard housing into which occupants of existing sub-standard housing can be relocated.

4. There do exist 660 public housing units for both negroes and whites, with 106 new units for negroes now under construction.

   a) 30 to 36 public housing units are now vacant in spite of the great number of families occupying sub-standard units and in spite of a long waiting list of applicants for public housing.

   b) Regulations governing occupancy of public housing appear to be excessively stringent and, in some cases, contrary to federal guidelines and court decisions (e. g., no women separted from their husbands, or unmarried women with children are accepted).

   c) The City Commission appears unwilling to approve construction of further public housing, apparently under pressure from local realtors and landlords.

   d) When public housing is approved(as in the case of the 106 units mentioned above which were approved solely for the purpose of relocating negro families living in an area designated for urban renewal) they tend to be built in thewestern section of the city, thus reenforcing a westward flow of the negro population to the point where there is serious danger of a massive ghetto being formed.*

* As a matter of fact, the urban renewal area is on the east side, while the relocation area has been located across town. All of which means that the 106 negro families involved will be removed from proximity to the churches, schools, etc. that they have habitually attended.

Raul:

Stuff from Tuscaloosa for your information

Morelit

Thanks

On August 1, 1968, the national government in the enactment of the Housing and Urban Development Act of 1968 made a renewed commtiment to a national goal of "a decent home and suitable environment for every American family" by providing for Federal funds regarded as suggicient to replace all existing substandard dwelling units. To give the commitment reality and meaning to the local community, the Council on Human Relations believes that the following basic strategies should be adopted:

First: The supply of housing suitable for low-income families to be expanded on a massive basis;

Second: The Housing Code for the City of Tuscaloosa to be employed as an instrument to improve opportunities for decent housing for all citizens;

Third: The rights and duties of tenants in low-cost public housing regarding admission and continued occupancy to be defined, clarified and enforced consistently with the general purpose of public housing and the constitutional requirements of due process.

Fourth: Open-housing legislation and relevant court decisions to be translated into open-housing action.

To put these broad strategies into effect, Council recommends community planning and efforts in the support of the following proposals:

1. A program of homeownership for the poor through the construction by provate concerns of inexpensive homes for sale to families earning as little as $3,000 annually under the national government's interest subsidy program;

2. A program for the construction of low-rent apartments by non-profit or limited-profit corporations under the government's interest subsidy program;

3. A program for the construction of additional public housing units;

4. A program for the construction of new rental units or the renovation of existing units by non-profit landlords under the government's rent-supplement program.

5. The implementation of the Housing Code so as to provide more effective procedures for enforcement of the code by extending the range of available legal remedies to deal with the wide spectrum of housing problems of differing severity;

6. A program of training, counseling, and pilot demonstration projects to encourage occupant understanding for housing and area maintenance;

7. A study of existing Housing code enforcement procedures and organization with a view to more efficient and effective enforcement of the Code's provisions;

8. A study of Housing authority regulations establishing admission and eviction policies applicable to tenants in low-cost housing;

9. Adoption of a policy to the effect that the denial of admission or termination of the lease to be permitted only on reasonable grounds having to do with tenant behavior with respect to other housing authority tenants and property thus eliminating the broad and arbitrary exclusion of low income families from public housing because of family "social problems" and without regard to the characteristics of the particular gamily and its housing needs;

10. A program of voluntary community action designed to disseminate information concerning available housing to minority groups and the desirability of open housing;

11. A program to reorient federal housing programs to place more low and moderate income housing in non-slum areas.

12. An effective educational program to help the general community at large to see the great value and profit to all the community of good housing for the poor.

HOUSING FOR LOW INCOME FAMILIES

A group with program development, real estate development, design, finance and community organization capabilities is interested in providing privately financed occupant-owner housing for poor people.

Our main interest is in developing condominiums, not only to provide adequate housing for persons in the poverty range, but also to use this opportunity to increase the economic viability of the owners and to favorably affect other problems common to the target population. We will, however, consider alternatives and variations to meet the requirements and differences of local conditions and prospective sponsors, and we will consider projects in which we would provide one or more of the component operations or in which other kinds of development, such as shopping facilities, are involved.

It is our belief that, with the favorable F.H.A. mortgage insurance already authorized, we can provide appropriate quality housing for low income groups not presently being given consideration in the housing market. Our idea includes interrelated housing, finance and program design, as follows:

(1) Volume construction of condominiums with modest developer profits will put monthly costs in the range currently paid for much slum rental, with the additional social benefits of home ownership.

(2) Architectural design appropriate to the uses and family structure of poor people will reduce the incidence of default and deterioration. Such design would probably include more bedrooms to increase individual privacy and semi-detached rooms for the frequently present peripheral family member whose income or housekeeping economic value often provides the margin for economic success. Provision of needed common spaces, such as for day care centers, will also affect both the quality of life and the financial ability of unit owners.

(3) Depending on favorable local land cost, taxation and construction factors, along with the availability of favorable interest rates and long term, high percentage mortgage insurance, we propose to provide 4 to 6 bedroom units in the range of $50 to $75 monthly cost, including taxes, insurance and maintenance of common areas as well as mortgage and interest.

(4) We propose to provide the education and organization needed to attract low-income buyers, help them prepare for ownership and occupancy, help them organize to meet common problems including consumer, credit, employment, legal and group living problems, and use of community agencies, as well as to conduct the business of the owner-association.

(5) We propose to provide for stabilizing and continuing needed organization by participation of established community groups, along with the developer, as unit owners with immediate involvement and adequate legal recourse. Other devices will be used for this purpose when possible, such as providing a variety of management skills through the recruitment of owners.

We welcome the opportunity to submit specific proposals and will accept restrictions to safeguard the transmission of specially provided advantages, such as land cost or tax abatement, to the proposed low income owners.

PLANNING

T&D

For Release: after 12 Noon, Monday,
January 16, 1967

"NEW DIRECTIONS IN METROPOLITAN DEVELOPMENT"

Remarks by Robert C. Wood
Undersecretary, U. S. Department
of Housing and Urban Development

Development Forum, Urban America, Inc.
Boca Raton, Florida, January 16, 1967

Summary:

The development patterns of existing metropolitan areas are the crucibles for improving urban life for the majority of Americans. New legislative tools--particularly the Metropolitan Development provisions of the 1966 Housing Act, and new technological tools--particularly the technique of systems analysis--make it possible for the suburban frontier to grow in an orderly and coherent manner. The newly established national Commission on Codes, Zoning, Taxation and Development Standards, headed by former Senator Paul Douglas, is a major step forward.

In order for this orderly development to happen, a commitment to professional excellence in public and private sector alike is required. Both developers and government must pass up the "easy solutions" of present patterns of land acquisition, planning and building in favor of "hard choices". These choices include careful attention to community infrastructure, rigorous analysis of future needs, realistic planning and devices to make this planning effective. The Government must continue to be involved in urban research and development, the "Pay-off" of which benefits the entire community.

NEW DIRECTIONS IN METROPOLITAN DEVELOPMENT

I take this occasion, first to salute Urban America. It is an organization of comparable life span with HUD, with a similar pattern of merger and consolidation, and one that has already demonstrated its great utility to the urban cause.

Since our beginnings, the two organizations have been closely intertwined. Exchanges of people, of ideas, of programs, have been frequent -- indeed, on the personnel side, as I review the brain-drain from HUD, perhaps too frequent. But the benefits that have flowed to public programs by Urban America's actions -- organizing new technical competence in the building industry -- providing technical assistance to non-profit groups interested in building housing for lower income groups -- fostering new means of communication with local officials, by making more visible urban needs to influential audiences -- are compensatory. Taken together they demonstrate the promise and power of enlightened private action in urban affairs and the feasibility and necessity of private and public collaboration.

It is on this foundation of what economists a generation ago called "the mixed economy", of what more recently has been dubbed "the profit plus" motive that I talk today. My aim is not to reiterate commonplaces:

--- that the meeting places of business and government are no longer battle-grounds.

___ that private enterprises operate with far more complex set of motives than appear on a balance sheet.

--- that government has long since, especially in the housing field, found it beneficial to use private mechanisms to secure public purposes.

I take these propositions as givens constantly demonstrated. Indeed, President Johnson's proposal for the consolidation of the Departments of Commerce and Labor to emphasize emerging manpower and development programs is a recent case in point. It underscores the changing organizational needs of a technological economy, and disposes of obsolete concepts of how the government helps assure that this nation produces and prospers.

Rather, I want to explore some of the specifics of our common endeavors -- the mutual concerns we have; the mutual responsibilities to be exercised and mutual deficiencies that need to be corrected if we are to succeed. My focal point, in terms of this forum's agenda, is metropolitan development -- the future course of the existing patterns of urban settlements where most Americans now live and where most will live in the next generation. My concern is with the sinews of our spread cities -- the investments and the decisions that tie together the homes and the lives of its citizens.

I appreciate the other and exciting options that exist. This is a moment of unique opportunities for mastering the urban environment.

A convergence of population trends, sustzined public attention, revolutionary technical capabilities, and new legislative tools, both

compel and permit us to experiment.

If we are to build urban complexes that serve, in President Johnson's words, "not just man's welfare but the dignity of his spirit":

We shall have to redouble our efforts to make older cities more livable, to attack seriously the condition of the ghetto. My colleague, Ralph Taylor, will be speaking to you on aspects of these efforts tomorrow.

We shall also have to develop new patterns, new communities designed for the future. Our discussion this morning brought out the problems and the high adventure which lie ahead on this front.

But, we shall have to bring more order and coherence in the continuing process of metropolitan development.

--- First, because it is in the suburban ring of our metropolitan areas that the bulk of urban America lives.

--- Second, because it is this "middle country" in which developers have, and will continue to have, their greatest influence -- both in number and in dollars.

--- Finally, because this middle country is too often overlooked by the vanguard of urban strategists. The quantitative and qualitative importance of suburban development tends to be eclipsed in the public's attention by the journalistic sex appeal of the mores and folkways of the suburban family.

The urban ghettos have considerable claim on our common humanity; new communities arouse great expectations. Yet an equal challenge for the next decade lies in controlling the volatile patterns of metropolitan land use, in finding alternatives to sprawl, in solving the difficult problems of extending and upgrading suburban community facilities and services.

In guiding metropolitan growth, we begin, public and private sectors alike, with some mutual hard facts.

Government and industry are both prisoners, to some extent of the demographic tables. These are quite clear on three points:

First, we are on the verge of an indefinite period of rapid urban population increase. Having housed the war babies, we shall soon have to house the families of their babies. Starting in 1970, the population projections go up precipitously. This working generation must be a generation of city builders unparalleled since the Massachusetts Bay Company started to develop New England.

Second, this growing population is shifting rapidly and unevenly, compounding the task of ordering development, depositing different requirements on different parts of the Continent. One quick fix on the moving target of metropolitan development is the transformation of that American landmark, major league baseball. In the past decade we have seen the St. Louis Browns moving to Baltimore; the Boston Braves to Milwaukee and then to Atlanta; the Washington Senators to Minneapolis; the Philadelphia Athletics to Kansas City; the Giants to San Francisco

and the Dodgers to Los Angeles. In short, the era of fixed urban dominance is passed. Sizable metropolitan areas are busting out all over. They require common understanding and approaches.

Third, the growing, mobile metropolitan population is clustering. Large metropolitan areas grow larger and tend increasingly to dominate their states. The Baltimore metropolitan area contains 53% of Maryland; Chicago 62% of Illinois; Boston 60% of Massachusetts; Detroit 48% of Michigan. Metropolitan goliaths are merging: Greater Pittsburgh extends from Altoona to Wheeling; Cleveland merges with Akron; San Francisco joins Oakland, San Jose, Stockton. In Florida, the area from here through Fort Lauderdale and Miami is, to all intents and purposes, a single megalopois.

So, the "spread city" is here to stay. The reality of this situation, which only the romantics -- perhaps -- still doubt, is amply demonstrated in the decision by Bell Telephone to issue separate directories for growing suburban sectors of metropolitan areas.

Together, then, I think we agree, that the metropolitan area -- and particularly its growing fringe -- is at least the quantitative frontier of the future.

I think we can also agree that it is difficult terrain in which to work. The legacy of forced-draft suburban development after World War II, is an almost rigid set of requirements on public facilities and services, on zoning and development standards.

So is the existing pattern of local governments, each with its peculiar habit ; patterns and development practices; each with limited jurisdiction. Given these constraints of low density settlements and divided authority, the pressures on public service and facilities -- in transportation, recreation, utilities, schools, and amenities - spiral upward in geometric proportion. Yet the need is clear for imparting whatever coherence to structure and style we can to the existing suburbs, and assuring that the next generation of development does better. The concerns are common to us all; We are all taxpayers, all neighbors in the middle country.

Mutually accepted facts, mutual concerns, lay the basis for mutual responsibilities. Here, the first is to avoid the obvious. Urban affairs and issues are, for the first time, enjoying the public spotlight. In the wake of reapportionment, state legislatures are setting up committees on the cities. The press and television are giving serious and continuing coverage to city problems and their explosive aftermath. Bar associations, civic organizations and other professional groups show increasing interest in urban issues. Metropolitan issues - safety, good housing, orderly growth - are for the first time high on the public agenda.

In this atmosphere, the temptation to crisis-oriented, simplistic solutions is strong. Radical proposals for reform of government structure, developments standards, public intervention abound. So do cynical counter-proposals for continuing to do what comes naturally in the acquisition

and development of land.

The enormous numbers of new suburban Americans to be housed, educated, and transported can be treated as an occasion for revolution in policies and structures. Or they can be regarded simply as a fortuitous demand situation. In my judgment neither position is realistic or responsible.

We will not transform the capacities of local government or private development enterprises overnight. But neither can we afford to continue the repetitious patterns of development and parochial patterns of local government.

The critical requirements for both parties is a condition of professionalism expressed in two ways: self-discipline in spirit and competence in technique.

For community building so intermingles the public and the private concerns, that neither purely market nor purely governmental considerations can dominate. So, the professional style becomes imperative.

Max Weber articulated this role 50 years ago when he defined the ethic of responsibility. Where individual men hold great power to alter the course of events, he pointed out, but lack sure knowledge of the consequences, they constrain their actions and check their exercises of authority, until events confirm their goals. The new and uncertain game of city-building needs to take this injunction to heart.

In the matter of self-discipline, it is important to recognize that, while rebuilding old cities has a built-in discipline of develop-

ment imposed by the existing patterns, the process of metropolitan growth does not. It is often up to the leader to impose professional restraint. They can decide to invest their skill and know-how in careful analysis and planning -- or decline that investment. They can work with local governments on sensible revisions of building, zoning and tax codes -- or avoid such a process. They can use and improve upon the newest building technology -- or ignore it.

On these choices turn the issue of whether or not communities horizons are extended or contracted.

Let me make clear that a call for self-discipline is not a call for financial sacrifice. Good design, careful planning, innovation, and concern with human needs are demonstrably good business.

As developer Jim Rouse, in his recent Congressional testimony said: "Columbia, by producing an outstanding profit, will speak loud and clear to the city building industry. It will induce attention to a good environment as the right product in city building. It will warn against the unmarketability of sprawl. It will lift attention to genuine respect for nature and the family".

The same self-discipline and governmental incentives are very important in metropolitan development.

No amount of discipline and innovation by private developers, however, will give coherence to metropolitan growth, unless the government assumes <u>its</u> responsibility for more realistic and effective planning.

New capabilities, new dispositions to deal seriously with the development process on a regional basis have to appear in the public sector.

This is the premise that inspired the Metropolitan Development aids enacted by Congress last fall. These aids aim to provide incentives to local communities to undertake development programs in accordance with comprehensive metropolitan plans.

In a great many communities, these plans have been around for a decade. We think its time that someone acted upon them. If so, these plans will exercise a strong pull in the direction of orderly development.

The metropolitan planning incentives - as many of you know - are in the form of supplementary grants of up to 20% of eligible project costs for those federally assisted programs that have a direct bearing on urban growth. The grants will augment existing Federal assistance to programs for water and sewage facilities, transportation facilities - including transit, highways and airports - open space, beautification and recreation programs, libraries, hospitals and medical facilities.

Whether this kind of incentive will be useful depends on both public and private capabilities for making the planning process realistic and for responding to its dictates. So, the second element of professionalism - competence in technique - comes into play. For if plans are to be used, they must be feasible, realistic and practical, designed to improve present patterns of settlement and accommodate new

ones. They must include not just pictures of great expectations, but ways and means of removing the impediments to action.

To do this, our new legislative tools must be supplemented by the tools of modern technology: the whole wizard's notebook of advanced computers, materials research, information systems, simulation theory, communications engineering, systems analysis, and much more.

We hear a great deal these days about "systems analysis" or systems approach. Being fashionable, these terms are used in as many ways as there are shades of blonde in a chorus line. But the concept is important - not because it is magic or "in" - but because it is a technique for manageably dealing with very complicated problems - for getting a handle on reality.

When we talk about applying systems analysis to metropolitan planning, we are not trying to add another layer of academic sophistry to an already jargon-laden process. We are describing a way to make planning work by relating it to what is really happening, by making it realistic and precise.

Here, the public sector has a special responsibility to develop, apply, refine the general approach to the specific problem. As the morning's discussion indicated, private industry is already well engaged in the process. But as economist, Carl Kaysen, concluded in studying the question of basic research in science: Companies can and should be engaged in such research both in the hope of commercial

"fall-out" and because of the stimulating effect on their other professionals.

But the market mechanism could not and should not be expected to provide an adequate flow of financial support. Since the "pay off" benefits the entire community both directly and indirectly, expenditures on basic science, Kaysen points out, should properly be regarded as "social overhead," as "capital investments in the stock of knowledge."

If this is true in the electronic and chemical industries, it is equally the case in urban affairs - in the areas of housing, safety, education and social services, and transportation.

Individual communities and companies with imagination can bring some innovation to the solution of many immediate urban problems. Yet systematic research on urban needs will almost certainly require national efforts, using both Federal and private capabilities. HUD is firmly commited to this goal.

One major step in this direction is the creation of the Commission on Codes, Zoning, and Taxation and Development Standards that President Johnson announced last week to be headed by former Senator Paul Douglas. Its present membership represents individual authorities in their fields, but its approach will be one of early and continuing involvement of the know-how of practitioners and the proponents of change. Here, we hope to improve the prospects for effective application of effective planning.

The Model Cities Program also encourages a kind of "systems approach" of general urban applicability: the identification of goals, attention to related needs, mobilization of resources, and experimentation. Mr. Bogard made clear how useful - even essential - this approach is in the development of new communities.

If we can bring to the development of suburban metropolitan areas, a similar problem-solving attitude, a similar receptivity to careful answers, we may by professional competence prevent their long, dismal slide into mediocrity.

Prescriptions of professionalism in attitude and method, of course, appear to be an elusive strategy for metropolitan development. The temptation is strong to deal in more specific terms:

--- the requirements for capital

--- the need for a thorough-going review of Federal, State, and local law long on the books and now to be adjusted to new purposes

--- the revision and streamlining of adminstrative procedures to provide more predictability and speed to the government process.

No one doubts the urgency of these reforms.

Yet, as crucial and critical as these specific and technical adjustments may be, they are barren without the underlying commitment to professional competence and quality. For the plain truth is that although we will forge in the next few years the long-term urban mold

for the United States, there is no cosmic imperative on the side of excellence or sensitivity. Despite the dire warnings of the civic Cassandras, our present suburban structure shows no sign of general collapse.

If we are to change the quality of urban life, it will be because we choose hard work and hard choices, because we choose to experiment and to take risks.

This I understand to be the commitment of Urban America. This is certainly the commitment of Secretary Weaver and the Administration, within proper limits of national authority.

"Those who came to this land", President Johnson has reminded us, "sought to build more than just a new country. They sought a new world....Let us from this moment begin our work so that in the future men will look back and say: It was then, after a long and weary way, that man turned the exploits of his genius to the full enrichment of his life".

Remarks of PHILIP I. EMMER

before

THE NATIONAL COMMISSION ON URBAN PROBLEMS

Honorable PAUL H. DOUGLAS, Chairman

Atlanta, Georgia July 21, 1967

Senator Douglas and honored members of the National Commission on Urban Problems, it is a pleasure for me to appear before you today. I hope that I may contribute in some small part to the answers you are seeking in these hearings.

I will separate my comments into three sections. First, I will address myself to the specific questions that were asked of me in the letter of July 5, 1967, from Senator Douglas; second, there are some remarks to be made about our industry and the agencies that control it; and last, some ideas that have occurred or have been suggested to me from time to time over the past seven years. In this latter respect, I am indebted to many people, but to none more than Gloria B. Richards, who has worked closely with me for the past four years on a Demonstration Program conducted for HUD, and who happens to be here today. I shall start with your questions.

HOW FAR HAVE WE BEEN ABLE TO REDUCE COSTS AND BY WHAT METHOD?

Our lowest costs have always occurred because of the traditional reasons, and when our volume was highest so that we could take advantage of quantity purchasing, more efficient manpower and lower unit overhead. There have been few other substantial methods by which costs have been reduced. On the relatively rare occasions when cost reduction techniques appeared feasible, there was always some bureaucracy standing in the way of performance.

In recent years, with full employment or, more accurately, labor shortages, and plenty of business for all, suppliers and subcontractors have become increasingly independent; and rather than cost reduction, I have seen a rather alarming increase in costs.

ARE THERE ANY ESPECIALLY PROMISING ROUTES TOWARD COST REDUCTION THAT OUGHT TO BE PURSUED--FOR EXAMPLE, THROUGH NEW TECHNIQUES, BUILDING CODE MODERNIZATION, ETC.?

My observations do not indicate a great deal of hope for cost reduction through technology, although we will certainly be able to live in a more satisfactory physical environment. For example, recent improvements in sound conditioning for apartment construction will help people live better, but such improvements cost more, not less.

Most emphatically, though, there are very substantial cost reductions available through building code modernization. One example with which I am currently confronted: the wiring necessary in a rent supplement project in Gainesville, Florida, costs substantially more than what would be required in single-family homes because of building code requirements on conduit which are not necessary in single-family construction. Wiring is available that can be installed safely without conduit and consideration can be made for future needs which could relieve the necessities of conduit. The extra cost in my project is about 30 to 40 thousand dollars which could be spent more beneficially elsewhere.

HOW WOULD YOU EVALUATE THE POTENTIAL--AS WELL AS THE LIMITS--FOR HOME OWNERSHIP AMONG LOWER-INCOME FAMILIES?

The potential is very large. Even after excluding the elderly and ill, those in broken homes without stable or sufficient income and, I guess, most of the people of low- and moderate-income in the large cities, there are still hundreds of thousands, probably millions, in the rest of the country who are possible home owners.

As to whether or not these families can and will make their way, it is my belief that a very large percentage of them will respond presently, and others will reach this level of maturity with the passage of the next few years and the natural leveling action that will take place in the areas of education, job opportunities and the like.

The greatest deterrent to reaching potential homeowners now is the method by which FHA evaluates credit risks. When it becomes commonly known in an area that people are turned down, others resign themselves to the same fate and often don't even make the attempt. Encouraging and arousing low-income families, and keeping their enthusiasm hot is a psychological technique that cannot stand much negativism.

In the study made by Gloria Richards, and concurred in by me, there is indication that some of the FHA qualifying characteristics, while probably very good for middle-income families, do not have much application for those of lower-income. FHA tries to predict the results of six items and based on a rating system, tries to determine whether or not a potential purchaser will be a good mortgagor. I believe that only one of these items, Adequacy of Effective Income, is important. I do not think the others are.

As to the general results, we do not believe there is a substantially predictable pattern between their analyses and the resulting problem cases. About 75 to 80 percent of the failures in our subdivision have come from family disasters which include deaths and marital breakups. Those are generally difficult to predict in advance. In the other failures, there were not more than two or three which we could possibly foretell. Conversely, there are a substantial number of people whom we considered as potential problems that have turned out to be pretty remarkable as far as maintaining their mortgage payments and their home. There are some notable stories that we could tell to illustrate both the good and the bad but time does not allow for that.

While the percentage of foreclosures in our type of subdivision is well above the average, two important facts should be kept in mind: first, the kind of financial experiences these families have had previously and second, the alternatives if we do not encourage home ownership.

In the area of financial experience, loan companies are generally willing to wait a while longer for their money, especially since the interest is accruing at the very healthy rate of three percent per month. Merchants have allowed for the "13-month year," and others in their society have been good enough to require less than agreed-upon performance. So, the stringent regulations of the mortgage companies, Fanny Mae (FNMA) and FHA are the

first experiences these people have had with punctuality. It is necessary that we realize that it is going to be some time before we can anticipate the promptness expected of other segments of our society.

As to the alternatives if we do not encourage home ownership, we will see our problems and/or our costs increase with either the continued existence of expensive slums on the one hand, or equally expensive subsidized housing programs on the other. So that I am not misunderstood, let me make it clear that I realize full well the necessity of such programs, but I believe also there is a great number of families that are stuck in either slums or public housing, who, with a little help, can become taxpayers rather than tax users.

In summary, I believe we are missing a large number of potential home owners because of credit reporting agencies, FHA's mortgagor rating system, and the extremely substantial amount of investigative work required of the mortgagee or builder to prepare the case. Later, I will make suggestions to alleviate some of these problems but for now I hope this answers your questions as to the potential of the market.

WHAT ARE THE CREDIT PROBLEMS AND HOW CAN THEY BE MITIGATED?

Credit problems often come from credit reports. Our experience indicates that Credit Bureaus are often staffed with poorly trained help, generally not competent to make decisions which will affect the future of an entire family. Often such people are prejudiced against minority group families and, when possible, will downgrade their reports. One of the most flagrant problems of credit reports is that derogatory information from years back is maintained while good information is dropped. These items weigh heavily against the potential home owner.

It is no revelation to anyone here that the low-income family, especially the minority family, has lived in a society far different than the balance of our citizens. The small loan companies are a way of life to these people and so too are the loan sharks, high-cost installment purchases, and loans from employers, which make for empty pay envelopes at week's end. They buy poor quality furniture with incredible markups. It seems that all the used cars they purchase have transmission problems. When they buy such a car and find they have major repairs, they either return the car to the lot or have it picked up. The vendor has his down payment and car and the purchaser has a collection account or a judgment, which will forever remain on the credit report. The people who specialize in this market recognize and disregard these credit report comments but FHA does not.

A typical credit problem: In 1961 I took a small deposit and ordered a credit report. The woman had worked for a short time on a job and she had evidently been discharged. The credit report said, "The wife was employed as a maid in a private home but was discharged for dishonesty." I questioned the woman about this and she denied that this was the case. We did not go through with the sale at the time but more than two years later they made another try. The wife had been working on another job for almost two years. We ordered another credit report which correctly reflected her current employment but also said, "His wife was formerly employed as a maid but

was discharged because of dishonesty." A few months ago another report was run on this family and the same comment was there. This woman has now had ten years of employment history, and she is and will forever be plagued by a three-week experience which may or may not have been true, and which nobody bothered to ask her about.

Problems such as these can't be mitigated with the reports we use, but it should be realized that these are not unusual occurrences and should be considered in proper context. Had this been a middle-income family, it is likely that the employee would have had a chance to respond to the charge. It is examples such as these, and I could give you dozens of them, that convince me that credit reports may not fully serve their function.

SOME THINGS THAT CONCERN ME

I have attempted to answer your specific questions and now I would like to add a few additional remarks.

1. In an attempt to solve our low-income housing problems, I can't help but feel that there are too many methods of subsidization being devised; that they are done more for political and public relation reasons than for practicality. They tend to confuse those who do the work, add to the tremendous amount of paperwork required, and create additional costs. Since the name of the game is "subsidy," I believe it would be beneficial to restrict the numbers and types of programs used.

2. In furtherance of this thought, I would like to see you study the rationale of ownership by non-profit groups, rather than by government bodies or profit-motivated companies. From what I have seen and heard, I have some doubts about the not-for-profit groups being the best vehicle for these programs.

3. We have done a great deal to subsidize renters, which may mean that we are encouraging "non-ownership." Home ownership does help to create good citizens and I think emphasis should be given toward encouraging it. There are some ways available to us now to do this which will be mentioned later.

4. One of the nut-and-bolt, everyday-type problems which discourages home builders is the necessity of running the same obstacle course twice while qualifying home buyers. There are many occasions when FHA has approved a home buyer only to have FNMA reject the same family. Sometimes it is hard to believe that these two agencies are members of the same government, much less the same Department. It is my understanding that Congress instructed FNMA to buy certificated 221(d)(2) mortgages without further qualification of the buyer after FHA approval, but FNMA chose to rely upon other regulations which gave her an out. I have the greatest respect for those who have guided FNMA both in Washington and here in Atlanta and I know that people like Mr. Stan Baughman and Mr. Frank Greer, head of the Atlanta FNMA office for many years, are dedicated public servants interested only in doing their job well.

Nevertheless, such policies as the one mentioned do not always contribute to solution of our low-income housing problems.

5. During the summer of 1965, FHA saw fit to eliminate the 40-year provision of the 221(d)(2) program, and make mortgages no longer than 30 years. For a family purchasing a $10,000 home, this increased the mortgage payment by about $5 to $6 per month and the necessary income by $20 to $25 per month. Or, stated another way, it had the effect of eliminating a bedroom from a home they could afford.

   Additionally, the three interest rate increases which took place during 1966 practically finished off the low-income sales market; these increases costing approximately $5 more per month on a $10,000 house.

6. Substantial local ad valorem tax increases throughout the country, and especially significant in Florida due to a change in assessment practices, were an effective coup de grâce. The mortgage term, the interest increase, and the local taxes, taken together with increased costs of production, have boosted the price of home ownership from $25 to $35 a month in the past four or five years so that a home on which the monthly payments were once about $55 are now $85--an astonishing rise of more than fifty percent.

7. Recently I have been working with FHA on a Rent Supplement Project and with our Local Housing Authority on a Turnkey project. For Gainesville, I thought a density of about ten units per acre would be ideal. Yet, FHA, following what they interpret as the intent of Congress, has required me to plan about 16 units per acre. On the other hand, the Local Housing Authority talks in terms of about five units per acre. They are both concerned with the same kind of people in the same city at the same time with the same problems, motivations, and so forth. I would like the record to be clear that I am criticizing neither the local FHA nor the Housing Authority people, both of whom are doing their best. Obviously though, they can't both be right and I am led to conclude that the directives, instructions, and legislation from which they work have to be the cause of the differences. This is one of many variances that exist all down the line and I think that some attempt should be made to resolve them. I do not mean that we should strive for uniformity for uniformity's sake, but rather, to reach the best solutions.

8. When an enthusiastic effort is made to house low-income families through home ownership, there has got to be a number of errors, and so I think it would be well if we were able to devise ways to reduce the cost of mortgage foreclosure and resale procedures. Several possibilities suggest themselves to me, and I would like to recommend that you explore further in this area. It is my understanding from Assistant Secretary Brownstein and his aides that the costs involved in the foreclosure and resale of a $10,000 home are approximately $3,000. Personal observation indicates that some of this cost can easily be eliminated.

9. I think an attempt should be made to cut down the rules, regulations, requirements, forms, conferences, and paper work necessary in the various housing programs. These things create additional cost and confusion,

and I believe that in the long run they cost more than they save. Recently, FHA required that builders keep a special bank account for customers' deposits. I don't believe that an insurance agency has the right to make that kind of demand. They have created an extra bookkeeping procedure; and, the guys who are going to steal deposit moneys aren't going to be stopped by this requirement.

Hopefully, it appears that FHA and HAA are taking steps in the right direction. Signs of it are apparent in the new FHA multi-family processing techniques and in the Turnkey program of HAA.

RECOMMENDATIONS

A. AS TO CONSTRUCTION COST REDUCTIONS:

1. Building codes must be modernized.

2. Labor unions must be convinced that more productivity, rather than less, is in the best interests of everyone.

3. There should be a very substantial training program to create skilled construction workers. It is ridiculous for the existence of an overabundance of unemployed Negroes and a shortage of manpower. I might mention here that I am dead set against "sweat equity."

4. Encourage local communities to reconsider Zoning and Land Development Ordinances, and request that local planners lead the way.

B. AS TO MORTGAGE CREDIT:

1. A new system of analyzing low-income people should be introduced. This system should include personal interviews when necessary.

2. In mortgage credit analysis, FHA should give primary consideration to family income and motivation and very little consideration to other facets that are now considered.

3. Some of the money that is expended in OEO-type programs should be spent among potential home owners. When a family indicates a desire to buy a home, it should be referred to a service that will help them with budgeting, debt elimination, job improvement, etc. Our experience doing exactly this kind of work shows it to be moderately effective.

4. The differences in standards between FHA and FNMA should be resolved so that when a mortgage loan is approved by FHA, it will be accepted by FNMA.

C. AS TO ENCOURAGING HOME OWNERSHIP:

1. Local communities should be sold on the idea that a partial tax abatement system for low-income families who are buying their own homes will produce more revenue than either public housing or slums.

2. Make available to potential home owners some of the same advantages that are given to renters. If we believe in the three percent interest rate, try using it with some of the "upward mobile" of our nation.

3. A lease/option program provided for in the Housing Act of 1965 has been killed by FHA because, I believe, it is considered unworkable. This program has strong possibilities and I would recommend its use.

4. Consider once again the 40-year mortgage specifically for Section 221(d)(2) cases.

5. Consider a flexible mortgage payment schedule in which a family that misses a payment has an opportunity for restructuring their mortgage. This would prevent an awful lot of foreclosures and the attendant costs to both the government and the families. Present forebearance procedures are not satisfactory and it is quite impossible for a family that falls behind to ever catch up again.

6. A period of stress arises during the first one or two years of home ownership. Counseling and guidance programs should be made available to home owners who once again may have problems with budgeting and other circumstances surrounding a new way of life. These services should certainly include family planning and marriage counseling as well as economic advice.

D. AS TO IMPROVING HOUSING AGENCY PROCEDURES:

1. There should be developed some standards of what we really want for low-income families. Should we have a density of five units per acre, or 16 units per acre or something in between? Is it better for interior walls to be plastered or should they be concrete block? Dozens of questions like these need resolution.

2. FHA should reconsider that in its basic function of insuring mortgage loans, they have become engulfed in administrative red tape. Perhaps an outside consulting firm could help eliminate unnecessary regulations and simplify the ones that must exist. Other housing agencies should be encouraged to do the same. To the credit of FHA, I must repeat that there is evidence of movement in this direction.

3. Thought should be given to reducing the number of subsidized programs. There are some apparent solutions suggested in the new Turnkey program where the building industry can produce housing at a normal profit. At the same time, there should be a re-examination of the part that non-profit organizations should play in housing.

4. The entire financing picture should be examined. Discounts on construction loans and permanent mortgages are paid with the same green dollars as other expenses, and yet, they are often not considered in cost analysis.

5. A study should be conducted with the aim of reducing the cost of foreclosure. This would produce very substantive results.

AND IN CONCLUSION

I think that the most positive step made in the direction of solving the type of problems that we have was the creation of this Commission and the appointment to it of such distinguished citizens. This is the most encouraging advance made since I have been a member of this industry and I trust your recommendations will be well received by and most beneficial to the entire nation.

Appearing before you has been a most satisfactory and exciting experience for me. I wish to thank you for your attention.

'New Town' Trials

A Planned Community In Virginia Is Forced To Change Its Direction

Gulf Oil, New Boss in Reston, To Stress Tradition More In Bid to Lift Home Sales

Urban Affairs

Can Income Levels Be Mixed?

By MONROE W. KARMIN
Staff Reporter of THE WALL STREET JOURNAL

RESTON, Va.—This dream town that by 1980 was supposed to be home for 75,000 residents happily living, working and playing together amid glamorous surroundings is about to be yanked abruptly back to earth.

The yank comes from hard-headed Gulf Oil Corp.; to save its $15 million investment in Reston, Gulf last month took control of this pioneer but laggard "New Town" from Robert E. Simon, the idealistic New York real estate entrepreneur whose vision launched development here. Now the company wants to make price, design and other changes that will bring more residents to Reston.

At present, Mr. Simon's six-year-old dream, hidden in the Virginia countryside 18 miles northwest of Washington, D.C., is little more then a debt-laden lightly populated (2,700 residents) display of contemporary architecture. And Mr. Simon now holds a flattering corporate title (chairman of the Gulf subsidiary that runs Reston) but has a muted voice in the affairs of the New Town.

Gulf's new man-in-charge is Robert H. Ryan, a Pittsburgh real estate consultant who has had New Town experience in Arizona. What Mr. Ryan does with Mr. Simon's project will hold wide significance for the burgeoning New Town trend in America—a trend that has captured the fancy of many architects, urban planners and government officials, but, in at least some instances, is stumbling on the rocks of economics.

A Dollars-and-Cents Man

Mr. Ryan is a dollars-and-cents man. "Economic feasibility must be a part of good planning and good design," he declares. To create a New Town that succeeds economically as well as architecturally, he insists, "you have to listen to the market." Though his soundings so far have been preliminary, here's what Mr. Ryan foresees for Reston:

Design—The modern row-style town house now prevalent here has not attracted buyers in droves. Hence, traditional architecture will make a comeback at Reston. So will the detached house, which up to now has been assigned a second-class "typical suburbia" rating by Reston planners. An in-between model, a detached town house called a "patio house," will be introduced. The attached town house in a countrified setting, says Mr. Ryan, "is ahead of its time."

Price—The emphasis on community amenities and architectural innovation has made Reston an expensive place in which to buy;

At present, Mr. Simon's six-year-old dream, hidden in the Virginia countryside 18 miles northwest of Washington, D.C., is little more then a debt-laden lightly populated (2,700 residents) display of contemporary architecture. And Mr. Simon now holds a flattering corporate title (chairman of the Gulf subsidiary that runs Reston) but has a muted voice in the affairs of the New Town.

Gulf's new man-in-charge is Robert H. Ryan, a Pittsburgh real estate consultant who has had New Town experience in Arizona. What Mr. Ryan does with Mr. Simon's project will hold wide significance for the burgeoning New Town trend in America—a trend that has captured the fancy of many architects, urban planners and government officials, but, in at least some instances, is stumbling on the rocks of economics.

A Dollars-and-Cents Man

Mr. Ryan is a dollars-and-cents man. "Economic feasibility must be a part of good planning and good design," he declares. To create a New Town that succeeds economically as well as architecturally, he insists, "you have to listen to the market." Though his soundings so far have been preliminary, here's what Mr. Ryan foresees for Reston:

Design—The modern row-style town house now prevalent here has not attracted buyers in droves. Hence, traditional architecture will make a comeback at Reston. So will the detached house, which up to now has been assigned a second-class "typical suburbia" rating by Reston planners. An in-between model, a detached town house called a "patio house," will be introduced. The attached town house in a countrified setting, says Mr. Ryan, "is ahead of its time."

Price—The emphasis on community amenities and architectural innovation has made Reston an expensive place in which to buy; town house prices range from about $35,000 to $45,000, and detached houses come even higher. So more dwelling units will be designed to sell for under $30,000. "I believe you can have good design for units in the high twenties," says Mr. Ryan. "There's nothing in Reston today that the average head of a family earning $7,500 a year can afford."

Income Mix—The Reston ideal has been to mix high-income families with lower-income families, so they will learn to live with each other. Though this may impress social planners, Mr. Ryan questions its appeal to home buyers. "I just don't know," he declares. "The American ethic for 200 years has been for income levels to live with their own kind."

Planning—Reston's promotional pitch from the beginning has stressed the advantages of a "planned" community. While this has attracted many sightseers and some home buyers, Mr. Ryan recognizes that the concept scares away many people who fear excessive discipline or controls. So the sales approach may soften the emphasis on planning. "Reston should offer choices and options to people," Mr. Ryan believes, "not regiment their lives."

A question now arising is whether these or other changes might mar Reston's planned beauty and individuality and result in something closer to the standard suburban subdivision. So far the residents themselves, though sensing that changes are coming, don't know quite what to expect. But many of them do express hope that the new management won't upset the basic concept of a planned community with clusters of houses and stretches of green that avoid suburban sprawl.

No 'Subdivision Tract'

Mr. Ryan himself denies any intent to convert Reston into a "subdivision tract" and promises to preserve the community's basic character. He accepts the Simon "master plan" that envisions, eventually, seven village centers sprinkled over Reston's 7,400 acres with residents living in clusters of buildings surrounded by open space and recreational and cultural facilities.

But the new boss clearly is more concerned with pleasing potential home buyers than planners. "We're going to develop a marketing program," he pledges. "I've been trying to find out what Reston's marketing program is, and I can't."

Reston not only was Mr. Simon's dream, some sources claim, but also his personal "Erector Set" intended to reflect his own tastes more than to appeal to the public. The Urban Land Institute long has been interested in New Town progress, and its executive director, Max S. Wehrly, says: "Simon let himself fall into the hands of his architects and designers and made mistakes that a seasoned developer wouldn't have."

Tight Money a Problem

The Simon group of planners naturally doesn't see things that way at all. Because the "new town" concept was so advanced, they contend, most traditional sources of financing shied from backing Mr. Simon with huge sums. So, this argument runs, the developer had to scratch for money, a quest that was made even harder by the tight money markets of recent years. "He got caught in the tight money squeeze, that's all," says a former associate.

Whatever the reason, Mr. Simon has operated Reston on a financial shoestring, consider-

Please Turn to Page 12, Column 2

MS

10/13/67

'New Town' Trials: A Community In Virginia Forced to Change Course

Continued From Page One

ing the dimension of his dream. The slow sales pace aggravated the situation. Since it opened officially three years ago, Reston has managed to sell only 547 houses; officials say this is at least a year and a half behind expectations. Because the planners have held the building pace close to sales, however, few dwellings are standing vacant.

At one point in 1964, construction at Reston was on the verge of a shutdown. Then Gulf kept things going with its $15 million. John Hancock Mutual Life Insurance Co. also has chipped in $24 million, though it has assumed no management role. But with relatively little cash coming in, Reston now is saddled with a $45 million debt that costs $2.5 million a year in interest payments. "Every morning I wake up and think what am I going to do today about that debt," sighs Mr. Ryan.

His solution will be to try to boost sales as soon as possible. This year Reston expects to sell more than 360 homes, making 1967 its best sales year. But Mr. Ryan wants to lift this volume first to 500 units and then to 1,000 units a year.

The introduction of lower-priced homes will be a key tactic. At the moment, Reston is caught in a contradiction. It seeks to be "self-contained"—that is, to provide employment as well as housing for prospective residents. It has attracted industry; eight plants are located in Reston now with eight more on the way. Yet few of the 800 workers employed by the eight plants now in Reston have bought houses in the community because, as Mr. Ryan says, "there isn't anything in Reston they can afford."

Thus, the New Town must look to Washington, D.C., for most of its prospective home buyers. The obstacle of an 18-mile commute to the city is aggravated by the fact that there is no public transportation, and part of the automobile route twists over old, narrow roads.

A substantial acceleration in sales is recognized as a far-off goal that will require even more investment by Gulf. Reston's corporate reshuffling brought planning and construction to a halt. For the spring '68 selling season, Mr. Ryan says he'll have to "go with what I've got," meaning he'll complete what has been started at Reston. His own plans probably will begin to materialize the following year.

Offering 90% Mortgages

To carry them out, Gulf is pledging another $12 million to Reston, plus some other important help. It will make available to home buyers 90% mortgages, requiring down payments of only 10%—something Mr. Simon never was able to do; because Reston house prices were above FHA ceilings, he could not get Federal Housing Administration mortgage insurance. Gulf will do the trick without FHA.

For all his enthusiasm, the new Reston chief remains cautious about predictions. The Simon goal of 75,000 people living in Reston by 1980 is out. "I don't know where that came from," says Mr. Ryan, but he will not offer a new target. He says only that he expects the "gap between income and outgo" to continue for years.

Reston's problems are social as well as financial.

It's true most residents profess extreme happiness with their new community. Few "for sale" signs or vacancies are noticeable. Max Libman, a patent attorney who has lived here about two years, describes Reston as "tremendous." He says: "It's mostly the people; Reston has attracted an amazingly large group of like-minded people who are very congenial."

Nevertheless, there is disenchantment, whether it is the fault of Reston's planners or its residents. Dr. Simon Auster, a psychiatrist and director of the Fairfax-Falls Church mental health center, puts it this way:

"A lot of people come to Reston thinking it's perfect. If you move to a planned community expecting perfection, you are bound to be disappointed. Life just isn't like that."

Dr. Auster, who has advised Reston officials on various phases of planning, now is being consulted on the newest development to shock the New Town. Last summer a wave of vandalism hit Reston. Just the other day came the arrest of two residents on charges of possessing and selling marijuana.

Nobody is quite sure whether the vandalism is the work of Reston youths or jealous youngsters from nearby, less affluent Herndon. But Dr. Auster believes Reston's progeny are at least partly guilty, and he tends to blame parents who place too much faith in community facilities to raise their children.

"Parents in Reston have trouble setting their own limits for their kids," he suggests, "because they are of the liberal, permissive school."

Some parents blame the community for the problem. Though there is a recreation center for teen agers, as well as nursery schools, playgrounds and child-care centers for youngsters through age nine, the complaint is that there is nothing for children 9 to 13—a "planning gap."

Another target for complainers is the effort to bring Government-aided housing for low-income families to Reston. Community planners have long proposed to mold Reston into a racially and economically integrated community, and in recent months a new application for aid has been submitted to the Department of Housing and Urban Development. This step aroused a tremor of criticism; a letter-writer to the local newspaper warned that low-income housing would bring to Reston residents whose conduct is "usually dirty and deleterious." Other Restonites defend the concept of mixed-income levels living together.

Paying Fees

Some residents gripe over the extras they have to pay here. Besides their mortgage burdens, homeowners must pay an annual fee to have their yards cared for, plus another fee of $150 or more a year to maintain the common property surrounding their homes, plus additional fees for air-conditioning and recreational facilities.

Ted Duke, president of Home Owners Association here, says many residents "feel misled" by overeager Reston salesmen. In a statement echoed by others, he says, "I heard a salesman tell a customer the annual maintenance costs would be on the order of $100, which is about half of what it really is."

Businessmen operating here are far from elated. George Zacko, a dentist who serves as president of the Reston Business and Professional Association, grouses that "so far it hasn't been a bonanza for anybody." Reston's lone restaurant recently closed its doors for the second time; this fall another operator will try again.

Dr. Zacko is particularly disturbed because Reston residents don't seem to support their own business community. He figures local shoppers tend to turn elsewhere for two reasons: The relatively few stores here offer a far from complete line of merchandise, and the specialty shops here charge what he considers rather high prices. The dentist says that he and the local doctor "are the only ones who have benefited immediately because we have services that are in demand."

Some people apparently just can't stand a planned environment after they have lived in it awhile. "A planned community is very planned," gripes Mrs. Pauline Crews. "As a nonconformist, I have been horrified by the centralized trend." Last week she and her husband decided to leave Reston after the school year is finished, because "the cluster environment is too much of a strain for me."

Even Mr. Libman, who thinks Reston is "tremendous," has his grievances. Someone hurled a bicycle lock through his window, and he's certain the culprit was one of Reston's own. "The bicycle lock is a dead giveaway," he reasons. "It's our own kids, not outsiders."

Retail Sales Fell 3% From Previous Week

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON — Retail store sales last week totaled $6,026,000,000, down 3% from the preceding week but up 2% from the year-earlier week, the Commerce Department estimated.

The year-to-year gain trailed both the 4% average advance of the four most recent weeks and the 3% average weekly rise so far this year.

Durable goods sales, at $1,902,000,000, were off 1% from a year earlier and trailed the 4% four-week average advance. Nondurables volume, at $4,124,000,000, was up 3% from a year before, matching the average rise of the past

Belgium's largest bank, will purchase the 200,000 shares from current owners. Then the bank, plus Deutsche Bank A.G., Credit Suisse, and Lazard Freres et Cie of Paris, will underwrite the additional 850,000 shares and sell the two blocks publicly.

Besides the Class A shares, there are 4,158,270 Class B shares and 1,386,090 Class C shares, for a total of 6,930,450 shares outstanding. Solvay said it is seeking quotation of its stock on the Brussells and Antwerp exchanges and will seek listings on other exchanges in Europe.

The company, which kept its earnings figures secret as a partnership, reported sales in 1966 of $569,340,000 and net income of $32,740,000.

Solvay has heavy investments in foreign chemical companies, including more than 2,000,000 shares of Allied Chemical Corp., New York, which has 28,044,740 shares outstanding. It got that holding in the 19th Century when a predecessor of Allied traded its shares for a Solvay process of making soda ash.

The Belgian company also owns about 4,000,000 shares of Imperial Chemical Industries, Ltd., London.

Solvay, all told, has 57 affiliates in 14 countries.

Soss' 4th Period Net Rose Despite Lower Auto Sales

DETROIT—Soss Mfg. Co., with 40% of its volume in auto parts, has found a reduction in its automotive sales helped profit.

In the fourth quarter ended Aug. 31 the company reported net of $297,970, or 35 cents a share, up 28% from $233,638, or 27 cents a share, a year earlier. The profit gain came despite a 4% drop in sales to $5,815,601 from $6,042,887.

Per-share earnings for both periods are based on 854,326 shares outstanding following a 33 1-3% stock dividend in September.

Soss' net in fiscal 1967 rose 5% to $1,331,071, or $1.56 a share, from $1,261,970, or $1.48 a share, the year before, but sales declined 13% to $24,857,685 from $28,549,690.

Urban Observatory Decision for City Due

Atlanta hopes to learn this week that it will become the home of an "urban observatory"—a regional center for research into the basic problems of urban areas the country over.

Six of the nation's major cities are to be designated as observatory cities by the U.S. Department of Housing and Urban Development.

At this point, Atlanta is one of 10 cities under consideration by HUD. The others are Nashville, Albuquerque, Denver, Cleveland, Minneapolis, Baltimore, Detroit, Kansas City, and Milwaukee.

IF ATLANTA is chosen, its urban observatory will be a joint enterprise of the city government and Georgia State College.

Dr. Alex Lacy, dean of Georgia State's Department of General Studies, and Dan Sweat, aide to Mayor Ivan Allen, are to go to Washington Tuesday for a meeting of representatives of the competing cities.

A recommendation by the National League of Cities and final selection of the six observatory cities by HUD officials are to follow that meeting, presumably within the week.

Each urban observatory would conduct or sponsor research in such areas as governmental structure, land use, housing, urban renewal, education and law enforcement.

Each would become a "data bank," supplying to cities or towns in its region the products of its own research and those of the five other observatories.

ATLANTA'S SELECTION would bring an initial $100,000 from HUD and the U.S. Office of Education and eventually much more from private foundations, as well as from federal agencies.

The cost to the city would be about $30,000 the first year. Among other things, the city would have to hire the person who will serve as administrator of the observatory.

Other staffing would be by Georgia State. Georgia State, as the plan goes, would call on other colleges and universities in the area for expert assistance, where needed or desirable.

THE LIBRARY OF URBAN AFFAIRS

Art

We invite you to accept
a trial membership in

THE LIBRARY OF URBAN AFFAIRS

and to select any three of the important books
on urban problems, urban design, urban management
listed in the enclosed brochure
(values to $47.40)

all for only $3.95

Dear Reader:

Can our cities survive?

At a time of anarchic violence and racial antagonisms, desperate overcrowding and accelerated decay of city services, bankrupt municipal treasuries and the increasingly hysterical demands by the dispossessed for a share in the good life, optimistic answers aren't easy.

There are times when hope seems the last blind refuge of fools and dreamers, when "turning off" seems the only sane point of view, when repression, patchwork and compromise seem to be the only practical treatment.

And yet...

-- Perhaps the dreamers are the truly practical men and women ...

-- Perhaps daring experiments are already pointing the way to difficult but workable solutions ...

-- Perhaps the basic problems are not those which have been given the most publicity, but go deeper and require different approaches ...

We invite you to join THE LIBRARY OF URBAN AFFAIRS and find out.

WHAT IS THE LIBRARY OF URBAN AFFAIRS?

(over, please)

THE LIBRARY OF URBAN AFFAIRS is a book club. A most unusual one.

By mass standards, it's small. By anybody's standards, it's select. In reputation and influence, it's enormous.

It is devoted to discovering the multi-layered truth about today's urban crisis. To discovering and exposing facts, however unpopular those facts may be. To reporting the experiments, the solutions, the new methods, the thinking of everyone whose work and opinion merits a hearing. It is devoted to giving you, as a member, the total picture of what goes on.

Our members include nationally (and internationally) known leaders in the fields of planning, sociology, government, ecology, social work, economics, history, and architecture. You would undoubtedly recognize many of their names and, we think, be proud to be numbered among them.

These are their reasons for membership in THE LIBRARY OF URBAN AFFAIRS:

* it's an essential service that keeps them totally informed on the best thinking, reporting, and analysis in this enormously important field.

* it saves them time.

* it saves them money.

WHAT DOES THE LIBRARY OFFER?

Probably the best list of books on all aspects of urbanology you can find anywhere. A valuable, eclectic, endlessly useful library for everyone interested in urban affairs. Books on:

* architecture, design and the new uses of space by outstanding authorities: The American Institute of Architects, Paolo Soleri, Siegfried Giedion, Renato Severino, Ian MacHarg, Le Corbusier.

* ecology: what we are doing, what we aren't, what's practical and possible to do, by the people who are doing it (and not just talking about it).

* urban sociology: views, plans, practice -- a world of exciting ideas and lively (sometimes bitter) experience.

* poverty, drugs, minorities: what you want to know and need to know, without sentimentalizing, agonizing or special pleading.

* planning: methods, policies, processes -- by imaginative and authoritative personalities in this highly select (but growing) science.

* more: every aspect of the urban scene that is relevant, unusual, instructive and of more than passing interest.

AND IT IS NO ACCIDENT THAT...

the book selection, month after month, maintains such a steady standard of excellence.

Our editors sift through hundreds of manuscripts from all publishers. Only those that have something important to communicate -- and do it well -- are considered worth including in THE LIBRARY OF URBAN AFFAIRS. And worth being considered by you.

In addition, we make it easy for you to decide whether or not you want a given book.

Every selection is carefully and completely reviewed. In this way, you can conveniently choose the books -- and only the books -- you want.

HOW DOES THE LIBRARY OF URBAN AFFAIRS SAVE YOU MONEY?

All books are offered to our members at generous discounts. Savings range up to 30% off publishers' prices -- occasionally more.

For every four books you buy, you may choose a bonus book. One you're probably thinking of buying anyway. All of which adds up to considerable savings on books you will want to keep for your own personal library.

SHOULD YOU JOIN?

Only you can answer that, of course. But if you are interested in any aspect of urban affairs, The Library is your best and most inexpensive source.

And because we believe you are interested, we've gone to considerable length to make our invitation attractive.

TAKE ANY THREE BOOKS
--worth up to $47.40--
ALL FOR ONLY $3.95
if you join now and agree to accept only 3 more selections or alternates during the coming year

Look through the enclosed brochure. Then select any three books (values range up to $47.40) -- all for only $3.95.

These three books will count as your first selection toward a bonus book.

You need buy as few as three more books at reduced member prices during the next twelve months. Since we normally offer from 70 to 100 books during the year, you should have no trouble finding three you will be happy to own.

TAKE NO RISK -- EXAMINE BOOKS FREE FOR 10 DAYS

To receive your first three books simply return the enclosed membership card (no postage necessary) or fill in the coupon on the brochure. We will send your books promptly.

Then examine the books for 10 days at our expense. If you are not thoroughly pleased, simply return the books. You pay nothing, owe nothing. Should you decide to keep them, you will be billed for your three selections at only $3.95, plus a small shipping and handling charge.

We believe (and the loyalty and reputation of our membership proves it) that you can make no more important and thoughtful decision than to join THE LIBRARY OF URBAN AFFAIRS now.

We suggest that you take advantage of this unusual offer, and return the postpaid membership card today.

Sincerely yours,

Harold S. Ingman

for attitudinal changes that might result from various mixes of these two sets of factors. In other words, there is a physical and intellectual predisposition that each man brings with him, a new orientation he acquires from his organizational setting, and finally, a resultant attitudinal set which, though ever-changing and fluid, becomes a morale measure and a feedback into the system. Our pilot study, however, was unable to do this type of sifting.

9. Based on 1960 census figures for seven census tracts nearest to each unit. "Type neighborhood" is based on the researchers' assessment.

10. Using Spearman's Coefficient of Correlation "r" for rank-order distributions.

11. To compare inputs with outputs, we used those grouped variables which showed singificant intercorrelations among themselves, namely, the composite book variables, the composite personnel variables, as well as a composite of demographic variables. As a further test, we selected certain key single item inputs and examined these in relation to our major output item "user satisfaction."

THE SOCIAL CONTEXT OF URBAN PLANNING

MAURICE BROADY

A SOCIOLOGIST rising to address a conference on urban planning cannot these days count upon as favorable a reception as he might have had in the early fifties. For the hopes which many planners then placed in sociology have been shattered by the insignificance of much sociological inquiry claiming to have a bearing on planning problems and by the inability of academic sociologists to adapt themselves to the demands of planning practice. Sociological studies, Peter Cowan (1965-1966: 6) tells us, are therefore "slightly in disfavor among architects".

Even in architectural circles here in Newcastle my agents also report some doubt about the value of my trade. Indeed, in the days of our Liverpool tutelage, Professor Brenikov was apt to chide sociologists with Miltonic eloquence: "The hungry sheep look up, and are not fed." And it would, I fear, be a rash sociologist who could claim that the reproach was no longer valid.

We could, of course, rightly argue that until recently very few sociologists were employed in Britain,[1] and that the lack of both opportunity and financial support has inhibited their contribution to planning. Such an argument, however, would miss the main point that planners and sociologists have very different views of time.

The academic sociologist—and most of us up till now have been employed in academic institutions—can perhaps afford the luxury of non-

committment. For all our interest in the idea of scientific prediction, we hesitate to estimate, let alone predict, the future.[2] The planner, on the other hand, *has* to commit himself *now*, on whatever limited evidence he can scratch together, to anticipations about future circumstances; and I believe that sociologists will have to come off their scientific hobbyhorse and be willing to risk their necks in making recommendations, using the best available theory and evidence, and even committing themselves to value judgments, if they are to contribute in any effective way to the solution of planning problems.[3]

The planner, also, needs to rethink his ideas about sociology. Though the situation is changing, for most planners in my experience, sociology is represented by Patrick Geddes on the one side and Lewis Mumford on the other. Mumford supports them in the view that sociology is a general social philosophy, while from Geddes they take the perniciously simple doctrine of "survey before plan". The two elements are related by the naive idea that a survey will establish the facts which will tell the planner exactly how to achieve the social goals which he sets for his town. As a result, sociology comes to be regarded as another kind of market research and the sociologist's contribution to briefing and design is so restricted as to rule out any more theoretically based analysis.

What this view ignores is that between fact-finding and action lies theory. In briefing a military commander, an intelligence officer will not only report on facts assembled by interrogation and translation of documents; he will also assess the validity of the data he has collected and use it in order to put forward an interpretation or theory about the enemy's dispositions and intentions. The same procedure is also called for in planning.

Indeed, it is upon such theorizing, as well as upon our knowledge of facts, that our ability to predict depends. Our conviction, for example, that the sun will rise tomorrow over the North Sea and not over the Pennines depends not only upon the repetition of accurate empirical observations of this particular phenomenon, but also upon our having a valid theory of celestial mechanics to explain why the sun never lets us down. In my view, the major intellectual reason for the odd love-hate relationship that planners and sociologists have sustained these past 20 years is that there has been too much simple fact-finding and too little theoretical argument. I turn, therefore, to consider the social context of urban planning with this in mind and out of the conviction, so neatly expressed by the psychologist, Kurt Lewin, that "there is nothing more practical than a good theory."

BEYOND ARCHITECTURAL DETERMINISM

Now, of course, planners do make use of social theory, though I very much doubt whether they realize that they are doing so. They are inclined to subscribe to a belief in what I call "architectural determinism" (Broady, 1966c).[4] This theory finds its most enthusiastic expression in comments such as Catherine Bauer's that "the tenants' entire social life may hang on the smallest whim of the greenest draftsman" (quoted in Rosow, 1961). Formally stated, it holds that physical structures determine social behavior; that the relationship between these two factors is a one-way relationship in which social behavior is the dependent variable; and that the effect of good physical design on social behavior will be beneficial and not adverse.

This last point is the clue which helps to explain why planners adopt precisely this form of social theory. For planners, at heart, are social idealists, who believe that their work will help to ameliorate society and even redeem mankind.[5] An architect-planner, however, is technically qualified only in the design of the material environment. What could be more natural than for him to suppose that the social virtues which his idealism leads him to seek can be promoted by the design of the physical environment which it is uniquely in his power to modify?

The trouble with this theory is that it is not a very good one. Like other varieties of popular determinism, it merely saves the layman the bother of observing accurately and thinking clearly. True, bad design can inhibit and good design can make it that much easier for people to do what they wish, or are obliged to do. But except in the limiting case it cannot, in my judgment, *determine* social activity.

I realize well enough that, in opening my argument like this, I leave myself wide open to the charge of being merely negatively critical of ideas put forward by planners.[6] In the 1950's particularly, sociologists seemed to spend all their time showing how invalid the neighborhood unit was, without ever facing the problem of what they could say that would contribute something positive to planning problems. And since I feel the sting of that charge, it is in this more positive direction that I now wish to move.

The path along which the sociology of planning needs to go has already been pioneered by industrial sociology. This field has developed, in part, out of the desire to improve industrial productivity, much as planning seeks to improve our social life. But the study of the social organization of industry has been better financed than research into the social aspects of

planning, and our understanding of industrial organization is, therefore, a good deal more advanced. It has gone through three major phases.[7] In the first phase, one can clearly discern the industrial equivalent or architectural determinism. In the classical theory of industrial organization (embodied in F. W. Taylor's concept of "scientific management"), the worker was regarded as a mere appendage to the machine and his efforts were thought to be determined by purely economic incentives. The analogy with an architectural theory which conceives social well-being as a direct product of good physical design, is, I think, apparent. The second phase, which began in the late 1930's with the work of Elton Mayo, was marked by the realization that productivity was also influenced by the pattern of social relationships within working groups on the shop floor. The interest in fostering good human relations in industry to which this led in the thirties and forties antedates by 30 years the planning profession's current concern with citizen participation. Since then, however, our theory has extended still further to take account of the wider structure of social organization—the pattern of conflict between workers and management, for instance—whose strains have frequently negated management's efforts to improve human relations within their firms. Industrial sociology has thus progressed from a narrow and very pragmatic perspective to a broader and more theoretically cogent view of industrial organization. In so doing, it has enabled us to understand, and thus to think and act more rationally about industrial problems. I refer to it here, however, to support my contention that a viable sociology of planning needs theoretical depth as well as factual content.

A THEORETICAL APPROACH TO THE SOCIOLOGY OF PLANNING

But to the brass tacks of physical planning. The kind of planning problems with which sociologists are asked to deal are usually very specific. Typically, the sociologist in a design team is expected to help prepare schedules of accommodation (Gutman, 1955-1956: 57, 63) or to undertake empirical studies of how people use and react to different kinds of housing or layout. (see, for example, Hole and Attenburrow, 1966). Such studies are defined specifically in terms of their utility for physical design; they are highly empirical and they lack theoretical sophistication. Until quite recently, the method being used to determine the provision of shops in new developments shared these characteristics. Planning reports of the postwar period contained various statements of the number of

shops that could be provided in relation to a given population (see Retailer's Advisory Committee, 1947; Manchester, City of, 1945: 137-138, 250-251; Ford and Thomas, 1953); and it was in such terms that the problem was being defined, less than ten years ago, when Cumbernauld Development Corporation posed the question to three of us at Glasgow University. Our most important contribution to the practical elucidation of the problem was to reformulate it, to place it in a different theoretical context. Listen to the conceptual change that this entailed. Instead of thinking simply of the crude ratio of shops to population, and what, anyway, was meant by "a shop?"—we sought to establish the floor area that could be used for retail trade and to relate this to population through the intervening variable of annual turnover. By rethinking the problem in this way, we were able to develop a much more viable and rational approach (Diamond and Gibb, 1962).

Much more could be done along similar lines to make the sociologist's contribution more relevant to problems of physical design. Perhaps the most impressive pieces of sociological thinking in this field was the set of projections of housing provision (see London County Council, 1961) worked out for the abortive Hook New Town which were based upon the theoretical analysis done by Glass and Davidson (1951) over ten years before. More work of this kind is possible. For example, all manner of assumptions are presently made in the planning of new towns about the pattern of rents, the size of households, the proportion of dwellings that should be built for sale, etc. I suspect that such decisions are presently made either by hunch, by ministerial fiat or by a vague look at what other towns are doing. The disadvantages of such procedures are that they are not fully rational, are not systematically derived from the best available evidence, and are often not clearly integrated with other aspects of development policy. These weaknesses could be avoided if we began, for instance, with the theoretical proposition that many factors in housing demand are related to social class and that this will vary with different economic structures. Then, if one could establish what both an ideal and a probable industrial portfolio would be for a new town, inferences could be made about the occupational-class patterns that these different portfolios would entail, thus, about the kind of housing that would broadly match that particular economic structure.

The exploration of such possibilities is best encouraged by the opportunity of applying sociological ideas in the context of urban development schemes, but, such opportunities for the sociologist are few and far between. Such procedures are unlikely to produce any final answers that

would not need to be revised in the light of subsequent experience; but, we no longer expect that of any planning forecast. No—the real value of such methods is that they would make it possible to base certain kinds of planning decisions more validly upon evidence and clearly stated assumptions, and permit a greater control of policy by the regular review of forecasts in the light of actual, ongoing experience. At the very least, as the chief architect of a Northern new town recently told me, the analysis which I have just proposed would have afforded him a very useful tool in arguing against the limited range of housing which his committee, against his better judgment, had insisted upon.

SOCIAL ORGANIZATION AND URBAN PLANNING

But we can go one step further. We tend to think of planning at the moment as primarily a matter of physical design and land use. In recent years, however, we have come to see that physical planning is also closely related to economic planning. The Americans, however, have already jumped beyond this to the view recently spelled out by Denis O'Harrow of the American Society of Planning Officials, who said, "Nowadays we are heading for a troika in which, on a equal basis with land use planning . . . we shall have social planning and economic planning."

The point has been pressed home upon the Americans by their experience both at home and in overseas development work. In the United States, the urban renewal projects carried out under the 1954 Housing Act served as "a catalyst in highlighting problems that most Americans had either not known or preferred to ignore." In particular, they brought home the close connection which existed between physical and social blight, and subsequently led to the setting up of the Federal Housing and Urban Development Department in 1965 and to the opinion of Robert Weaver, its secretary, that "today urban renewal must deal with human renewal as well as physical renewal." Such a conclusion has grown directly out of an urban situation which has involved a scale of physical degradation more serious than we in Britain have faced for 50 years, which has been aggravated by social schism more explosive than anything that our own class system could have generated, and which is being tackled with political and legislative apparatus often much weaker than that with which we in Britain were tackling the problems of the urban environment in the second half of the nineteenth century.

The significance of social factors has been equally emphasized by the American experience of economic planning in underdeveloped countries. Everett Hagen (1964) posed a question which, as he tells us, had puzzled him during the two years he spent as economic advisor to the Burmese Government. Why was it, he asked, that notwithstanding the official desire for economic development, resources were not used more effectively to that end? To answer it, he was obliged to study how different kinds of social structure influenced personality patterns in ways that were favourable or inimical to economic development. Much the same kind of consideration underpins John Friedmann's (unpub.) interest in the social context of planning, the importance of which derives, as he sees it, "from the observation that the manner of deciding will influence what it is that one *can* decide and is thus bound to influence the results of the decision." In our own context, I believe that the phenomenal growth of sociology in public esteem during the last six or seven years has also been occasioned by an awareness that the retarded pace of the economic development in comparison with other European countries (which became clearly noticeable in the middle fifties) was less convincingly explained by reference to the difficulties of postwar reconstruction than to the possibility that our *social* institutions might well be maladapted to the exigencies of rapid economic growth.[8]

The effect of social organization on economic activity can best be illustrated by the Royal Institute of British Architects' report on *The Architect and his Office* (1962). This showed that there were two kinds of office. In one kind, managerial authority and design initiative were centralized in the hands of the principals, responsibility was not shared, and no attempt was made to maintain job continuity among the staff. In the other kind, the maximum responsibility was devolved, work was done in cooperative groups, and "discussions, meeting, criticisms, etc. . . . went on at all levels." Associated with these structural differences were different performance standards: standards of design and technical efficiency were generally higher in decentralized than in centralized offices and staff turnover was lower because of the "well-informed and democratic atmosphere" in which the staff worked, and the sense of responsibility which they shared for the work that was done. Similar findings have been reported by Burns and Stalker (1961), who demonstrated the greater appropriateness of a decentralized structure for technical innovation in industrial enterprises; and also by Revans (1964), who showed that the time taken by patients to recuperate after operations varied systematically with differences in patterns of communication among hospital staffs.

Has this organizational approach any value in urban planning? I believe that it has. At the micro-level, for example, there is now evidence to show that the attitude of residents to their houses and their satisfaction with them is not simply affected by the objective character of the dwelling; but also by whether it is owned or rented, and whether the residents have had a hand in building them.[9] On the larger scale, perhaps the most significant work, once again, is developing in America. Jane Jacob's (1964) analysis of the Greenwich Village sidewalk, for example, is an important illustration: the point that physical and social organization need to be considered together. In her address to the Royal Institute of British Architects earlier in the year, she continued in the same idiom by proposing an explanation of the economic vitality of cities in terms of the relationship between their internal and external economies, a theory which, she clearly believed, would further our understanding of how cities like Pittsburgh could once more be made economically viable (Jacobs, 1967). I was particularly impressed last year with the way in which this organizational approach was being used in the New Town of Columbia in Maryland (see Michael, 1964). The broad social objectives of this development were stated to be to encourage "the growth in human personality, character, and creativity" and to "increase the options for human development" (Rouse, 1963). We might be inclined to smile a little at this rather grandiose and somewhat utopian expression, of which we in Britain these days are so skeptical. Nevertheless, the working out of these ideas in a report on the planning of "social processes *as well as* physical facilities was most impressive" (Broady, 1967b). Indeed, the significance of this approach to urban development was illustrated by Michael Frayn (*The Observer,* November 27, 1966) who referred to the American city which went about economic development by establishing an art gallery and symphony orchestra in order to encourage distinguished scholars to come to the university, who were in turn expected to attract endowments and able students; thus—the real objective—to entice to the area industrialists with plants needing steady supplies of graduate labor. So that, as Frayn so succinctly put it, "a small outlay on Bach and borrowed Botticellis would bring in a big return in new business."

How little we know—in any systematic way—about the conditions of successful town development in modern Britain! Why was it, for instance, that Coventry seized while Southampton botched the opportunities for replanning immediately after the war? How can the resurgence of the Northeast be explained and how far can the experience be applied elsewhere? Why does Harlow, of all the Mark I new towns, appear to have the

most successful record of social and cultural development? Though particular individuals undoubtedly played an important role in this development, a distinctive pattern of social and administrative conditions also obtained in Harlow which seems to have been particularly favorable to individual enterprise. At all events, this is the hypothesis that is guiding the pilot investigation which I am organizing there in a few months' time. The factors which I think we shall find to have been relevant are: the sizeable and socially active middle class in Harlow; the significant role played by teachers in activating this middle class; the close relationship between these elements in the social structure and the local administrative agencies; and a local council sufficiently in tune with the life of the town and sympathetic towards its voluntary agencies to be willing to engage *their* efforts in its development. Other factors may, in the event, prove to have been more important, but that would in no way invalidate an inquiry from which, I would hope, it will be possible to gain some ideas about the conditions of effective social development in growing urban communities.

PLANNING THEORY AND SOCIAL INDETERMINACY

I am persuaded, as you can see, that sociological research can contribute more substantially than hitherto in the guidance of urban planning. On the one side, it can produce quantitative estimates of demand relating to physical provision, and I have suggested that it will do this the more effectively to the degree that such empirical estimates are rather more firmly rooted in theory. In the second place, I think we could find out a great deal more about the specifically social conditions that are conducive to desirable social results, particularly by the application of a kind of organizational theory to these problems. However, the question which we now need to consider is: how far *can* the future be predicted?

One can begin by observing that many architects and planners are beginning to adapt their practice to the awareness that, under modern conditions, social change takes place very quickly and that its direction is difficult to predict with any degree of precision. John Weeks (1963–1964: 85), for example, has pointed out that the architect's problem is that his building may be "sheltering an organization which has a rate of growth and change . . . so great that it makes its buildings obsolescent before they decay naturally." This leads him to the concept of an indeterminate architecture in which buildings are designed, as far as possible, on a duffel-coat principle in order to accommodate unanticipated changes of social func-

tion. The authors of the South Hampshire Study (1966: 9-10) also note that planning is becoming "less and less a matter of precise propositions committed to paper and more and more a matter of ideas and policies loosely assembled, under constant review, within which, every now and then, some project is seen to be as ready for execution as human judgment can pronounce."

These statements indicate a very substantial departure from the idea that the object of planning is to produce a kind of rational, utopian blueprint to which future developments will unequivocally conform. Such an idea is particularly congenial to architects or engineers accustomed to thinking in deterministic terms about the design of buildings or sewage systems. In its place, we are beginning to get a more sophisticated notion of what planning is about, which is, at once, less utopian and more realistic in its assumptions about the extent to which we can anticipate social change. In a particularly interesting article, Otto Koenigsberger (1964) has analyzed the reasons for this transition. His starting point is the dissatisfaction felt in Singapore with British planning in the period immediately after the war. Here was a plan based upon four years' intensive and highly professional work; a master plan "produced according to all the rules of the book," but one which had been invalidated within eight years of its completion by the facts of social change—by the fact, among others, that the increase of population had been in the order of 120,000 families per year. Master planning was clearly not adapted to conditions of rapid social change—and little wonder! For the idea of devising a master plan was worked out in Britain in the 1930's and bears the strong imprint of the period of stagnation in which it was conceived. The master plan was "fundamentally a static concept providing for limited and predictable change and ultimately for cities of finite size." It rested upon the assumption that social change would be slow, that initiative would come from private parties and that the preservation of an existing beautiful country was a major concern of the planners: assumptions ill attuned both to the rate of demographic growth in the tropics and to the pace of technological change in our more temperate climes.

I am impressed by the fact that it is precisely the practical men who have come to appreciate the indeterminacy of human affairs. But we also need to consider the possibility that they may have underestimated the potential ability of the social sciences to overcome this indeterminacy by a fuller development of theory and methods, after the manner of the natural sciences. This is a hope that sociologists and architects often share. The zest that many sociologists bring to their professional tasks frequently

grows out of the positivist belief that social behavior can in principle (and possibly two or three hundred years' time) be predicted and thus rationally controlled. *Rerum cognoscere causas,* as the London School of Economics has it, to understand the causes of human affairs. Architects, too, are inclined to believe that there must be somewhere—and where better than in prestige-giving science—an established theory, a "scheme for classifying human activities" which would at once resolve the problem of indeterminacy and provide them with a philosophy of design which might be more valid than their own intuitive aesthetic (Gutman, 1965-1966: 54-55). Some seek this in Gestalt psychology, some in set theory and finite mathematics (Gutman, 1955-1956: 53); others, yet again, have been known to seek their salvation in such odd sources as Malinowski's concept of human needs. Many, in their time, have hoped to find in sociology some such positive approach to design. And so we must inquire whether—as seems often to be supposed—the social sciences can, in principle at least, overcome the social indeterminacy to which our colleagues have begun to accommodate their practice.
